As previously described, the Project proposes to construct a cluster of alternating current solar PV energy generation systems totaling 350 MWs with accompanying battery storage on approximately 1,963 acres of land. The Project would not result in population growth and would not cause an increase in currently established population projections. The Project does not include residential development or large local or regional employment centers, and thus would not result in significant population or employment growth.

Furthermore, the operation of the Project would create renewable energy over its planned lifetime and decrease the need for energy from fossil fuel–based power plants in the state, which is considered a beneficial impact to statewide air quality. The energy produced by the Project would displace the criteria pollutant emissions which would otherwise be produced by existing business-as-usual power generation resources (including natural gas and coal).

Table 2-8 shows the emissions that would potentially be displaced by the Proposed Project. Note that this estimate only includes that associated with the combustion of fossil fuels; it does not include the vehicle trips associated with the Project's operations, and it similarly does not include operational employee trips associated with natural gas or coal combustion nor the emissions associated with extracting and transporting those power sources. In addition, this estimate only includes the displacement of that portion of the California market that comes from fossil fuels and does not include the approximate 50 percent of the California electricity generated by non-combustion sources (wind, solar, nuclear, hydro-electric) (California Energy Commission [CEC] 2019a). Displacement of fossil fuel emissions has a direct beneficial effect on human health for those receptors downwind of the location of the fossil fuel power plants.

PC ORIGINAL PKG

Table 2-8. Proposed Project Displaced Criteria Pollutant Emissions (Tons)

Construction Year	Emissions (Tons)					
	ROG	NO_X	CO	SO_2	PM_{10}	$PM_{2.5}$
Emissions Displaced Annually (tons)						
Displaced Natural Gas-Source Emissions	0	0.61	0.19	0.42	0.58	0.23
Displaced Coal-Source Emissions	0	4.31	0.18	0.20	0.03	0.02
Total	0	4.92	0.37	0.63	0.61	0.26
Emissions Displaced over 30 Years (tons)						
Displaced Natural Gas-Source Emissions	0	18.36	5.56	12.61	17.43	7.05
Displaced Coal-Source Emissions	0	129.38	5.39	6.15	0.91	0.65
Total	0	147.74	10.95	18.76	18.34	7.69

Source: Displaced emissions calculated by ECORP using USEPA's AP-42 Fifth Edition Compilation of Air Emissions Factors 1995; 2015.
Notes: In order to provide a conservative analysis, the proposed Project is assumed to generate electricity 50 percent of the time available (4,380 hours annually). Heat Rate indicates the energy generator efficiency of existing fossil-fuel based energy generators. The heat rate of a power plant measures the amount of fuel used to generate one unit of electricity. Power plants with lower heat rates are more efficient than plants with higher heat rates. The CEC's "Updated Thermal Power Plant Efficiency Measures and Operational Characteristics for Production Cost Modeling" (2019b) estimates heat rates and operating ranges for thermal power plants supplying energy to California. The average heat rate of power plants types are as follows:
**Steam Boiler fueled by coal: 10,800 heat rate **Steam Boiler fueled by natural gas: 10,200 heat rate **Gas Turbine: 10,100 heat rate **Combined natural gas Boiler and Turbine: 7,640 heat rate
By omitting steam boilers fueled by coal since so little of California's energy is derived from coal, the average heat rate = 9,313 [(10,100 + 10,200 + 7,640) ÷ 3 = 9,313]. 14.6 MW (63,875,000 annual kWH) x 9,313 heat rate = 594,867,875,000 Btu displaced from fossil fuel production. Fossil fuel-based energy consumption in California is predominately derived from natural gas (34.23 percent). Coal constitutes 2.96 percent of all fossil fuel-based energy. Therefore, 247,286,575,638 of the displaced Btu is displaced natural gas consumption and 17,251,168,375 is displaced Btu is displaced coal. The heat content of coal is assumed at 24 million Btu per ton of coal burned. At a rate of 24 million Btu per ton of coal burned, the Project would displace 719 tons of burned coal annually.

As shown, the Project would potentially displace just under 147.74 tons of NO_x, 10.95 tons of CO, 18.76 tons of SO_2, 18.34 tons of PM_{10}, and 7.69 tons of $PM_{2.5}$ over the course of 30 years. Furthermore, as demonstrated in Table 2-6 and Table 2-7, the Project would not exceed the applicable significance thresholds for construction or operational-source emissions.

Exposure of Sensitive Receptors to Toxic Air Contaminants

As previously described, sensitive receptors are defined as facilities or land uses that include members of the population that are particularly sensitive to the effects of air pollutants, such as children, the elderly, and people with illnesses. Examples of these sensitive receptors are residences, schools, hospitals, and daycare centers. CARB has identified the following groups of individuals as the most likely to be affected by air pollution: the elderly over age 65, children under age 14, athletes, and persons with cardiovascular and chronic respiratory diseases such as asthma, emphysema, and bronchitis. The nearest existing noise-sensitive land use to the Project Site is a single-family residence located 523 feet from the southwestern corner of the Vega 5 Project boundary.

PC ORIGINAL PKG

Construction-Generated Air Contaminants

Construction of the Project would result in temporary, short-term Project-generated emissions of diesel particulate matter (DPM), ROG, NOx, CO, and PM_{10} from the exhaust of off-road, heavy-duty diesel equipment for Project construction; soil hauling truck traffic; paving; and other miscellaneous activities. The portion of the SSAB which encompasses the Project area is designated as a nonattainment area for federal O_3, $PM_{2.5}$ and PM_{10} standards and is also a nonattainment area for the state standards for O_3 and PM_{10} (CARB 2019). Thus, existing O_3 and PM_{10} levels in the SSAB are at unhealthy levels during certain periods. However, as shown in Table 2-6, the Project would not exceed the ICAPCD significance thresholds for construction emissions.

The health effects associated with O_3 are generally associated with reduced lung function. Because the Project would not involve construction activities that would result in O_3 precursor emissions (ROG or NO_x) in excess of the ICAPCD thresholds, the Project is not anticipated to substantially contribute to regional O_3 concentrations and the associated health impacts.

CO tends to be a localized impact associated with congested intersections. In terms of adverse health effects, CO competes with oxygen, often replacing it in the blood, reducing the blood's ability to transport oxygen to vital organs. The results of excess CO exposure can include dizziness, fatigue, and impairment of central nervous system functions. The Project would not involve activities that would result in CO emissions in excess of the ICAPCD thresholds. Thus, the Project's CO emissions would not contribute to the health effects associated with this pollutant.

Particulate matter (PM_{10} and $PM_{2.5}$) contains microscopic solids or liquid droplets that are so small that they can get deep into the lungs and cause serious health problems. Particulate matter exposure has been linked to a variety of problems, including premature death in people with heart or lung disease, nonfatal heart attacks, irregular heartbeat, aggravated asthma, decreased lung function, and increased respiratory symptoms such as irritation of the airways, coughing, or difficulty breathing. For construction activity, DPM is the primary TAC of concern. PM_{10} exhaust is considered a surrogate for DPM as all diesel exhaust is considered to be DPM. As with O_3 and NOx, the Project would not generate emissions of PM_{10} or $PM_{2.5}$ that would exceed the ICAPCD's thresholds. Accordingly, the Project's PM_{10} and $PM_{2.5}$ emissions are not expected to cause any increase in related regional health effects for these pollutants.

In summary, Project construction would not result in a potentially significant contribution to regional concentrations of nonattainment pollutants and would not result in a significant contribution to the adverse health impacts associated with those pollutants.

Operational Air Contaminants

Operation of the Proposed Project would not result in the development of any substantial sources of air toxins. There would be no stationary sources associated Project operations; nor would the Project attract additional mobile sources that spend long periods queuing and idling at the site. Onsite Project emissions would not result in significant concentrations of pollutants at nearby sensitive receptors as the predominant operational emissions associated with the Proposed Project would be routine maintenance

PC ORIGINAL PKG

work and site security as well as panel upkeep and cleaning. Therefore, the Project would not be a substantial source of TACs. The Project will not result in a high carcinogenic or non-carcinogenic risk during operation.

Naturally Occurring Asbestos

Another potential air quality issue associated with construction-related activities is the airborne entrainment of asbestos due to the disturbance of naturally-occurring asbestos-containing soils. The Proposed Project is not located within an area designated by the State of California as likely to contain naturally-occurring asbestos (Department of Conservation [DOC] 2000). As a result, construction-related activities would not be anticipated to result in increased exposure of sensitive land uses to asbestos.

Carbon Monoxide Hot Spots

It has long been recognized that CO exceedances are caused by vehicular emissions, primarily when idling at intersections. Concentrations of CO are a direct function of the number of vehicles, length of delay, and traffic flow conditions. Under certain meteorological conditions, CO concentrations close to congested intersections that experience high levels of traffic and elevated background concentrations may reach unhealthy levels, affecting nearby sensitive receptors. Given the high traffic volume potential, areas of high CO concentrations, or "hot spots," are typically associated with intersections that are projected to operate at unacceptable levels of service during the peak commute hours. It has long been recognized that CO hotspots are caused by vehicular emissions, primarily when idling at congested intersections. However, transport of this criteria pollutant is extremely limited, and CO disperses rapidly with distance from the source under normal meteorological conditions. Furthermore, vehicle emissions standards have become increasingly more stringent in the last 20 years. Currently, the allowable CO emissions standard in California is a maximum of 3.4 grams/mile for passenger cars (there are requirements for certain vehicles that are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of increasingly sophisticated and efficient emissions control technologies, CO concentration in the SSAB is designated as in attainment. Detailed modeling of Project-specific CO "hot spots" is not necessary and thus this potential impact is addressed qualitatively.

A CO "hot spot" would occur if an exceedance of the state one-hour standard of 20 parts per million (ppm) or the eight-hour standard of 9 ppm were to occur. The analysis prepared for CO attainment in the South Coast Air Quality Management District's (SCAQMD's) *1992 Federal Attainment Plan for Carbon Monoxide* in Los Angeles County and a Modeling and Attainment Demonstration prepared by the SCAQMD as part of the 2003 Air Quality Management Plan can be used to demonstrate the potential for CO exceedances of these standards. The SCAQMD is the air pollution control officer for much of southern California. The SCAQMD conducted a CO hot spot analysis as part of the 1992 CO Federal Attainment Plan at four busy intersections in Los Angeles County during the peak morning and afternoon time periods. The intersections evaluated included Long Beach Boulevard and Imperial Highway (Lynwood), Wilshire Boulevard and Veteran Avenue (Westwood), Sunset Boulevard and Highland Avenue (Hollywood), and La Cienega Boulevard and Century Boulevard (Inglewood). The busiest intersection evaluated was at Wilshire Boulevard and Veteran Avenue, which has a traffic volume of approximately 100,000 vehicles per day. Despite this level of traffic, the CO analysis concluded that there was no violation of CO standards

PC ORIGINAL PKG

(SCAQMD 1992). In order to establish a more accurate record of baseline CO concentrations affecting the Los Angeles, a CO "hot spot" analysis was conducted in 2003 at the same four busy intersections in Los Angeles at the peak morning and afternoon time periods. This "hot spot" analysis did not predict any violation of CO standards. The highest one-hour concentration was measured at 4.6 ppm at Wilshire Boulevard and Veteran Avenue and the highest eight-hour concentration was measured at 8.4 ppm at Long Beach Boulevard and Imperial Highway. Thus, there was no violation of CO standards.

Similar considerations are also employed by other Air Districts when evaluating potential CO concentration impacts. More specifically, the Bay Area Air Quality Management District (BAAQMD), the air pollution control officer for the San Francisco Bay Area, concludes that under existing and future vehicle emission rates, a given project would have to increase traffic volumes at a single intersection by more than 44,000 vehicles per hour or 24,000 vehicles per hour where vertical and/or horizontal air does not mix—in order to generate a significant CO impact.

The Proposed Project is anticipated to result in no more than two daily traffic trips. It is noted that this is a conservative estimate and many days will have no operational related vehicle trips. Thus, the Proposed Project would not generate traffic volumes at any intersection of more than 100,000 vehicles per day (or 44,000 vehicles per day) and there is no likelihood of the Project traffic exceeding CO values.

Odors

Typically, odors are regarded as an annoyance rather than a health hazard. However, manifestations of a person's reaction to foul odors can range from psychological (e.g., irritation, anger, or anxiety) to physiological (e.g., circulatory and respiratory effects, nausea, vomiting, and headache).

With respect to odors, the human nose is the sole sensing device. The ability to detect odors varies considerably among the population and overall is quite subjective. Some individuals have the ability to smell minute quantities of specific substances; others may not have the same sensitivity but may have sensitivities to odors of other substances. In addition, people may have different reactions to the same odor; in fact, an odor that is offensive to one person (e.g., from a fast-food restaurant) may be perfectly acceptable to another. It is also important to note that an unfamiliar odor is more easily detected and is more likely to cause complaints than a familiar one. This is because of the phenomenon known as odor fatigue, in which a person can become desensitized to almost any odor and recognition only occurs with an alteration in the intensity.

Quality and intensity are two properties present in any odor. The quality of an odor indicates the nature of the smell experience. For instance, if a person describes an odor as flowery or sweet, then the person is describing the quality of the odor. Intensity refers to the strength of the odor. For example, a person may use the word "strong" to describe the intensity of an odor. Odor intensity depends on the odorant concentration in the air. When an odorous sample is progressively diluted, the odorant concentration decreases. As this occurs, the odor intensity weakens and eventually becomes so low that the detection or recognition of the odor is quite difficult. At some point during dilution, the concentration of the odorant reaches a detection threshold. An odorant concentration below the detection threshold means that the concentration in the air is not detectable by the average human.

PC ORIGINAL PKG

Project Construction

During construction, the Proposed Project presents the potential for generation of objectionable odors in the form of diesel exhaust in the immediate vicinity of the site. However, these emissions are short-term in nature and will rapidly dissipate and be diluted by the atmosphere downwind of the emission sources. Additionally, odors would be localized and generally confined to the Project area. Therefore, odors generated during Project construction would not adversely affect a substantial number of people to odor emissions.

Project Operations

Land uses commonly considered to be potential sources of obnoxious odorous emissions include agriculture (farming and livestock), wastewater treatment plants, food processing plants, chemical plants, composting facilities, refineries, landfills, dairies, and fiberglass molding. The Proposed Project does not include any uses identified as being associated with odors.

3.0 GREENHOUSE GAS EMISSIONS

3.1 Greenhouse Gas Setting

Certain gases in the earth's atmosphere, classified as GHGs, play a critical role in determining the earth's surface temperature. Solar radiation enters the earth's atmosphere from space. A portion of the radiation is absorbed by the earth's surface and a smaller portion of this radiation is reflected back toward space. This absorbed radiation is then emitted from the earth as low-frequency infrared radiation. The frequencies at which bodies emit radiation are proportional to temperature. Because the earth has a much lower temperature than the sun, it emits lower-frequency radiation. Most solar radiation passes through GHGs; however, infrared radiation is absorbed by these gases. As a result, radiation that otherwise would have escaped back into space is instead trapped, resulting in a warming of the atmosphere. This phenomenon, known as the greenhouse effect, is responsible for maintaining a habitable climate on earth. Without the greenhouse effect, the earth would not be able to support life as we know it.

Prominent GHGs contributing to the greenhouse effect are CO_2, methane (CH_4), and N_2O. Fluorinated gases also make up a small fraction of the GHGs that contribute to climate change. Fluorinated gases include chlorofluorocarbons, hydrofluorocarbons, perfluorocarbons, sulfur hexafluoride, and nitrogen trifluoride; however, it is noted that these gases are not associated with typical land use development. Human-caused emissions of these GHGs in excess of natural ambient concentrations are believed to be responsible for intensifying the greenhouse effect and leading to a trend of unnatural warming of the earth's climate, known as global climate change or global warming. It is "extremely likely" that more than half of the observed increase in global average surface temperature from 1951 to 2010 was caused by the anthropogenic increase in GHG concentrations and other anthropogenic factors together (Intergovernmental Panel on Climate Change [IPCC] 2014).

Table 3-1 describes the primary GHGs attributed to global climate change, including their physical properties, primary sources, and contributions to the greenhouse effect.

PC ORIGINAL PKG

Each GHG differs in its ability to absorb heat in the atmosphere based on the lifetime, or persistence, of the gas molecule in the atmosphere. CH_4 traps over 25 times more heat per molecule than CO_2, and N_2O absorbs 298 times more heat per molecule than CO_2 (IPCC 2014). Often, estimates of GHG emissions are presented in carbon dioxide equivalents (CO_2e), which weight each gas by its global warming potential. Expressing GHG emissions in CO_2e takes the contribution of all GHG emissions to the greenhouse effect and converts them to a single unit equivalent to the effect that would occur if only CO_2 were being emitted.

Climate change is a global problem. GHGs are global pollutants, unlike criteria air pollutants and TACs, which are pollutants of regional and local concern. Whereas pollutants with localized air quality effects have relatively short atmospheric lifetimes (about one day), GHGs have long atmospheric lifetimes (one to several thousand years). GHGs persist in the atmosphere for long enough time periods to be dispersed around the globe. Although the exact lifetime of any particular GHG molecule is dependent on multiple variables and cannot be pinpointed, it is understood that more CO_2 is emitted into the atmosphere than is sequestered by ocean uptake, vegetation, or other forms. Of the total annual human-caused CO_2 emissions, approximately 55 percent is sequestered through ocean and land uptakes every year, averaged over the last 50 years, whereas the remaining 45 percent of human-caused CO_2 emissions remains stored in the atmosphere (IPCC 2013).

PC ORIGINAL PKG

Table 3-1. Greenhouse Gases

Greenhouse Gas	Description
CO_2	Carbon dioxide is a colorless, odorless gas. CO_2 is emitted in a number of ways, both naturally and through human activities. The largest source of CO_2 emissions globally is the combustion of fossil fuels such as coal, oil, and gas in power plants, automobiles, industrial facilities, and other sources. A number of specialized industrial production processes and product uses such as mineral production, metal production, and the use of petroleum-based products can also lead to CO_2 emissions. The atmospheric lifetime of CO_2 is variable because it is so readily exchanged in the atmosphere.[1]
CH_4	Methane is a colorless, odorless gas and is the major component of natural gas, about 87 percent by volume. It is also formed and released to the atmosphere by biological processes occurring in anaerobic environments. Methane is emitted from a variety of both human-related and natural sources. Human-related sources include fossil fuel production, animal husbandry (intestinal fermentation in livestock and manure management), rice cultivation, biomass burning, and waste management. These activities release significant quantities of CH_4 to the atmosphere. Natural sources of CH_4 include wetlands, gas hydrates, permafrost, termites, oceans, freshwater bodies, non-wetland soils, and other sources such as wildfires. The atmospheric lifetime of CH_4 is about12 years.[2]
N_2O	Nitrous oxide is a clear, colorless gas with a slightly sweet odor. Nitrous oxide is produced by both natural and human-related sources. Primary human-related sources of N_2O are agricultural soil management, animal manure management, sewage treatment, mobile and stationary combustion of fossil fuels, adipic acid production, and nitric acid production. N_2O is also produced naturally from a wide variety of biological sources in soil and water, particularly microbial action in wet tropical forests. The atmospheric lifetime of N_2O is approximately 120 years.[3]

Sources: [1]USEPA 2016a, [2] USEPA 2016b, [3] USEPA 2016c

The quantity of GHGs that it takes to ultimately result in climate change is not precisely known; it is sufficient to say the quantity is enormous, and no single project alone would measurably contribute to a noticeable incremental change in the global average temperature or to global, local, or microclimates. From the standpoint of CEQA, GHG impacts to global climate change are inherently cumulative.

3.1.1 Sources of Greenhouse Gas Emissions

In 2020, CARB released the 2020 edition of the California GHG inventory covering calendar year 2018 emissions. In 2018, California emitted 425.3 million gross metric tons of CO_2e including from imported electricity. Combustion of fossil fuel in the transportation sector was the single largest source of California's GHG emissions in 2018, accounting for approximately 30 percent of total GHG emissions in the state. This sector was followed by the industrial sector (21 percent) and the electric power sector including both in-state and out-of-state sources (15 percent) (CARB 2020b). Emissions of CO_2 are byproducts of fossil fuel combustion. CH_4, a highly potent GHG, primarily results from off-gassing (the release of chemicals from nonmetallic substances under ambient or greater pressure conditions) and is largely associated with agricultural practices and landfills. N_2O is also largely attributable to agricultural practices and soil management. Carbon dioxide sinks, or reservoirs, include vegetation and the ocean, which absorb CO_2 through sequestration and dissolution (CO_2 dissolving into the water), respectively, two of the most common processes for removing CO_2 from the atmosphere.

PC ORIGINAL PKG

3.2 Regulatory Framework

3.2.1 State

Executive Order S-3-05

Executive Order (EO) S-3-05, signed by Governor Arnold Schwarzenegger in 2005, proclaims that California is vulnerable to the impacts of climate change. It declares that increased temperatures could reduce the Sierra Nevada snowpack, further exacerbate California's air quality problems, and potentially cause a rise in sea levels. To combat those concerns, the EO established total GHG emission targets for the state. Specifically, emissions are to be reduced to the 2000 level by 2010, the 1990 level by 2020, and to 80 percent below the 1990 level by 2050.

Assembly Bill 32 Climate Change Scoping Plan and Updates

In 2006, the California legislature passed Assembly Bill (AB) 32 (Health and Safety Code § 38500 et seq., or AB 32), also known as the Global Warming Solutions Act. AB 32 requires CARB to design and implement feasible and cost-effective emission limits, regulations, and other measures, such that statewide GHG emissions are reduced to 1990 levels by 2020 (representing a 25 percent reduction in emissions). Pursuant to AB 32, CARB adopted a Scoping Plan in December 2008, which outlines measures to meet the 2020 GHG reduction goals. California is on track to meet or exceed the target of reducing GHG emissions to 1990 levels by the end of 2020.

The Scoping Plan is required by AB 32 to be updated at least every five years. The latest update, the 2017 Scoping Plan Update, addresses the 2030 target established by Senate Bill (SB) 32 as discussed below and establishes a proposed framework of action for California to meet a 40 percent reduction in GHG emissions by 2030 compared to 1990 levels. The key programs that the Scoping Plan Update builds on include increasing the use of renewable energy in the state, the Cap-and-Trade Regulation, the Low Carbon Fuel Standard, and reduction of methane emissions from agricultural and other wastes.

Senate Bill 32 and Assembly Bill 197 of 2016

In August 2016, Governor Brown signed SB 32 and AB 197, which serve to extend California's GHG reduction programs beyond 2020. SB 32 amended the Health and Safety Code to include § 38566, which contains language to authorize CARB to achieve a statewide GHG emission reduction of at least 40 percent below 1990 levels by no later than December 31, 2030. SB 32 codified the targets established by Executive Order (EO) B-30-15 for 2030, which set the next interim step in the State's continuing efforts to pursue the long-term target expressed in EOs S-3-05 and B-30-15 of 80 percent below 1990 emissions levels by 2050.

Senate Bill 100 of 2018

In 2018, SB 100 was signed by Governor Brown, codifying a goal of 60 percent renewable procurement by 2030 and 100 percent by 2045 Renewables Portfolio Standard.

PC ORIGINAL PKG

3.3 Greenhouse Gas Emissions Impact Assessment

3.3.1 Thresholds of Significance

The impact analysis provided below is based on the following CEQA Guidelines Appendix G thresholds of significance. The Project would result in a significant impact to greenhouse gas emissions if it would:

1) Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment.

2) Conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases.

The Appendix G thresholds for GHG's do not prescribe specific methodologies for performing an assessment, do not establish specific thresholds of significance, and do not mandate specific mitigation measures. Rather, the CEQA Guidelines emphasize the lead agency's discretion to determine the appropriate methodologies and thresholds of significance consistent with the manner in which other impact areas are handled in CEQA. With respect to GHG emissions, the CEQA Guidelines § 15064.4(a) states that lead agencies "shall make a good-faith effort, based to the extent possible on scientific and factual data, to describe, calculate or estimate" GHG emissions resulting from a project. The CEQA Guidelines note that an agency has the discretion to either quantify a project's GHG emissions or rely on a "qualitative analysis or other performance-based standards." (14 California Code of Regulations [CCR] 15064.4(b)). A lead agency may use a "model or methodology" to estimate GHG emissions and has the discretion to select the model or methodology it considers "most appropriate to enable decision makers to intelligently take into account the project's incremental contribution to climate change." (14 CCR 15064.4(c)). Section 15064.4(b) provides that the lead agency should consider the following when determining the significance of impacts from GHG emissions on the environment:

1. The extent a project may increase or reduce GHG emissions as compared to the existing environmental setting.
2. Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project.
3. The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions (14 CCR 15064.4(b)).

In addition, Section 15064.7(c) of the CEQA Guidelines specifies that "[w]hen adopting or using thresholds of significance, a lead agency may consider thresholds of significance previously adopted or recommended by other public agencies, or recommended by experts, provided the decision of the lead agency to adopt such thresholds is supported by substantial evidence" (14 CCR 15064.7(c)). The CEQA Guidelines also clarify that the effects of GHG emissions are cumulative and should be analyzed in the context of CEQA's requirements for cumulative impact analysis (see CEQA Guidelines § 15130(f)). As a note, the CEQA

PC ORIGINAL PKG

Guidelines were amended in response to SB 97. In particular, the CEQA Guidelines were amended to specify that compliance with a GHG emissions reduction plan renders a cumulative impact insignificant.

Per CEQA Guidelines § 15064(h)(3), a project's incremental contribution to a cumulative impact can be found not cumulatively considerable if the project would comply with an approved plan or mitigation program that provides specific requirements that would avoid or substantially lessen the cumulative problem within the geographic area of the project. To qualify, such plans or programs must be specified in law or adopted by the public agency with jurisdiction over the affected resources through a public review process to implement, interpret, or make specific the law enforced or administered by the public agency. Examples of such programs include a "water quality control plan, air quality attainment or maintenance plan, integrated waste management plan, habitat conservation plan, natural community conservation plans [and] plans or regulations for the reduction of greenhouse gas emissions." Put another way, CEQA Guidelines § 15064(h)(3) allows a lead agency to make a finding of less than significant for GHG emissions if a project complies with adopted programs, plans, policies and/or other regulatory strategies to reduce GHG emissions.

The significance of the Project's GHG emissions is evaluated consistent with CEQA Guidelines § 15064.4(b)(2) by considering whether the Project complies with applicable plans, policies, regulations and requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions. The ICAPCD has not adopted a GHG significance threshold yet recommends the 100,000-metric ton of CO_2e threshold established by the Mojave Desert Air Quality Management District (MDAQMD). As previously described, Section 15064.7(c) of the CEQA Guidelines specifies that "[w]hen adopting or using thresholds of significance, a lead agency may consider thresholds of significance previously adopted or recommended by other public agencies, or recommended by experts, provided the decision of the lead agency to adopt such thresholds is supported by substantial evidence" (14 CCR 15064.7(c)). This ICAPCD-recommended threshold is appropriate as the MDAQMD GHG thresholds were formulated based on similar geography and climate patterns as found in Imperial County. Therefore, the 100,000-metric ton of CO_2e threshold is appropriate for this analysis.

In *Center for Biological Diversity v. Department of Fish and Wildlife* (2015) 62 Cal. 4th 2014, 213, 221, 227, following its review of various potential GHG thresholds proposed in an academic study [Crockett, *Addressing the Significance of Greenhouse Gas Emissions: California's Search for Regulatory Certainty in an Uncertain World* (July 2011), 4 Golden Gate U. Envtl. L. J. 203], the California Supreme Court identified the use of numeric bright-line thresholds as a potential pathway for compliance with CEQA GHG requirements. The study found numeric bright line thresholds designed to determine when small projects were so small as to not cause a cumulatively considerable impact on global climate change was consistent with CEQA. Specifically, Public Resources Code section 21003(f) provides it is a policy of the state that "[a]ll persons and public agencies involved in the environmental review process be responsible for carrying out the process in the most efficient, expeditious manner in order to conserve the available financial, governmental, physical and social resources with the objective that those resources may be better applied toward the mitigation of actual significant effects on the environment." The Supreme Court-reviewed study noted, "[s]ubjecting the smallest projects to the full panoply of CEQA requirements, even though the public benefit would be minimal, would not be consistent with implementing the statute in the most efficient, expeditious manner. Nor would it be consistent with applying lead agencies' scarce resources toward mitigating actual significant

PC ORIGINAL PKG

climate change impacts." (Crockett, *Addressing the Significance of Greenhouse Gas Emissions: California's Search for Regulatory Certainty in an Uncertain World* (July 2011), 4 Golden Gate U. Envtl. L. J. 203, 221, 227.)

3.3.2 Methodology

GHG-related impacts were assessed in accordance with methodologies recommended by the ICAPCD. Where GHG emission quantification was required, emissions were modeled using CalEEMod, version 2020.4.0. CalEEMod is a statewide land use emissions computer model designed to quantify potential GHG emissions associated with both construction and operations from a variety of land use projects. Project construction generated GHG emissions were calculated using CalEEMod model defaults for Imperial County coupled with information provided by the Project applicant. For instance, construction is estimated to take 12-18 months. According to the Traffic Study prepared for the Project (KOA 2021a & 2021b), the number of on–site construction workers for Vega 2 and 3 solar facility is not expected to exceed 150 workers at any one time. The number of on-site construction workers for the Vega 2 and 3 battery storage facility and substations is not expected to exceed 100 workers at any one time. The number of on–site construction workers for the Vega 5 solar facility is not expected to exceed 75 workers at any one time. The number of on-site construction workers for the Vega 5 battery storage facility and substation is not expected to exceed 50 workers at any one time.

Operational air pollutant emissions account for a conservative estimate of two worker trip per day. Such visits include inspections, equipment servicing, site and landscape clearing, and periodic washing of the PV modules if needed to maintain power generation efficiency.

3.3.3 Impact Analysis

Generation of GHG Emissions

Project Construction

Construction-related activities that would generate GHG emissions include worker commute trips, haul trucks carrying supplies and materials to and from the Project Site, and off-road construction equipment (e.g., dozers, loaders, excavators). Table 3-2 illustrates the specific construction generated GHG emissions that would result from construction of the Project. Once construction is complete, the generation of these GHG emissions would cease.

PC ORIGINAL PKG

Table 3-2. Construction-Related Greenhouse Gas Emissions

Emissions Source	CO_2e (Metric Tons/ Year)
Construction of Vega 2 and 3 (2023)	961
Construction of Vega 5 (2024)	787
Significance Threshold	*10,000*
Exceed Significance Threshold?	**No**

Source: CalEEMod version 2020.4.0. Refer to Attachment A for Model Data Outputs.

As shown in Table 3-2, implementation of the Project would result in the generation of approximately 961 metric tons of CO_2e for the construction of Vega 2 and 3, and 787 metric tons of CO_2e for the construction of Vega 5. Therefore, Project GHG emissions would not exceed the significance threshold.

Additionally, the Project proposes a solar energy generation facility intended to generate renewable energy. Solar plants generate far less GHG life-cycle emissions (approximately 83 to 94 percent less) than fossil-fueled energy plants. As identified in Table 3-5, the Project could potentially displace approximately 12,620 metric tons of CO_2e per year, and approximately 378,597 metric tons of CO_2e over the course of 30 years, which is considerably more than would be generated during construction.

Project Operations

Operation of the Project would result in an increase in GHG emissions solely associated with motor vehicle trips. Long-term GHG emissions attributed to operations of the Project are identified in Table 3-3.

PC ORIGINAL PKG

Table 3-3. Operational-Related Greenhouse Gas Emissions

Emission Source	CO_2e (Metric Tons/ Year)
Area Source	0
Energy	2,720
Mobile	4
Waste	0
Water	10
Total	**2,734**
Significance Threshold	*100,000*
Exceed Significance Threshold?	**No**

Source: CalEEMod version 2020.4.0. Refer to Attachment A for Model Data Outputs.
Notes: Emission projections predominately based on CalEEMod model defaults for Imperial County. Operational emissions account for two vehicle trips per day. It is noted that this is a conservative estimate as many days will have no operational related vehicle trips. Additionally, it accounts for the energy usage used for the battery energy storage system and the pumping of 32-acre feet of water per year.

As shown in Table 3-3, operational-generated emissions would not exceed the potentially significant impact threshold of 100,000 metric tons of CO_2e annually.

Conflict with any Applicable Plan, Policy, or Regulation of an Agency Adopted for the Purpose of Reducing the Emissions of Greenhouse Gases

The Project would not conflict with any adopted plans, policies, or regulations adopted for the purpose of reducing GHG emissions. The Proposed Project is subject to compliance with SB 32. As discussed previously, the Proposed Project-generated GHG emissions would not surpass either the SCAQMD or CAPCOA GHG significance thresholds, which were prepared with the purpose of complying with statewide GHG-reduction efforts. Additionally, once construction is complete, the Project would be a producer of renewable energy, which generates substantially less GHG emissions compared with the more common types of fossil-fueled energy generation facilities.

GHG emissions generated by energy sources account for all stages of the life cycle (including mining, construction, etc.), which are referred to as the cumulative GHG emissions and are usually expressed in grams of CO_2e per unit of busbar electricity (i.e., gCO_2/kWh_e). When comparing various fossil-fueled energy generators, the GHG emissions generated are dependent on the type of fuel (i.e., gas, oil, coal). GHG emissions generated by some of the more common types of fossil-fueled plants and solar-power plants are summarized in Table 3-4.

PC ORIGINAL PKG

Table 3-4. Life-Cycle Greenhouse Gas Emissions for Various Types of Energy Generators

Fossil Fueled	
Coal	950 to 1,250
Oil	500 to 1,200
Gas	440 to 780
Solar	43 to 73[3]

Source: Weisser 2007
Notes:
1 $gCO_2e/kWhe$ = grams of CO_2e per unit of busbar electricity.
2 Emissions are based on lifecycle of energy source including mining, construction, operation, etc.
3 Solar PV life-cycle emissions result from using fossil-fuel-based energy to produce the materials for solar cells, modules, and systems, as well as directly from smelting, production, and manufacturing facilities.

As shown in Table 3-4, solar plants generate far less GHG life-cycle emissions (approximately 83 to 94 percent less) than fossil-fueled energy plants. Therefore, the Proposed Project would contribute to the continued reduction of GHG emissions in the interconnected California and western U.S. electricity systems, as the energy produced by the Project would displace GHG emissions that would otherwise be produced by existing business-as-usual power generation resources (including natural gas, coal, arid renewable combustion resources). The Project would generate a maximum of 14.6 MW of electricity at any one time. Table 3-5 shows the emissions that would potentially be displaced by the Proposed Project. Note that this estimate only includes that associated with the combustion of fossil fuels; it does not include the vehicle trips associated with the Project's operations, and it similarly does not include operational employee trips associated with natural gas or coal combustion nor the emissions associated with extracting and transporting those power sources. In addition, this estimate only includes the displacement of that portion of the California market that comes from fossil fuels and does not include the approximate 50 percent of the California electricity generated by non-combustion sources (wind, solar, nuclear, hydro-electric) (CEC 2019a).

PC ORIGINAL PKG

Table 3-5. Proposed Project Displaced GHG Emissions (Metric Tons)

	Emissions (Metric Tons)			
	CO_2	CH_4	N_2O	CO_2e
Emissions Displaced Annually (metric tons)				
Displaced Natural Gas-Source Emissions	10,880	0.00	0.00	10,880
Displaced Coal-Source Emissions	1,737	0.01	0.01	1,740
Total	**12,617**	**0.01**	**0.01**	**12,620**
Emissions Displaced over 30 Years (metric tons)				
Displaced Natural Gas-Source Emissions	326,411	0.00	0.00	326,411
Displaced Coal-Source Emissions	52,097	0.35	0.26	52,186
Total	**378,508**	**0.35**	**0.26**	**378,597**

Source: Displaced emissions calculated by ECORP using USEPA's AP-42 Fifth Edition Compilation of Air Emissions Factors 1995; 2015.
Notes: In order to provide a conservative analysis, the Proposed Project is assumed to generate electricity 50 percent of the time available (4,380 hours annually). Heat Rate indicates the energy generator efficiency of existing fossil-fuel based energy generators. The heat rate of a power plant measures the amount of fuel used to generate one unit of electricity. Power plants with lower heat rates are more efficient than plants with higher heat rates. The CEC's "Updated Thermal Power Plant Efficiency Measures and Operational Characteristics for Production Cost Modeling" (2019b) estimates heat rates and operating ranges for thermal power plants supplying energy to California. The average heat rate of power plants types are as follows:
**Steam Boiler fueled by coal: 10,800 heat rate **Steam Boiler fueled by natural gas: 10,200 heat rate **Gas Turbine: 10,100 heat rate **Combined natural gas Boiler and Turbine: 7,640 heat rate
By omitting steam boilers fueled by coal since so little of California's energy is derived from coal, the average heat rate = 9,313 [(10,100 + 10,200 + 7,640) ÷ 3 = 9,313]. 14.6 MW (63,875,000 annual kWH) x 9,313 heat rate = 594,867,875,000 Btu displaced from fossil fuel production. Fossil fuel-based energy consumption in California is predominately derived from natural gas (34.23 percent). Coal constitutes 2.96 percent of all fossil fuel-based energy. Therefore, 247,286,575,638 of the displaced Btu is displaced natural gas consumption and 17,251,168,375 is displaced Btu is displaced coal. The heat content of coal is assumed at 24 million Btu per ton of coal burned. At a rate of 24 million Btu per ton of coal burned, the Project would displace 719 tons of burned coal annually.

As shown, the Project would potentially displace approximately 12,620 metric tons of CO_2e per year, and approximately 378,597 metric tons of CO_2e over the course of 30 years.

While the Project would emit some GHG emissions during construction and a very small amount during operations, the contribution of renewable resource energy production to meet the goals of the Renewable Portfolio Standard (Scoping Plan Measure E-3) would result in a net cumulative reduction of GHG emissions, a key environmental benefit. (Scoping Plan Measure E-3, Renewable Portfolio Standard, of the Climate Change Scoping Plan requires that all investor-owned utility companies generate 60 percent of their energy demand from renewable sources by year 2030.) Therefore, the short-term minor generation of GHG emissions during construction which is necessary to create this new, low-GHG-emitting power-generating facility, as well as the negligible amount generated during ongoing maintenance operations, would be more than offset by GHG emission reductions associated with solar-generated energy during operation.

Increasing sources of solar energy is one of the measures identified under the Scoping Plan to reduce statewide GHG emissions. The Proposed Project would reduce GHG emissions in a manner consistent with SB 32 and other California GHG-reducing legislation by creating a new source of solar power to replace the current use of fossil-fuel power and reduce GHG emissions power generation and use.

PC ORIGINAL PKG

The Project would not conflict with any applicable plan, policy, or regulation intended to reduce GHG emissions.

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Light Industry	0.00	1000sqft	0.00	1.00	0
Other Non-Asphalt Surfaces	1,553.00	Acre	1,553.00	67,648,680.00	0

1.2 Other Project Characteristics

Urbanization	Rural	**Wind Speed (m/s)**	3.4	**Precipitation Freq (Days)**	12
Climate Zone	15			**Operational Year**	2024
Utility Company	Imperial Irrigation District				
CO2 Intensity (lb/MWhr)	189.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Industrial land use added to account for trip generation for operations.

Construction Phase - Building construction and paving assumed to occur simultaneously. Construction phasing updated to match PD.

Off-road Equipment - Equipment updated per information provided by the PD.

Trips and VMT - Updated per information provided by the PD.

On-road Fugitive Dust - % Paved calculated from Access Route Figure in PD. Default worker commute=10.2 miles. 2.61 miles of unpaved road to access project site. 1.65/10.2=16% unpaved roads. Vendor commute=11.9 miles and same roads will be used.

Grading -

Vehicle Trips - Conservative estimate of 1 trip per day for operations.

Road Dust - Used same % paved roads as construction workers.

Energy Use - General light industrial used for trip generation only

PC ORIGINAL PKG

Vega 2 & 3 - Imperial County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Construction Off-road Equipment Mitigation - Mitigation measure AQ-1 accounted. PM Reduction value for applying soil stabilizers to unpaved roadways per communication with ICAPCD (Monica Soucier via email correspondence).

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Light Industry	0.00	1000sqft	0.00	1.00	0
Other Non-Asphalt Surfaces	1,553.00	Acre	1,553.00	67,648,680.00	0

1.2 Other Project Characteristics

Urbanization	Rural	**Wind Speed (m/s)**	3.4	**Precipitation Freq (Days)**	12
Climate Zone	15			**Operational Year**	2024
Utility Company	Imperial Irrigation District				
CO2 Intensity (lb/MWhr)	189.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Industrial land use added to account for trip generation for operations.

Construction Phase - Building construction and paving assumed to occur simultaneously. Construction phasing updated to match PD.

Off-road Equipment - Equipment updated per information provided by the PD.

Trips and VMT - Updated per information provided by the PD.

On-road Fugitive Dust - % Paved calculated from Access Route Figure in PD. Default worker commute=10.2 miles. 2.61 miles of unpaved road to access project site. 1.65/10.2=16% unpaved roads. Vendor commute=11.9 miles and same roads will be used.

Grading -

Vehicle Trips - Conservative estimate of 1 trip per day for operations.

Road Dust - Used same % paved roads as construction workers.

Energy Use - General light industrial used for trip generation only

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Construction Off-road Equipment Mitigation - Mitigation measure AQ-1 accounted. PM Reduction value for applying soil stabilizers to unpaved roadways per communication with ICAPCD (Monica Soucier via email correspondence).

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Light Industry	0.00	1000sqft	0.00	1.00	0
Other Non-Asphalt Surfaces	410.00	Acre	410.00	17,859,600.00	0

1.2 Other Project Characteristics

Urbanization	Rural	**Wind Speed (m/s)**	3.4	**Precipitation Freq (Days)**	12
Climate Zone	15			**Operational Year**	2025
Utility Company	Imperial Irrigation District				
CO2 Intensity (lb/MWhr)	189.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Industrial land use added to account for trip generation for operations.

Construction Phase - Building construction and paving assumed to occur simultaneously. Construction phasing updated to match PD.

Off-road Equipment - Equipment updated per information provided by the PD.

Trips and VMT - Updated per information provided by the PD.

On-road Fugitive Dust - Map provided in PD shows access roads to the project site are 100% paved.

Grading -

Vehicle Trips - Conservative estimate of 1 trip per day for operations.

Road Dust - Used same % paved roads as construction workers.

Energy Use - General light industrial used for trip generation only

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Industrial land use added to account for trip generation for operations.

Construction Phase - Building construction and paving assumed to occur simultaneously. Construction phasing updated to match PD.

Off-road Equipment - Equipment updated per information provided by the PD.

Trips and VMT - Updated per information provided by the PD.

On-road Fugitive Dust - Map provided in PD shows access roads to the project site are 100% paved.

Grading -

Vehicle Trips - Conservative estimate of 1 trip per day for operations.

Road Dust - Used same % paved roads as construction workers.

Energy Use - General light industrial used for trip generation only

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Industrial land use added to account for trip generation for operations.

Construction Phase - Building construction and paving assumed to occur simultaneously. Construction phasing updated to match PD.

Off-road Equipment - Equipment updated per information provided by the PD.

Trips and VMT - Updated per information provided by the PD.

On-road Fugitive Dust - Map provided in PD shows access roads to the project site are 100% paved.

Grading -

Vehicle Trips - Conservative estimate of 1 trip per day for operations.

Road Dust - Used same % paved roads as construction workers.

Energy Use - General light industrial used for trip generation only

1.2 Other Project Characteristics

Urbanization	Rural	**Wind Speed (m/s)**	3.4	**Precipitation Freq (Days)**	12
Climate Zone	15			**Operational Year**	2024
Utility Company	Imperial Irrigation District				
CO2 Intensity (lb/MWhr)	189.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Industrial land use used to account for BESS. Parking used to add acreage of total project site.

Construction Phase - Model run done for operations only.

Off-road Equipment - Model run done for operations only.

Trips and VMT - Model run done for operations only.

Architectural Coating - Model run done for operations only.

Vehicle Trips - Accounting for 2 vehicle trips per day

Road Dust - Percent paved taken from Vega 2 & 3 construcion workers PC ORIGINAL PKG

Vega Complex Operations - Imperial County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Water And Wastewater - Water use from PD.

Solid Waste - No soild waste generated

Project Fossil Fuel Emissions Displacement

Megawatt Project[1]	Operational Time[2]	Annual Hours of Generation[2]	Annual Kilowatt Hours	Heat Rate[3]	Btu Displaced[4]
14.583 MW	50 Percent	4,380 Hours	63,873,540 Kilowatt Hours	9,313	594,854,278,020

[1] *The Project is anticipated to generate 350 megawatts daily. 350 ÷ 24 hours = 14.583 MWHR facility*

[2] *The Project is assumed to generate electricity 50 percent of the time available (4,380 hours annually).*

[3] *Heat Rate indicates the energy generator efficiency of existing fossil-fuel based energy generators. The heat rate of a power plant measures the amount of fuel used to generate one unit of electricity. Power plants with lower heat rates are more efficient than plants with higher heat rates. The CEC's "Updated Thermal Power Plant Efficiency Measures and Operational Characteristics for Production Cost Modeling" (2019) estimates heat rates and operating ranges for thermal power plants supplying energy to California. The average heat rate of power plants types are as follows:*
***Steam Boiler fueled by coal: 10,800 heat rate. **Steam Boiler fueled by natural gas: 10,200 heat rate. **Gas Turbine: 10,100 heat rate. **Combined natural gas Boiler and Turbine: 7,640 heat rate.*
Omitting steam boilers fueled by coal since so little of California's energy is derived from coal, the average heat rate = 9,313 [(10,100 + 10,200 + 7,640) ÷ 3 = 9,313]

[4] *63,873,540 anuual kilowatt hours x 9,313 average heat rate of existing fossil fuel generators = 594,854,278,020 Btu displaced from fossil fuel production.*
Energy consumption in California is predominately derived from natural gas (34.23%). Coal constitutes 2.96% of all energy-based energy consumption in California. Renewable sources (not including hydroelectric generators) account for 31.70% and nuclear power accounts for 8.98%. 7.34% of the state's energy comes from unspecificed nonrenewable sources and this percentage is added to the natural gas total for the purpose of this analysis. CEC. 2020. "2019 Total System Electric Generation". https://www.energy.ca.gov/data-reports/energy-almanac/california-electricity-data
247,280,923,373 of the displaced BTU is displaced natural gas consumption and 17,250,774,063 of the displaced BTU is displaced coal.
The heat content of coal is assumed at 24 million Btu per ton of coal burned. At a rate of 24 million Btu per ton of coal burned, the Project would displace 719 tons of burned coal annually.

1.0 INTRODUCTION

The Vega SES 2 and Vega SES 3 Solar Projects (Projects) are proposed 100-Megawatt (MW) direct current (dc) and 400 MW-hour (MWH) battery storage utility-scale solar projects located on approximately 1,712 acres of vacant land on three parcels in Imperial County, California. ECORP Consulting, Inc. conducted a literature review, small unmanned aircraft system (sUAS) survey, and biological reconnaissance survey of the Project sites to document the existing biological resources, to assess the habitat for its potential to support sensitive plant and wildlife species, and, as required under the California Environmental Quality Act (CEQA), to determine whether Project-related impacts could occur to sensitive biological resources.

1.1 Purpose of the Report

This report was prepared to describe biological resources on the Project sites and to support Project review under CEQA. Assessment of potential occurrences of special-status plants and animals is based on habitat, geographic and elevational range, and data from field surveys conducted by ECORP in 2020. For the purposes of this report, the term Project Areas refers to the areas proposed to be directly affected by implementation of the Projects and corresponds to the client-supplied Project boundaries. The term Survey Area refers to the Project Areas and a 500-foot buffer around the Project Area boundaries, potentially subject to temporary or indirect impacts.

1.2 Project Location and Description

The proposed Projects are located on approximately 1,712 acres of vacant land on three parcels in Imperial County, California (Assessor Parcel Numbers [APNs] 025-260-011, 025-010-006, and 025-270-023). The Projects are approximately 10 miles east of the Salton Sea and five miles west of the Chocolate Mountains (Figure 1). As depicted on the U.S. Geological Survey (USGS) 7.5-minute Iris, CA topographic quadrangle, the Projects are located within Sections 3, 4, 7, 8, 9, 10, 14, 15, 16, 17, and 18 of Township 11 South, Range 15 East, San Bernardino Base and Meridian.

For the purposes of this report, Vega 2 and 3 Projects were divided into 3 Study Areas (Figure 2). The term Study Area includes the 500-foot buffer.

A complete summary of geographic information is provided in Table 1.

Table 1. Geographic Information Summary

Study Area	Project Name	Accessor's Parcel Number (APN)	Sections	Township	Range	7.5-minute Quadrangle	Approximate Center of Study Area (latitude/longitude)
1	SES 2	025-260-011	8, 16, 17	11 South	15 East	Iris, CA[1]	33.212810, -115.432084
2	SES 2 and 3	025-010-006	3, 4, 7, 8, 9, 10, 15, 16, 17, 18	11 South	15 East	Iris, CA[1]	33.224760, -115.414804
3	SES 2	025-270-023	10, 14, 15	11 South	15 East	Iris, CA[1]	33.211691, -115.395183

PC ORIGINAL PKG

Study Area 1 includes a battery storage utility-scale solar project located on approximately 448.3 acres of vacant land within one private parcel in Imperial County, California. Study Area 2, also known as the Mesa Grande parcel, includes a battery storage utility-scale solar project located on approximately 640 acres of vacant land within one private parcel in Imperial County. Study Area 3, also known as the Li Tong parcel, includes a battery storage utility-scale solar project located on approximately 624 acres of vacant land within one private parcel in Imperial County. The proposed Projects will connect to previously established Imperial Irrigation District generator intertie lines adjacent to Study Area 1 and 2.

Topography consists of gentle slopes with a gradual increase in elevation from the western extent to the eastern extent. The southwest portion of Study Area 1 (adjacent to the Union Pacific railroad) is slightly below sea level at an elevation of -2 meters (-7 feet) and the eastern extent of Study Area 3 is at an elevation of 55 meters (182 feet) above mean sea level. Adjacent land uses include active agricultural land to the west and Open Space/Bureau of Land Management Land to the north, east, and south. The Coachella Canal travels from northwest to southeast between the project impact areas of Study Area 2. Siphon Six travels through the northwestern portion of Study Area 2 and Siphon Five travels through the southwestern portion of Study Area 2 and the northwestern portion of Study Area 3.

2.0 REGULATORY CONSIDERATIONS

The biological reconnaissance survey was conducted to identify potential constraints and to ensure compliance with state and federal regulations regarding listed, protected, and sensitive species could be achieved. The regulations are detailed below.

2.1 Federal Regulations

2.1.1 Endangered Species Act

The Endangered Species Act (ESA) protects plants and animals that are listed as endangered or threatened by the U.S. Fish and Wildlife Service (USFWS) and the National Marine Fisheries Service. Section 9 of the ESA prohibits the taking of endangered wildlife, where taking is defined as "harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, collect, or attempt to engage in such conduct" (50 Code of Federal Regulations [CFR] 17.3). For plants, this statute governs removing, possessing, maliciously damaging, or destroying any endangered plant on federal land and removing, cutting, digging up, damaging, or destroying any endangered plant on non-federal land in knowing violation of state law (16 U.S. Code 1538). Under Section 7 of the ESA, federal agencies are required to consult with the USFWS if their actions, including permit approvals or funding, could adversely affect a listed (or proposed) species (including plants) or its critical habitat. Through consultation and the issuance of a biological opinion, the USFWS may issue an incidental take statement allowing take of the species that is incidental to an otherwise authorized activity provided the activity will not jeopardize the continued existence of the species. Section 10 of the ESA provides for issuance of incidental take permits where no other federal actions are necessary provided a habitat conservation plan (HCP) is developed.

PC ORIGINAL PKG

2.1.2 Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) implements international treaties between the U.S. and other nations devised to protect migratory birds, any of their parts, eggs, and nests from activities such as hunting, pursuing, capturing, killing, selling, and shipping, unless expressly authorized in the regulations or by permit. As authorized by the MBTA, the USFWS issues permits to qualified applicants for the following types of activities: falconry, raptor propagation, scientific collecting, special purposes (rehabilitation, education, migratory game bird propagation, and salvage), take of depredating birds, taxidermy, and waterfowl sale and disposal. The regulations governing migratory bird permits can be found in 50 CFR Part 13 General Permit Procedures and 50 CFR Part 21 Migratory Bird Permits. The State of California has incorporated the protection of birds of prey in Sections 3800, 3513, and 3503.5 of the California Fish and Game Code.

2.1.3 Clean Water Act

The purpose of the Clean Water Act (CWA) is to "restore and maintain the chemical, physical, and biological integrity of the nation's waters." Section 404 of the CWA prohibits the discharge of dredged or fill material into Waters of the U.S. without a permit from the U.S. Army Corps of Engineers (USACE). The definition of Waters of the U.S. includes rivers, streams, estuaries, the territorial seas, ponds, lakes, and wetlands. Wetlands are defined as those areas "that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions" (33 CFR 328.3 7b). The U.S. Environmental Protection Agency (USEPA) acts as a cooperating agency to set policy, guidance, and criteria for use in evaluation permit applications and also reviews USACE permit applications.

The USACE regulates "fill" or dredging of fill material within its jurisdictional features. "Fill material" means any material used for the primary purpose of replacing an aquatic area with dry land or changing the bottom elevation of a water body. Substantial impacts to wetlands may require an individual permit. Projects that only minimally affect wetlands may meet the conditions of one of the existing Nationwide Permits. A Water Quality Certification or waiver pursuant to Section 401 of the CWA is required for Section 404 permit actions; this certification or waiver is issued by the State Water Resources Control Board (SWRCB), administered by each of nine California Regional Water Quality Control Boards (RWQCBs).

2.2 State and Local Regulations

2.2.1 California Endangered Species Act

The California ESA generally parallels the main provisions of the ESA but, unlike its federal counterpart, the California ESA applies the take prohibitions to species proposed for listing (called "candidates" by the State). Section 2080 of the California Fish and Game Code prohibits the taking, possession, purchase, sale, and import or export of endangered, threatened, or candidate species, unless otherwise authorized by permit or in the regulations. Take is defined in Section 86 of the California Fish and Game Code as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill." The California ESA allows for take incidental to otherwise lawful development projects. State lead agencies are required to consult

PC ORIGINAL PKG

with California Department of Fish and Wildlife (CDFW) to ensure that any action they undertake is not likely to jeopardize the continued existence of any endangered or threatened species or result in destruction or adverse modification of essential habitat.

2.2.2 Fully Protected Species

The State of California first began to designate species as "fully protected" prior to the creation of the federal and California ESAs. Lists of fully protected species were initially developed to provide protection to those animals that were rare or faced possible extinction, and included fish, amphibians and reptiles, birds, and mammals. Most fully protected species have since been listed as threatened or endangered under federal and/or California ESAs. The regulations that implement the Fully Protected Species Statute (California Fish and Game Code § 4700) provide that fully protected species may not be taken or possessed at any time. Furthermore, CDFW prohibits any State agency from issuing incidental take permits for fully protected species, except for necessary scientific research.

2.2.3 Native Plant Protection Act

The Native Plant Protection Act (NPPA) of 1977 (California Fish and Game Code §§ 1900-1913) was created with the intent to "preserve, protect and enhance rare and endangered plants in this State." The NPPA is administered by CDFW. The Fish and Wildlife Commission has the authority to designate native plants as "endangered" or "rare" and to protect endangered and rare plants from take. The California ESA of 1984 (California Fish and Game Code § 2050-2116) provided further protection for rare and endangered plant species, but the NPPA remains part of the California Fish and Game Code.

2.2.4 Porter Cologne Water Quality Control Act

The RWQCB implements water quality regulations under the federal CWA and the Porter-Cologne Water Quality Act. These regulations require compliance with the National Pollutant Discharge Elimination System (NPDES), including compliance with the California Storm Water NPDES General Construction Permit for discharges of storm water runoff associated with construction activities. General Construction Permits for projects that disturb one or more acres of land require development and implementation of a Storm Water Pollution Prevention Plan. Under the Porter-Cologne Water Quality Act, the RWQCB regulates actions that would involve "discharging waste, or proposing to discharge waste, with any region that could affect the water of the state" [Water Code 13260(a)].

Waters of the State are defined as "any surface water or groundwater, including saline waters, within the boundaries of the state" (Water Code 13050[e]). The RWQCB regulates all such activities, as well as dredging, filling, or discharging materials into Waters of the State that are not regulated by the USACE due to a lack of connectivity with a navigable water body. The RWQCB may require issuance of Waste Discharge Requirements for these activities.

On April 2, 2019, the SWRCB adopted the *State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State* (referred to as the Procedures) for inclusion in the *Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California* (Resolution No. 2019-0015). The new Procedures include:

PC ORIGINAL PKG

- definition of wetlands and aquatic resources that are Waters of the State,
- description of application requirements for individual orders (not general orders) for water quality certification, or waste discharge requirements,
- description of information required in compensatory mitigation plans, and
- definition of exemptions to application procedures.

The Office of Administrative Law approved the procedures on August 28, 2019, and the rule went into effect May 28, 2020.

2.2.5 California Fish and Game Code

2.2.5.1 Streambed Alteration Agreement

Section 1602 of the California Fish and Game Code requires that a Notification of Lake or Streambed Alteration be submitted to CDFW for "any activity that may substantially divert or obstruct the natural flow or substantially change the bed, channel, or bank of any river, stream, or lake." The CDFW reviews the proposed actions and, if necessary, submits to the Applicant a proposal for measures to protect affected fish and wildlife resources. The final proposal that is mutually agreed upon by CDFW and the Applicant is the Streambed Alteration Agreement (SAA). Often, projects that require an SAA also require a permit from the USACE under Section 404 of the CWA. In these instances, the conditions of the Section 404 permit and the SAA may overlap.

2.2.5.2 Migratory Birds

The CDFW enforces the protection of nongame native birds in §§ 3503, 3503.5, and 3800 of the California Fish and Game Code. Section 3513 of the California Fish and Game Code prohibits the possession or take of birds listed under the MBTA. These sections mandate the protection of California nongame native birds' nests and also make it unlawful to take these birds. All raptor species are protected from "take" pursuant to California Fish and Game Code § 3503.5 and are also protected at the federal level by the MBTA of 1918 (USFWS 1918).

2.2.6 Conservation and Open Space Element

Imperial County created the Conservation and Open Space Element plan to provide details and measures for management and preservation of biological resources as well as various other resources (i.e., cultural, soils, minerals). This plan focuses on protecting scarce resources and preventing wasteful exploitation, neglect, and destruction of California's natural resources. The plan outlines areas with sensitive habitat and sensitive species, also labelled "Resource Areas". Open space easements and protection of riparian habitat, rock outcrops, California fan palm oases, and wildlife corridors are also discussed in the plan. As it currently stands, the open space element follows CEQA guidelines with special focus on its scarce resources.

PC ORIGINAL PKG

2.2.7 CEQA Significance Criteria

Section 15064.7 of the CEQA Guidelines encourages local agencies to develop and publish the thresholds the agency uses in determining the significance of environmental effects caused by projects under its review. However, agencies may also rely upon the guidance provided by the expanded Initial Study checklist contained in Appendix G of the CEQA Guidelines. Appendix G provides examples of impacts that would normally be considered significant. Based on these examples, impacts to biological resources would normally be considered significant if the project would:

- have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by CDFW or USFWS;
- have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by CDFW or USFWS;
- have a substantial adverse effect on State or federally protected wetlands (including, but not limited to, marsh, vernal pool, and coastal) through direct removal, filling, hydrological interruption, or other means;
- interfere substantially with the movement of any native resident or migratory fish or wildlife species, or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites;
- conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance; and
- conflict with the provisions of an adopted HCP, Natural Community Conservation Plan, or other approved local, regional, or state HCP.

An evaluation of whether an impact on biological resources would be substantial must consider both the resource itself and how that resource fits into a regional or local context. Substantial impacts would be those that would diminish, or result in the loss of, an important biological resource, or those that would obviously conflict with local, state, or federal resource conservation plans, goals, or regulations. Impacts are sometimes locally important but not significant according to CEQA. The reason for this is that although the impacts would result in an adverse alteration of existing conditions, they would not substantially diminish, or result in the permanent loss of an important resource on a population-wide or region-wide basis.

3.0 METHODS

3.1 Literature Review

Prior to conducting the biological reconnaissance survey, ECORP biologists performed a literature review using the CDFW's California Natural Diversity Data Base (CNDDB; CDFW 2020a) and the California Native Plant Society's (CNPS') Electronic Inventory (CNPSEI; CNPS 2020) to determine the special-status plant and

PC ORIGINAL PKG

wildlife species that have been documented in the vicinity of the Project. The CNDDB and CNPSEI database searches were conducted on September 24 and November 2, 2020. ECORP searched CNDDB and CNPSEI records within the Project Area boundaries as depicted on USGS 7.5-minute Iris topographic quadrangle, and the surrounding topographic quadrangles: Wister, Iris Wash, Lion Head Mountain, Niland, Tortuga, Westmorland, Wiest, and Amos. The CNDDB and CNPSEI contain records of reported occurrences of federally or state-listed endangered, threatened, proposed endangered or threatened species, California Species of Special Concern (SSC), and other special-status species or habitat that may occur within or in the vicinity of the Project. Additional information was gathered from the following sources and includes, but is not limited to the following:

- U.S. Department of Agriculture, Natural Resources Conservation Service (NRCS) *Web Soil Survey* (NRCS 2020a);
- *Special Animals List* (CDFW 2020b);
- *State and Federally Listed Endangered and Threatened Animals of California* (CDFW 2020c);
- *The Jepson Manual: Vascular Plants of California* (Baldwin et al. 2012);
- *The Manual of California Vegetation*, 2nd Edition (Sawyer et al. 2009); and
- various online websites (e.g., CalFlora 2020).

A desktop review of the National Wetlands Inventory (USFWS 2020a) and the corresponding USGS topographic maps was also conducted to determine if there were any blue line streams or drainages in the Survey Area that might potentially fall under the jurisdiction of either federal or State agencies.

3.2 Field Survey

3.2.1 sUAS Survey and Vegetation Mapping

Due to the size of the area and limited road access, an initial survey utilizing a sUAS was conducted to quickly assess current site conditions and gather high-resolution imagery. Upon arrival at the site, an initial field reconnaissance was conducted by the drone pilot to obtain an understanding of the site topography, access, vegetation densities, and staging areas for controlling the aerial flights. The drone was programmed to do a systematic flight over the property to collect high-resolution aerial photographs of the entire property. The photos collected were then combined into a single orthomosaic image that was incorporated into mapping files in a Geographic Information System (GIS).

The information gathered from the sUAS/drone survey were then used to assist the biologists with accurate mapping of the vegetation communities. A botanist utilized the high-resolution drone imagery to map vegetation communities. Vegetation classifications were in accordance with *A Manual of California Vegetation* (Sawyer et al. 2009). Vegetation communities that did not fit within the Sawyer classification system were described following Holland (1986) or Cowardin (alternative methods). Areas of the site that had already been graded, developed, and/or disturbed were mapped as such. Acreages of each vegetation community were calculated based on GIS data collected during the sUAS survey.

PC ORIGINAL PKG

3.2.2 Biological Reconnaissance Survey

The biological reconnaissance survey was conducted by walking the entire Study Area to determine the vegetation communities and wildlife habitats on the Project sites. Private property and inaccessible areas within the buffer were surveyed utilizing 8x42 binoculars. The biologists documented the plant and animal species present in the Survey Area and the conditions within the Survey Area were assessed for their potential to provide habitat for special-status plant and wildlife species, including those from the literature review. Data were recorded on submeter Global Positioning System (GPS) devices, data sheets, and maps. In instances where a special-status species was observed, the date, species, location and habitat, and GPS coordinates were recorded. The locations of special-status species observations were recorded using a handheld submeter GPS in North American Datum (NAD) 83, Universal Transverse Mercator (UTM) coordinates, Zone 11S. Photographs were also taken during the survey to provide visual representation of the various vegetation communities within the Project sites. The Project sites were also examined to assess its potential to facilitate wildlife movement or function as a movement corridor for wildlife throughout the region.

Plant and wildlife species, including any special-status species that were observed during the survey, were recorded. Plant nomenclature follows that of *The Jepson Manual: Vascular Plants of California* (Baldwin et al. 2012). Wildlife nomenclature follows that of *The American Ornithologists' Union (AOU) Checklist of North American Birds* (AOU 2020), the Society for the Study of Amphibians and Reptiles (SSAR 2017), and the *Revised Checklist of North American Mammals North of Mexico* (Bradley et al. 2014).

3.2.3 Aquatic Resources Delineation

An aquatic resources delineation was conducted by ECORP delineation specialists in conjunction with the biological reconnaissance survey, the results of which are presented under separate cover (ECORP 2020).

3.3 Potential for Occurrence Determinations

Using information from the literature review and observations in the field, a list of special-status plant and animal species that have potential to occur within the Survey Area was generated. For the purposes of this assessment, special-status species are defined as plants or animals that:

- have been designated as either rare, threatened, or endangered by CDFW, CNPS, or the USFWS, and/or are protected under either the federal or California ESAs;
- are candidate species being considered or proposed for listing under these same acts;
- are fully protected by the California Fish and Game Code, §§ 3511, 4700, 5050, or 5515; and
- are of expressed concern to resource and regulatory agencies or local jurisdictions.

Special-status species reported for the region in the literature review or for which suitable habitat occurs on the Survey Area were assessed for their potential to occur within the Survey Area based on the following guidelines:

Present: The species was observed on site during a site visit or focused survey.

PC ORIGINAL PKG

High: Habitat (including soils and elevation factors) for the species occurs within the Survey Area and a known occurrence has recently been recorded (within the last 20 years) within five miles of the area.

Moderate: Habitat (including soils and elevation factors) for the species occurs within the Survey Area and a documented observation occurs within the database search, but not within five miles of the area; a historic documented observation (more than 20 years old) was recorded within five miles of the Survey Area; or a recently documented observation occurs within five miles of the area and marginal or limited amounts of habitat occurs in the Project site.

Low: Limited or marginal habitat for the species occurs within the Survey Area and a recently documented observation occurs within the database search, but not within five miles of the area; a historic documented observation (more than 20 years old) was recorded within five miles of the Survey Area; or suitable habitat strongly associated with the species occurs on site, but no records or only historic records were found within the database search.

Presumed Absent: Species was not observed during a site visit or focused surveys conducted in accordance with protocol guidelines at an appropriate time for identification; habitat (including soils and elevation factors) does not exist on site; or the known geographic range of the species does not include the Survey Area.

Note: Location information on some special-status species may be of questionable accuracy or unavailable. Therefore, for survey purposes, the environmental factors associated with a species' occurrence requirements may be considered sufficient reason to give a species a positive potential for occurrence. In addition, just because a record of a species does not exist in the databases does not mean it does not occur. In many cases, records may not be present in the databases because an area has not been surveyed for that particular species.

4.0 RESULTS

The results of the literature review and field surveys, including site characteristics, vegetation communities, wildlife, special-status species, and special-status habitats (including any potential wildlife corridors) are summarized below.

4.1 Literature Review

4.1.1 Special-Status Plants and Wildlife

Special-status plants and wildlife species reported for the region in the literature review or for which suitable habitat occurs were evaluated for their potential to occur within the Project Areas or in the buffer areas within the Survey Area where indirect impacts could occur. Of all available records, a total of 18 special-status plant species and 19 special-status wildlife species were identified as having the potential for occurrence in the vicinity of the Project Areas (Attachments B and C).

PC ORIGINAL PKG

4.1.2 U.S. Fish and Wildlife Service Designated Critical Habitat

The Project Areas are not located within any USFWS-designated critical habitat. The closest designated critical habitat is for desert tortoise (*Gopherus agassizii*) located approximately seven miles to the northeast and Peirson's milk-vetch (*Astragalus magdalenae* var. *peirsonii*) located approximately six miles to the southeast of the Project Areas.

4.2 Biological Reconnaissance Survey

The biological reconnaissance survey was conducted by ECORP biologists Christina Congedo, Greg Hampton, Caroline Garcia, Christina Torres, and Jennifer Kendrick. Summarized below are the results of the biological reconnaissance survey, including site characteristics, plants and plant communities, wildlife, special-status species, and special-status habitats (including any potential wildlife corridors). Weather conditions during the survey are summarized in Table 2.

Table 2. Weather Conditions During the Survey

Study Area	Date	Time		Temperature (˚F)		Cloud Cover (%)		Wind Speed (mph)	
		Start	End	Start	End	Start	End	Start	End
1	09/29/2020	0630	1400	67	105	0	0	4	3-6

2	11/10/2020	0745	1605	49	64	0	0	0	0
2 and 3	11/11/2020	0930	1645	63	67	0	0	2-3	2-3
3	11/12/2020	0800	1600	55	72	15	5	0-3	0-3
3	11/13/2020	0750	1430	48	77	0	0	0-3	0-3

4.2.1 Property Characteristics

The Study Areas consist of mostly undeveloped land. Disturbances onsite include the railroad, Coachella Canal, a small grove of active agriculture, and roads. An extensive alluvial fan system with associated riparian community traverses the Study Areas. This system begins at the Chocolate Mountains to the northeast and heads southwest across the sites. Study Area 1 is bordered by an active railroad right-of-way to the southwest. Within the southeast buffer of Study Area 1, an intermittent drainage flows southwest under the railroad tracks via a concrete underpass. A ridgeline, which runs northwest-southeast splits Study Area 1, with either side of the ridge descending into lowlands. Portions of the Coachella Canal travel through the western sections of Study Areas 2 and 3. Adjacent land uses include agricultural land to the west and undeveloped land to the north, south, and east. Representative site photographs are included in Attachment A.

Topography for the Study Areas generally consists of gentle slopes with a gradual increase in elevation from the western extent to the eastern extent. The southwest portion of Study Area 1 is slightly below sea

PC ORIGINAL PKG

level at an elevation of -2 meters (-7 feet), and the eastern extent of Study Area 3 is at an elevation of 55 meters (182 feet) above mean sea level. A soils analysis search was conducted using the Web Soil Survey data (NRCS 2020a). The eastern portions of Study Areas 2 and 3 fall within the Colorado Desert Area soil survey; therefore, soil survey data was not available for these portions. Eleven soil units, or types, occur within the Project Areas (Figure 3). These include:

- 103 - Carsitas gravelly sand, 0 to 5 percent slopes
- 124 - Niland gravelly sand
- 125 - Niland gravelly sand, wet
- 129 – Pits
- 130 - Rositas sand, 0 to 2 percent slopes
- 132 - Rositas fine sand, 0 to 2 percent slopes
- 133 - Rositas fine sand, 2 to 9 percent slopes
- 135 - Rositas fine sand, wet, 0 to 2 percent slopes
- 139 - Superstition loamy fine sand
- 141- Torriorthents and Orthids, 5 to 30 percent slopes
- 145 - Water

The Niland gravelly sand (124), Niland gravelly sand, wet (125), and Pits (129) map units contain hydric minor components (NRCS 2020b). A summary of characteristics based on official series descriptions for each of the soil series mapped within the Study Areas are provided under separate cover in the aquatic resources delineation report (ECORP 2020).

4.2.2 Vegetation Communities/Land Use

The majority of the Study Areas consists of creosote bush scrub and blue palo verde/ironwood woodland. The location of each vegetation community in the Study Areas are described in detail below and presented on Figure 4. Acreage of each habitat and vegetation community in the Project Areas, where direct impacts would occur, are shown in Table 3. Representative photographs of the habitats within the Study Areas are included in Attachment A.

Table 3. Vegetation Communities and Land Covers in Project Areas

Vegetation Communities and Land Covers	Acres
Bush Seepweed Scrub	7.44
Creosote Bush Scrub	881.97
Disturbed Creosote Bush Scrub	11.30
Blue Palo Verde/Ironwood Woodland	230.73
Tamarisk Thickets	1.57
Urban/Developed - Roads	8.50
Project Area Totals	**1141.51**

4.2.2.1 Bush Seepweed Scrub (*Suaeda [moquinii] nigra* Shrubland Alliance)

Bush sweepweed scrub is found on flat to gently sloping valley bottoms, bajadas, and toe slopes adjacent to alluvial fans. Bush seepweed scrub is dominated by bush sweepweed, a USFWS Wetland Inventory OBL species (USACE 1996), and can be co-dominant with four-wing saltbush (*Atriplex canescens*) and/or alkali goldenbush (*Isocoma acradenia*). This vegetation community typically has a sparse to intermittent herbaceous layer. This community was only observed in Study Area 1. Bush seepweed dominated the shrub cover with occasional occurrences of four-wing saltbush, arrow weed (*Pluchea sericea*), big saltbush (*Atriplex lentiformis*), alkali goldenbush, and tamarisk.

4.2.2.2 Creosote Bush Scrub (*Larrea tridentata* Shrubland Alliance)

Creosote bush scrub is the most characteristic vegetation of the California desert and is found on alluvial fans, bajadas, upland slopes, and washes. Creosote bush scrub is dominated by a nearly monotypic stand of creosote bush with an open canopy and an herbaceous layer of seasonal annuals and perennials. This community was dominant in all three Study Areas. Other species that were observed within this community included burrobush (*Ambrosia dumosa*), narrow leaved cryptantha (*Cryptantha angustifolia*), and desert plantain (*Plantago ovata*).

4.2.2.3 Disturbed Creosote Bush Scrub (Disturbed *Larrea tridentata* Shrubland Alliance)

Disturbed creosote bush is creosote bush scrub that has been previously altered. Within Study Areas 2 and 3, this vegetation cover is characterized as sparser with a high percentage of nonnative plant species including common Mediterranean grass (*Schismus barbatus*) and Saharan mustard (*Brassica tournefortii*).

Other plant species observed within this community include desert plantain and crinkle mat (*Tiquilia plicata*).

4.2.2.4 Blue Palo Verde/Ironwood Woodland (*Parkinsonia florida - Olneya tesota* Woodland Alliance)

Blue palo verde/ironwood woodland is characterized by blue palo verde or ironwood as a dominant or co-dominant plant species in the tree or tall shrub canopy that is open to continuous. The shrub layer is intermittent or open, while the herbaceous layer is sparse with seasonal annuals. It occurs in desert arroyo margins, seasonal watercourses, desert washes, bottomlands, bajadas, alluvial fans, and lower slopes. Blue palo verde/ironwood woodland take up large portions of Study Area 2 and 3. Other plant species observed within this community included creosote bush, cheesebush (*Ambrosia salsola*), and burrobush.

4.2.2.5 Tamarisk Thickets (*Tamarix* spp. Shrubland Semi-Natural Alliance)

Tamarisk thickets are characterized by a weedy monoculture of tamarisk. This habitat is typically in ditches, washes, rivers, arroyo margins, lake margins, and other watercourses. Within all three Study Areas, tamarisk was often the dominant, with arrow weed occasionally as a co-dominant plant species. Other species observed within this community included popcorn flowers (*Cryptantha* spp.), screw bean mesquite (*Prosopis pubescens*), and Mediterranean grass.

4.2.2.6 Other Land Cover Types

Urban/Developed

Urban/Developed areas do not constitute a vegetation classification, but rather a land cover type. Areas mapped as developed have been constructed upon or otherwise physically altered to an extent that natural vegetation communities are no longer supported. In the Study Areas, this land cover consisted primarily of compacted dirt roads and structures. In Study Area 1, an area consisting of bare ground surrounding four-wing saltbush scrub was also classified as "urban/developed – dirt roads" as this area functioned as a vehicle turnaround.

4.2.2.7 Vegetation Communities and Land Covers within Survey Area

One additional vegetation community and one additional land cover was observed within the buffer, but not within the Project Areas. These are described in detail below. No impacts to this vegetation community and land cover are expected as a result of Project-related activities.

PC ORIGINAL PKG

Active Agriculture

Active agriculture consists of row crops that include planted, typically monotypic rows of crops of annual and perennial species with open space between rows. Species composition frequently changes by season and year. Row crops often occur in upland areas with high soil quality, or floodplains and are almost always artificially irrigated. This land cover was observed in the northwestern portion of the buffer of Study Area 1.

Fourwing Saltbush Scrub (Atriplex canescens Shrubland Alliance)

Fourwing saltbush scrub is characterized by fourwing saltbush as a dominant within the shrub layer. The shrub canopy is open or intermittent, while the herbaceous layer can be variable, with seasonal herbs and nonnative grasses. It is found within playas, shores, lake deposits, dissected alluvial fans, or channel beds. Fourwing saltbush scrub was only observed in a small section within the buffer of Study Area 2. Other plant species observed areas within this community included creosote bush, Mediterranean grass, and brittlebush (*Encelia* spp.).

4.2.3 Wildlife Observed

Wildlife species observed included western side-blotch lizard (*Uta stansburiana elegans*), western whiptail lizard (*Aspidoscelis tigris*), desert patch-nosed snake (*Salvadora hexalepis hexalepis*), northern harrier *(Circus hudsonius*), loggerhead shrike (*Lanius ludovicianus*), black-tailed gnatcatcher (*Polioptila melanura*), great egret (*Ardea alba*), American kestrel (*Falco sparverius*), Gambel's quail (*Callipepla gambelii*), European starling (*Sturnus vulgaris*), killdeer (*Charadrius vociferus*), rock wren (*Salpinctes obsoletus*), turkey vulture (*Cathartes aura*), common raven (*Corvus corax*), great-tailed grackle (*Quiscalus mexicanus*), phainopepla (*Phainopepla nitens*), red-tailed hawk (*Buteo jamaicensis*), greater roadrunner (*Geococcyx californianus*), ladder-backed woodpecker (*Dryobates scalaris*), black phoebe (*Sayornis nigricans*), Say's phoebe (*Sayornis saya*), house finch (*Haemorhous mexicanus*), black-throated sparrow (*Amphispiza bilineata*), white-crowned sparrow (*Zonotrichia leucophrys*), Anna's hummingbird *(Calypte anna*), bushtit (*Psaltriparus minimus*), peregrine falcon (*Falco peregrinus*), cactus wren (*Campylorhynchus brunneicapillus*), lesser goldfinch (*Spinus psaltria*), black-tailed jackrabbit (*Lepus californicus*), desert cottontail (*Sylvilagus audubonii*), bobcat (*Lynx rufus*), and signs of coyote (*Canis latrans*), desert kit fox (*Vulpes macrotis*), antelope squirrel (*Ammospermophilus leucurus*), kangaroo rat (*Dipodomys* sp.), and raccoon (*Procyon lotor*).

4.3 Special-Status Species Assessment

The literature review resulted in 22 special-status plant and 27 special-status wildlife species that have historically been recorded in the vicinity of the Project Areas or that are highly associated with habitat that occurs on the Project sites. Special-status plants were evaluated for their potential to occur within the Project Areas where impacts could occur. Special-status wildlife were evaluated for their potential to occur within the Survey Areas, a broader area that includes the Project Areas and buffer, where direct or indirect impacts could occur. Special-status wildlife species observed during the reconnaissance survey are depicted on Figure 5.

PC ORIGINAL PKG

4.3.1 Plants

Numerous special-status plant species have been recorded within five miles of the Project Areas, according to the CNDDB (CDFW 2020a), IPaC (USFWS 2020b), and CNPSEI (CNPS 2020). Of all available records, 18 special-status plant species were identified as those with the potential for occurrence within the vicinity of the Project Areas, while an additional four plant were presumed absent based on their known habitat not occurring within the Project Areas. Descriptions of the CNPS designations are found in Table 4 and a list of the special-status plant species identified in the literature review is presented below (CNPS 2020).

Table 4. CNPS Status Designations

List Designation	Meaning
1A	Plants Presumed Extirpated in California and Either Rare or Extinct Elsewhere
1B	Plants Rare, Threatened, or Endangered in California and Elsewhere
2A	Plants Presumed Extirpated in California, But Common Elsewhere
2B	Plants Rare, Threatened, or Endangered in California, But More Common Elsewhere
3	Plants about which we need more information; a review list
4	Plants of limited distribution; a watch list
List 1B, 2, and 4 extension meanings:	
.1	Seriously threatened in California (over 80 percent of occurrences threatened / high degree and immediacy of threat)
.2	Moderately threatened in California (20-80 percent occurrences threatened / moderate degree and immediacy of threat)
.3	Not very threatened in California (less than 20 percent of occurrences threatened / low degree and immediacy of threat or no current threats known)

Note: According to CNPS (Skinner and Pavlik 1994), plants on Lists 1B and 2 meet definitions for listing as threatened or endangered under Section 1901, Chapter 10 of the California Fish and Game Code (California Department of Fish and Game [CDFG] 1984). This interpretation is inconsistent with other definitions.

Figure 5. Special-status Species Observations
Study Area 3
2020-144/2020-199/2020-209 Vega SES 2 and Vega Ses 3

4.3.1.1 Special-Status Plant Species Present

During the reconnaissance survey, the following species was observed within Study Areas 2 and 3:

- Munz's cholla (*Cylindropuntia munzii*) is a CNPS California Rare Plant Rank (CRPR) 1B.3 plant species. This species is known to occur at elevations between 150 and 600 meters (492 and 1,969 feet) and blooms in the month of May. Munz's cholla is known to occur in gravelly or sandy Sonoran desert scrub habitat. A total of two individuals were observed within Study Area 2 and 15 individuals were observed within Study Area 3. Most are located adjacent to the Project Areas. Two individuals are located within the Project Area of Study Area 3 and could be directly impacted. Additionally, there is high potential for this species to occur in Study Area 1 due to presence of creosote bush scrub habitat.

4.3.1.2 Special-Status Plant Species with a Moderate Potential to Occur

Due to the presence of suitable habitat and several known recent occurrences within five miles of the Project Areas, the following species were determined to have a moderate potential to occur:

- Gravel milk-vetch (*Astragalus sabulonum*) is a CRPR 2B.2 plant species. This species is known to occur at elevations between -60 and 930 meters (-197 and 3,051 feet) and blooms between February and June. Gravel milk-vetch is known to occur in Sonoran desert scrub habitat within sandy, sometimes gravelly flats, washes, and roadsides. One historic CNDDB record from 1906 was recorded approximately 3.66 miles northwest of Study Area 1. Potential habitat occurs within the Study Areas for this species in the creosote bush scrub habitat.
- Wiggins' croton (*Croton wigginsii*) is a CRPR 2B.2 plant species. This species is known to occur at elevations between 50 and 100 meters (164 and 328 feet) and blooms between March and May. Wiggins' croton is known to occur in sandy Sonoran desert scrub habitat. One historic CNDDB record from 1986 was recorded approximately 3.8 miles southeast of Study Area 3. Potential habitat occurs within the Study Areas for this species in the sandy, creosote bush scrub habitat.
- Glandular ditaxis (*Ditaxis claryana*) is a CRPR 2B.2 plant species. This species is known to occur at elevations between sea level and 465 meters (sea level and 1,526 feet) and blooms between October and March. Glandular ditaxis (*Ditaxis claryana*) is known to occur in sandy Sonoran desert scrub habitat. One historic CNDDB record from 1978 was recorded within the northern portion of Study Area 3. Potential habitat occurs within the Study Areas for this species in the creosote bush scrub habitat.
- Sand food (*Pholisma sonorae*) is a CRPR 1B.2 plant species. This parasitic species attaches to the roots of host *Eriogonum*, *Tiquilia*, *Ambrosia*, and *Pluchea* species. Sand food is known to occur at elevations between sea level and 200 meters (sea level and 656 feet) and blooms between April and June. It is known to occur in sandy Sonoran desert scrub habitat. One historic CNDDB record from 1980 was recorded approximately 4.42 miles southeast of the Study Areas, and a known occurrence exists within the CNPS quadrant database. Potential habitat occurs within the Study Areas for this species in the sandy, creosote bush scrub habitat.

PC ORIGINAL PKG

4.3.1.3 Special-Status Plant Species with Low Potential to Occur

The following species were found to have a low potential to occur on the Project Areas because of limited habitat for the species on the site and a known occurrence has been reported in the database, but not within five miles of the Project Areas, or suitable habitat strongly associated with the species occurs within the Project Areas, but no records were found in the database search:

- Salton milk-vetch (*Astragalus crotalariae*), CNPS 4.3
- Harwood's milk-vetch (*Astragalus insularis* var. *harwoodii*), CNPS 2B.2
- Borrego milk-vetch (*Astragalus lentiginosus* var. *borreganus*), CNPS 4.3
- pink fairy-duster (*Calliandra eriophylla*), CNPS 2B.3
- sand evening-primrose (*Chylismia arenaria*), CNPS 2B.2
- spiny abrojo (*Condalia globosa* var. *pubescens*), CNPS 4.2
- Abrams' spurge (*Euphorbia abramsiana*), CNPS 2B.2
- ribbed cryptantha (*Johnstonella costata*), CNPS 4.3
- slender-spined all thorn (*Koeberlinia spinosa* var. *tenuispina*), CNPS 2B.2
- slender cottonheads (*Nemacaulis denudata* var. *gracilis*), CNPS 2B.2
- roughstalk witch grass (*Panicum hirticaule* var. *hirticaule*), CNPS 2B.1
- Coves' cassia (*Senna covesii*), CNPS 2B.1
- Mecca-aster (*Xylorhiza cognata*), CNPS 1B.2

4.3.1.4 Special-Status Plant Species Presumed Absent

The following species are presumed absent from the Project sites due to the lack of suitable habitat, soil type, and/or elevation range at the Project Areas:

- chaparral sand-verbena (*Abronia villosa* var. *aurita*), CNPS 1B.1
- Peirson's milk-vetch (*Astragalus magdalenae* var. *peirsonii)*, CNPS 1B.2
- Algodones Dunes sunflower (*Helianthus niveus* var. *tephrodes*), CNPS 1B.2
- giant Spanish-needle (*Palafoxia arida* var. *gigantea*), CNPS 1B.3

4.3.2 Wildlife

The literature search documented 27 special-status wildlife species in the vicinity of the Survey Area, seven of which are federally and/or state-listed. Of the 27 special-status wildlife species identified in the literature review, two were present within the Survey Area, one was found to have a high potential to occur, eight were found to have a moderate potential to occur and six were found to have a low potential

PC ORIGINAL PKG

to occur; the remaining nine species are presumed absent from the Survey Area. Descriptions of the federal and state wildlife designations are found in Table 5, and a brief natural history and discussion of the special-status wildlife species found onsite that have a high or moderate potential to occur within the Survey Area are provided below.

Table 5. Wildlife Status Designations

List Designation	Meaning
Federal Designation	**Jurisdiction under United States Fish and Wildlife Service (USFWS)**
END	Federally listed as Endangered
THR	Federally listed as Threatened
CAN	Federal Candidate Species
FSC	Federal Species of Concern
FPD	Federal Proposed for Delisting
BBC	Bird of Conservation Concern
State Designation	**Jurisdiction under California Fish and Wildlife Service (CDFW)**
END	State listed as Endangered
THR	State listed as Threatened
SSC	California Species of Special Concern
FP	Fully Protected Species
WL	Watch List

4.3.2.1 Special-Status Wildlife Species Present

The following species were observed within the Survey Area during the reconnaissance survey:

- Loggerhead shrike is a USFWS bird of conservation concern (BCC) and CDFW SSC. This species prefers open country with scattered shrubs and trees. They frequent agricultural fields, abandoned orchards, desert scrublands, and riparian areas. Two individuals were observed perching in palo verde-ironwood woodland, and creosote bush scrub of Study Area 2.
- Black-tailed gnatcatcher is a CDFW WL species. This species remains in pairs all year, defending permanent territories. Black-tailed gnatcatchers prefer dry washes or desert brush with varied growth of mesquite, acacias, and paloverdes, but are also known to inhabit tamarisk scrub. Many pairs of black-tailed gnatcatchers were observed foraging and calling within the palo verde-ironwood woodland, tamarisk thickets, bush seepweed scrubs, and creosote bush scrub within and adjacent to Study Areas 1 and 2.

PC ORIGINAL PKG

4.3.2.2 Special-Status Wildlife Species with a High Potential to Occur

One species was found to have a high potential to occur within the Survey Area due to the presence of suitable habitat for the species on the sites and because a known occurrence has been recorded within five miles of the sites:

- Burrowing owl (*Athene cunicularia*) is a USFWS BCC, a CDFW SSC, and Imperial County Species of Conservation Focus. It is typically found in dry open areas with few trees and short grasses; it is also found in vacant lots near human habitation. It uses uninhabited mammal burrows for roosts and nests, often in close proximity to California ground squirrel (*Otospermophilus beecheyi*) colonies. It primarily feeds on large insects and small mammals but will also eat birds and amphibians. A burrowing owl was observed on the Vega SES 5 Project site, which is adjacent to Vega SES 2/Study Area 1. This means burrowing owl is likely to also occur within the Vega 2 and 3 Project Areas and may not have been observed due to wintering movement trends.

4.3.2.3 Special-Status Wildlife Species with a Moderate Potential to Occur

Nine species were found to have moderate potential to occur within the Survey Area because habitat (including soils and elevation factors) for the species occurs on the sites and a known occurrence exists within the database search, but not within five miles of the Survey Area; or a known occurrence exists within five miles of the Survey Area and marginal or limited amounts of habitat occurs within the Survey Area:

- Flat-tailed horned lizard (*Phrynosoma mcallii*) is a CDFW SSC and Imperial County Species of Conservation Focus. This species is most commonly found on sandy flats and valleys within desert scrub habitat with little or no windblown sand. They can also be found on salt flats and gravelly soils. The creosote bush scrub habitat provides suitable habitat for the flat-tailed horned lizard. There are known regional populations to north and south of the sites but occurrences in proximity to the Project Areas themselves is not well-known.

- Desert tortoise is a federally and state-threatened species. This species is found in sandy flats to rocky foothills, including alluvial fans, washes, and canyons where suitable soils for den construction are present. The creosote bush scrub, alluvial fans, and washes provide suitable habitat for the desert tortoise. One burrow with a half-moon shape was found during the reconnaissance survey within Vega 2 in Study Area 1. No desert tortoise sign (scat, tracks, carcasses, scrapes, etc.) was observed however the shape indicates that a desert tortoise could use the burrow. Desert tortoise critical habitat is seven miles northeast of the Project Areas.

- Northern harrier is a CDFW SSC. This species is typically found in open habitats with dense ground cover including grasslands, agricultural fields, and marshes. Northern harriers nest on the ground, preferring wetland habitat for cover. There is some suitable habitat for this species within all three Study Areas. This species was observed outside of the Survey Area during the reconnaissance survey.

- California horned lark (*Eremophila alpestris* ssp. *actia*) is a CDFW WL species. It occurs in bare, open areas dominated by low vegetation or widely scattered shrubs, including prairies, deserts,

PC ORIGINAL PKG

and plowed fields. It nests in a hollow on the ground. The sparse creosote scrub habitat onsite and in the buffer zones provides potential habitat.

- Merlin (*Falco columbarius*) is a CDFW WL species. This species prefers open and semi-open areas within woodlands near water bodies including rivers, lakes, and wetlands. There are suitable open areas within the upland habitats adjacent to the tamarisk thickets that provide suitable habitat for the merlin. Therefore, wintering individuals have a moderate potential to occur within the Survey Area. There is a CNDDB record from 2007 located approximately three miles from the Project Areas.
- Crissal thrasher (*Toxostoma crissale*) is a CDFW SSC. It inhabits desert scrub and riparian brush with dense mesquite thickets often near streams or washes. The tamarisk thickets and bush seepweed scrub along the washes provides suitable habitat for this species.
- California black rail (*Laterallus jamaicensis* ssp. *coturniculus*) is a USFWS BBC, state-threatened, and CDFW fully protected species. California black rail are typically found in marsh habitat, including riparian marshes, saltmarshes, and wetlands. This species prefers consistent shallow water within the habitats. There is suitable habitat during the rainy season and shortly after for the California black rail within the riparian habitats in the Study Areas. There is one recent CNNDB record from 2015 approximately 4.8 miles from the Project Areas and four historic CNDDB records, two of which are located within the Project Areas.
- Yuma hispid cotton rat (*Sigmodon hispidus eremicus*) is a CDFW SSC. This species is generally associated with mesic habitats near drainage ditches, streams, and sloughs but also occurs in open fields or on the borders of open fields where there is dense grass habitat or agricultural fields. There is potential for this species to occur near the Coachella Canal, where they can utilize runways through dense herbaceous growth along the canal.
- Palm Springs pocket mouse (*Perognathus longimembris bangsi*) is a CDFW SSC. This species is associated with flat or gently sloping habitats of loose or sandy soils, with relatively sparse vegetation. There is potential for this species in the creosote bush scrub habitats of the Study Areas.

4.3.2.4 Wildlife Species with Low Potential to Occur

Six species were found to have a low potential to occur within the Survey Area because limited habitat for the species occurs on the sites and a known occurrence has been reported in the database, but not within five miles of the Survey Area, or suitable habitat strongly associated with the species occurs within the Survey Area, but no records were found in the database search:

- mountain plover (*Charadrius montanus*), USFWS BCC and CDFW SSC,
- Gila woodpecker (*Melanerpes uropygialis*), USFWS BCC and state endangered,
- Yuma Ridgway's rail (*Rallus obsoletus yumanensis*), USFWS END and state threatened and CDFW fully protected,

PC ORIGINAL PKG

- California leaf-nosed bat (*Macrotus californicus*), CDFW SSC,
- pallid bat (*Antrozous pallidus*), CDFW SSC, and
- western yellow bat (*Lasiurus xanthinus*), CDFW SSC.

4.3.2.5 Wildlife Species Presumed Absent

The following nine species are presumed absent from the Survey Area due to the lack of suitable habitat:

- razorback sucker (*Xyrauchen texanus*), federally listed endangered, state listed endangered, and CDFW FP,
- Sonoran desert toad (*Incilius alvarius*), CDFW SSC,
- barefoot gecko (*Coleonyx switaki*), state threatened,
- western mastiff bat (*Eumops perotis* ssp. *californicus*), CDFW SSC,
- pocketed free-tailed bat (*Nyctinomops femorosaccus*), CDFW SSC,
- big free-tailed bat (*Nyctinomops macrotis*), CDFW SSC
- Mexican long-tongued bat (*Choeronycteris mexicana*), CDFW SSC,
- Townsend's big-eared bat (*Corynorhinus townsendii*), CDFW SSC, and
- peninsular bighorn sheep (*Ovis canadensis* ssp. *nelson*), federally listed endangered, state listed endangered, and CDFW FP.

4.4 Wildlife Movement Corridors, Linkages, and Significant Ecological Areas

The concept of habitat corridors addresses the linkage between large blocks of habitat that allow the safe movement of mammals and other wildlife species from one habitat area to another. The definition of a corridor is varied, but corridors may include such areas as greenbelts, refuge systems, underpasses, and biogeographic land bridges, for example. In general, a corridor is described as a linear habitat, embedded in a dissimilar matrix, which connects two or more large blocks of habitat. Wildlife movement corridors are critical for the survivorship of ecological systems for several reasons. Corridors can connect water, food, and cover sources, spatially linking these three resources with wildlife in different areas. In addition, wildlife movement between habitat areas provides for the potential of genetic exchange between wildlife species populations, thereby maintaining genetic variability and adaptability to maximize the success of wildlife responses to changing environmental conditions. This is especially critical for small populations subject to loss of variability from genetic drift and effects of inbreeding. Naturally, the nature of corridor use and wildlife movement patterns varies greatly among species.

The Study Areas were assessed for their ability to function as a wildlife corridor. The Study Areas have an alluvial fan system, which stems from the Chocolate Mountains and spreads across the landscape in the lowland areas. This interconnected drainage system has associated riparian corridors, which occur

PC ORIGINAL PKG

throughout all three Study Areas. These areas provide cover for migrating and nesting birds. It also provides foraging habitat for raptors and small and large mammals, including rodents, felids, and canids. The large drainages and canal lined with tamarisk thickets and blue palo verde/ironwood woodlands are likely utilized by wildlife moving through the area. A bobcat was spotted using the tamarisk thickets for movement during the reconnaissance surveys. Therefore, these features and associated riparian habitat would be considered linkages between natural habitat areas.

The western portion of the Study Areas 2 and 3 are restricted by the Coachella Canal, and the southern border of Study Area 1 is restricted by railroad tracks. Due to the nature of this Study Area's location between the canal and railroad, it is already disconnected and acts as more of a buffer between agricultural lands and wildlands to the northeast, but not as a corridor for mammals.

The blue palo verde/ironwood woodland of Study Areas 2 and 3 provides shelter and good-quality foraging habitat. This habitat would function as a corridor for wildlife movement from the Chocolate Mountains. The bush seepweed scrub provides moderate shelter and little to moderate-quality foraging habitat. The creosote bush scrub habitats offer little shelter, but moderate-quality foraging habitat. The eastern portion of the Study Areas 2 and 3, east of Coachella Canal, currently provide wildlife movement opportunities because it consists of open and relatively unimpeded land. This portion of the Projects would be considered a wildlife movement corridor.

5.0 PROJECT IMPACTS

Implementation of the Projects has potential to impact blue palo verde – ironwood woodland, bush seepweed scrub, creosote bush scrub, disturbed creosote bush scrub, and tamarisk thickets. These communities may provide suitable nesting and foraging habitat for passerines, including loggerhead shrike, black-tailed gnatcatcher, burrowing owl, raptor foraging habitat, and habitat for gravel milk-vetch, Wiggins' croton, glandular ditaxis, sand food, and Munz's cholla. The following recommendations would be required to determine if the Projects would result in significant impacts to vegetation communities, special-status plant and wildlife species, jurisdictional waters, and wildlife movement corridors.

5.1.1 Special-Status Species

5.1.1.1 Special-Status Plants

The literature review identified 18 special-status plant species that have the potential to occur within the Project Areas. Of 22 original records, four plant species are presumed absent due to the lack of suitable habitat within the Project Areas. These species are chaparral sand-verbena, Peirson's milk-vetch, Algodones Dunes sunflower, and giant Spanish-needle. A total of 13 plant species have a low potential to occur due to the limited suitable habitat within the Project Areas. These species are Salton milk-vetch, Harwood's milk-vetch, Borrego milk-vetch, pink fairy-duster, sand evening-primrose, spiny abrojo, Abrams' spurge, ribbed cryptantha, slender-spined all thorn, slender cottonheads, roughstalk witch grass, Coves' cassia, and Mecca-aster. A total of four plant species have a moderate potential to occur due to the presence of suitable habitat within the Project Areas. These species are gravel milk-vetch, Wiggins' croton, glandular ditaxis, and sand food.

PC ORIGINAL PKG

One rare plant species, Munz's cholla (CRPR 1B.3), was found to be present within Study Areas 2 and 3, and there is high potential for this species to occur within Study Area 1. Suitable habitat for this species is present within the creosote bush scrub habitat. Two individuals are located within the Project Area of Study Area 3 and could be directly impacted. Impacts that may occur to the species includes loss of individuals, habitat, and seedbank. Depending on the size of the population, this impact may be significant. Implementation of **BIO-1**, **BIO-2**, and **BIO-9** is recommended to decrease the chances of a significant impact.

5.1.1.2 Special-Status Wildlife

The literature review identified 27 special-status wildlife species that have the potential to occur within the Survey Area. However, 15 of these species have a low or no potential to occur due to the lack of suitable and/or limited habitat within the Survey Area. Wildlife species that are presumed absent from the Survey Areas include razorback sucker, Sonoran desert toad, barefoot gecko, western mastiff bat, pocketed free-tailed bat, big free-tailed bat, Mexican long-tongued bat, Townsend's big-eared bat, and peninsular bighorn sheep. Wildlife species with a low potential to occur include Gila woodpecker, Yuma Ridgway's rail, California leaf-nosed bat, pallid bat, and western yellow bat.

Ten species have a moderate or high potential to occur within the Survey Area, these species are flat-tailed horned lizard, Mojave desert tortoise, northern harrier, California horned lark, merlin, Crissal thrasher, California black rail, Yuma hispid cotton rat, Palm Springs pocket mouse, and burrowing owl. Additionally, two special-status wildlife species were observed onsite during the habitat assessment; loggerhead shrike and black-tailed gnatcatcher were observed in the tamarisk thickets, bush seepweed scrub, blue palo verde/ironwood woodland, and creosote bush scrub throughout the Study Areas. Direct impacts to these species that could occur include injury, mortality, nest failures, and loss of young. Indirect impacts include loss of nesting and foraging habitat, increase in anthropogenic effects (i.e., noise levels, introduction of invasive and nonnative species, increase in human activity, increase in dust). Impacts to these species could be considered significant; therefore, implementation of **BIO-2**, **BIO-3**, **BIO-4**, **BIO-5**, and **BIO-7** is recommended.

Foraging habitat for a number of raptor species and breeding habitat for numerous passerine species that are protected by the MBTA occurs throughout the Project sites. The sites provide nesting habitat for ground-nesting species as well as species that nest in riparian scrub habitat. The presence of large ironwood and palo verde trees within the Study Areas is suitable nesting habitat for raptor species. Additionally, northern harriers are ground nesters, for which the tamarisk thickets and other dense habitats provide potential nesting habitat for this species. Direct impacts to nesting avian species include injury, mortality, loss of young, and nest failure. Indirect impacts include loss of foraging and nesting habitat for passerine and raptors species, increase in noise and human activities, and potential introduction of invasive or nonnative species. Implementation of **BIO-4**, **BIO-5**, and **BIO-7** are recommended to mitigate for potential impacts.

PC ORIGINAL PKG

5.1.2 Sensitive Natural Communities

The approximately 1,712-acre Project sites are comprised of blue palo verde/ironwood woodland, creosote bush scrub, disturbed creosote bush scrub, bush seepweed scrub, tamarisk thickets, and urban/developed land, which would be directly impacted by the Projects. In-kind mitigation, up to 3:1 ratio, may be required by CDFW to offset impacts to bush seepweed scrub, blue palo verde/ironwood woodland, and tamarisk thickets in order to reduce impacts to less than significant. Implementation of **BIO-7** and **BIO-8** is recommended to reduce potential impacts to less than significant threshold.

5.1.3 State- and/or Federally Protected Wetlands and Waters

The results of the Aquatic Resources Delineation and discussion of potential impacts on state- or federally protected wetlands or Waters of the U.S. are discussed in the Aquatic Resources Delineation Report (ECORP 2020), prepared under separate cover. Implementation of **BIO-6** and **BIO-8** is recommended to mitigate for potential significant impacts.

5.1.4 Wildlife Corridors and Nursery Sites

Study Area 1 is located adjacent to areas containing existing disturbances (i.e., railroad, roads, Coachella Canal, and active agricultural land). A majority of this area does not contain suitable vegetation and/or cover to support wildlife movement. Study Areas 2 and 3 does support wildlife movement opportunities connecting the Project Areas to large, undeveloped natural areas to the northeast. The riparian habitats of these areas, in particular, could act as a potential corridor and nursey site for migrating wildlife species. The proposed Project Area of Study Area 3 avoids one of the alluvial fan systems that could function as a corridor, thereby preserving wildlife movement in this area. Implementation of **BIO-2**, **BIO-4**, **BIO-5**, **BIO-6**, and **BIO-7** are recommended to mitigate for potential significant impacts.

5.1.5 Habitat and Conservation Plans and Natural Community Conservation

The Projects will follow the guidelines in Imperial County's Conservation and Open Space Element and meet the requirements outlined in the plan. Consultation with County of Imperial Department of Planning and Development, USFWS, and CDFW would be required should listed plant and/or wildlife species be found to occur.

6.0 RECOMMENDATIONS AND MITIGATION MEASURES

The following recommendations have been developed in accordance with the CEQA impacts analysis for the Projects (see Section 5) but should not be considered mitigation measures at this point in the Project planning process. These actions are recommended prior to Project implementation:

BIO-1 **Rare Plant Surveys:** Rare plant surveys should be conducted within suitable habitat on the Project Areas during the appropriate blooming period for the gravel milk-vetch, Wiggins' croton, glandular ditaxis, sand food, and Munz's cholla. The surveys should be conducted by a botanist or qualified biologist in accordance with the USFWS Guidelines for Conducting and Reporting Botanical Inventories for Federally Listed, Proposed, and Candidate Plants (USFWS 1996); the CDFW Protocols for Surveying and Evaluating Impacts to Special Status

PC ORIGINAL PKG

Native Plant Populations and Sensitive Natural Communities (CDFW 2018); and the CNPS Botanical Survey Guidelines (CNPS 2001). If any special-status species are observed during the rare plant surveys, the location of the individual plant or population will be recorded with a submeter GPS device for mapping purposes. If Project-related impacts to rare plants on the Project site are unavoidable, then consultation with CDFW may be required to develop a mitigation plan or additional avoidance and minimization measures. Mitigation measures that may be implemented if the species is observed include establishing a no-disturbance buffer around locations of individuals or a population, salvage or seed collection, and additional monitoring requirements.

BIO-2 **Biological Monitoring:** A qualified biologist should be present to monitor all ground-disturbing and vegetation-clearing activities conducted for the Projects. During each monitoring day, the biological monitor should perform clearance survey "sweeps" at the start of each work day that vegetation clearing takes place to minimize impacts on special-status species with potential to occur (including, but not limited to, special-status and/or nesting bird species and flat-tailed horned lizard). The monitor will be responsible for ensuring that impacts to special-status species, nesting birds, and active nests will be avoided to the greatest extent possible. Biological monitoring should take place until the Project sites have been completely cleared of any vegetation. If an active nest is identified, the biological monitor should establish an appropriate disturbance limit buffer around the nest using flagging or staking. Construction activities should not occur within any disturbance limit buffer zones until the nest is deemed no longer active by the biologist. If special-status wildlife species are detected during biological monitoring activities, then consultation with the USFWS and/or CDFW should be conducted and a mitigation plan should be developed to avoid and offset impacts to these species. Mitigation measures may consist of work restrictions or additional biological monitoring activities after ground-disturbing activities are complete.

BIO-3 **Pre-Construction Surveys for Burrowing Owl:** Pre-construction surveys for burrowing owl should be conducted within the Project Areas and adjacent areas prior to the start of ground-disturbing activities. The surveys should follow the methods described in the CDFW's *Staff Report on Burrowing Owl Mitigation* (CDFG 2012). Two surveys should be conducted, with the first survey being conducted between 30 and 14 days before initial ground disturbance (grading, grubbing, and construction), and the second survey being conducted no more than 24 hours prior to initial ground disturbance. If burrowing owls and/or suitable burrowing owl burrows with sign (e.g., whitewash, pellets, feathers, prey remains) are identified on the Project site during the survey and impacts to those features are unavoidable, consultation with the CDFW should be conducted and the methods described in the CDFW's *Staff Report on Burrowing Owl Mitigation* (CDFG 2012) for avoidance and/or passive relocation should be followed.

BIO-4 **Pre-Construction Nesting Bird Survey:** If construction or other project activities are scheduled to occur during the bird breeding season (Typically February 1 through August 31

PC ORIGINAL PKG

for raptors and March 15 through August 31 for the majority of migratory bird species), a pre-construction nesting-bird survey should be conducted by a qualified avian biologist to ensure that active bird nests, including those for the loggerhead shrike, black-tailed gnatcatcher, and burrowing owl, will not be disturbed or destroyed. The survey should be completed no more than three days prior to initial ground disturbance. The nesting-bird survey should include the Project Areas and adjacent areas where Project activities have the potential to affect active nests, either directly or indirectly due to construction activity or noise. If an active nest is identified, the biologist should establish an appropriately sized disturbance limit buffer around the nest using flagging or staking. Construction activities should not occur within any disturbance limit buffer zones until the nest is deemed inactive by the qualified biologist.

BIO-5 **Pre-Construction Survey for Special-Status Species:** A pre-construction survey should be conducted for special-status wildlife species within all areas of potential permanent and temporary disturbance. The pre-construction survey should take place no more than 14 days prior to the start of ground-disturbing activities. The pre-construction surveys should take place regardless of breeding season timing and should focus on identifying the presence of special-status wildlife species present within the Project Areas or that were identified as having a high potential to occur within the Project Areas. These species include, but are not limited to, burrowing owl, loggerhead shrike, and black-tailed gnatcatcher. Should any special-status species be identified during the pre-construction survey, consultation to develop suitable avoidance and minimization measures with the appropriate agency (USFWS, CDFW) may need to be undertaken.

BIO-6 **Aquatic Resources Regulatory Permitting:** If Project-related impacts will occur to areas under the jurisdiction of the USACE, CDFW or RWQCB, a regulatory permit with those agencies is needed prior to the impact occurring. Permitting includes preparation and submittal of a Pre-Construction Notification under Section 404 of the federal Clean Water Act, an Application for Water Quality Certification under Section 401 of the federal Clean Water Act and a Notification of Lake or Streambed Alteration under Section 1600 of the California Fish and Game Code. Other items such as finalized project plans, quantities of fill material, supporting technical studies and so on are also submitted along with the applications. As a part of this process, the project must also identify and approve mitigation through the respective agencies. Mitigation can include onsite or offsite options or could include payment of an in-lieu fee to a conservation organization. Types of mitigation can include restoration, creation, rehabilitation, enhancement or other types of habitat improvement. Typically, the type of mitigation and acreage of mitigation is negotiated with the regulatory agencies during the permitting process.

BIO-7 **Sensitive Habitat Avoidance:** To the greatest extent possible, plans should avoid impacts to blue palo verde-ironwood woodland, bush seepweed scrub, and tamarisk thicket habitats to minimize potential impacts to special-status species. Excluding these habitats from the

PC ORIGINAL PKG

Project should also minimize mitigation and permitting requirements to meet the less than significant threshold.

BIO-8 **Minimization of Impacts to Riparian Habitat:** Solar panels, structures, and new access roads should not be placed within 50 feet of riparian habitat boundaries. A construction buffer of 300 feet should be established around the riparian habitat during bird breading season (February 1 – August 31). Prior to construction, fencing should be installed approximately 10 feet from the wetland and riparian habitat boundaries within 50 feet of the Project. Fencing should be easily visible to construction. Plans should clearly delineate access roads and staging areas. The extensive alluvial fan systems should not be used as access roads between Project Areas.

BIO-9 **Rare Plant Relocation:** If Project impacts are unavoidable to Munz's cholla, prior to grading activities, individuals that will be impacted will be salvaged and transplanted to augment an existing nearby population or other approved mitigation site. During revegetation activities, specific methods regarding salvaging, stockpiling and transplantation, will be required to ensure successful survivorship. These methods can include the correct timing and procedure for individual transplants as well as the reporting and documentation of the process to the necessary regulatory agencies.

The following best management practices are not mitigation measures pursuant to CEQA but are recommended to further reduce impacts to special-status species that have potential to occur on the property:

- Confine all work activities to a pre-determined work area. Prior to the initiation of ground disturbing activities, the project footprint, including laydown and staging areas, will be clearly delineated using fencing. All equipment and materials shall use existing roads and parking areas for equipment staging and laydown.

- To prevent inadvertent entrapment of wildlife during the construction phase of the Project, all excavated, steep-walled holes or trenches more than two feet deep should be covered at the close of each working day by plywood or similar materials. If the trenches cannot be closed, one or more escape ramps constructed of earthen fill or wooden planks should be installed. Before such holes or trenches are filled, they should be thoroughly inspected for trapped animals.

- Wildlife are often attracted to burrow- or den-like structures such as pipes, and may enter stored pipes and become trapped or injured. To prevent wildlife use of these structures, all construction pipes, culverts, or similar structures with a diameter of four inches or greater should be capped while stored onsite.

- All food-related trash items such as wrappers, cans, bottles, and food scraps should be disposed of in securely closed containers and removed at least once a week from a construction or Project site.

PC ORIGINAL PKG

- Use of rodenticides and herbicides on the Project site should be restricted. This is necessary to prevent primary or secondary poisoning of wildlife, including burrowing owl and the depletion of prey populations on which they depend. All uses of such compounds should observe label and other restrictions mandated by the USEPA, California Department of Food and Agriculture, and other State and federal legislation. If rodent control must be conducted, zinc phosphide should be used because of a proven lower risk to burrowing owl.

Special-Status Plant Species with Potential to Occur				
Scientific Name **Common Name**	**Status**	**Blooming Period/ Elevation Range (meters)**	**Habitat**	**Potential to Occur in the Project Areas**
Abronia villosa var. *aurita* chaparral sand-verbena	**USFWS**: None **CDFW**: None **CRPR**: 1B.1 **BLM**: Sensitive	Mar-Sep (75 - 1600)	Chaparral Coastal scrub Desert dunes	**Presumed absent:** No habitat occurs within the Project Areas; a known occurrence exists within the CNPS quadrat database.
Astragalus crotalariae Salton milk-vetch	**USFWS**: None **CDFW**: None **CRPR**: 4.3 **BLM**: None	Jan-Apr (-60 - 250)	Sonoran desert scrub	**Low:** Habitat for this species occurs within the Project Areas; a known occurrence exists within the CNPS quadrat database.
Astragalus insularis var. *harwoodii* Harwood's milk-vetch	**USFWS**: None **CDFW**: None **CRPR**: 2B.2 **BLM**: None	Jan-May (0 – 710)	Desert dunes Mojavean desert scrub	**Low:** Limited habitat occurs within the Project Areas. No CNDDB record within 5 miles of Project Areas. A known occurrence exists within the CNPS quadrat database.
Astragalus lentiginosus var. *borreganus* Borrego milk-vetch	**USFWS**: None **CDFW**: None **CRPR**: 4.3 **BLM**: None	Feb-May (30 – 895)	Mojavean desert scrub Sonoran desert scrub	**Low:** Habitat for this species occurs within the Project Areas; a known occurrence exists within the CNPS quadrat database.
Astragalus magdalenae var. *peirsonii* Peirson's milk-vetch	**USFWS**: Threatened **CDFW**: Endangered **CRPR**: 1B.2 **BLM**: Federal Threatened	Dec-Apr (60 - 225)	Desert dunes	**Presumed absent:** No habitat occurs within the Project Areas. No CNDDB record within 5 miles of the Project Areas. A known occurrence exists within the CNPS quadrat database.
Astragalus sabulonum gravel milk-vetch	**USFWS**: None **CDFW**: None **CRPR**: 2B.2 **BLM**: None	Feb-Jun (-60 - 930)	Desert dunes Mojavean desert scrub Sonoran desert scrub	**Moderate:** Habitat for this species occurs within the Project Areas. Historic CNDDB record (1906) approximately 3.66 miles northwest of Project Areas. A known occurrence exists within the CNPS quadrat database.
Calliandra eriophylla pink fairy-duster	**USFWS**: None **CDFW**: None **CRPR**: 2B.3 **BLM**: None	Jan-Mar (120 – 1500)	Sonoran desert scrub	**Low:** Limited habitat occurs within the Project Areas. No CNDDB record within 5 miles of the Project Areas. A known occurrence exists within the CNPS quadrat database.

PC ORIGINAL PKG

Special-Status Plant Species with Potential to Occur				
Scientific Name **Common Name**	**Status**	**Blooming Period/ Elevation Range (meters)**	**Habitat**	**Potential to Occur in the Project Areas**
Chylismia arenaria sand evening-primrose	**USFWS**: None **CDFW**: None **CRPR**: 2B.2 **BLM**: None	Nov-May (-70 – 915)	Sonoran desert scrub	**Low:** Habitat occurs within the Project Areas. No CNDDB record within 5 miles of the Project Areas. A known occurrence exists within the CNPS quadrat database.
Condalia globosa var. *pubescens* spiny abrojo	**USFWS**: None **CDFW**: None **CRPR**: 4.2 **BLM**: None	Mar-May (85 – 1000)	Sonoran desert scrub	**Low:** Limited habitat (elevation) occurs within the Project Areas; a known occurrence exists within the CNPS quadrat database.
Croton wigginsii Wiggins' croton	**USFWS**: None **CDFW**: Rare **CRPR**: 2B.2 **BLM**: Sensitive	Mar-May (50 - 100)	Desert dunes Sonoran desert scrub	**Moderate:** Limited habitat for this species occurs within the Project Areas. One historic CNDDB record (1986) approximately 3.8 miles southeast of the Project Areas. A known occurrence exists within the CNPS quadrat database.
Cylindropuntia munzii Munz's cholla	**USFWS**: None **CDFW**: None **CRPR**: 1B.3 **BLM**: Sensitive	May (150 – 600)	Sonoran desert scrub	**Present:** This species was present on Vega 2 and Vega 3 Project Areas (Study Area 2 & 3). There is high potential for this species in Study Area 1, due to presence of creosote bush scrub habitat.
Ditaxis claryana glandular ditaxis	**USFWS**: None **CDFW**: None **CRPR**: 2B.2 **BLM**: None	Oct, Dec, Jan, Feb, Mar (0 – 465)	Mojavean desert scrub Sonoran desert scrub	**Moderate:** Habitat for the species occurs within the Project Areas. A historic CNDDB record (1978) occurs within Project Areas. A known occurrence exists within the CNPS quadrat database.
Euphorbia abramsiana Abrams' spurge	**USFWS**: None **CDFW**: None **CRPR**: 2B.2 **BLM**: None	Sep-Nov (-5 – 1310)	Mojavean desert scrub Sonoran desert scrub	**Low:** Habitat for this species occurs within the Project Areas. No CNDDB record within 5 miles of Project Areas. A known occurrence exists within the CNPS quadrat database.

Special-Status Plant Species with Potential to Occur				
Scientific Name **Common Name**	**Status**	**Blooming Period/ Elevation Range (meters)**	**Habitat**	**Potential to Occur in the Project Areas**
Helianthus niveus var. *tephrodes* Algodones Dunes sunflower	**USFWS**: None **CDFW**: Endangered **CRPR**: 1B.2 **BLM**: None	Sep-May (50 - 100)	Desert dunes	**Presumed absent:** No habitat occurs within the Project Areas. No CNDDB record within 5 miles of Project Areas. A known occurrence exists within the CNPS quadrat database.
Johnstonella costata ribbed cryptantha	**USFWS**: None **CDFW**: None **CRPR**: 4.3 **BLM**: None	Feb-May (-60 - 500)	Desert dunes Mojavean desert scrub Sonoran desert scrub	**Low:** Limited habitat for this species occurs within the Project Areas; a known occurrence exists within the CNPS quadrat database.
Koeberlinia spinosa var. *tenuispina* slender-spined all thorn	**USFWS**: None **CDFW**: None **CRPR**: 2B.2 **BLM**: None	May-Jul (150 - 510)	Riparian woodland Sonoran desert scrub	**Low:** Limited habitat occurs within the Project Areas. No CNDDB record within 5 miles of the Project Areas. A known occurrence exists within the CNPS quadrat database.
Nemacaulis denudata var. *gracilis* slender cottonheads	**USFWS**: None **CDFW**: None **CRPR**: 2B.2 **BLM**: None	Apr-May (-50 - 400)	Coastal dunes Desert dunes Sonoran desert scrub	**Low:** Limited habitat for this species occurs within the Project Areas. No CNDDB record within 5 miles of site. A known occurrence exists within the CNPS quadrat database.
Palafoxia arida var. *gigantea* giant Spanish-needle	**USFWS**: None **CDFW**: None **CRPR**: 1B.3 **BLM**: Sensitive	Jan-May (15 - 100)	Desert dunes	**Presumed absent:** No habitat occurs within the Project Areas. No CNDDB record occurs within 5 miles of the Project Areas.
Panicum hirticaule var. *hirticaule* roughstalk witch grass	**USFWS**: None **CDFW**: None **CRPR**: 2B.1 **BLM**: None	Aug-Dec (45 – 315)	Desert dunes Joshua tree woodland Mojavean desert scrub Sonoran desert scrub	**Low:** Limited habitat occurs within the Project Areas. No CNDDB record within 5 miles of the Project Areas. A known occurrence exists within the CNPS quadrat database.
Pholisma sonorae sand food	**USFWS**: None **CDFW**: None **CRPR**: 1B.2 **BLM**: Sensitive	Apr-Jun (0 - 200)	Desert dunes Sonoran desert scrub	**Moderate:** Habitat for this species occurs within the Project Areas. One historic CNDDB record (1980) occurs approximately 4.42 miles southeast of the Project Areas. A known occurrence exists within the CNPS quadrat database.

Special-Status Plant Species with Potential to Occur				
Scientific Name **Common Name**	**Status**	**Blooming Period/ Elevation Range (meters)**	**Habitat**	**Potential to Occur in the Project Areas**
Senna covesii Coves' cassia	**USFWS**: None **CDFW**: None **CRPR**: 2B.1 **BLM**: None	Aug-Dec (45 – 1315)	Desert dunes Joshua tree woodland Mojavean desert scrub Sonoran desert scrub	**Low:** Limited habitat occurs within the Project Areas. No CNDDB record occurs within 5 miles of Project Areas. A known occurrence exists within the CNPS quadrat database.
Xylorhiza cognata Mecca-aster	**USFWS**: None **CDFW**: None **CRPR**: 1B.2 **BLM**: Sensitive	Jan-Jun (20 – 400)	Sonoran desert scrub	**Low:** Habitat for this species occurs within the Project Areas. No CNDDB record occurs within 5 miles of Project Areas. A known occurrence exists within the CNPS quadrat database.

California Native Plant Society (CNPS) Rare Plant Ranks:
1B: Plants rare, threatened, and endangered in California and elsewhere.
2B: Plants rare, threatened, or endangered in California, but more common elsewhere.
4: Plants of limited distribution; a watch list.

CNPS Threat Ranks:
0.1: Seriously threatened in California (over 80% of occurrences threatened / high degree and immediacy of threat)
0.2: Fairly threatened in California (20-80% of occurrences threatened / moderate degree and immediacy of threat)
0.3-Not very threatened in California (less than 20% of occurrences threatened / low degree and immediacy of threat or no current threats known)

ATTACHMENT C

Special-Status Wildlife Potential for Occurrence

PC ORIGINAL PKG

Special-Status Wildlife Species Potential For Occurrence				
Scientific Name Common Name	**Status**		**Habitat Requirements**	**Potential for Occurrence**
VERTEBRATES				
OSTEICHTHYES (BONY FISH)				
CATOSTOMIDAE (suckers)				
Xyrauchen texanus razorback sucker	USFWS: CDFW:	**END** **END,** FP	Rivers and lakes in the southwestern United States	**Presumed absent.** There is suitable habitat within Coachella Canal. One historic record (1974), but no recent CNDDB records occur within 5 miles of the Project Areas.
AMPHIBIANS				
BUFONIDAE (true toads)				
Incilius alvarius Sonoran desert toad	USFWS: CDFW:	none SSC	Creosote bush desert scrub, grasslands up into oak-pine woodlands, thorn scrub and tropical deciduous forest in Mexico.	**Presumed absent.** There is suitable habitat within the Project Areas and within the buffer; however, the population may be extirpated (Jennings and Hayes 1994). One historic (1916), but no recent CNDDB records occur within 5 miles of the Project Areas.
REPTILES				
GEKKONIDAE (geckos)				
Coleonyx switaki barefoot gecko	USFWS: CDFW:	none **THR**	Arid rocky areas on flatlands, canyons, thorn scrub, especially where there are large boulders and rock outcrops, and where vegetation is sparse.	**Presumed absent.** Habitat such as canyons, thorn scrub, large boulders, and rock outcrops is not present within the Project Areas. No CNDDB records occur within 5 miles of the Project Areas.
PHRYNOSOMATIDAE (spiny lizards)				
Phrynosoma mcallii flat-tailed horned lizard	USFWS: CDFW:	none SSC	Desert scrub on sandy flats and valleys with little or no windblown sand, salt flats, and areas with gravelly soils. There are three regional populations of flat-tailed horned lizard in California; two of these (representing the majority of the range in the State) occur in Imperial County. These are on the west side of the Salton Sea/Imperial Valley and on the east side of the Imperial Valley.	**Moderate.** There is suitable habitat within the Project Areas. No CNDDB records occur within 5 miles of the Project Areas.

PC ORIGINAL PKG

TESTUDINDAE (land tortoises)				
Gopherus agassizii Mojave desert tortoise	USFWS: CDFW:	**THR** **THR**	Sandy flats to rocky foothills, including alluvial fans, washes and canyons where suitable soils for den construction might be found.	**Moderate.** There is **m**arginally suitable habitat within the Project Areas and buffer. Desert tortoise critical habitat is approximately 7 miles northeast of the Project Areas. No CNDDB records occur within 5 miles of the Project Areas.
BIRDS				
ACCIPITRIDAE (hawks, kites, harriers, and eagles)				
Circus hudsonius northern harrier	USFWS: CDFW:	none SSC	Undisturbed tracts of grasslands and wetlands with low, thick vegetation. Prefers to breed in dry upland habitats, old fields, grazed meadows, drained marshlands, and high-desert shrubsteppe. Also found in pasturelands, croplands, and open floodplains.	**Moderate.** There is some suitable habitat within the Project Areas. One individual was observed outside of the Survey Area in adjacent habitat to the Project Areas. No CNDDB records occur within 5 miles of the Project Areas.
ALAUDIDAE (larks)				
Eremophila alpestris* ssp. *actia California horned lark	USFWS: CDFW:	none WL	Bare open areas dominated by low vegetation or widely scattered shrubs, includes prairies, deserts, and plowed fields. Nests in a hollow on the ground.	**Moderate.** The open areas within the Project Areas and in buffer provide suitable habitat. No CNDDB records occur within 5 miles of the Project Areas.
CHARADRIIAE (plovers and lapwings)				
Charadrius montanus mountain plover	USFWS: CDFW:	BCC SSC	Shortgrass prairie, especially where blue grama, buffalo grass, and western wheat grass are dominant; and in grassy semidesert with scattered saltbush, sage, prickly pear, and yucca, at elevations ranging from 2,100 to 10,663 feet. Also found in fallow or recently plowed agricultural fields and in overgrazed landscapes that mimic their natural shortgrass habitat.	**Low.** There is limited suitable habitat within the Project Areas. Three recent CNDDB records occur within 5 miles of the Project Areas with the closest approximately 2.8 miles southwest of the Project Areas (2011).
FALCONIDAE (falcons and caracaras)				
Falco columbarius merlin	USFWS CDFW	none WL	Open and semi open areas in fragmented woodlots, near rivers, lakes, or bogs, and on lake islands.	**Moderate.** There is suitable river and wetland habitat within the Project Areas and buffer. One CNDDB record (2007) occurs approximately 3 miles west of the Project Areas.

PC ORIGINAL PKG

LANIIDAE (shrikes)				
Lanius ludovicianus loggerhead shrike (nesting)	USFWS: CDFW:	BCC SSC	Open country with short vegetation and well-spaced shrubs or low trees, particularly those with spines or thorns, agricultural fields, pastures, old orchards, riparian areas, desert scrublands, savannas, prairies, golf courses, and cemeteries.	**Present.** There were 3 sightings of loggerhead shrike on Vega 2 (Study Areas 1 & 2). There is suitable habitat within the Project Areas. One CNDDB record (2007) occurs approximately 0.84 mile south of the Project Areas.
MIMIDAE (mockingbirds and thrashers)				
Toxostoma crissale Crissal thrasher	USFWS: CDFW:	none SSC	Desert scrub and riparian brush with dense mesquite thickets often near streams or washes.	**Moderate.** The bush seepweed scrub habitat provides suitable habitat for this species. No CNDDB records within 5 miles of the Project Areas.
PICIDAE (woodpeckers)				
Melanerpes uropygialis Gila woodpecker	USFWS: CDFW:	BCC **END**	Arid environments, especially deserts and dry forests of the southwestern U.S. and adjacent Mexico, usually below elevations of 3,300 feet. Most common in low swales and arroyos, including riparian corridors with cottonwood, willow, and mesquite. Nests in cacti and other tree species.	**Low.** Unlikely to occur within the Project Areas and buffer due to absence of suitable nesting cavity locations, i.e. large trees and/or large cacti. No recent CNDDB records within 5 miles of the Project Areas.
POLIOPTILIDAE (gnatcatchers)				
Polioptila melanura black-tailed gnatcatcher	USFWS: CDFW:	none WL	Semiarid and desert thorn scrub habitats. This species is well adapted to dry habitats and tend to be most common in areas with less than 8 inches of annual rainfall. They often live far from streams and other bodies of water.	**Present.** There were approximately 20 sightings of black-tailed gnatcatcher on Vega 2 and 3. They were often observed foraging in the tamarisk thickets. Desert scrub habitat within the Project Areas is also suitable for this species. No CNDDB records occur within 5 miles of the Project Areas.
RALLIDAE (rails)				
Laterallus jamaicensis **ssp.** ***coturniculus*** California black rail	USFWS: CDFW:	BCC **THR,** FP	Riparian marshes, coastal prairies, saltmarshes, and impounded wetlands. All of its habitats have stable shallow water, usually just 1.2 inches deep at most.	**Moderate.** The presence of riparian habitat provides suitable habitat. One recent CNDDB record occurs from 2015 approximately 4.8 miles west of the Project Areas. Four historic CNDDB records (1975–1989) occur with two located within the Project Areas.

PC ORIGINAL PKG

Rallus obsoletus* ssp. *yumanensis Yuma Ridgway's rail	USFWS: CDFW:	**END** **THR,** FP	Consistently found in freshwater marshes that are composed of cattail and bulrush. This emergent vegetation averages greater than 6 feet tall. Water depth tends to be around 3.5 inches deep. Range extends from Nevada, California, and Arizona to Baja California and Sonora Mexico.	**Low.** The presence of the canal and freshwater forested/shrub wetland habitat within the Project Areas and buffer could be suitable for this species. Overall, there is a lack of stable, shallow water as well as lack of cattails and bulrush within the Survey Area. No CNDDB records occur within 5 miles of the Project Areas.
STRIGIDAE (owls)				
Athene cunicularia burrowing owl	USFWS: CDFW:	BCC SSC	Open grasslands including prairies, plains, and savannah, or vacant lots and airports. Nests in abandoned dirt burrows.	**High.** The creosote bush scrub provides habitat and soils that are suitable for burrowing owl. There was one sighting of burrowing owl within the Vega 5 Project Area which is adjacent to Vega 2/Study Area 1. Twelve CNDDB records occur within 5 miles of the Project Areas with the closest overlapping the project boundary. Twelve owls were found in the area in 2007.
MAMMALS				
MOLOSSIDAE (free-tailed bats)				
Eumops perotis* ssp. *californicus western mastiff bat	USFWS: CDFW:	none SSC	Roosts high above ground in rock and cliff crevices, shallow caves, and rarely in buildings. Occurs in arid and semiarid regions including rocky canyon habitats.	**Presumed absent.** There is no suitable roosting habitat within the Project Areas or in the buffer. No CNDDB records occur within 5 miles of the Project Areas.
Nyctinomops femorosaccus pocketed free-tailed bat	USFWS: CDFW:	none SSC	Roosts in crevices of outcrops and cliffs, shallow caves, and buildings. Found along rugged canyons, high cliffs, and semiarid rock outcroppings.	**Presumed absent.** There is no suitable roosting habitat within the Project Areas or in the buffer. No CNDDB records occur within 5 miles of the Project Areas.
Nyctinomops macrotis big free-tailed bat	USFWS: CDFW:	none SSC	Roosts in cliff crevices, and less often in buildings, caves, and tree cavities. Occurs in rocky areas of rugged and hilly country including woodlands, evergreen forests, river floodplain-arroyo habitats, and desert scrub.	**Presumed absent.** There is no suitable roosting habitat within the Project Areas or in the buffer. No CNDDB records occur within 5 miles of the Project Areas.

PC ORIGINAL PKG

PHYLLOSTOMIDAE (leaf-nosed bats)				
Choeronycteris mexicana Mexican long-tongued bat	USFWS: CDFW:	none SSC	Roosts in caves, rock fissures, old mines, and rarely in buildings. Found in desert shrublands, tropical deciduous forests, deep mountain canyons with riparian vegetation, oak-conifer woodlands and forests.	**Presumed absent.** There is no suitable roosting habitat within the Project Areas or in the buffer; however, there is suitable foraging habitat. No CNDDB records occur within 5 miles of the Project Areas.
Macrotus californicus California leaf-nosed bat	USFWS: CDFW:	none SSC	Roosts in caves, abandoned mines, or natural rock fissures in canyons during the day. May roost in buildings, under bridges, or in porches during the night. Found in lowland desert scrub. Foraging usually takes place in dry desert washes.	**Low.** There is no suitable roosting habitat within the Project Areas or in the buffer; however, there is suitable foraging habitat. No CNDDB records occur within 5 miles of the Project Areas.
VESPERTILIONIDAE (evening bats)				
Antrozous pallidus pallid bat	USFWS: CDFW:	none SSC	Roosts in rock crevices, caves, mines, buildings, bridges, and in trees. Generally, in mountainous areas, lowland desert scrub, arid grasslands near water and rocky outcrops, and open woodlands.	**Low.** There is no suitable roosting habitat within the Project Areas or in the buffer; desert scrub provides suitable foraging habitat. No CNDDB records occur within 5 miles of the Project Areas.
Corynorhinus townsendii Townsend's big-eared bat	USFWS: CDFW:	none SSC	Roosts in mines, caves, buildings, or other crevices, sometimes trees. Usually requires large crevices. Most common in moist areas or those with access to water.	**Presumed absent.** There is no suitable roosting habitat within the Project Areas and buffer. No CNDDB records occur within 5 miles of the Project Areas.
Lasiurus xanthinus western yellow bat	USFWS: CDFW:	none SSC	Roosts in trees, particularly palms, in desert wash, desert riparian, valley foothill riparian, and palm oasis habitats.	**Low.** There is limited suitable roosting habitat within the Project Areas and buffer. No CNDDB records occur within 5 miles of the Project Areas.
BOVIDAE (sheep and relatives)				
Ovis canadensis* ssp. *nelsoni peninsular bighorn sheep	USFWS: CDFW:	**END** **END,** FP	Dry, rocky, low-elevation desert slopes, canyons, and washes from the San Jacinto and Santa Rosa mountains near Palm Springs, California south into Baja California, Mexico.	**Presumed absent.** There is no suitable habitat such as canyons and mountains within the Project Areas and buffer. No CNDDB records occur within 5 miles of the Project Areas.

PC ORIGINAL PKG

CRICETIDAE (New World rats and mice)				
Sigmodon hispidus* ssp. *eremicus Yuma hisbid cotton rat	USFWS: CDFW:	none SSC	Inhabits a variety of habitats, but generally associated with drainage ditches, canals, and seeps vegetated with plants such as arrow weed, saltgrass, common reed, cattails, sedges, tamarisk, heliotrope, and annual grasses. They utilize runways through dense herbaceous growth and nests are built of woven grass. Noted presence in moist agricultural fields.	**Moderate.** There is suitable habitat in and around Coachella Canal adjacent to the Project Areas. No CNDDB records occur within 5 miles of the Project Areas.
HETEROMYIDAE (kangaroo rats, pocket mice and kangaroo mice)				
Perognathus longimembris bangsi Palm Springs pocket mouse	USFWS: CDFW:	none SSC	Occurs in flat or gently sloping habitats of loose or sandy soils, with relatively sparse vegetation.	**Moderate.** There is suitable habitat for this species within the creosote bush scrub. No CNDDB records occur within 5 miles of the Project Areas.

1.0 INTRODUCTION

The Vega SES 5 Solar Project (Project) is located on approximately 405 acres, consisting primarily of two parcels and a portion of a third parcel, in Imperial County, California. ECORP Consulting, Inc. conducted a literature review, small unmanned aircraft system (sUAS) survey, and biological reconnaissance survey of the Project to document the existing biological resources, to assess the habitat for its potential to support sensitive plant and wildlife species, and, as required under the California Environmental Quality Act (CEQA), to determine whether Project-related impacts could occur to sensitive biological resources.

1.1 Purpose of the Report

This report was prepared to describe biological resources in the Project Area and to support Project review under CEQA. Assessment of potential occurrences of special-status plants and animals is based on habitat, geographic and elevational range, and data from field surveys conducted by ECORP in 2020. For the purposes of this report, the term *Project Area* refers to the client supplied Project boundary. The term *Impact Area* refers to the areas proposed to be directly affected by implementation of the Project. The term *Survey Area* refers to the areas proposed to be directly impacted by the Project, the 500-foot buffer, and areas potentially subject to temporary impacts.

1.2 Project Location and Description

The proposed Project is a 50-megawatt (MW) alternating current solar photovoltaic energy project with an integrated 50 MW battery storage utility-scale solar project located on approximately 405 acres, including Imperial County Assessor's Parcel Number 025-260-022-000, 025-260-019-000, and a portion of 025-260-011-000. The Project is approximately 10 miles east of the Salton Sea and five miles west of the Chocolate Mountains (Figure 1). The Project Area is bisected by a railroad right-of-way in the northeastern portion of the site and the East Highline Canal intersects the southwest portion of the site (Figure 2). As depicted on the U.S. Geological Survey (USGS) 7.5-minute Iris topographic quadrangle, the Project is located in Sections 8, 16, 17, 18, 19, and 20 of Township 11 South, Range 15 East, San Bernardino Base and Meridian.

The proposed Project will connect to the closest Imperial Irrigation District (IID) substation through a previously established Imperial Irrigation District generator intertie line.

Topography is relatively flat with elevations ranging between -20 meters (-65 feet) and 22 meters (71 feet) above mean sea level. Adjacent land uses include active agricultural land to the west and Open Space/Bureau of Land Management land to the north, east, and south. The East Highline Canal travels through the Project Area from north to south, and a portion of Siphon Five travels through the northeast portion of the Project Area.

2.0 REGULATORY CONSIDERATIONS

The biological reconnaissance survey was conducted to identify potential constraints and to ensure compliance with state and federal regulations regarding listed, protected, and sensitive species could be achieved. The regulations are detailed below.

2.1 Federal Regulations

2.1.1 Endangered Species Act

The federal Endangered Species Act (ESA) protects plants and animals that are listed as endangered or threatened by the United States Fish and Wildlife Service (USFWS) and the National Marine Fisheries Service. Section 9 of the ESA prohibits the taking of endangered wildlife, where taking is defined as "harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, collect, or attempt to engage in such conduct" (50 Code of Federal Regulations [CFR] 17.3). For plants, this statute governs removing, possessing, maliciously damaging, or destroying any endangered plant on federal land and removing, cutting, digging up, damaging, or destroying any endangered plant on non-federal land in knowing violation of state law (16 U.S. Code 1538). Under Section 7 of the ESA, federal agencies are required to consult with the USFWS if their actions, including permit approvals or funding, could adversely affect a listed (or proposed) species (including plants) or its critical habitat. Through consultation and the issuance of a biological opinion, the USFWS may issue an incidental take statement allowing take of the species that is incidental to an otherwise authorized activity provided the activity will not jeopardize the continued existence of the species. Section 10 of the ESA provides for issuance of incidental take permits where no other federal actions are necessary provided a habitat conservation plan (HCP) is developed.

2.1.2 Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) implements international treaties between the United States and other nations devised to protect migratory birds, any of their parts, eggs, and nests from activities such as hunting, pursuing, capturing, killing, selling, and shipping, unless expressly authorized in the regulations or by permit. As authorized by the MBTA, the USFWS issues permits to qualified applicants for the following types of activities: falconry, raptor propagation, scientific collecting, special purposes (rehabilitation, education, migratory game bird propagation, and salvage), take of depredating birds, taxidermy, and waterfowl sale and disposal. The regulations governing migratory bird permits can be found in 50 CFR Part 13 General Permit Procedures and 50 CFR Part 21 Migratory Bird Permits. The State of California has incorporated the protection of birds of prey in Sections 3800, 3513, and 3503.5 of the California Fish and Game Code.

2.1.3 Clean Water Act

The purpose of the Clean Water Act (CWA) is to "restore and maintain the chemical, physical, and biological integrity of the nation's waters." Section 404 of the CWA prohibits the discharge of dredged or fill material into Waters of the U.S. without a permit from the U.S. Army Corps of Engineers (USACE). The definition of Waters of the U.S. includes rivers, streams, estuaries, the territorial seas, ponds, lakes, and

PC ORIGINAL PKG

wetlands. Wetlands are defined as those areas "that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions" (33 CFR 328.3 7b). The U.S. Environmental Protection Agency (USEPA) acts as a cooperating agency to set policy, guidance and criteria for use in evaluation permit applications and also reviews USACE permit applications.

The USACE regulates "fill" or dredging of fill material within its jurisdictional features. "Fill material" means any material used for the primary purpose of replacing an aquatic area with dry land or changing the bottom elevation of a water body. Substantial impacts to wetlands may require an individual permit. Projects that only minimally affect wetlands may meet the conditions of one of the existing Nationwide Permits. A Water Quality Certification or waiver pursuant to Section 401 of the CWA is required for Section 404 permit actions; this certification or waiver is issued by the State Water Quality Control Board, administered by each of nine California Regional Water Quality Control Boards (RWQCBs).

2.2 State and Local Regulations

2.2.1 California Endangered Species Act

The California ESA generally parallels the main provisions of the ESA but, unlike its federal counterpart, the California ESA applies the take prohibitions to species proposed for listing (called "candidates" by the State). Section 2080 of the California Fish and Game Code prohibits the taking, possession, purchase, sale, and import or export of endangered, threatened, or candidate species, unless otherwise authorized by permit or in the regulations. Take is defined in Section 86 of the California Fish and Game Code as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill." The California ESA allows for take incidental to otherwise lawful development projects. State lead agencies are required to consult with California Department of Fish and Wildlife (CDFW) to ensure that any action they undertake is not likely to jeopardize the continued existence of any endangered or threatened species or result in destruction or adverse modification of essential habitat.

2.2.2 Fully Protected Species

The State of California first began to designate species as "fully protected" prior to the creation of the federal and California ESAs. Lists of fully protected species were initially developed to provide protection to those animals that were rare or faced possible extinction, and included fish, amphibians and reptiles, birds, and mammals. Most fully protected species have since been listed as threatened or endangered under federal and/or California ESAs. The regulations that implement the Fully Protected Species Statute (California Fish and Game Code § 4700) provide that fully protected species may not be taken or possessed at any time. Furthermore, CDFW prohibits any state agency from issuing incidental take permits for fully protected species, except for necessary scientific research.

2.2.3 Native Plant Protection Act

The Native Plant Protection Act (NPPA) of 1977 (California Fish and Game Code §§ 1900-1913) was created with the intent to "preserve, protect and enhance rare and endangered plants in this State." The NPPA is administered by CDFW. The Fish and Wildlife Commission has the authority to designate native

PC ORIGINAL PKG

plants as "endangered" or "rare" and to protect endangered and rare plants from take. The California ESA of 1984 (California Fish and Game Code § 2050-2116) provided further protection for rare and endangered plant species, but the NPPA remains part of the California Fish and Game Code.

2.2.4 Porter Cologne Water Quality Control Act

The RWQCB implements water quality regulations under the federal CWA and the Porter-Cologne Water Quality Act. These regulations require compliance with the National Pollutant Discharge Elimination System (NPDES), including compliance with the California Storm Water NPDES General Construction Permit for discharges of storm water runoff associated with construction activities. General Construction Permits for projects that disturb one or more acres of land require development and implementation of a Storm Water Pollution Prevention Plan. Under the Porter-Cologne Water Quality Act, the RWQCB regulates actions that would involve "discharging waste, or proposing to discharge waste, with any region that could affect the water of the state" [Water Code 13260(a)].

Waters of the State are defined as "any surface water or groundwater, including saline waters, within the boundaries of the state" (Water Code 13050[e]). The RWQCB regulates all such activities, as well as dredging, filling, or discharging materials into Waters of the State that are not regulated by the USACE due to a lack of connectivity with a navigable water body. The RWQCB may require issuance of Waste Discharge Requirements for these activities.

On April 2, 2019, the SWRCB adopted the *State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State* (referred to as the Procedures) for inclusion in the *Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California* (Resolution No. 2019-0015). The new Procedures include:

- definition of wetlands and aquatic resources that are Waters of the State,
- description of application requirements for individual orders (not general orders) for water quality certification, or waste discharge requirements,
- description of information required in compensatory mitigation plans, and
- definition of exemptions to application procedures.

The Office of Administrative Law approved the procedures on August 28, 2019, and the rule went into effect May 28, 2020.

2.2.5 Conservation and Open Space Element

Imperial County created the Conservation and Open Space Element plan to provide details and measures for management and preservation of biological resources as well as various other resources (i.e. cultural, soils, minerals). This plan focuses on protecting scarce resources and preventing wasteful exploitation, neglect, and destruction of California's natural resources. The plan outlines areas with sensitive habitat and sensitive species, also labelled "Resource Areas". Open space easements and protection of riparian habitat, rock outcrops, California fan palm oases, and wildlife corridors are also discussed in the plan. As it

PC ORIGINAL PKG

currently stands, the open space element follows CEQA guidelines with special focus on its scarce resources.

2.2.6 California Fish and Game Code

2.2.6.1 Streambed Alteration Agreement

Section 1602 of the California Fish and Game Code requires that a Notification of Lake or Streambed Alteration be submitted to CDFW for "any activity that may substantially divert or obstruct the natural flow or substantially change the bed, channel, or bank of any river, stream, or lake." The CDFW reviews the proposed actions and, if necessary, submits to the Applicant a proposal for measures to protect affected fish and wildlife resources. The final proposal that is mutually agreed upon by CDFW and the Applicant is the Streambed Alteration Agreement (SAA). Often, projects that require an SAA also require a permit from the USACE under Section 404 of the CWA. In these instances, the conditions of the Section 404 permit and the SAA may overlap.

2.2.6.2 Migratory Birds

The CDFW enforces the protection of nongame native birds in §§ 3503, 3503.5, and 3800 of the California Fish and Game Code. Section 3513 of the California Fish and Game Code prohibits the possession or take of birds listed under the MBTA. These sections mandate the protection of California nongame native birds' nests and also make it unlawful to take these birds. All raptor species are protected from "take" pursuant to California Fish and Game Code § 3503.5 and are also protected at the federal level by the MBTA of 1918 (USFWS 1918).

2.2.7 CEQA Significance Criteria

Section 15064.7 of the CEQA Guidelines encourages local agencies to develop and publish the thresholds the agency uses in determining the significance of environmental effects caused by projects under its review. However, agencies may also rely upon the guidance provided by the expanded Initial Study checklist contained in Appendix G of the CEQA Guidelines. Appendix G provides examples of impacts that would normally be considered significant. Based on these examples, impacts to biological resources would normally be considered significant if the project would:

- have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by CDFW or USFWS;
- have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by CDFW or USFWS;
- have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, and coastal) through direct removal, filling, hydrological interruption, or other means;

PC ORIGINAL PKG

- interfere substantially with the movement of any native resident or migratory fish or wildlife species, or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites;
- conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance; and
- conflict with the provisions of an adopted HCP, Natural Community Conservation Plan, or other approved local, regional or state HCP.

An evaluation of whether an impact on biological resources would be substantial must consider both the resource itself and how that resource fits into a regional or local context. Substantial impacts would be those that would diminish, or result in the loss of, an important biological resource, or those that would obviously conflict with local, state, or federal resource conservation plans, goals, or regulations. Impacts are sometimes locally important but not significant according to CEQA. The reason for this is that although the impacts would result in an adverse alteration of existing conditions, they would not substantially diminish, or result in the permanent loss of an important resource on a population-wide or region-wide basis.

3.0 METHODS

3.1 Literature Review

Prior to conducting the biological reconnaissance survey, ECORP biologists performed a literature review using the CDFW's California Natural Diversity Data Base (CNDDB; CDFW 2020a) and the California Native Plant Society's (CNPS') Electronic Inventory (CNPSEI; CNPS 2020) to determine the special-status plant and wildlife species that have been documented in the vicinity of the Project. The CNDDB and CNPSEI database searches were conducted on September 24, 2020. ECORP searched CNDDB and CNPSEI records within the Project site as depicted on USGS 7.5-minute Iris topographic quadrangle, and the surrounding eight topographic quadrangles: Wister, Iris Wash, Lion Head Mountain, Niland, Tortuga, Westmorland East, Wiest, and Amos. The CNDDB and CNPSEI contain records of reported occurrences of federally or state-listed endangered, threatened, proposed endangered or threatened species, California Species of Special Concern (SSC), and/or other special-status species or habitat that may occur within or in the vicinity of the Project. Additional information was gathered from the following sources and includes, but is not limited to the following:

- U.S. Department of Agriculture, Natural Resources Conservation Service (NRCS) Web Soil Survey (NRCS 2020a);
- Special Animals List (CDFW 2020b);
- State and Federally Listed Endangered and Threatened Animals of California (CDFW 2020c);
- The Jepson Manual: Vascular Plants of California (Baldwin et al. 2012);
- The Manual of California Vegetation, 2nd Edition (Sawyer et al. 2009); and

PC ORIGINAL PKG

- various online websites (e.g., CalFlora 2020).

A desktop review of the National Wetlands Inventory (USFWS 2020a) and the corresponding USGS topographic maps was also conducted to determine if there were any blue line streams or drainages that might potentially fall under the jurisdiction of either federal or state agencies were present in the Survey Area.

3.2 Field Survey

3.2.1 sUAS Survey and Vegetation Mapping

Due to the extensive size of the area and limited road access, an initial survey utilizing a small unmanned aircraft system sUAS was conducted to quickly assess current site conditions and gather high resolution imagery. Upon arrival at the site, an initial field reconnaissance was conducted by the drone pilot to obtain an understanding of the site topography, access, vegetation densities, and staging areas for controlling the aerial flights. The drone was programmed to do a systematic flight over the property to collect high-resolution aerial photographs of the entire property. The photos collected were then combined into a single orthomosaic image that was incorporated into mapping files in a Geographic Information System (GIS).

The information gathered from the sUAS/drone survey were then used to assist the biologists with accurate mapping of the vegetation communities. A botanist utilized the high-resolution drone imagery to map vegetation communities. Vegetation classifications were in accordance with *A Manual of California Vegetation* (Sawyer et al. 2009). Vegetation communities that did not fit within the Sawyer classification system were described following Holland or Cowardin (alternative methods). Areas of the site(s) that had already been graded, developed, and/or disturbed were mapped as such. Acreages of each vegetation community were calculated based on GIS data collected during the sUAS survey.

3.2.2 Biological Reconnaissance Survey

The biological reconnaissance survey was conducted by walking the entire Survey Area to determine the vegetation communities and wildlife habitats present within the Survey Area. Private property and inaccessible areas within the buffer were surveyed utilizing 8x42 binoculars. The biologists documented the plant and animal species present in the Survey Area and conditions within the Survey Area were assessed for their potential to provide habitat for special-status plant and wildlife species, including those from the literature review. Data were recorded on global positioning system (GPS) devices, data sheets, and maps. In instances where a special-status species was observed, the date, species, location and habitat, and GPS coordinates were recorded. The locations of special-status species observations were recorded using a handheld GPS in NAD 83, UTM coordinates, Zone 11S. Photographs were also taken during the survey to provide visual representation of the various vegetation communities within the Survey Area. The Survey Area was also examined to assess its potential to facilitate wildlife movement or function as a movement corridor for wildlife moving throughout the region.

Plant and wildlife species, including any special-status species that were observed during the survey, were recorded. Plant nomenclature follows that of *The Jepson Manual: Vascular Plants of California* (Baldwin et

PC ORIGINAL PKG

al. 2012). Wildlife nomenclature follows that of *The American Ornithologists' Union (AOU) Checklist of North American Birds* (AOU 2020), the Society for the Study of Amphibians and Reptiles (SSAR 2017), and the *Revised Checklist of North American Mammals North of Mexico* (Bradley et al. 2014).

3.2.3 Aquatic Resources Delineation

An aquatic resources delineation was conducted by ECORP biologists in conjunction with the biological reconnaissance survey, the results of which are presented under a separate cover (ECORP 2022).

3.3 Potential for Occurrence Determinations

Using information from the literature review and observations in the field, a list of special-status plant and animal species that have potential to occur within the Survey Area was generated. For the purposes of this assessment, special-status species are defined as plants or animals that:

- have been designated as either rare, threatened, or endangered by CDFW, CNPS, or the USFWS, and/or are protected under either the federal or California ESAs;
- are candidate species being considered or proposed for listing under these same acts;
- are fully protected by the California Fish and Game Code, §§ 3511, 4700, 5050, or 5515;
- are of expressed concern to resource and regulatory agencies or local jurisdictions.

Special-status species reported for the region in the literature review or for which suitable habitat occurs on the Survey Area were assessed for their potential to occur within the Survey Area based on the following guidelines:

Present: The species was observed on site during a site visit or focused survey.

High: Habitat (including soils and elevation factors) for the species occurs within the Survey Area and a known occurrence has recently been recorded (within the last 20 years) within five miles of the area.

Moderate: Habitat (including soils and elevation factors) for the species occurs within the Survey Area and a documented observation occurs within the database search, but not within five miles of the area; a historic documented observation (more than 20 years old) was recorded within five miles of the Survey Area; or a recently documented observation occurs within five miles of the area and marginal or limited amounts of habitat occurs in the Survey Area.

Low: Limited or marginal habitat for the species occurs within the Survey Area and a recently documented observation occurs within the database search, but not within five miles of the area; a historic documented observation (more than 20 years old) was recorded within five miles of the Survey Area; or suitable habitat strongly associated with the species occurs on site, but no records or only historic records were found within the database search.

Presumed Absent: Species was not observed during a site visit or focused surveys conducted in accordance with protocol guidelines at an appropriate time for identification; habitat (including soils and

PC ORIGINAL PKG

elevation factors) does not exist on site; or the known geographic range of the species does not include the Survey Area.

Note: Location information on some special-status species may be of questionable accuracy or unavailable. Therefore, for survey purposes, the environmental factors associated with a species' occurrence requirements may be considered sufficient reason to give a species a positive potential for occurrence. In addition, just because a record of a species does not exist in the databases does not mean it does not occur. In many cases, records may not be present in the databases because an area has not been surveyed for that particular species.

4.0 RESULTS

The results of the literature review and field surveys, including site characteristics, vegetation communities, wildlife, special-status species, and special-status habitats (including any potential wildlife corridors) are summarized below.

4.1 Literature Review

4.1.1 Special-Status Plants and Wildlife

Special-status plants and wildlife species reported for the region in the literature review or for which suitable habitat occurs were evaluated for their potential to occur within the Project Area or in the buffer areas within the Survey Area where indirect impacts could occur. Of all available records, a total of 22 special-status plant species and 23 special-status wildlife species were identified as having the potential for occurrence in the vicinity of the Project site (Attachments B and C).

4.1.2 U.S. Fish and Wildlife Service Designated Critical Habitat

The Project site is not located within any USFWS-designated critical habitat. The closest designated critical habitat is for Peirson's milk-vetch (*Astragalus magdalenae* var. *peirsonii*) located approximately nine miles to the southeast of the Project site, and desert tortoise (*Gopherus agassizii*) critical habitat located approximately 10 miles east of the Project site.

4.2 Biological Reconnaissance Survey

The biological reconnaissance survey was conducted on September 29-30, 2020, by ECORP biologists Christina Congedo and Caroline Garcia. Summarized below are the results of the biological reconnaissance survey, including site characteristics, plants and plant communities, wildlife, special-status species, and special-status habitats (including any potential wildlife corridors). Weather conditions during the survey are summarized in Table 2.

PC ORIGINAL PKG

Table 1. Weather Conditions During the Survey								
Date	Time		Temperature (˚F)		Cloud Cover (%)		Wind Speed (mph)	
	Start	End	Start	End	Start	End	Start	End
09/29/2020	0630	1400	67	105	0	0	4	3-6
09/30/2020	0640	1200	69	105	0	0	4-5	7

4.2.1 Property Characteristics

The southwestern portion of the Project Area is primarily composed of undeveloped land that was historically used for agriculture. The northeastern section is comprised of an ephemeral drainage and associated wetland and riparian habitats on undeveloped land. The northern border of the Project Area appears to have been graded and/or filled in at several areas near the railroad tracks. The ephemeral drainage system flows southwest under the railroad tracks via a concrete underpass. Riparian habitat lines the banks and bed of the ephemeral drainage system and portions directly north and east of the East Highland canal. Wetlands exist within the riparian habitat directly south of the railroad right-of-way, abutting the ephemeral drainages, connected with Siphon 5. The southwestern portion of the Project Area consists of a fallow agricultural field with ruderal vegetation. The fallow field is bordered to the north and south by two offshoot irrigation channels and a wetland associated with the East Highland canal to the northeast. The Project Area is surrounded to the west, south, and north by agricultural fields and undeveloped land to the east.

Topography throughout the Project Area is relatively flat, but gently slopes from northeast to southwest away from the railroad right-of-way. A soils analysis search was conducted using NRCS soil survey data (NRCS 2020a). Nine soil series occur within the Project Area (Figure 3). These include:

- 103 - Carsitas gravelly sand, 0 to 5 percent slopes
- 115 - Imperial-Glenbar silty clay loams, wet, 0 to 2 percent slopes
- 122 - Meloland very fine sandy loam, wet
- 124 - Niland gravelly sand
- 125 - Niland gravelly sand, wet
- 132 - Rositas fine sand, 0 to 2 percent slopes
- 133 - Rositas fine sand, 2 to 9 percent slopes
- 135 - Rositas fine sand, wet, 0 to 2 percent slopes
- 141 - Torriorthents and Orthids, 5 to 30 percent slopes
- 142 - Vint loamy very fine sand, wet
- 144 - Vint and Indio very fine sandy loams, wet
- 145 - Water

Figure 3. Natural Resources Conservation Service Soil Types

2020-144 Vega SES 5

Both the Niland gravelly sand and Niland gravelly sand, wet soils contain hydric components (NRCS 2020b). The Niland series soils exist on the western and eastern portions of the site and are characterized as well- to moderately well-drained soils with low surface runoff. The Carsitas gravelly sand soil is restricted to the eastern corner of the Project Area and is characterized as deep, excessively drained soil. The Imperial-Glenbar silty clay loam soils are restricted to the northwestern edge of the site and are characterized as moderately well drained soils. The Meloland very fine sandy loam soils are restricted to the southwestern portion of the site and are characterized as moderately well drained with low surface runoff. Vint loamy very fine sand soils exist in the northwestern portion of the site and are characterized as having moderately well-drained soils with very low surface runoff. Vint and Indio very fine sandy loams exist in the northwestern portion of the site and are characterized as having moderately well-drained soils with low surface runoff. The Rositas fine sand soils exist in the western and eastern portions of the site and are characterized as having moderately well-drained with very low surface runoff. The Torriorthents and Orthids soils exist in the northeastern portion of the site and are characterized as having variable permeability and rapid surface runoff.

4.2.2 Vegetation Communities/Land Use

The majority of the Project Area consists of fallow agricultural land and creosote bush scrub. The location of each vegetation community in the Project Area and wider Survey Area are described in detail below and presented in Figure 4. Acreage of each habitat and vegetation community in the Impact Area are shown in Table 2. Representative photographs of the habitats within the Project Area are included within Attachment A.

Table 2. Vegetation Communities and Land Covers in the Impact Area

Vegetation Communities and Land Covers	Acres
Bush seepweed scrub	60.25
Creosote bush scrub	103.26
Fallow agricultural land	101.27
Tamarisk thickets	1.54
Urban/Developed	2.49
Urban/Developed (Roads)	0.30
Impact Area Total	269.11

4.2.2.1 Bush seepweed Scrub (*Suaeda [moquinii] nigra* Shrubland Alliance)

Bush sweepweed scrub is found on flat to gently sloping valley bottoms, bajadas, and toe slopes adjacent to alluvial fans. Bush seepweed scrub is dominated by bush sweepweed, a USFWS Wetland Inventory OBL species (USACE 1996),and can be co-dominant with four-wing saltbush (*Atriplex canescens*) and/or alkali goldenbush (*Isocoma acradenia*). This vegetation community typically has a sparse to intermittent herbaceous layer. On this Project, bush sweepweed dominated the shrub cover with occasional occurrences of four-wing saltbush, arrow weed (*Pluchea sercia*), big saltbush (*Atriplex lentiformis*), alkali goldenbush, and tamarisk (*Tamarix* sp.).

Map Date: 8/18/2022
Photo Source: NAIP (2018), ECORP UAS Imagery (2020)

Figure 4. Vegetation Communities and Land Covers

4.2.2.2 Creosote Bush Scrub (Disturbed *Larrea tridentata* Shrubland Alliance)

Creosote bush scrub is found on alluvial fans, bajadas, upland slopes, mesas, erosional highlands, basins, and washes. Creosote was typically dominant in the shrub canopy, but occasionally was co-dominant with white bursage, with an absent to intermittent herbaceous layer of seasonal annuals. Other plant species include four-wing saltbush, big saltbush, Mediterranean grass (*Schismus barbatus*) and occasional bush seepweed on the banks of established drainages.

4.2.2.3 Tamarisk Thickets (*Tamarix* spp. Shrubland Semi-Natural Alliance)

Tamarisk thickets are characterized by a weedy monoculture of tamarisk. This habitat is typically in ditches, washes, rivers, arroyo margins, lake margins, and other watercourses. On the Project site, tamarisk and arrow weed were often co-dominant in this vegetation community. Other plant species observed include arrow weed, bush seepweed, four-wing saltbush, and big saltbush.

4.2.2.4 Other Land Cover Types

Fallow Agricultural Land

Fallow agricultural lands include remnant signs of row crops with open space between rows. Agricultural lands often occur in upland areas with high soil quality, or floodplains and are almost always artificially irrigated. This land cover was observed in the southern portion of the Project Area. On this Project, the areas consisted primarily of ruderal vegetation including bush seepweed, amaranth (*Amaranthus* sp.), and sudangrass (*Sorghum bicolor* ssp. *drummondii*) and occasional big saltbush.

Urban/Developed

Urban/Developed areas do not constitute a vegetation classification, but rather a land cover type. Areas mapped as developed have been constructed upon or otherwise physically altered to an extent that natural vegetation communities are no longer supported. There may be irrigated landscaped, ornamental species present between the hardscape. On the Project site, this land cover was dominant and consisted primarily of compacted dirt roads, structures, including utility towers.

4.2.2.5 Vegetation Communities and Land Covers within the Survey Area

One additional vegetation community and one additional land cover were observed within the buffer, but not within the Project Area. No impacts are expected as a result of Project-related activities.

Iodine bush scrub (Allenrolfea occidentalis Shrubland Alliance)

Iodine bush scrub is found on playas perched above drainages, seep, and dry lakebed margins. Iodine bush, a USFWS Wetland Inventory FACW+ species (USACE 1996), is dominant in the shrub and herbaceous layers in an open to continuous canopy. Other plant species observed within this community include four-wing saltbush, tamarisk, and bush seepweed.

PC ORIGINAL PKG

Active Agricultural Land

Active agricultural lands include planted, typically monotypic rows of crops of annual and perennial species with open space between rows. Species composition frequently changes by season and year. Agricultural lands often occur in upland areas with high soil quality, or floodplains and are almost always artificially irrigated. This land cover was observed in the southwestern portion of the 500-foot buffer.

4.2.3 Wildlife Observed

Wildlife species and sign observed included bobcat (*Lynx rufus*), burrowing owl (*Athene cunicularia*), American kestrel (*Falco sparverius*), Gambel's quail (*Callipepla gambelii*), turkey vulture (*Cathartes aura),* house finch (*Haemorhous mexicanus*), loggerhead shrike (*Lanius ludovicianus*), black-tailed gnatcatcher (*Polioptila melanura*), desert cottontail (*Sylvilagus audubonii*), black phoebe (*Sayornis nigricans*), white-crowned sparrow (*Zonotrichia leucophrys*), antelope ground squirrel (*Ammospermophilus* sp.*),* coyote (*Canis latrans*), and common side-blotched lizard (*Uta stansburiana*). In addition, potential kangaroo rat (*Dipodomys* sp.) burrows were observed throughout the Survey Area.

4.3 Special-Status Species Assessment

The literature review resulted in 22 special-status plant and 23 special-status wildlife species that historically have been recorded in the vicinity of the Project or that are highly associated with habitat that occurs on the Project site. Special-status plants were evaluated for their potential to occur within the Project limits where impacts could occur. Special-status wildlife were evaluated for their potential to occur within the Survey Area, a broader area which includes the Project Area and buffer, where direct or indirect impacts could occur. Potential for Occurrence tables are included in Attachments B and C.

4.3.1 Plants

Numerous special-status plant species have been recorded within five miles of the Project Area, according to the CNDDB (CDFW 2020a), IPaC (USFWS 2020b), and CNPSEI (CNPS 2020). Of all available records, a total of 22 species were identified as those with the potential for occurrence within the vicinity of the Project Area. Descriptions of the CNPS designations are found in Table 3 and a list of the special-status plant species identified in the literature review is presented following Table 3.

Table 3. CNPS Status Designations

List Designation	Meaning
1A	Plants Presumed Extirpated in California and Either Rare or Extinct Elsewhere
1B	Plants Rare, Threatened, or Endangered in California and Elsewhere
2A	Plants Presumed Extirpated in California, But Common Elsewhere
2B	Plants Rare, Threatened, or Endangered in California, But More Common Elsewhere
3	Plants about which we need more information; a review list
4	Plants of limited distribution; a watch list

PC ORIGINAL PKG

Table 3. CNPS Status Designations	
List Designation	**Meaning**
List 1B, 2, and 4 extension meanings:	
.1	Seriously threatened in California (over 80 percent of occurrences threatened / high degree and immediacy of threat)
.2	Moderately threatened in California (20-80 percent occurrences threatened / moderate degree and immediacy of threat)
.3	Not very threatened in California (less than 20% of occurrences threatened / low degree and immediacy of threat or no current threats known)

Note: According to CNPS (Skinner and Pavlik 1994), plants on Lists 1B and 2 meet definitions for listing as threatened or endangered under Section 1901, Chapter 10 of the California Fish and Game Code (California Department of Fish and Game [CDFG] 1984). This interpretation is inconsistent with other definitions.

4.3.1.1 Plant Species with a High Potential to Occur

Due to the presence of suitable habitat and several known recent occurrences within five miles of the Project Area, the following species were determined to have a high potential to occur:

- Gravel milk-vetch (*Astragalus sabulonum*) is a CNPS California Rare Plant Rank (CRPR) 2B.2 plant species. This species is known to occur at elevations between -60 and 930 meters (-197 and 3,051 feet) and blooms between February and June. Gravel milk-vetch is known to occur in creosote scrub habitat within sandy, sometimes gravelly flats, washes, and roadsides (CNPS 2020). One historic CNDDB record located approximately four miles northwest of the site near the City of Niland. Potential habitat occurs on site for this species in the form of creosote bush scrub habitat.
- Glandular ditaxis (*Ditaxis claryana*) is a CRPR 2B.2 plant species. This species is known to occur at elevations between sea level and 465 meters (sea level and 1,526 feet) and blooms between October and March. Glandular ditaxis is known to occur in creosote scrub habitat within sandy soils (CNPS 2020). One historic CNDDB record located approximately two miles northeast of the site. Potential habitat occurs onsite for this species in the creosote bush scrub habitat.

4.3.1.2 Plant Species with a Moderate Potential to Occur

The following species were found to have moderate potential to occur because habitat (including soils and elevation factors) for the species occurs in the Project Area and a known occurrence exists within the database search, but not within five miles of the Project; or a known occurrence exists within five miles of the site and marginal or limited amounts of habitat occurs in the Project Area:

- Salton milk-vetch (*Astragalus crotalariae*) is a CRPR 4.3 plant species. This species is known to occur at elevations between -60 and 250 meters (197 and 820 feet) and blooms between January and April. Salton milk-vetch is known to occur in creosote scrub habitat within sandy or gravelly soils. Potential habitat occurs onsite for this species in the disturbed creosote bush scrub habitat.
- Borrego milk-vetch (*Astragalus lentiginosus* var. *borreganus*) is a CRPR 4.3 plant species. This species is known to occur at elevations between 30 and 895 meters (98 and 2,936 feet) and

PC ORIGINAL PKG

blooms between February and May. Borrego milk-vetch is known to occur in creosote scrub habitat within sandy soils. Potential habitat occurs on site for this species in the disturbed creosote bush scrub habitat.

- Spiny abrojo (*Condalia globosa* var. *pubescens*) is a CRPR 4.2 plant species. This species is known to occur at elevations between 85 and 100 meters (164 and 279 feet) and blooms between March and May. Spiny abrojo is known to occur in creosote scrub habitat. Potential habitat occurs onsite for this species in the creosote bush scrub habitat.
- Abrams' spurge (*Euphorbia abramsiana*) is a CRPR 2B.2 plant species. This species is known to occur at elevations between -5 and 1,310 meters (16 and 4,298 feet) and blooms between September and November. Abrams' spurge is known to occur in creosote scrub habitat within sandy flats, including playas, fields, disturbed areas, and washes. Potential habitat occurs onsite for this species in the creosote bush scrub habitat.
- Ribbed cryptantha (*Johnstonella costata*) is a CRPR 4.3 plant species. This species is known to occur at elevations between -60 and 500 meters (197 and 1,640 feet) and blooms between February and May. Ribbed cryptantha is known to occur in desert dunes and creosote scrub habitat within sandy soils. Potential habitat occurs onsite for this species in the creosote bush scrub habitat.
- Slender-spined all thorn (*Koeberlinia spinosa* var. *tenuispina*) is a CRPR 2B.2 plant species. This species is known to occur at elevations between 150 and 510 meters (492 and 1,673 feet) and blooms between May and July. Slender-spined all thorn is known to occur in riparian woodland and creosote scrub habitats. Potential habitat occurs onsite for this species in the riparian and creosote bush scrub habitats.
- Slender cottonheads (*Nemacaulis denudata* var. *gracilis*) is a CRPR 2B.2 plant species. This species is known to occur at elevations between -50 and 400 meters (164 and 1,312 feet) and blooms between April and May. Slender cottonheads is known to occur in desert dunes and creosote scrub habitat. Potential habitat occurs onsite for this species in the disturbed creosote bush scrub habitat.
- Sand food (*Pholisma sonorae*) is CRPR 1B.2 plant species. This species is known to occur at elevations between sea level and 200 meters (sea level and 656 feet) and blooms between April and June. Sand food is known to occur in desert dunes and creosote scrub habitat within sandy soils. Potential habitat occurs onsite for this species in the creosote bush scrub habitat.
- Mecca-aster (*Xylorhiza cognata*) is a CRPR 1B.2 plant species. This species is known to occur at elevations between 20 and 400 meters (66 and 1,312 feet) and blooms between January and June. Mecca-aster is known to occur in creosote scrub habitat. Potential habitat occurs onsite for this species in the creosote bush scrub habitat.

PC ORIGINAL PKG

4.3.1.3 Plant Species with Low Potential to Occur

The following species were found to have a low potential to occur on the Project Area because limited habitat for the species occurs on the site and a known occurrence has been reported in the database, but not within five miles of the site, or suitable habitat strongly associated with the species occurs on the site, but no records were found in the database search:

- chaparral sand-verbena (*Abronia villosa* var. *aurita*), CRPR 1B.1
- Harwood's milk-vetch (*Astragalus insularis* var. *harwoodii*), CRPR 2B.2
- Peirson's milk-vetch (*Astragalus magdalenae* var. *peirsonii*), CRPR 1B.2
- pink fairy-duster (Calliandra eriophylla), CRPR 2B.3
- sand evening-primrose (*Chylismia arenaria*), CRPR 2B.2
- Wiggins' croton (*Croton wigginsii*), CRPR 2B.2
- Munz's cholla (Cylindropuntia munzii), CRPR 1B.3
- Algodones Dunes sunflower (*Helianthus niveus* var. *tephrodes*), CRPR 1B.2
- giant Spanish-needle (*Palafoxia arida* var. *gigantea*), CRPR 1B.3
- roughstalk witch grass (*Panicum hirticaule* var. *hirticaule*), CRPR 2B.1
- Coves' cassia (*Senna covesii*), CRPR 2B.1

4.3.2 Wildlife

The literature search documented 23 special-status wildlife species in the vicinity of the Project Area, six of which are federally and/or state listed. Of the 23 special-status wildlife species identified in the literature review, three were present within the Project Area, one was found to have a high potential to occur, three were found to have a moderate potential to occur, and seven were found to have a low potential to occur; the remaining nine species are presumed absent from the Project Area. Descriptions of the federal and state wildlife designations are found in Table 4, and a brief natural history and discussion of the special-status wildlife species found onsite that have a high or moderate potential to occur on the Project Area are provided below. Special-status wildlife species observed during the reconnaissance survey are depicted on Figure 5.

FP	Fully Protected Species
WL	Watch List

4.3.2.1 Special-Status Wildlife Species Present

The following species were either observed during the reconnaissance survey:

- Black-tailed gnatcatcher is a CDFW WL species. This species is remains in pairs all year, defending permanent territories. Black-tailed gnatcatchers prefer dry washes or desert brush with varied growth of mesquite, acacias, and paloverdes, but are also known to inhabit tamarisk scrub. One individual was observed foraging within the bush seepweed scrub along the railroad right-of-way and another individual was observed foraging within the tamarisk thickets of the Project Area (Figure 5).
- Loggerhead strike is a USFWS Bird of Conservation Concern (BCC) and a CDFW SSC. This species prefers open country with scattered shrubs and trees. They frequent agricultural fields, abandoned orchards, desert scrublands, and riparian areas. One individual was observed perched in the bush seepweed scrub in the center of the Project Area and another individual was observed foraging in the creosote bush scrub in the northwestern portion of the Project Area (Figure 5).

PC ORIGINAL PKG

2020-144 Vega SES 5

- Burrowing owl (BUOW) is a USFWS BBC and CDFW SSC. It is typically found in dry open areas with few trees and short grasses; it is also found in vacant lots near human habitation. It uses uninhabited mammal burrows for roosts and nests, often times in close proximity to California ground squirrel colonies. It primarily feeds on large insects and small mammals but will also eat birds and amphibians. The creosote scrub and portions of the riparian habitats provides potential habitat throughout the Project Area and buffer. Ground squirrel burrows that could be utilized by owls were detected within the Project Area. One burrowing owl was observed during the survey and potential burrows were detected within the Project Area. Twelve CNDDB records (2007) occur within five miles of the Project Area, with the closest record overlapping the Project boundary.

4.3.2.2 Special-Status Wildlife Species with a High Potential to Occur

One species was found to have high potential to occur within the Project Area due to the presence of suitable habitat for the species occurring onsite and a known occurrence has been recorded within five miles of the Project Area:

- Mountain plover (*Charadrius montanus*) is a USFWS BCC and a CDFW SSC. This species is most commonly found in grassy semidesert with scattered saltbush, sage, prickly pear, and yucca. It is also found in fallow or recently plowed agricultural fields and in overgrazed landscapes that mimic their natural shortgrass habitat. Three recent CNDDB observations have been recorded within five miles of the Project, the closest observation being approximately two miles away. The old agricultural land west and south of the East Highline Canal provides suitable habitat for the mountain plover.

4.3.2.3 Special-Status Wildlife Species with a Moderate Potential to Occur

Three species were found to have moderate potential to occur within the Project Area because habitat (including soils and elevation factors) for the species occurs onsite and a known occurrence exists within the database search, but not within five miles of the Project Area; or a known occurrence exists within five miles of the site and marginal or limited amounts of habitat occurs within the Project Area:

- California black rail (*Laterallus jamaicensis* ssp. *coturniculus*) is a USFWS BBC, state threatened, and CDFW fully protected species. California black rail are typically found in marsh habitat, including riparian marshes, saltmarshes, and wetlands. This species prefers consistent shallow water within the habitats. There is suitable habitat during the rainy season and shortly after for the California black rail within the wetlands in the Survey Area. There is one recent CNNDB record from 2015 approximately three miles from the Project Area and four historic CNDDB records, two of which are located within the Project Area.

- Merlin (*Falco columbarius*) is a CDFW WL species. This species prefers open and semi-open areas within woodlands near water bodies including rivers, lakes, and wetlands. There are suitable open areas within the upland habitats adjacent to the tamarisk thickets that provide suitable habitat for the merlin. Therefore, wintering individuals have a moderate potential to occur within the Project Area. There is a CNDDB record from 2007 located approximately three miles from the Project Area.

PC ORIGINAL PKG

- Yuma hispid cotton rat (*Sigmodon hispidus eremicus*) is a CDFW SSC. This species occurs in open fields or on the borders of open fields where there is dense grass habitat and/or agricultural fields. There is potential for this species to occur near the East Highline Canal and creosote bush scrub habitat of the Survey Area.

4.3.2.4 Wildlife Species with Low Potential to Occur

Seven species were found to have a low potential to occur within the Project Area because limited habitat for the species occurs onsite and a known occurrence has been reported in the database, but not within five miles of the Project Area, or suitable habitat strongly associated with the species occurs onsite, but no records were found in the database search:

- desert tortoise, federally listed threatened and state listed threatened,
- flat-tailed horned lizard (*Phrynosoma mcallii*), CDFW SSC,
- northern harrier (*Circus hudsonius*), CDFW SSC,
- Yuma Ridgway's rail (*Rallus obsoletus* ssp. *yumanensis*), federally listed endangered, state listed threatened, and CDFW FP,
- California leaf-nosed bat (*Macrotus californicus*), CDFW SSC,
- pallid bat (*Antrozous pallidus*), CDFW SSC, and
- western yellow bat (*Lasiurus xanthinus*), CDFW SSC.

4.3.2.5 Wildlife Species Presumed Absent

The following nine species are presumed absent from the Project due to the lack of suitable habitat within the Project Area:

- razorback sucker (*Xyrauchen texanus*), federally listed endangered, state listed endangered, and CDFW FP,
- Sonoran desert toad (*Incilius alvarius*), CDFW SSC,
- barefoot gecko (*Coleonyx switaki*), state listed threatened,
- western mastiff bat (*Eumops perotis* ssp. *californicus*), CDFW SSC,
- pocketed free-tailed bat (*Nyctinomops femorosaccus*), CDFW SSC,
- Mexican long-tongued bat (*Choeronycteris mexicana*), CDFW SSC,
- big free-tailed bat (*Nyctinomops macrotis*), CDFW SSC,
- Townsend's big-eared bat (*Corynorhinus townsendii*), CDFW SSC, and
- peninsular bighorn sheep (*Ovis canadensis* ssp. *nelson*), federally listed endangered, state listed endangered, and CDFW FP.

PC ORIGINAL PKG

4.4 Wildlife Movement Corridors, Linkages, and Significant Ecological Areas

The concept of habitat corridors addresses the linkage between large blocks of habitat that allow the safe movement of mammals and other wildlife species from one habitat area to another. The definition of a corridor is varied, but corridors may include such areas as greenbelts, refuge systems, underpasses, and biogeographic land bridges, for example. In general, a corridor is described as a linear habitat, embedded in a dissimilar matrix, which connects two or more large blocks of habitat. Wildlife movement corridors are critical for the survivorship of ecological systems for several reasons. Corridors can connect water, food, and cover sources, spatially linking these three resources with wildlife in different areas. In addition, wildlife movement between habitat areas provides for the potential of genetic exchange between wildlife species populations, thereby maintaining genetic variability and adaptability to maximize the success of wildlife responses to changing environmental conditions. This is especially critical for small populations subject to loss of variability from genetic drift and effects of inbreeding. Naturally, the nature of corridor use and wildlife movement patterns varies greatly among species.

The Project Area was assessed for its ability to function as a wildlife corridor. The Project Area has an ephemeral drainage braided system with an associated riparian corridor in the eastern section of the Project that provides cover for migrating and nesting birds. It also provides foraging habitat for raptors and small and large mammals, including rodents and canids. The tamarisk thicket-dominated wetlands located near the canal boundaries are likely utilized by wildlife moving through the area. Therefore, these features and associated riparian habitat would be considered necessary linkages between natural habitat areas to the north and east. The southwestern portion is restricted by the East Highland canal, off-shoot channels, roads, and agricultural fields. Although the canals, roads, and agricultural fields inhibit or deter large mammal movement, avian species and small mammals may forage and pass through these features.

The bush seepweed scrub, iodine scrub, and creosote bush scrub habitats offer little shelter, but moderate-quality foraging habitat. This natural pocket of habitat is semi-open with barriers to the north and south, leaving the terrain accessibility constrained for wildlife access. The eastern portion of the Project Area currently provides wildlife movement opportunities to the northwest and southeast because it consists of open and relatively unimpeded land. However, this portion of the Project would not be considered a wildlife movement corridor that would need to be preserved to allow wildlife to move between important natural habitat areas due to the lack of conserved natural lands in the immediate vicinity and the Project's proximity to farming lands. The Project is surrounded to the north, west, and south by agriculture. The scrub habitat within the Project boundaries is exposed and does not contain any major features that would be considered critical movement corridors for wildlife. Therefore, the scrub habitat acts as more of a buffer between agricultural lands and wildlands to the northeast, but not as a corridor for mammals.

5.0 PROJECT IMPACTS

Implementation of the Project has potential to impact creosote bush scrub habitat, bush seepweed scrub, and tamarisk thickets. These communities may provide suitable nesting and foraging habitat for passerines, including California black rail, BUOW, mountain plover, loggerhead strike, black-tailed

PC ORIGINAL PKG

gnatcatcher, raptor foraging habitat, and habitat for Salton milk-vetch, Borrego milk-vetch, gravel milk-vetch, spiny abrojo, glandular ditaxis, Abram's spurge, ribbed cryptantha, slender-spined all thorn, slender cottonheads, sand food, and Mecca-aster. The following recommendations would be required to determine if the Project would result in significant impacts to vegetation communities, special-status plant and wildlife species, jurisdictional waters, and wildlife movement corridors.

5.1.1 Special-Status Species

5.1.1.1 Special-Status Plants

The literature review identified 22 special-status plant species that have the potential to occur within the Project Area. However, 11 of these plant species have a low potential to occur due to limited suitable habitat. These species include chaparral sand-verbena, Hardwood's milk-vetch, Peirson's milk-vetch, Munz's cholla, pink fairy-duster, sand evening-primrose, Wiggins' croton, Algodones Dunes sunflower, giant Spanish-needle, roughstalk witch grass, and Coves' cassia.

There is moderate or high potential for 11 rare plant species (i.e. Salton's milk-vetch, Borrego milk-vetch, gravel milk-vetch, spiny abrojo, glandular ditaxis, Abram's spurge, ribbed cryptantha, slender-spined all thorn, slender cottonheads, sand food, and Mecca-aster) to be present within the Project Area. Suitable habitat for these species is present within the washes and creosote bush scrub habitats. Impacts that may occur to the species includes loss of individuals, habitat, and seedbank. Depending on the size of the population, this impact may be significant. Implementation of **BIO-1** and **BIO-2** is recommended to decrease the chances of a significant impact.

5.1.1.2 Special-Status Wildlife

The literature review identified 23 special-status wildlife species that have the potential to occur within the Project Area. However, 16 of these species have a low or no potential to occur due to the lack of suitable and limited habitat within the Project site. Wildlife species that are presumed absent from the Project Area include: Sonoran desert toad, barefoot gecko, western mastiff bat, pocketed free-tailed bat, Mexican long-tongued bat, Townsend's big-eared bat, big free-tailed bat, and peninsular bighorn sheep. Wildlife species with a low potential to occur include desert tortoise, razorback sucker, flat-tailed horned lizard, northern harrier, Yuma's ridgeway rail, California leaf-nosed bat, pallid bat, and western yellow bat.

Four species have a moderate or high potential to occur within the Project Area, these species are mountain plover, merlin, California black rail, and Yuma hispid cotton rat. Additionally, three special-status wildlife species were observed onsite during the habitat assessment. Black-tailed gnatcatchers, BUOW, and loggerhead strikes were observed in the tamarisk thickets and creosote bush scrub in the northern portion of the Project Site. Direct impacts to these species that could occur include injury, mortality, nest failures, and loss of young. Indirect impacts include loss of nesting and foraging habitat, increase in anthropogenic effects (i.e. noise levels, introduction of invasive/nonnative species, increase in human activity, increase in dust). Impacts to these species could be considered significant; therefore, implementation of **BIO-2**, **BIO-3**, **BIO-4**, **BIO-5**, and **BIO-7** is recommended.

PC ORIGINAL PKG

Foraging habitat for a number of raptor species and breeding habitat for numerous passerine species that are protected by the MBTA occurs throughout the Project Area. The site provides nesting habitat for ground-nesting species as well as species that nest in creosote scrub and riparian scrub habitats. Due to the lack of large trees within the Survey Area, there is no suitable nesting habitat for tree-nesting raptor species. Direct impacts to nesting avian species include injury, mortality, loss of young, and nest failure. Indirect impacts include loss of foraging and nesting habitat for passerine and raptors species, increase in noise and human activities, potential introduction of invasive/nonnative species. Implementation of **BIO-4**, **BIO-5**, and **BIO-7** are recommended to mitigate for potential impacts.

5.1.2 Sensitive Natural Communities

The approximately 405-acre site is comprised of fallow agricultural, creosote bush scrub, bush seepweed scrub, tamarisk thickets, and urban/developed land, that would be directly impacted by the Project. Active agricultural land, creosote bush scrub, iodine bush scrub, and tamarisk thickets occur within the Project buffer. In-kind mitigation, up to 3:1 ratio, may be required by CDFW to offset impacts to bush seepweed scrub and tamarisk thickets in order to reduce impacts to less than significant. Implementation of **BIO-7** and **BIO-8** is recommended to reduce potential impacts to a less than significant threshold.

5.1.3 State- and/or Federally Protected Wetlands and Waters

The results of the Aquatic Resources Delineation and discussion of potential impacts on state or federally protected wetlands or Waters of the U.S are discussed in the Aquatic Resources Delineation Report (ECORP 2020), prepared under a separate cover. Implementation of **BIO-6** and **BIO-8** is recommended to mitigate for potential significant impacts.

5.1.4 Wildlife Corridors and Nursery Sites

The Project Area is located adjacent to areas containing existing disturbances (i.e., roads, railroad tracks, and active agricultural land). The majority of the Project site does not contain suitable vegetation or cover to support wildlife movement and is nestled between agricultural and development; therefore, wildlife movement opportunities connecting the Project Site to large, undeveloped natural areas is limited. However, the riparian corridor could act as a potential corridor and nursey site for migrating wildlife species. Therefore, implementation of **BIO-2**, **BIO-4**, **BIO-5**, **BIO-6**, and **BIO-7** are recommended to mitigate for potential significant impacts.

5.1.5 Habitat and Conservation Plans and Natural Community Conservation

The Project will follow the guidelines in Imperial County's Conservation and Open Space Element and meet the requirements outlined in the plan. Consultation with County of Imperial - Department of Planning and Development, USFWS, and CDFW would be required should listed plant and/or wildlife species be found to occur.

PC ORIGINAL PKG

6.0 RECOMMENDATIONS AND MITIGATION MEASURES

The following recommendations have been developed in accordance with the CEQA impacts analysis for the Project (see Section 5) but should not be considered mitigation measures at this point in the Project planning process. These actions are recommended prior to Project implementation:

BIO-1 **Rare Plant Surveys:** Rare plant surveys should be conducted within suitable habitat on the Project Area during the appropriate blooming period for the Salton milk-vetch, Borrego milk-vetch, gravel milk-vetch, spiny abrojo, glandular ditaxis, Abram's spurge, ribbed cryptantha, slender-spined all thorn, slender cottonheads, sand food, and Mecca-aster. The surveys should be conducted by a botanist or qualified biologist in accordance with the USFWS Guidelines for Conducting and Reporting Botanical Inventories for Federally Listed, Proposed, and Candidate Plants (USFWS 1996); the CDFW Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities (CDFW 2018); and the CNPS Botanical Survey Guidelines (CNPS 2001). If any special-status species are observed during the rare plant surveys, the location of the individual plant or population will be recorded with a submeter GPS device for mapping purposes. If Project-related impacts to rare plants on the Project site are unavoidable, then consultation with CDFW may be required to develop a mitigation plan or additional avoidance and minimization measures. Mitigation measures that may be implemented if the species is observed include establishing a no-disturbance buffer around locations of individuals or a population and additional monitoring requirements.

BIO-2 **Biological Monitoring:** A qualified biologist should be present to monitor all ground-disturbing and vegetation-clearing activities conducted for the Project. During each monitoring day, the biological monitor should perform clearance survey "sweeps" at the start of each work day that vegetation clearing takes place to minimize impacts on special-status species with potential to occur (including, but not limited to, special-status (i.e. Yuma hispid cotton rat and/or nesting bird species). The monitor will be responsible for ensuring that impacts to special-status species, nesting birds, and active nests will be avoided to the greatest extent possible. Biological monitoring should take place until the Project Site has been completely cleared of any vegetation. If an active nest is identified, the biological monitor should establish an appropriate disturbance limit buffer around the nest using flagging or staking. Construction activities should not occur within any disturbance limit buffer zones until the nest is deemed no longer active by the biologist. If special-status wildlife species are detected during biological monitoring activities, consultation with the USFWS and/or CDFW should be conducted and a mitigation plan should be developed to avoid and offset impacts to these species. Mitigation measures may consist of work restrictions or additional biological monitoring activities after ground-disturbing activities are complete.

BIO-3 **Pre-Construction Surveys for Burrowing Owl:** Pre-construction surveys for burrowing owl should be conducted within the Project Area and adjacent areas prior to the start of ground-

PC ORIGINAL PKG

disturbing activities. The surveys should follow the methods described in the CDFW's *Staff Report on Burrowing Owl Mitigation* (CDFW 2012). Two surveys should be conducted, with the first survey being conducted between 30 and 14 days before initial ground disturbance (grading, grubbing, and construction), and the second survey being conducted no more than 24 hours prior to initial ground disturbance. If burrowing owls and/or suitable burrowing owl burrows with sign (e.g., whitewash, pellets, feathers, prey remains) are identified on the Project site during the survey and impacts to those features are unavoidable, consultation with the CDFW should be conducted and the methods described in the CDFW's *Staff Report on Burrowing Owl Mitigation* (CDFW 2012) for avoidance and/or passive relocation should be followed.

BIO-4 **Pre-Construction Nesting Bird Survey:** If construction or other project activities are scheduled to occur during the bird breeding season (Typically February 1 through August 31 for raptors and March 15 through August 31 for the majority of migratory bird species), a pre-construction nesting-bird survey should be conducted by a qualified avian biologist to ensure that active bird nests, including those for the black-tailed gnatcatcher, BUOW, and loggerhead strike, will not be disturbed or destroyed. The survey should be completed no more than three days prior to initial ground disturbance. The nesting-bird survey should include the Project Area and adjacent areas where Project activities have the potential to affect active nests, either directly or indirectly due to construction activity or noise. If an active nest is identified, the biologist should establish an appropriately sized disturbance limit buffer around the nest using flagging or staking. Construction activities should not occur within any disturbance limit buffer zones until the nest is deemed inactive by the qualified biologist.

BIO-5 **Pre-Construction Survey for Special-Status Species:** A pre-construction survey should be conducted for special-status wildlife species within all areas of potential permanent and temporary disturbance. The pre-construction survey should take place no more than 14 days prior to the start of ground-disturbing activities. The pre-construction surveys should take place regardless of breeding season timing and should focus on identifying the presence of special-status wildlife species present within the Project Area or that were identified as having a high potential to occur within the Project Area. These species include, but are not limited to, mountain plover, California black rail, merlin, Yuma hispid cotton rat, BUOW, black-tailed gnatcatcher, and loggerhead strike. Should any special-status species be identified during the pre-construction survey, consultation to develop suitable avoidance and minimization measures with the appropriate agency (USFWS, CDFW) may need to be undertaken.

BIO-6 **Aquatic Resources Regulatory Permitting:** If Project-related impacts will occur to areas under the jurisdiction of the USACE, CDFW or RWRCB, a regulatory permit with those agencies is needed prior to the impact occurring. Permitting includes preparation and submittal of a Pre-Construction Notification under Section 404 of the federal Clean Water Act, an Application for Water Quality Certification under Section 401 of the federal Clean

PC ORIGINAL PKG

Water Act and a Notification of Lake or Streambed Alteration under Section 1600 of the California Fish and Game Code. Other items such as finalized project plans, quantities of fill material, supporting technical studies and so on are also submitted along with the applications. As a part of this process, the Project must also identify and approve mitigation through the respective agencies. Mitigation can include onsite or offsite options or could include payment of an in-lieu fee to a conservation organization. Types of mitigation can include restoration, creation, rehabilitation, enhancement or other types of habitat improvement. Typically, the type of mitigation and acreage of mitigation is negotiated with the regulatory agencies during the permitting process.

BIO-7 **Sensitive Habitat Avoidance:** To the greatest extent possible, plans should avoid impacts to bush seepweed scrub and tamarisk thicket habitats to minimize potential impacts to special-status species. Excluding these habitats from the Project should also minimize mitigation and permitting requirements to meet the less than significance threshold.

BIO-8 **Minimization of Impacts to Wetland/Riparian Habitat:** Solar panels, structures, and new access roads should not be placed within 50 feet of wetland and riparian habitat boundaries. A construction buffer of 300 feet should be established around the wetlands and riparian habitat during bird breading season (February 1 – August 31). Prior to construction, fencing should be installed approximately 10 feet from the wetland and riparian habitat boundaries within 50 feet of the Project. Fencing should be easily visible to construction. Plans should clearly delineate access roads and staging areas. The extensive alluvial fan system should not be used as an access road between Project Areas.

The following best management practices are not mitigation measures pursuant to CEQA but are recommended to further reduce impacts to special-status species that have potential to occur on the property:

- Confine all work activities to a pre-determined work area. Prior to the initiation of ground disturbing activities, the project footprint, including laydown and staging areas, will be clearly delineated using fencing. All equipment and materials shall use existing roads and parking areas for equipment staging and laydown.
- To prevent inadvertent entrapment of wildlife during the construction phase of the Project, all excavated, steep-walled holes or trenches more than two feet deep should be covered at the close of each working day by plywood or similar materials. If the trenches cannot be closed, one or more escape ramps constructed of earthen fill or wooden planks should be installed. Before such holes or trenches are filled, they should be thoroughly inspected for trapped animals.
- Wildlife are often attracted to burrow- or den-like structures, such as pipes and may enter stored pipes and become trapped or injured. To prevent wildlife use of these structures, all construction pipes, culverts, or similar structures with a diameter of four inches or greater should be capped while stored onsite.

PC ORIGINAL PKG

- All food-related trash items such as wrappers, cans, bottles, and food scraps should be disposed of in securely closed containers and removed at least once a week from a construction or Project site.
- Use of rodenticides and herbicides on Project site should be restricted. This is necessary to prevent primary or secondary poisoning of wildlife, including burrowing owl and the depletion of prey populations on which they depend. All uses of such compounds should observe label and other restrictions mandated by the U.S. Environmental Protection Agency, California Department of Food and Agriculture, and other State and federal legislation. If rodent control must be conducted, zinc phosphide should be used because of a proven lower risk to BUOW.

Special-Status Plant Potential for Occurrence Table

PC ORIGINAL PKG

Special-Status Plant Species with Potential to Occur within the Project site				
Scientific Name **Common Name**	**Status**	**Blooming Period/ Elevation Range (meters)**	**Habitat**	**Potential to Occur in the Project**
Abronia villosa var. *aurita* chaparral sand-verbena	**USFWS**: None **CDFW**: None **CRPR**: 1B.1 **BLM**: Sensitive	Mar-Sep (75 - 1600)	Chaparral Coastal scrub Desert dunes	**Low:** Limited habitat occurs within the Project site; known occurrence exists within the CNPS nine quadrant search.
Astragalus crotalariae Salton milk-vetch	**USFWS**: None **CDFW**: None **CRPR**: 4.3 **BLM**: None	Jan-Apr (-60 - 250)	Sonoran desert scrub	**Moderate:** Habitat for this species occurs within the Project site; known occurrence exists within CNPS nine quadrat search.
Astragalus insularis var. *harwoodii* Harwood's milk-vetch	**USFWS**: None **CDFW**: None **CRPR**: 2B.2 **BLM**: None	Jan-May (0 – 710)	Desert dunes Mojavean desert scrub	**Low:** Limited habitat occurs within the Project site; known occurrence exists within CNPS nine quadrat search.
Astragalus lentiginosus var. *borreganus* Borrego milk-vetch	**USFWS**: None **CDFW**: None **CRPR**: 4.3 **BLM**: None	Feb-May (30 – 895)	Mojavean desert scrub Sonoran desert scrub	**Moderate:** Habitat for this species occurs within the Project site; known occurrence exists within CNPS nine quadrat search.
Astragalus magdalenae var. *peirsonii* Peirson's milk-vetch	**USFWS**: Threatened **CDFW**: Endangered **CRPR**: 1B.2 **BLM**: Federal Threatened	Dec-Apr (60 - 225)	Desert dunes	**Low:** Limited habitat occurs within the Project site; known occurrence exists within CNPS nine quadrat search.
Astragalus sabulonum gravel milk-vetch	**USFWS**: None **CDFW**: None **CRPR**: 2B.2 **BLM**: None	Feb-Jun (-60 - 930)	Desert dunes Mojavean desert scrub Sonoran desert scrub	**High:** Habitat for this species occurs within the Project site; historic CNNDB record (1906) approximately 3 miles from the Project.
Calliandra eriophylla pink fairy-duster	**USFWS**: None **CDFW**: None **CRPR**: 2B.3 **BLM**: None	Jan-Mar (120 – 1500)	Sonoran desert scrub	**Low:** Limited habitat occurs within the Project site; known occurrence exists within CNPS nine quadrat search.
Chylismia arenaria sand evening-primrose	**USFWS**: None **CDFW**: None **CRPR**: 2B.2 **BLM**: None	Nov-May (-70 – 915)	Sonoran desert scrub	**Low:** Limited habitat occurs within the Project site; known occurrence exists within database.

PC ORIGINAL PKG

Special-Status Plant Species with Potential to Occur within the Project site				
Scientific Name **Common Name**	**Status**	**Blooming Period/ Elevation Range (meters)**	**Habitat**	**Potential to Occur in the Project**
Condalia globosa var. *pubescens* spiny abrojo	**USFWS**: None **CDFW**: None **CRPR**: 4.2 **BLM**: None	Mar-May (85 – 1000)	Sonoran desert scrub	**Moderate:** Habitat occurs within the Project site; known occurrence exists within CNPS nine quadrat search.
Croton wigginsii Wiggins' croton	**USFWS**: None **CDFW**: Rare **CRPR**: 2B.2 **BLM**: Sensitive	Mar-May (50 - 100)	Desert dunes Sonoran desert scrub	**Low:** Limited habitat for this species occurs within the Project site; known CNDDB occurrence (1986) approximately 4 miles from the Project.
Cylindropuntia munzii Munz's cholla	**USFWS**: None **CDFW**: None **CRPR**: 1B.3 **BLM**: Sensitive	May (150 – 600)	Sonoran desert scrub	**Low:** Limited habitat for this species occurs within the Project site; known CNDDB occurrence (2017) exists within 1 mile of the Project. This species was not observed during the reconnaissance survey.
Ditaxis claryana glandular ditaxis	**USFWS**: None **CDFW**: None **CRPR**: 2B.2 **BLM**: None	Oct, Dec, Jan, Feb, Mar (0 – 465)	Mojavean desert scrub Sonoran desert scrub	**High:** Habitat for the species occurs in the Project site and a known CNNDB occurrence (1978) has been recorded within one mile of the Project.
Euphorbia abramsiana Abrams' spurge	**USFWS**: None **CDFW**: None **CRPR**: 2B.2 **BLM**: None	Sep-Nov (-5 - 1310)	Mojavean desert scrub Sonoran desert scrub	**Moderate:** Habitat for this species occurs within the Project site; known occurrence exists within CNPS nine quadrat search.
Helianthus niveus var. tephrodes Algodones Dunes sunflower	**USFWS**: None **CDFW**: Endangered **CRPR**: 1B.2 **BLM**: None	Sep-May (50 - 100)	Desert dunes	**Low:** Limited habitat occurs within the Project site; known occurrence exists within CNPS nine quadrat search.
Johnstonella costata ribbed cryptantha	**USFWS**: None **CDFW**: None **CRPR**: 4.3 **BLM**: None	Feb-May (-60 - 500)	Desert dunes Mojavean desert scrub Sonoran desert scrub	**Moderate:** Habitat for this species occurs within the Project site; known occurrence exists within CNPS nine quadrat search.
Koeberlinia spinosa var. *tenuispina* slender-spined all thorn	**USFWS**: None **CDFW**: None **CRPR**: 2B.2 **BLM**: None	May-Jul (150 - 510)	Riparian woodland Sonoran desert scrub	**Moderate:** Habitat occurs within the Project site; known occurrence exists within CNPS nine quadrat search.

PC ORIGINAL PKG

Special-Status Plant Species with Potential to Occur within the Project site				
Scientific Name **Common Name**	**Status**	**Blooming Period/ Elevation Range (meters)**	**Habitat**	**Potential to Occur in the Project**
Nemacaulis denudata var. *gracilis* slender cottonheads	**USFWS**: None **CDFW**: None **CRPR**: 2B.2 **BLM**: None	Apr-May (-50 - 400)	Coastal dunes Desert dunes Sonoran desert scrub	**Moderate:** Habitat for this species occurs within the Project site; known occurrence exists within CNPS nine quadrat search.
Palafoxia arida var. *gigantea* giant Spanish-needle	**USFWS**: None **CDFW**: None **CRPR**: 1B.3 **BLM**: Sensitive	Jan-May (15 - 100)	Desert dunes	**Low:** Limited habitat occurs within the Project site; known occurrence exists within CNPS nine quadrat search.
Panicum hirticaule var. *hirticaule* roughstalk witch grass	**USFWS**: None **CDFW**: None **CRPR**: 2B.1 **BLM**: None	Aug-Dec (45 – 315)	Desert dunes Joshua tree woodland Mojavean desert scrub Sonoran desert scrub	**Low:** Limited habitat occurs within the Project site; known occurrence exists within CNPS nine quadrat search.
Pholisma sonorae sand food	**USFWS**: None **CDFW**: None **CRPR**: 1B.2 **BLM**: Sensitive	Apr-Jun (0 - 200)	Desert dunes Sonoran desert scrub	**Moderate:** Habitat for this species occurs within the Project site; known occurrence exists within CNPS nine quadrat search.
Senna covesii Coves' cassia	**USFWS**: None **CDFW**: None **CRPR**: 2B.1 **BLM**: None	Aug-Dec (45 – 1315)	Desert dunes Joshua tree woodland Mojavean desert scrub Sonoran desert scrub	**Low:** Limited habitat occurs within the Project site; known occurrence exists within CNPS nine quadrat search.
Xylorhiza cognata Mecca-aster	**USFWS**: None **CDFW**: None **CRPR**: 1B.2 **BLM**: Sensitive	Jan-Jun (20 – 400)	Sonoran desert scrub	**Moderate:** Habitat for this species occurs within the Project site; known occurrence exists within CNPS nine quadrat search.

California Native Plant Society (CNPS) Rare Plant Ranks:
1B: Plants rare, threatened, and endangered in California and elsewhere.
2B: Plants rare, threatened, or endangered in California, but more common elsewhere.
4: Plants of limited distribution; a watch list.

CNPS Threat Ranks:
0.1: Seriously threatened in California (over 80% of occurrences threatened / high degree and immediacy of threat)
0.2: Fairly threatened in California (20-80% of occurrences threatened / moderate degree and immediacy of threat)
0.3-Not very threatened in California (less than 20% of occurrences threatened / low degree and immediacy of threat or no current threats known)

ATTACHMENT C

Special-Status Wildlife Potential for Occurrence Table

PC ORIGINAL PKG

Special-Status Wildlife Species Potential For Occurrence				
Scientific Name Common Name	**Status**		**Habitat Requirements**	**Potential for Occurrence**
VERTEBRATES				
OSTEICHTHYES (BONY FISH)				
CATOSTOMIDAE (suckers)				
Xyrauchen texanus razorback sucker	USFWS: CDFW:	**END** **END,** FP	Rivers and lakes in the southwestern United States	**Presumed absent.** No suitable habitat on site. Perennial canal present in buffer. One historic (1974), but no recent CNDDB record within 5 miles of the site.
AMPHIBIANS				
BUFONIDAE (true toads)				
Incilius alvarius Sonoran Desert toad	USFWS: CDFW:	none SSC	Creosote bush desert scrub, grasslands up into oak-pine woodlands, thorn scrub and tropical deciduous forest in Mexico.	**Presumed absent.** Suitable habitat on site and within the buffer; however, population may be extirpated (Jennings and Hayes 1994). One historic (1916), but no recent CNDDB record within 5 miles of the site.
REPTILES				
GEKKONIDAE (geckos)				
Coleonyx switaki barefoot gecko	USFWS: CDFW:	none **THR**	Arid rocky areas on flatlands, canyons, thorn scrub, especially where there are large boulders and rock outcrops, and where vegetation is sparse.	**Presumed absent.** Habitat such as canyons, thorn scrub, large boulders, and rock outcrops not present on site. No CNDDB records occur within 5 miles of the site.
PHRYNOSOMATIDAE (spiny lizards)				
Phrynosoma mcallii flat-tailed horned lizard	USFWS: CDFW:	none SSC	Desert scrub on sandy flats and valleys with little or no windblown sand, salt flats, and areas with gravelly soils. There are three regional populations of flat-tailed horned lizard in California; two of these (representing the majority of the range in the State) occur in Imperial County. These are on the west side of the Salton Sea/Imperial Valley and on the east side of the Imperial Valley.	**Low.** Suitable habitat on site. No CNDDB records occur within 5 miles of the site.
TESTUDINDAE (land tortoises)				
Gopherus agassizii Mojave desert tortoise	USFWS: CDFW:	**THR** **THR**	Sandy flats to rocky foothills, including alluvial fans, washes and canyons where suitable soils for den construction might be found.	**Low.** Suitable habitat within the site and buffer. Desert tortoise critical habitat is approximately 10 miles northeast of the site. No CNDDB records occur within 5 miles of the site.

PC ORIGINAL PKG

BIRDS				
ACCIPITRIDAE (hawks, kites, harriers, and eagles)				
Circus hudsonius northern harrier	USFWS: CDFW:	none SSC	Undisturbed tracts of grasslands and wetlands with low, thick vegetation. Prefers to breed in dry upland habitats, old fields, grazed meadows, drained marshlands, and high-desert shrubsteppe. Also found in pasturelands, croplands, and open floodplains.	**Low.** Marginally suitable habitat onsite. No nesting habitat onsite. No CNDDB records occur within 5 miles of the site.
CHARADRIIAE (plovers and lapwings)				
Charadrius montanus mountain plover	USFWS: CDFW:	BCC SSC	Shortgrass prairie, especially where blue grama, buffalo grass, and western wheat grass are dominant; and in grassy semidesert with scattered saltbush, sage, prickly pear, and yucca, at elevations ranging from 2,100 to 10,663 feet. Also found in fallow or recently plowed agricultural fields and in overgrazed landscapes that mimic their natural shortgrass habitat.	**High**. Suitable habitat such as agricultural fields onsite. Three CNDDB records occur within 5 miles of the project site with the closest one being two miles away (2011).
FALCONIDAE (falcons and caracaras)				
Falco columbarius merlin	USFWS: CDFW:	none WL	Open and semi-open areas in fragmented woodlots, near rivers, lakes, or bogs, and on lake islands.	**Moderate.** Suitable river and wetland habitat within the site and buffer. One recent CNDDB record (2007) occurs within 3 miles of the site.
LANIIDAE (shrikes)				
Lanius ludovicianus loggerhead shrike (nesting)	USFWS: CDFW:	BCC SSC	Open country with short vegetation and well-spaced shrubs or low trees, particularly those with spines or thorns, agricultural fields, pastures, old orchards, riparian areas, desert scrublands, savannas, prairies, golf courses, and cemeteries.	**Present.** One adult was observed in the southwestern corner of the Project. Suitable habitat such as agricultural fields onsite. One CNDDB record (2007) within 1/10 of a mile of the site.

PC ORIGINAL PKG

POLIOPTILIDAE (gnatcatchers)				
Polioptila melanura black-tailed gnatcatcher	USFWS: CDFW:	none WL	Semiarid and desert thorn scrub habitats. This species is well adapted to dry habitats and tend to be most common in areas with less than 8 inches of annual rainfall. They often live far from streams and other bodies of water.	**Present.** A pair was observed foraging in the tamarisk thickets within the northeastern corner of the Project. Desert scrub habitat within the site is suitable for this species. No CNDDB records occur within 5 miles of the site.
RALLIDAE (rails)				
Laterallus jamaicensis* ssp. *coturniculus California black rail	USFWS: CDFW:	BCC **THR,** FP	Riparian marshes, coastal prairies, saltmarshes, and impounded wetlands. All of its habitats have stable shallow water, usually just 1.2 inches deep at most.	**Moderate.** The presence of riparian habitat and wetlands onsite provides suitable habitat. One recent CNDDB record occurs from 2015. Four historic CNDDB records occur with two being less than 1 mile from the site.
Rallus obsoletus* spp. *yumanensis Yuma Ridgway's rail	USFWS: CDFW:	**END THR,** FP	Consistently found in freshwater marshes that are composed of cattail and bulrush. This emergent vegetation averages greater than 6 feet tall. Water depth tends to be around 3.5 inches deep. Range extends from Nevada, California, and Arizona to Baja California and Sonora Mexico.	**Low.** Presence of the canal and freshwater forested/shrub wetland habitat within the site and buffer could be suitable. No CNDDB records within 5 miles of the site.
STRIGIDAE (owls)				
Athene cunicularia burrowing owl	USFWS: CDFW:	BCC SSC	Open grasslands including prairies, plains, and savannah, or vacant lots and airports. Nests in abandoned dirt burrows.	**Present.** An adult was observed perched on a mound on the border of the tamarisk thickets in the eastern portion of the Project. Twelve CNDDB records occur within 5 miles of the site with the closest overlapping the project boundary. Twelve owls were found in the area in 2007.
MAMMALS				
MOLOSSIDAE (free-tailed bats)				
Eumops perotis* ssp. *californicus western mastiff bat	USFWS: CDFW:	none SSC	Roosts high above ground in rock and cliff crevices, shallow caves, and rarely in buildings. Occurs in arid and semiarid regions including rocky canyon habitats.	**Presumed absent.** No suitable roosting habitat within site or in buffer. No CNDDB records within 5 miles of the site.

PC ORIGINAL PKG

Nyctinomops femorosaccus pocketed free-tailed bat	USFWS: CDFW:	none SSC	Roosts in crevices of outcrops and cliffs, shallow caves, and buildings. Found along rugged canyons, high cliffs, and semiarid rock outcroppings.	**Presumed absent.** No suitable roosting habitat within site or in buffer. No CNDDB records within 5 miles of the site.
Nyctinomops macrotis big free-tailed bat	USFWS: CDFW:	none SSC	Roosts in cliff crevices, and less often in buildings, caves, and tree cavities. Occurs in rocky areas of rugged and hilly country including woodlands, evergreen forests, river floodplain-arroyo habitats, and desert scrub.	**Presumed absent.** No suitable roosting habitat within site or in buffer. No CNDDB records within 5 miles of the site.
PHYLLOSTOMIDAE (leaf-nosed bats)				
Choeronycteris mexicana Mexican long-tongued bat	USFWS: CDFW:	none SSC	Roosts in caves, rock fissures, old mines, and rarely in buildings. Found in desert shrublands, tropical deciduous forests, deep mountain canyons with riparian vegetation, oak-conifer woodlands and forests.	**Presumed absent.** No suitable roosting habitat within site or in buffer; however, there is suitable foraging habitat. No CNDDB records within 5 miles of the site.
Macrotus californicus California leaf-nosed bat	USFWS: CDFW:	none SSC	Roosts in caves, abandoned mines, or natural rock fissures in canyons during the day. May roost in buildings, under bridges, or in porches during the night. Found in lowland desert scrub. Foraging usually takes place in dry desert washes.	**Low.** No suitable roosting habitat within site or in buffer; however, there is suitable foraging habitat. No CNDDB records within 5 miles of the site.
VESPERTILIONIDAE (evening bats)				
Antrozous pallidus pallid bat	USFWS: CDFW:	none SSC	Roosts in rock crevices, caves, mines, buildings, bridges, and in trees. Generally, in mountainous areas, lowland desert scrub, arid grasslands near water and rocky outcrops, and open woodlands.	**Low.** There is a bridge spanning the river in the northeast corner of the Project; however, there was no bat sign observed during the habitat assessment. Desert scrub provides suitable foraging habitat. No CNDDB records within 5 miles of the site.
Corynorhinus townsendii Townsend's big-eared bat	USFWS: CDFW:	none SSC	Roosts in mines, caves, buildings, or other crevices, sometimes trees. Usually requires large crevices. Most common in moist areas or those with access to water.	**Presumed absent.** There is no suitable roosting habitat within the site and buffer. No CNDDB records occur within 5 miles of the site.

PC ORIGINAL PKG

Lasiurus xanthinus western yellow bat	USFWS: CDFW:	none SSC	Roosts in trees, particularly palms, in desert wash, desert riparian, valley foothill riparian, and palm oasis habitats.	**Low.** There is limited suitable roosting habitat within the site and buffer. No CNDDB records occur within 5 miles of the site.
BOVIDAE (sheep and relatives)				
Ovis canadensis* ssp. *nelsoni peninsular bighorn sheep	USFWS: CDFW:	**END** **END,** FP	Dry, rocky, low-elevation desert slopes, canyons, and washes from the San Jacinto and Santa Rosa mountains near Palm Springs, California south into Baja California, Mexico.	**Presumed absent.** There is no suitable habitat such as canyons and mountains within the project site and buffer. No CNDDB records occur within 5 miles of the site.
CRICETIDAE (New World rats and mice)				
Sigmodon hispidus* ssp. *eremicus Yuma hisbid cotton rat	USFWS: CDFW:	none SSC	Inhabits a variety of habitats, but generally associated with drainage ditches, canals, and seeps vegetated with plants such as arrow weed, saltgrass, common reed, cattails, sedges, tamarisk, heliotrope, and annual grasses. They utilize runways through dense herbaceous growth and nests are built of woven grass. Noted presence in moist agricultural fields.	**Moderate.** There is marginally suitable habitat within the site and buffer. No CNDDB records within 5 miles of the Project.

Federal Designations:
(Federal Endangered Species Act, USFWS)

END: Federally-listed, Endangered
THR: Federally-listed, Threatened
CAN: Federal Candidate Species
FSC: Federal Species of Concern
FPD: Federal Proposed for Delisting
BCC: Bird of Conservation Concern

State Designations:
(California Endangered Species Act, CDFW)

END: State-listed, Endangered
THR: State-listed, Threatened
CAN: State Candidate Species
SSC: California Species of Special Concern
FP: Fully Protected Species
WL: Watch List

1.0 INTRODUCTION

This aquatic resources delineation report was prepared to describe the aquatic resources at the Vega SES 2 and SES 3 Solar Projects (Projects) in Imperial County, California. The proposed Projects are 100-Megawatt (MW) direct current and 400 MW-hour (MWH) battery storage utility-scale solar projects located on approximately 1,712 acres of vacant land on three parcels in Imperial County, California (Assessor Parcel Numbers [APNs] 025-260-011, 025-010-006, and 025-270-023). As depicted on the U.S. Geological Survey (USGS) 7.5-minute "Iris, California" topographic quadrangle (USGS 1992), the Projects are located within Sections 3, 4, 7, 8, 9, 10, 14, 15, 16, 17, and 18 of Township 11 South, Range 15 East, San Bernardino Base and Meridian.

For the purposes of this report, the Vega 2 and 3 Projects were divided into three Study Areas. The term *Study Area* refers to the Project footprint plus a 500-foot buffer. The term *Impact Area* refers to the areas proposed to be directly affected by implementation of the Projects and corresponds to the client-supplied Project impact boundary. A complete summary of geographic information for each Study Area is provided in Table 1.

The original areas surveyed in 2020 included a larger footprint. The Project Impact Areas were refined in 2022. Therefore, the original 2020 Study Area, including features mapped and sample points collected outside of the updated Impact Areas are shown on the figures to provide context. However, this report is intended to provide information to support USACE review and verification for features within the Impact Area only.

Table 1. Geographic Information Summary

Study Area	Project Name	Accessor's Parcel Number (APN)	Sections	Approximate Center of Study Area
1	SES 2	025-260-011	8, 16, 17	33.212810, -115.432084
2	SES 2 and 3	025-010-006	3, 4, 7, 8, 9, 10, 15, 16, 17, 18	33.224760, -115.414804
3	SES 2	025-270-023	10, 14, 15	33.211691, -115.395183

Study Area 1 includes a battery storage utility-scale solar project located on approximately 448 acres of vacant land within one private parcel in Imperial County.

Study Area 2, also known as the Mesa Grande parcel, includes a battery storage utility-scale solar project located on approximately 640 acres of vacant land within one private parcel in Imperial County. Study Area 3, also known as the Li Tong parcel, includes a battery storage utility-scale solar project located on approximately 624 acres of vacant land within one private parcel in Imperial County. The proposed Projects will connect to previously established Imperial Irrigation District generator intertie lines adjacent to Study Area 1 and 2.

All three Study Areas are approximately 10 miles east of the Salton Sea and four miles west of the Chocolate Mountains (Figure 1. *Project Location and Vicinity*). Driving directions to the Study Areas are included as Attachment A.

PC ORIGINAL PKG

This report describes aquatic resources identified within the Impact Areas that may be regulated by the Porter-Cologne Water Quality Act, California Fish and Game Code Sections 1600 and 1602, and the U.S. Army Corps of Engineers (USACE) pursuant to Sections 401 and 404 of the federal Clean Water Act (CWA). The information presented in this report provides data required by the USACE Los Angeles District's *Minimum Standards for Acceptance of Aquatic Resources Delineation Reports* (USACE 2016). The aquatic resource boundaries depicted in this report represent a calculated estimation of the potentially jurisdictional area within the Impact Areas and are subject to modification following a verification process by each regulating agency.

2.0 REGULATORY SETTING

2.1 Clean Water Act

The USACE regulates discharge of dredged or fill material into waters of the U.S. under Section 404 of the CWA. "Discharges of fill material" is defined as the addition of fill material into waters of the U.S., including, but not limited to, the following: placement of fill necessary for the construction of any structure, or impoundment requiring rock, sand, dirt, or other material for its construction; site-development fills for recreational, industrial, commercial, residential, and other uses; causeways or road fills; and fill for intake and outfall pipes, and subaqueous utility lines [33 CFR § 328.2(f)]. In addition, Section 401 of the CWA (33 U.S. Code 1341) requires any applicant for a federal license or permit to conduct any activity that may result in a discharge of a pollutant into waters of the U.S. to obtain a certification that the discharge will comply with the applicable effluent limitations and water quality standards.

Substantial impacts to wetlands, over 0.5 acre of impact, may require an individual permit. Projects that only minimally affect wetlands, less than 0.5 acre of impact, may meet the conditions of one of the existing Nationwide Permits. A RWQCB Water Quality Certification or waiver pursuant to Section 401 of the CWA is required for USACE Section 404 permit actions.

Pursuant to the USEPA and USACE memorandum regarding CWA jurisdiction, issued following the U.S. Supreme Court's decision in the consolidated cases Rapanos v. United States and Carabell v. United States (herein referred to as Rapanos), the agencies will assert jurisdiction over the following waters: "Traditional Navigable Waters" (TNW), all wetlands adjacent to TNWs, non-navigable tributaries of TNWs that are "relatively permanent" waters (RPW) (i.e., tributaries that typically flow year-round or have continuous flow at least seasonally), and wetlands that directly abut such tributaries (USEPA and USACE 2007).

Waters requiring a significant nexus determination by the USACE and USEPA to establish jurisdiction include non-navigable tributaries that are not relatively permanent, wetlands adjacent to non-navigable tributaries that are not relatively permanent, and wetlands adjacent to but do not directly abut a relatively permanent non-navigable tributary (USEPA and USACE 2007). The jurisdictional determination is a fact-based evaluation to establish whether a water has a significant nexus with a TNW. The significant nexus analysis will assess the flow characteristics and functions of the non-navigable tributary itself and the functions performed by all wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of downstream TNWs (USEPA and USACE 2007).

PC ORIGINAL PKG

2.2 Porter-Cologne Water Quality Act

The Porter-Cologne Water Quality Control Act (hereafter referred to as Porter-Cologne Act) provides a framework to protect water quality in California. The Porter-Cologne Act was enacted in 1969 as Division 7 of the Water Code and is the primary water quality law in California. The Porter-Cologne Act addresses two primary functions: water quality control planning and waste discharge regulation (WDR). The State Legislature, in adopting the Porter-Cologne Act, directed that California's waters "shall be regulated to attain the highest water quality which is reasonable" and charges the Water Boards with protecting all waters of California, defined as "any surface water or groundwater, including saline waters, within the boundaries of the State." This encompasses all Waters of the State, including those not under federal jurisdiction.

The Porter-Cologne Act regulates discharges that could affect the quality of water of surface or ground waters, wherever those discharges may occur. Under the Porter-Cologne Act, the Water Board regulates actions that would involve "discharging waste, or proposing to discharge waste, with any region that could affect the water of the state" [Water Code 13260(a)]. Waters of the State are defined as "any surface water or groundwater, including saline waters, within the boundaries of the state" [Water Code 13050 (e)]. The Porter Cologne Act defines *Waters of the State* very broadly, with no physical descriptors, and no interstate commerce limitation.

The Porter-Cologne Act further requires that anyone who plans to discharge waste where it might affect Waters of the State must first notify the Water Boards. The Water Boards identify the sources of pollutants that threaten water quality under the Porter-Cologne Act and regulate waste discharges that could affect water quality by issuing WDRs. The State Water Resources Control Board (SWRCB) adopted the *State Wetland Definition and Procedures for Discharge of Dredged or Fill Material into Waters of the U.S.* in April 2019. The Water Board regulates all such activities, as well as dredging, filling, or discharging materials into Waters of the State, that are not regulated by USACE due to a lack of connectivity with a navigable water body. The Water Board may require issuance of a WDR for these activities. If a project impacts Waters of the State that do not fall under federal jurisdiction, the applicant need not obtain a section 404 permit or a 401 certification, but instead must receive approval from the Water Boards through the adoption of WDRs.

2.3 California Fish and Game Code Section 1602

Pursuant to Section 1602 of the California Fish and Game Code, a Streambed Alteration Agreement (SAA) application must be submitted for "any activity that may substantially divert or obstruct the natural flow or substantially change the bed, channel, or bank of any river, stream, or lake" (California Department of Fish and Wildlife [CDFW] 2020). In Title 14 of the California Code of Regulations, Section 1.72, the CDFW defines a *stream* (including creeks and rivers) as:

> "a body of water that flows at least periodically or intermittently through a bed or channel having banks and supports fish or other aquatic life. This includes watercourses having a surface or subsurface flow that supports or has supported riparian vegetation."

PC ORIGINAL PKG

The CDFW's jurisdiction includes drainages with a definable bed, bank, or channel with the jurisdictional limit being the top-of-bank. It also includes areas that support intermittent, perennial, or subsurface flows; supports fish or other aquatic life; or supports riparian or hydrophytic vegetation. It also includes areas that have a hydrologic source.

The CDFW will determine if the proposed actions will result in diversion, obstruction, or change of the natural flow, bed, channel, or bank of any river, stream, or lake that supports fish or wildlife. The CDFW will submit an SAA that includes measures to protect affected fish and wildlife resources; this SAA is the final proposal agreed upon by the CDFW and the applicant.

A summary of federal, state, and local regulations and corresponding regulating agencies are summarized in Table 2.

Table 2. Summary of Federal, State, and Local Regulations

Regulation	Resource	Regulating Agency
Federal Regulations		
Federal Clean Water Act	Aquatic features meeting the definition of Waters of the US	USACE
State Regulations		
California Fish and Game Code Section 1602	River, stream, or lake and associated riparian habitat	CDFW
Porter-Cologne Water Quality Act	Aquatic features meeting the definition of Waters of the State	SWRCB/RWQCB

3.0 METHODS

3.1 Pre-Survey Investigation

Due to the size of the area and limited road access, an initial survey utilizing a small Unmanned Aircraft System (sUAS) was conducted to assess current site conditions and gather high-resolution imagery. The sUAS surveys were conducted on September 9, November 11, and November 17, 2020. Photos collected during the sUAS survey were then combined into a single orthomosaic image that was incorporated into mapping files in a Geographic Information System (GIS). Potential aquatic resources, specifically drainages, within the Impact Area were digitized prior to the field survey using the sUAS imagery. Prior to conducting the field delineations, the following resources were reviewed to identify potential aquatic resources: sUAS imagery, satellite aerial imagery (ESRI 2020; Google Earth 2015; U.S. Department of Agriculture [USDA] 2018), the National Wetlands Database, the online web soil survey (Natural Resources Conservation Service [NRCS] 2020a), and a hydric soils list for the area.

3.2 Field Survey Investigation

This aquatic resources delineation was conducted in accordance with the *Corps of Engineers Wetlands Delineation Manual* (Environmental Laboratory 1987), the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region* (USACE 2008a), *A Field Guide to the Identification of the*

PC ORIGINAL PKG

Ordinary High Water Mark (OHWM) in the Arid West Region of the Western United States (USACE 2008b), the *Updated Datasheet for the Identification of the Ordinary High Water Mark (OHWM) in the Arid West Region of the Western United States* (USACE 2010), and the State of New Mexico's *Hydrology Protocol for the Determination of Ephemeral, Intermittent, and Perennial Waters* (Surface Water Quality Bureau [SWQB] 2010). Field data was recorded on Wetland Determination Data Forms - Arid West Region and Arid West OHWM Datasheets. ESRI© and sUAS aerial imagery were used to assist with mapping and ground-truthing. *Munsell Soil Color Charts* (Kollmorgen Instruments Co. 1990) and the Web Soil Survey (Natural Resources Conservation Service [NRCS] 2020a) were used to aid in identifying hydric soils in the field. The Jepson Manual, 2nd Edition (Baldwin et al. 2012) and the USACE National Wetland Plant List (USACE 2018) were used for plant nomenclature and identification.

Digitized feature boundaries identified during the pre-survey investigation were then verified in the field. Feature boundary modifications, if necessary, were made in the field using a post-processing capable global positioning system unit with sub-meter accuracy (EOS Arrow 100 GNSS). Where aquatic features were present, the extent of potential Waters of the U.S. and CDFW-regulated streambed and top-of-bank limits were determined using the OHWM in accordance with USACE requirements and guidelines, as well as SWRCB and CDFW delineation guidance. Streambed widths were based on evidence of OHWM as observed during the field survey, and streambed widths and other lateral limits of jurisdiction were calculated and recorded. Bank-to-bank width measures were also recorded and used as a measure of CDFW jurisdictional boundary where features lacked riparian vegetation. The extent of associated riparian habitat was based on the canopy of the riparian community within or directly adjacent to the streambed that is likely influenced by the hydrology of the streambed. In addition, stream conditions were assessed based on the SWQB protocol to classify features as ephemeral, intermittent, or perennial waters. A combination of hydrological, geomorphic and biological indicators was used to determine the hydrologic nature of each drainage. Each channel was also evaluated for the presence or absence of OHWM field indicators such as bed and bank, a natural line impressed in the bank, sediment deposits, changes in the character of soil, destruction of terrestrial vegetation, litter/debris, leaf litter disturbance, water stains, soil shelving, and exposed roots indicating active hydrology within the channel.

Due to the alluvial fan system within the Impact Areas, ephemeral channels identified during the pre-survey investigation were assessed in the field to determine if active hydrology occurred within the channel. Ephemeral features were assessed on a case-by-case basis and determined to be active or inactive based on the number of OHWM features present and the presence of riparian vegetation. In general, ephemeral features were considered active if the feature exhibited at least two OHWM indicators and supported riparian vegetation. These active ephemeral drainages were mapped upstream of existing riparian vegetation to the extent that two or more OHWM indicators were present. Whereas channels mapped during the pre-survey that only exhibited one OHWM indicator were classified as inactive erosional channels, or rills. Channels classified as active are those that are presumed to regularly transport water during rain events, and channels classified as inactive do not regularly transport water during rain events and are relic remains of large rain events.

The boundaries of the aquatic resources were delineated through standard field methods (e.g., paired sample set analyses) and aerial photograph interpretation. Paired locations were sampled to evaluate

PC ORIGINAL PKG

whether the vegetation, hydrology, and soils data supported an aquatic resource determination. At each paired location, one point was located such that it was within the estimated aquatic resource area, and the other point was situated outside the limits of the estimated aquatic resource area. Additional non-paired locations were sampled to confirm boundaries. All aquatic features observed within the Study Areas were recorded in the field using a post-processing capable Global Positioning System (GPS) unit with sub-meter accuracy (e.g., Juniper Geode™). Feature characteristics and measurements were recorded directly into the data dictionary in the GPS unit. Characteristics of mapped features were also documented in photographs.

Two separate field survey efforts were conducted for the Project by ECORP delineation specialists in 2020 and 2021; the first being a general field reconnaissance of the Study Areas to identify areas supporting potential state and federal jurisdictional waters. The subsequent field surveys and formal delineations were conducted to verify preliminary results observed in the initial survey and to collect additional data and photographs. The Study Areas were visually surveyed to determine the location and extent of aquatic resources, and special attention was given to the features identified during the preliminary survey described above. The initial survey for Study Area 1 was conducted in conjunction with the biological reconnaissance survey on September 29-30, 2020, by Christina Congedo and Caroline Garcia; the subsequent survey was conducted on January 25, 2021, by Christina Congedo and Jessie Beckman. The initial survey for Study Area 2 was conducted in conjunction with the biological reconnaissance survey on November 9-10, 2020 by Greg Hampton and Christina Torres; the subsequent survey was conducted on January 25-27, 2021 by Greg Hampton, Jessie Beckman, and Christina Torres. The initial survey for Study Area 3 was conducted in conjunction with the biological reconnaissance survey on November 11-13, 2020, by Greg Hampton, Caroline Garcia, Jennifer Kendrick, and Christina Torres; the subsequent survey was conducted on January 26-27, 2021, by Christina Congedo, Christina Torres, and Jessie Beckman.

3.3 Post-Processing

The data collected in the field utilized ArcGIS™ Collector on a device (smartphone or tablet) connected to a submeter external receiver. The submeter receiver applies differential correction instantaneously in the field using the Satellite Based Augmentation System. The data were then viewed and analyzed for verification, edited, and compiled in GIS format at the time of download. ArcGIS™ software was used to develop the geodatabase and the shapefiles depicted on the figures included in this report.

4.0 RESULTS

4.1 Existing Site Conditions

Topography for the Study Areas generally consists of gentle slopes with a gradual increase in elevation from the western extent to the eastern extent. The southwest portion of Study Area 1 is slightly below sea level at an elevation of -2 meters (-7 feet), and the eastern extent of Study Area 3 is at an elevation of 55 meters (182 feet) above mean sea level in the Sonoran Desert Region of the Desert Province (Baldwin et. al. 2012). The average winter low temperature in the vicinity of the three Study Areas is 41.7 degrees Fahrenheit (˚F) and the average summer high temperature is 104.7˚F. Average annual precipitation for Imperial, California is approximately 2.90 inches, which falls as rain (National Oceanic and Atmospheric

PC ORIGINAL PKG

Administration [NOAA] 2020a). During the 2019-2020 rain year prior to the field surveys, approximately 4.74 inches of precipitation were recorded at the Imperial, CA weather station located approximately 26 miles southwest of the Study Areas (NOAA 2020b). The most recent significant precipitation event prior to the surveys occurred April 8-11, 2020, with a total of 0.80 inch of rainfall accumulating over four days.

A typical year analysis of the Study Areas via a single point method was conducted using the USACE Antecedent Precipitation Tool (APT, USACE 2021). The APT is an automation tool that utilizes standardized methodology to calculate precipitation normalcy at a given location using publicly available data sources. The APT analysis determines whether precipitation, drought, and other climatic conditions from the previous three months are *wet*, *normal*, or *dry* for the geographic area based on a rolling 30-year period (USEPA 2021). The APT was run for the dates the wetland delineation data were collected between September 29, 2020 and January 27, 2021. The APT demonstrated the site conditions on these dates represent a time of year referenced as the dry season, that the general region and site were in a moderate to severe drought, and that site conditions were normal to drier than normal in climatic conditions.

Study Area 1 is primarily composed of undeveloped land. A railroad right-of-way borders the southwestern portion of the site, and an ephemeral drainage system flows southwest under the railroad via a concrete underpass. A ridgeline that runs northwest-southeast splits the Impact Area, with either side of the ridge descending into lowlands. There is a manmade berm on the north side of the railroad tracks that prevents flow from the western ridgeline from emptying into the ephemeral drainage to the east. The base of the southern side of the ridgeline appears to have been previously graded based on remnant machine tracks, flat terrain, and disconnected drainage features. The ephemeral drainage system (ED-3001) associated with Siphon Five runs northeast-southwest through the southeast corner of Study Area 1. A majority of ED-3001 is located outside of the Impact Area. The East Highline Canal is located approximately 1,070 feet southwest of the Impact Area. Study Area 1 is surrounded to the west by agricultural fields and undeveloped Bureau of Land Management (BLM) land to the north, east, and south.

Study Areas 2 and 3 are primarily composed of undeveloped land. Braided, ephemeral drainage systems associated with Siphon Five and Siphon Six run northeast-southwest through Study Area 2, and braided, ephemeral drainage systems associated with Siphon Four and Siphon Five run northeast-southwest through Study Area 3. An additional berm runs north-south within Study Area 2 and obstructs water flow from continuing southwest, eventually diverting flow into the Siphon Five system. The siphons allow the drainage systems to flow over the Coachella Canal and continue southwest of the Study Areas. The Coachella Canal bisects the western portion of Study Areas 2 and 3, and a manmade berm is situated along the entire east side of the canal. Unlined manmade retention basins are located directly west of and run parallel to the Coachella Canal, and a manmade berm lines the east side of the basins. The basins are enclosed on all sides and therefore have no connectivity to the canal or adjacent siphons. Study Areas 2 and 3 are surrounded by undeveloped BLM to the north, east, west, and south.

4.1.1 Vegetation Communities and Land Cover

The Project supports five vegetation communities: blue palo verde-ironwood (*Parkinsonia florida - Olneya tesota)* woodland, bush seepweed (*Suaeda nigra*) scrub, creosote bush

PC ORIGINAL PKG

(*Larrea tridentata)* scrub, disturbed creosote bush scrub, and tamarisk (*Tamarix* spp.) thickets. One land cover type also occurs within the Impact Area: urban/developed.

Vegetation Communities within the Impact Area

Blue palo verde-ironwood woodland is characterized by blue palo verde or ironwood as a dominant or co-dominant plant species in the tree or tall shrub canopy that is open to continuous. Blue palo verde-ironwood woodland is present throughout large portions of the Impact Area for Study Areas 2 and 3. Other plant species observed within this community included creosote bush, cheesebush (*Ambrosia salsola*), and burrobush (*Ambrosia dumosa*).

Bush seepweed scrub is found on flat to gently sloping valley bottoms, bajadas, and toe slopes adjacent to alluvial fans. Bush seepweed scrub is dominated by bush seepweed, a USFWS Wetland Inventory OBL species (USACE 2018), and can be co-dominant with fourwing saltbush and/or alkali goldenbush (*Isocoma acradenia*). This community was only observed in Study Area 1. Bush seepweed dominated the shrub cover with occasional occurrences of fourwing saltbush and creosote bush.

Creosote bush scrub is dominated by a nearly monotypic stand of creosote bush with an open canopy and an herbaceous layer of seasonal annuals and perennials. This community was dominant in all three Study Areas. Other species that were observed within this community included burrobush, narrow-leaved cryptantha (*Cryptantha angustifolia*), and desert plantain (*Plantago ovata*).

Disturbed creosote bush scrub consists of creosote bush that are co-dominant in the shrub canopy with an absent to intermittent herbaceous layer of seasonal annuals. Within Study Areas 2 and 3, this vegetation cover is characterized as sparser with a high percentage of nonnative plant species including common Mediterranean grass (*Schismus barbatus*) and Saharan mustard (*Brassica tournefortii*). Other plant species observed within this community include desert plantain and fanleaf crinklemat (*Tiquilia plicata*).

Tamarisk thickets are characterized by a weedy monoculture of tamarisk. This habitat is typically in ditches, washes, rivers, arroyo margins, lake margins, and other watercourses. Within the Study Areas, tamarisk was often the dominant, with arrow weed (*Pluchea sericea*) occasionally as a co-dominant plant species. Other species observed within this community included popcorn flowers (*Cryptantha* spp.), screw bean mesquite (*Prosopis pubescens*), and Mediterranean grass.

Land Cover Types within the Impact Area

Urban/Developed areas do not constitute a vegetation classification, but rather a land cover type. Areas mapped as developed have been constructed upon or otherwise physically altered to an extent that natural vegetation communities are no longer supported. In the Impact Areas, this land cover consisted primarily of compacted dirt roads and structures. In Study Area 1, an area consisting of bare ground surrounding native scrub was classified as "urban/developed – dirt roads" as this area functioned as a vehicle turnaround.

PC ORIGINAL PKG

4.1.2 Soils

A soils analysis search was conducted using the Web Soil Survey data (NRCS 2020a). The eastern portions of Study Areas 2 and 3 fall within the Colorado Desert Area soil survey; therefore, soil survey data was not available for these portions. According to the Web Soil Survey, 10 soil units, or types, have been mapped within the Study Areas (Figure 2. *Natural Resources Conservation Service Soil Types*). These include:

- 103 - Carsitas gravelly sand, 0 to 5 percent slopes
- 124 - Niland gravelly sand
- 125 - Niland gravelly sand, wet
- 129 – Pits
- 130 - Rositas sand, 0 to 2 percent slopes
- 132 - Rositas fine sand, 0 to 2 percent slopes
- 133 - Rositas fine sand, 2 to 9 percent slopes
- 135 - Rositas fine sand, wet, 0 to 2 percent slopes
- 139 - Superstition loamy fine sand
- 141 - Torriorthents and Orthids, 5 to 30 percent slopes

The Niland gravelly sand (124), Niland gravelly sand, wet (125), and Pits (129) map units contain hydric minor components (NRCS 2020b). Three water state classes (dry, moist, and wet) are used as soil moisture status entries for map unit components and designate a mean monthly soil water state at a specified depth. A summary of characteristics based on official series descriptions for each of the soil series mapped within the alignments are provided below (NRCS 2020c).

Carsitas Series

The Carsitas series consists of very deep, somewhat excessively drained soils that formed in alluvium from granitoid and/or gneissic rocks. The Carsitas soils are on alluvial fans, fan aprons, valley fills, dissected remnants of alluvial fans and in drainageways. Slopes range from 0 to 30 percent. The mean annual precipitation is about three inches and the mean annual air temperature is about 77°F.

Niland Series

The Niland series is a member of the sandy over clayey, mixed (calcareous), hyperthermic family of Typic Torrifluvents. These soils consist of well and moderately well-drained soils with slopes that formed in coarse mixed alluvium overlying fine alluvium at depths of less than 36 inches. Niland soils typically have stratified gravelly sand and sand overlying silty clay at a depth of 23 inches. Niland soils are on basin and floodplain edges and have slopes that are typically less than one percent, but can range up to five percent.

Rositas Series

The Rositas series is a member of the mixed, hyperthermic family of Typic Torripsamments. These soils consist of very deep, somewhat excessively drained soils. These soils are formed in sandy eolian material and have less than 15 percent coarse and very coarse sand. Rositas soils are on dunes and sand sheets and have slopes that range from 0 to 30 percent. The mean annual precipitation is about four inches and the mean annual air temperature is about 72°F.

Superstition Series

The Superstition series consists of very deep, somewhat excessively drained soils with very low to low runoff and rapid permeability. Superstition soils have slopes of 0 to 10 percent; they are formed in sandy eolian deposits and exist on dunes. The mean annual precipitation is about three inches and the mean annual air temperature is about 74°F.

4.1.3 National Wetland Inventory

According to the National Wetland Inventory (USFWS 2020a), there are several Riverine features mapped within the Impact Areas (Figure 3. *National Wetland Inventory*).

4.1.4 Hydrology

All three Study Areas are within the Salton Sea Watershed (Hydrologic Unit Code #18100204, NRCS et al. 2016). The Study Areas and Chocolate Mountains are part of an alluvial fan drainage system. Alluvial fans occur when stream flow feeds into a system of distributary channels. Infrequent yet intense rainfall causes sheetflood across the fan surface, in which sediment-laden water overflows from the confines of its channel and eventually results in gravel deposits that have the appearance of a network of braided channels (Blatt et. al 1980). A number of these braided channels are fluid in nature and are relic scars that do not actively transport water during rain events. These relic channels would therefore be considered inactive, whereas channels that actively transport water during rain events would be considered active. The alluvial fan drainage system produces ephemeral conditions within the Study Areas following large rain events and contains a network of inactive and active braided channels. In addition, this interconnected drainage system has associated riparian corridors that occur throughout all three Study Areas.

Within the Study Areas, the alluvial fan system directs surface flow from the Chocolate Mountains through the Study Areas to the southwest. Surface flow eventually feeds into the ephemeral drainage features associated with Siphon Four, Siphon Five, and Siphon Six. The siphons direct flow over the Coachella Canal and eventually under the railroad right-of-way in Study Area 1 before ultimately draining into the East Highline Canal and/or associated wetlands. Both the Coachella Canal and East Highline Canal divert water from the All American Canal, which brings water from the Colorado River at the Imperial Dam. The Coachella Canal supplies water to the Coachella Valley north of the Salton Sea, and eventually drains into a manmade storage reservoir known as Lake Cahuilla. Lake Cahuilla is not traditional navigable waters (TNW) per Section 404 of the CWA. The East Highline Canal supplies water to the Imperial Valley via

smaller lateral canals and drains that ultimately drain to the Salton Sea. The Salton Sea is TNW per Section 404 of the CWA.

4.2 Aquatic Resources

Aquatic resources have been mapped within the Impact Areas; each resource is summarized by feature in Attachment B and depicted on Figure 4. *Aquatic Resources Delineation*. The regulated limits that are presented in Attachment B serve as an estimate and are subject to agency verification. Features identified as an aquatic resource had wetland indicators present and/or physical evidence of flow including OHWM, presence of riparian vegetation or direct surface connection into features with riparian vegetation, defined bed and bank, scour, presence of a clear and natural line impressed on the bank, disturbance of leaf litter, the presence or absence of sediment deposits, changes in the character of soil, destruction of terrestrial vegetation, and/or exposed roots indicating active hydrology within the channel.

Contiguous riparian habitat associated with nearby aquatic features was mapped, and the associated aquatic feature was also recorded. There were periodic mesquite and blue palo verde individuals scattered across Survey Areas 2 and 3. They were not mapped during this effort as they were part of contiguous riparian habitat. OHWM and Wetland Determination Data Forms are included as Attachment C, representative site photographs are included as Attachment D, the USACE OMBIL Regulatory Module (ORM) aquatic resources table is included as Attachment E, and digital data are provided as Attachment F.

4.2.1 Wetlands

No wetlands were delineated within the Impact Areas.

4.2.2 Other Aquatic Resources (Non-Wetland Waters)

Ephemeral Drainage

Ephemeral drainages are linear features that exhibit a bed and bank and an OHWM. These features typically convey runoff for short periods of time, during and immediately following rain events, and are not influenced by groundwater sources at any time during the year. As previously described, the Impact Areas and adjacent upslope areas are within an alluvial fan drainage system that produces ephemeral conditions with surface waters flowing in direct response to large rain events for short durations. Drainages determined to be active transport surface flow water from the direction of the Chocolate Mountains to the southwest and have connectivity to downstream ephemeral drainages within the Impact Areas. These ephemeral drainages follow the riparian vegetation within the landscape as discussed in Section 4.2.4.

Some of the ephemeral drainages are associated with the Siphons: Siphon 4 (ED-3005), Siphon 5 (ED-3001, ED-3003, ED-3004), and Siphon 6 (ED-3002). These features are documented by OHWM Transects 100, 101, 102, and 200 (Attachment C). These features contained no surface flow at the time of the field assessment and had sparse vegetation within the bed. The OHWM was delineated in the field primarily by changes in sediment texture, vegetation, a natural scour line, bank erosion, and the presence of litter and

debris. These ephemeral drainage systems divert surface flow from the direction of the Chocolate Mountains to the southwest, bypassing the Coachella Canal and railroad right-of-way and ultimately connecting to the East Highline Canal and/or associated wetlands. The East Highline Canal supplies water to the Imperial Valley via smaller lateral canals and drains that ultimately drain to the Salton Sea. At the time of the field delineation in 2020, these OHWM Transects were located inside the Project limits, as previously provided by the Applicant. The Impact Area limits were revised in 2022 and these OHWM Transects were no longer located within the revised Impact Area. However, these OHWM Transect data sheets have been included in this report because the field conditions documented are representative of the ephemeral drainages mapped within the revised Impact Area limits.

4.2.3 Manmade Features

Canal

The Coachella Canal is adjacent to and outside of the Impact Areas of Study Area 2 and 3. This concrete-lined canal is used for the purpose of year-round water transport throughout the Coachella Valley. It is maintained by the Coachella Valley Water District to be free of vegetation for water conveyance efficiency and ultimately flows into the Lake Cahuilla storage reservoir. Lake Cahuilla is an artificial soil-cement-lined temporal reservoir that is not connected to TNW.

4.2.4 Potential CDFW Regulated Habitats

The following describes vegetation communities or habitat features that could be regulated by CDFW but are not expected to be regulated by the USACE under Section 404 of the CWA because they do not appear to meet the current definition of waters of the U.S.

Alkali Sink

Alkali sinks are composed of poorly drained soils with high salinity and/or alkalinity from evaporation of water that accumulates in closed drainages. These sinks are often seasonally inundated and lose water through evaporation. Alkali sink habitat occurs within the southern portion of the Impact Area of Study Area 1.

Sampling Point 552 was collected within the alkali sink habitat south of Study Area 1. At the time of the aquatic resource delineation in 2020, this sampling point was inside the Impact Area limits. The Impact Area was revised in 2022 and it now no longer includes the location of Sampling Point 552. However, alkali sink habitat is still present within the revised Impact Area and is subject to direct impacts. Sampling Point 552 is representative of the alkali sink habitat of the Study Area as a whole. Plant species observed included bush seepweed. The soil matrix color at a depth of 0 to 4 inches was 7.5YR 4/4 with no redox features; at a depth of 4 to 7 inches the soil matrix color was 7.5YR 5/4 with no redox features; and at a depth of 7 to 10 inches the soil matrix color was 7.5YR 4/4 with 3 percent redox features colored 5YR 5/8. Hydric soil indicators were determined to be absent at this sampling point. Wetland hydrology indicators observed included the surface soil cracks (B6) primary indicator.

PC ORIGINAL PKG

Riparian Habitat

Riparian habitat associated with the drainage systems throughout the Impact Areas consists of blue palo verde-ironwood woodland and tamarisk thickets. Blue palo verde-ironwood woodland is characterized by blue palo verde or ironwood as a dominant or co-dominant plant species in the tree or tall shrub canopy that is open to continuous. Tamarisk thickets are characterized by a weedy, monoculture of tamarisk. This habitat is typically in ditches, washes, rivers, arroyo margins, lake margins, and other watercourses. There were scattered riparian trees associated with ephemeral drainages within the creosote scrub habitat due to the alluvial nature of the sites.

A total of three sampling points were collected within the riparian habitat in the northwestern portion of Study Area 2 and included Sampling Points 1, 2, and 3. At the time of the aquatic resource delineation in 2020, these sampling points were inside the Impact Area limits. The Impact Area was revised in 2022 and it now no longer includes the location of these Sampling Points. However, riparian habitat is still present within the revised Impact Area and is subject to direct impacts. Therefore, the data from Sampling Points 1, 2, and 3 have been included in this report because the field conditions documented are representative of the riparian habitat found within the revised Impact Area. Plant species observed within the riparian habitat at all three points included tamarisk, common Mediterranean grass, and narrow leaved cryptantha. Hydric soil and wetland hydrology indicators were determined to be absent at all but Sampling Point 1, which met the drift deposits (B3) primary indicator.

Sampling Point 551 was collected within the riparian habitat associated with ED-3001 south of Study Area 1. At the time of the aquatic resource delineation in 2020, this sampling point was inside the Project limits. The Impact Area was revised in 2022 and it now no longer includes the location of Sampling Point 551. Sampling Point 551 is representative of the riparian habitat of the Study Area as a whole. Plant species observed included tamarisk and bush seepweed. The soil matrix color at a depth of 0 to 6 inches was 10YR 5/4 with no redox features; and at a depth of 6 to 8 inches the soil matrix color was 10YR 5/4 with 3 percent gley features colored 2.5/N. Hydric soil indicators were determined to be absent at this sampling point. Wetland hydrology indicators observed included the surface soil cracks (B6) primary indicator and the sediment deposits (B2), drift deposits (B3), and drainage patterns (B10) secondary indicators.

5.0 JURISDICTIONAL ASSESSMENT

Aquatic resources that are potentially regulated under the CWA, the Porter-Cologne Act, and California Fish and Game Code Section 1602 are summarized below. These results are subject to modification following agency verification.

5.1 Clean Water Act

Per Regulatory Guidance Letter 16-01, an applicant may request a PJD "in order to move ahead expeditiously to obtain a Corps permit authorization where the requestor determin*es that it is in his or her best interest to do so … even where initial indications are that the aquatic resources on a parcel may not be jurisdictional*" (USACE 2016b). The following information on connectivity of wetlands and other waters in the Survey Area to TNW is provided should an Approved Jurisdictional Determination (AJD) be necessary.

PC ORIGINAL PKG

The ephemeral drainages within the Impact Area are tributary to the Salton Sea, which is a TNW. Under the current definition of waters of the U.S., the *Rapanos* guidance, the ephemeral drainages onsite would be considered non-navigable tributaries that are not relatively permanent. In which, case, a significant nexus evaluation of the ephemeral drainages would be necessary to determine jurisdiction if seeking an AJD.

5.2 Porter-Cologne Water Quality Control Act

The following categories meet the definition of Waters of the State and are regulated pursuant to the Porter-Cologne Act. The Porter-Cologne Act defines Waters of the State as "any surface water or groundwater, including saline waters, within the boundaries of the state" [Water Code 13050 (e)]. The Porter Cologne Act defines "Waters of the State" very broadly, with no physical descriptors, and no interstate commerce limitation. The categories are:

- Ephemeral Drainages

The remaining features are excluded from the definition of Waters of the State pursuant to current guidance from the SWRCB. Impacts to features that fall under the definition of Waters of the State would trigger the need for permits through the WDR process.

5.3 California Fish and Game Code Section 1600-1602

The following categories meet the criteria for resources that are regulated under section 1600 of the California Fish and Game Code. This includes all resources with surface or subsurface flow, and a body of water that "flows at least periodically or intermittently through a bed or channel having banks and supports fish or other aquatic life." Areas with associated riparian vegetation that is supported by the surface and subsurface flow through these streambeds are also added to CDFW's jurisdiction under 1600. The categories are:

- Ephemeral Drainages
- Riparian Habitat
- Alkali Sinks

The remaining features are excluded from Section 1600-1602 pursuant to current guidance from CDFW. Impacts to features that fall under the definition of streambed and associated riparian habitat would trigger the need for Streambed Alteration Notification and the Project may need to enter into formal Agreements with CDFW.

Arid West Ephemeral and Intermittent Streams OHWM Datasheet

Project: Vega SES 2/3
Project Number:
Stream: ED-3005 (Cross section #100)
Investigator(s): C. Torres, G. Hampton

Date: 11/12/2020
Town: Calipatria
Photo begin file#:

Time: 9:20 AM
State: CA
Photo end file#:

Y [X] / N [ ] Do normal circumstances exist on the site?

Y [ ] / N [X] Is the site significantly disturbed?

Location Details: Cross section taken at Siphon 4 where the associated drainage system crosses Coachella Canal.

Projection: **Datum:** NAD83
Coordinates:

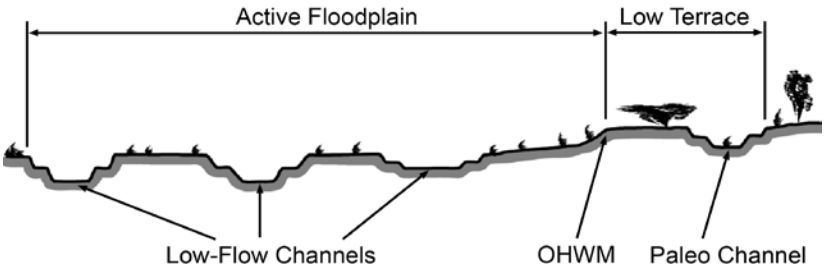
Potential anthropogenic influences on the channel system: Drainage system is diverted to cross over the Coachella Canal via a series of Siphons: Siphon 4, Siphon 5, and Siphon 6. Manmade berms that serve to divert surface flow are present along the railroad, canal, and other areas within the Study Areas. Active agriculture is adjacent to the northwest portion of the Study Areas. Area is actively used for offroad vehicles, including some of the larger drainages that double as roads.

Brief site description: The Study Areas and adjacent Chocolate Mountains are part of an alluvial fan drainage system. The Coachella Canal bisects Study Areas 2 and 3. Unlined, manmade retention basins are located directly west of and run parallel to the Coachella Canal. A railroad right-of-way borders the southwestern portion of the site, and a drainage system flows southwest under the railroad via a concrete underpass. Drainages flow southwest in direction of the East Highline Canal.

Checklist of resources (if available):

- [X] Aerial photography
  Dates: 1953-2015
- [X] Topographic maps
- [ ] Geologic maps
- [X] Vegetation maps
- [X] Soils maps
- [X] Rainfall/precipitation maps
- [ ] Existing delineation(s) for site
- [X] Global positioning system (GPS)
- [ ] Other studies
- [ ] Stream gage data
  Gage number:
  Period of record:
- [ ] History of recent effective discharges
- [ ] Results of flood frequency analysis
- [ ] Most recent shift-adjusted rating
- [ ] Gage heights for 2-, 5-, 10-, and 25-year events and the most recent event exceeding a 5-year event

Hydrogeomorphic Floodplain Units



Procedure for identifying and characterizing the floodplain units to assist in identifying the OHWM:

1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.
2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.
3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.
   a) Record the floodplain unit and GPS position.
   b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.
   c) Identify any indicators present at the location.
4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.
5. Identify the OHWM and record the indicators. Record the OHWM position via:
   - [ ] Mapping on aerial photograph
   - [X] GPS
   - [ ] Digitized on computer
   - [ ] Other:

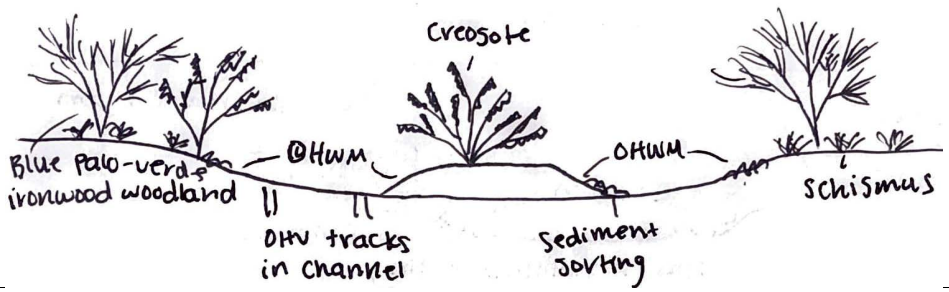
Project ID: Vega SES 2/3 **Cross section ID:** ED-3005 (#100) **Date:** 11/12/2020 **Time:** 9:20 AM

Cross section drawing:



OHWM

GPS point: 33.205770, -115.404347

Indicators:

- [x] Change in average sediment texture
- [x] Change in vegetation species
- [x] Change in vegetation cover
- [x] Break in bank slope
- [ ] Other: _____
- [ ] Other: _____

Comments:

Large drainage also being used as a road for OHV. Riparian habitat associated with drainage system. Slight break in bed and bank.
OHWM: 15' width, 5" depth
B2B: 50' width, 1' depth

Floodplain unit:

- [x] Low-Flow Channel
- [ ] Active Floodplain
- [ ] Low Terrace

GPS point: 33.205770, -115.404347

Characteristics of the floodplain unit:

Average sediment texture: Medium sand
Total veg cover: 15 % Tree: 10 % Shrub: 5 % Herb: _____%
Community successional stage:

- [ ] NA
- [ ] Early (herbaceous & seedlings)
- [x] Mid (herbaceous, shrubs, saplings)
- [ ] Late (herbaceous, shrubs, mature trees)

Indicators:

- [ ] Mudcracks
- [ ] Ripples
- [x] Drift and/or debris
- [x] Presence of bed and bank
- [ ] Benches
- [x] Soil development
- [ ] Surface relief
- [ ] Other: _____
- [ ] Other: _____
- [ ] Other: _____

Comments:

Channel itself is unvegetated with some vegetated islands. Blue palo-verde and ironwood woodland line the banks, with occasional creosote bush. A number of channels branch off the main drainage that flows into Siphon Four.

Arid West Ephemeral and Intermittent Streams OHWM Datasheet

Project: Vega SES 2/3
Project Number:
Stream: ED-3004 (Cross section #101)
Investigator(s): C. Torres, G. Hampton

Date: 11/11/2020
Town: Calipatria
Photo begin file#:

Time: 10:00 AM
State: CA
Photo end file#:

Y [x] / N [ ] Do normal circumstances exist on the site?

Y [ ] / N [x] Is the site significantly disturbed?

Location Details: Cross section taken at Siphon 5 where the associated drainage system crosses Coachella Canal.

Projection:
Datum: NAD83
Coordinates:

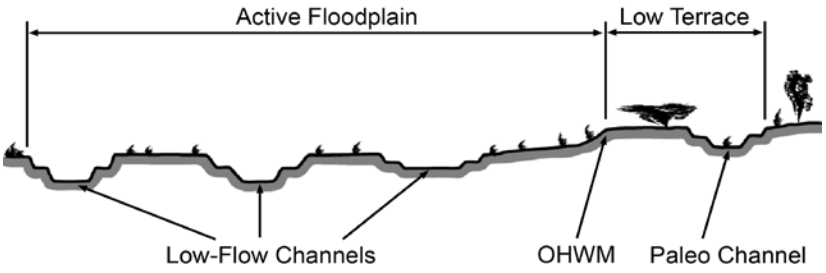
Potential anthropogenic influences on the channel system: Drainage system is diverted to cross over the Coachella Canal via a series of Siphons: Siphon 4, Siphon 5, and Siphon 6. Manmade berms that serve to divert surface flow are present along the railroad, canal, and other areas within the Study Areas. Active agriculture is adjacent to the northwest portion of the Study Areas. Area is actively used for offroad vehicles, including some of the larger drainages that double as roads.

Brief site description: The Study Areas and adjacent Chocolate Mountains are part of an alluvial fan drainage system. The Coachella Canal bisects Study Areas 2 and 3. Unlined, manmade retention basins are located directly west of and run parallel to the Coachella Canal. A railroad right-of-way borders the southwestern portion of the site, and a drainage system flows southwest under the railroad via a concrete underpass. Drainages flow southwest in direction of the East Highline Canal.

Checklist of resources (if available):

- [x] Aerial photography
  Dates: 1953-2015
- [x] Topographic maps
- [ ] Geologic maps
- [x] Vegetation maps
- [x] Soils maps
- [x] Rainfall/precipitation maps
- [ ] Existing delineation(s) for site
- [x] Global positioning system (GPS)
- [ ] Other studies
- [ ] Stream gage data
  Gage number:
  Period of record:
- [ ] History of recent effective discharges
- [ ] Results of flood frequency analysis
- [ ] Most recent shift-adjusted rating
- [ ] Gage heights for 2-, 5-, 10-, and 25-year events and the most recent event exceeding a 5-year event

Hydrogeomorphic Floodplain Units



Procedure for identifying and characterizing the floodplain units to assist in identifying the OHWM:

1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.
2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.
3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.
   a) Record the floodplain unit and GPS position.
   b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.
   c) Identify any indicators present at the location.
4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.
5. Identify the OHWM and record the indicators. Record the OHWM position via:
   - [ ] Mapping on aerial photograph
   - [x] GPS
   - [ ] Digitized on computer
   - [ ] Other:

Y [x] / N [ ] Do normal circumstances exist on the site?

Y [ ] / N [x] Is the site significantly disturbed?

Location Details: Cross section taken of ID-01 adjacent to railroad right-of-way at northeast portion of Project Area.

Projection:
Datum: NAD83
Coordinates:

Potential anthropogenic influences on the channel system:
Channel diverted under railroad tracks using a concrete culvert, and drainage system eventually meets with the East Highline Canal at the southwest end of the site. Lateral canals divert water from the East Highline Canal to active agriculture that is adjacent to the Project Area.

Brief site description: The East Highline Canal bisects the western portion of the Study Area, and the Study Area is bordered by a railroad right-of-way to the northeast. The portion of the site that is southwest of the canal consists of undeveloped land that was historically used for agriculture. The portion of the site that is northeast of the canal is comprised of a drainage system and associated wetland and riparian habitats. Wetland habitat lines both sides of the East Highline Canal.

1.0 INTRODUCTION

This aquatic resources delineation report was prepared to describe the aquatic resources at the Vega SES 5 Solar Project (Project). The proposed Project is a 50-megawatt (MW) alternating current solar photovoltaic energy project with an integrated 50-MW battery storage utility-scale solar project located on approximately 405 acres of land (*Project Area*) on three private parcels in Imperial County, California (Assessor Parcel Numbers [APNs] 025-260-022-000, 025-260-019-000, and a portion of 025-260-011-000). For the purposes of this report, the term *Impact Area* refers to the area proposed to be directly affected by implementation of the Project and corresponds to the client supplied project impact boundary.

The Project Area is approximately 10 miles east of the Salton Sea and five miles east of the Chocolate Mountains (Figure 1. *Project Location and Vicinity*). The Project Area corresponds to portions of Sections 8, 16, 17, 18, 19, and 20; Township 11 South; and Range 15 East (San Bernardino Base and Meridian) of the "Iris, California" 7.5-minute quadrangle (U.S. Geological Survey [USGS] 1992). The approximate center of the Project Area is located at 33.206020° latitude and -115.440959° longitude within the Salton Sea Watershed (Hydrologic Unit Code #18100204, Natural Resources Conservation Service [NRCS], USGS, and U.S. Environmental Protection Agency [USEPA] 2016). Driving directions to the site are included as Attachment A.

This report describes aquatic resources identified within the Impact Area that may be regulated by the Porter-Cologne Water Quality Act, California Fish and Game Code Section 1600 and 1602, and the U.S. Army Corps of Engineers (USACE) pursuant to Sections 401 and 404 of the federal Clean Water Act (CWA). The information presented in this report provides data required by the USACE Los Angeles District's *Minimum Standards for Acceptance of Aquatic Resources Delineation Reports* (USACE 2016). The aquatic resource boundaries depicted in this report represent a calculated estimation of the potentially jurisdictional area within the Impact Area and are subject to modification following a verification process by each regulating agency.

The original area surveyed in 2020 and 2021 included a larger footprint. This area was the Project Area plus a 500-foot buffer. The Impact Area of the Project was refined in 2022. Therefore, the original 2020 and 2021 survey area, including features mapped and sample points collected outside of the updated Impact Areas are shown on the figures to provide context. However, this report is intended to provide information to support USACE review and verification for features within the Impact Area only.

2.0 REGULATORY SETTING

2.1 Clean Water Act

The USACE regulates discharge of dredged or fill material into waters of the U.S. under Section 404 of the CWA. "Discharges of fill material" is defined as the addition of fill material into waters of the U.S., including, but not limited to, the following: placement of fill necessary for the construction of any structure, or impoundment requiring rock, sand, dirt, or other material for its construction; site-development fills for recreational, industrial, commercial, residential, and other uses; causeways or road

ENVIRONMENTAL CONSULTANTS

PC ORIGINAL PKG

fills; and fill for intake and outfall pipes, and subaqueous utility lines [33 CFR § 328.2(f)]. In addition, Section 401 of the CWA (33 U.S. Code 1341) requires any applicant for a federal license or permit to conduct any activity that may result in a discharge of a pollutant into waters of the U.S. to obtain a certification that the discharge will comply with the applicable effluent limitations and water quality standards.

Substantial impacts to wetlands, over 0.5 acre of impact, may require an individual permit. Projects that only minimally affect wetlands, less than 0.5 acre of impact, may meet the conditions of one of the existing Nationwide Permits. A RWQCB Water Quality Certification or waiver pursuant to Section 401 of the CWA is required for USACE Section 404 permit actions.

Pursuant to the USEPA and USACE memorandum regarding CWA jurisdiction, issued following the U.S. Supreme Court's decision in the consolidated cases Rapanos v. United States and Carabell v. United States (herein referred to as Rapanos), the agencies will assert jurisdiction over the following waters: "Traditional Navigable Waters" (TNW), all wetlands adjacent to TNWs, non-navigable tributaries of TNWs that are "relatively permanent" waters (RPW) (i.e., tributaries that typically flow year-round or have continuous flow at least seasonally), and wetlands that directly abut such tributaries (USEPA and USACE 2007).

Waters requiring a significant nexus determination by the USACE and USEPA to establish jurisdiction include non-navigable tributaries that are not relatively permanent, wetlands adjacent to non-navigable tributaries that are not relatively permanent, and wetlands adjacent to but do not directly abut a relatively permanent non-navigable tributary (USEPA and USACE 2007). The jurisdictional determination is a fact-based evaluation to establish whether a water has a significant nexus with a TNW. The significant nexus analysis will assess the flow characteristics and functions of the non-navigable tributary itself and the functions performed by all wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of downstream TNWs (USEPA and USACE 2007).

2.2 Porter-Cologne Water Quality Control Act

The Porter-Cologne Water Quality Control Act (hereafter referred to as Porter-Cologne Act) provides a framework to protect water quality in California. The Porter-Cologne Act was enacted in 1969 as Division 7 of the Water Code and is the primary water quality law in California. The Porter-Cologne Act addresses two primary functions: water quality control planning and waste discharge regulation (WDR). The State Legislature, in adopting the Porter-Cologne Act, directed that California's waters "shall be regulated to attain the highest water quality which is reasonable" and charges the Water Boards with protecting all waters of California, defined as "any surface water or groundwater, including saline waters, within the boundaries of the State." This encompasses all Waters of the State, including those not under federal jurisdiction.

The Porter-Cologne Act regulates discharges that could affect the quality of water of surface or ground waters, wherever those discharges may occur. Under the Porter-Cologne Act, the Water Board regulates actions that would involve "discharging waste, or proposing to discharge waste, with any region that could affect the water of the state" [Water Code 13260(a)]. Waters of the State are defined as "any surface water or groundwater, including saline waters, within the boundaries of the state" [Water Code 13050 (e)].

PC ORIGINAL PKG

The Porter Cologne Act defines "Waters of the State" very broadly, with no physical descriptors, and no interstate commerce limitation.

The Porter-Cologne Act further requires that anyone who plans to discharge waste where it might affect Waters of the State must first notify the Water Boards. The Water Boards identify the sources of pollutants that threaten water quality under the Porter-Cologne Act and regulate waste discharges that could affect water quality by issuing WDRs. The State Water Resources Control Board (SWRCB) adopted the *State Wetland Definition and Procedures for Discharge of Dredged or Fill Material into Waters of the U.S.* in April 2019. The Water Board regulates all such activities, as well as dredging, filling, or discharging materials into Waters of the State, that are not regulated by USACE due to a lack of connectivity with a navigable water body. The Water Board may require issuance of a WDR for these activities. If a project impacts Waters of the State that do not fall under federal jurisdiction, the applicant need not obtain a section 404 permit or a 401 certification, but instead must receive approval from the Water Boards through the adoption of WDRs.

2.3 California Fish and Game Code Section 1602

Pursuant to Section 1602 of the California Fish and Game Code, a Streambed Alteration Agreement (SAA) application must be submitted for "any activity that may substantially divert or obstruct the natural flow or substantially change the bed, channel, or bank of any river, stream, or lake" (California Department of Fish and Wildlife [CDFW] 2020). In Title 14 of the California Code of Regulations, Section 1.72, the CDFW defines a *stream* (including creeks and rivers) as:

> "a body of water that flows at least periodically or intermittently through a bed or channel having banks and supports fish or other aquatic life. This includes watercourses having a surface or subsurface flow that supports or has supported riparian vegetation."

The CDFW's jurisdiction includes drainages with a definable bed, bank, or channel with the jurisdictional limit being the top-of-bank. It also includes areas that support intermittent, perennial, or subsurface flows; supports fish or other aquatic life; or supports riparian or hydrophytic vegetation. It also includes areas that have a hydrologic source.

The CDFW will determine if the proposed actions will result in diversion, obstruction, or change of the natural flow, bed, channel, or bank of any river, stream, or lake that supports fish or wildlife. The CDFW will submit an SAA that includes measures to protect affected fish and wildlife resources; this SAA is the final proposal agreed upon by the CDFW and the applicant.

A summary of federal, state, and local regulations and corresponding regulating agencies are summarized in Table 1.

3.0 METHODS

3.1 Pre-Survey Investigations

Due to the size of the area and limited road access, an initial survey utilizing a small Unmanned Aircraft System (sUAS) was conducted to assess current site conditions and gather high-resolution imagery. The sUAS survey was conducted on September 9, 2020. Photos collected during the sUAS survey were then combined into a single orthomosaic image that was incorporated into mapping files in a Geographic Information System (GIS). Potential aquatic resources, specifically drainages, within the Project Area were digitized prior to the field survey using the sUAS imagery. Prior to conducting the field delineations, the following resources were reviewed to identify potential aquatic resources: sUAS imagery, satellite aerial imagery (ESRI 2020; Google Earth 2015; USDA 2018), the National Wetlands Database, the online web soil survey (NRCS 2020a), and a hydric soils list for the area (NRCS 2020c).

3.2 Field Survey Investigation

This aquatic resources delineation was conducted in accordance with the *Corps of Engineers Wetlands Delineation Manual* (Environmental Laboratory 1987), the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region* (USACE 2008a), *A Field Guide to the Identification of the Ordinary High Water Mark (OHWM) in the Arid West Region of the Western United States* (USACE 2008b), the *Updated Datasheet for the Identification of the Ordinary High Water Mark (OHWM) in the Arid West Region of the Western United States* (USACE 2010), and the State of New Mexico's *Hydrology Protocol for the Determination of Ephemeral, Intermittent, and Perennial Waters* (Surface Water Quality Bureau [SWQB] 2010). Field data was recorded on Wetland Determination Data Forms - Arid West Region and Arid West OHWM Datasheets. ESRI© and sUAS aerial imagery were used to assist with mapping and ground-truthing. *Munsell Soil Color Charts* (Kollmorgen Instruments Co. 1990) and the Web Soil Survey (NRCS 2020a) were used to aid in identifying hydric soils in the field. The Jepson Manual, 2nd Edition (Baldwin et al. 2012) and the USACE National Wetland Plant List (USACE 2018) were used for plant nomenclature and identification.

Digitized feature boundaries identified during the pre-survey investigation were then verified in the field. Feature boundary modifications, if necessary, were made in the field using a post-processing capable global positioning system unit with sub-meter accuracy (EOS Arrow 100 GNSS). Where aquatic features were present, the extent of potential Waters of the U.S. and CDFW-regulated streambed and top-of-bank limits were determined using the OHWM in accordance with USACE requirements and guidelines, as well as SWRCB and CDFW delineation guidance. Streambed widths were based on evidence of OHWM as observed during the field survey, and streambed widths and other lateral limits of jurisdiction were calculated and recorded. Bank-to-bank width measures were also recorded and used as a measure of

PC ORIGINAL PKG

CDFW jurisdictional boundary where features lacked riparian vegetation. The extent of associated riparian habitat was based on the canopy of the riparian community within or directly adjacent to the streambed that is likely influenced by the hydrology of the streambed. In addition, each of the drainages were evaluated for the presence or absence of sediment deposits, litter/debris, water stains, soil shelving, or exposed roots indicating active hydrology within the channel. Streambed widths and other lateral limits of jurisdiction were calculated and recorded. Bank-to-bank width measures were also recorded and used as a measure of CDFW jurisdictional boundary where features lacked riparian vegetation. The extent of associated riparian habitat was based on the canopy of the riparian community within or directly adjacent to the streambed that is likely deriving benefit from the hydrology of the streambed. In addition, stream conditions were assessed based on the SWQB protocol to classify features as ephemeral, intermittent, or perennial waters. A combination of hydrological, geomorphic and biological indicators was used to determine the hydrologic nature of each drainage. Each channel was also evaluated for the presence or absence of OHWM field indicators such as bed and bank, a natural line impressed in the bank, sediment deposits, changes in the character of soil, destruction of terrestrial vegetation, litter/debris, leaf litter disturbance, water stains, soil shelving, and exposed roots indicating active hydrology within the channel.

Due to the alluvial fan system within the Project Area, ephemeral channels identified during the pre-survey investigation were assessed in the field to determine if active hydrology occurred within the channel. Ephemeral features were assessed on a case-by-case basis and determined to be active or inactive based on the number of OHWM features present and the presence of riparian vegetation. In general, ephemeral features were considered active if the feature exhibited at least two OHWM indicators and supported riparian vegetation. These active ephemeral drainages were mapped upstream of existing riparian vegetation to the extent that two or more OHWM indicators were present. Whereas channels mapped during the pre-survey that only exhibited one OHWM indicator were classified as inactive erosional channels, or rills. Channels classified as active are those that are presumed to regularly transport water during rain events, and channels classified as inactive do not regularly transport water during rain events and are relic remains of large rain events.

The boundaries of the aquatic resources were delineated through standard field methods (e.g., paired sample set analyses) and aerial photograph interpretation. Paired locations were sampled to evaluate whether the vegetation, hydrology, and soils data supported an aquatic resource determination. At each paired location, one point was located such that it was within the estimated aquatic resource area, and the other point was situated outside the limits of the estimated aquatic resource area. Additional non-paired locations were sampled to confirm boundaries. All aquatic features observed within the Project Area were recorded in the field using a post-processing capable Global Positioning System (GPS) unit with sub-meter accuracy (e.g., Juniper Geode™). Feature characteristics and measurements were recorded directly into the data dictionary in the GPS unit. Characteristics of mapped features were also documented in photographs.

Field surveys were conducted on six days (September 29-30, November 9-11, 2020, and January 25, 2021) by ECORP delineation specialists Christina Congedo, Jessie Beckman, and Caroline Garcia. The September field surveys were general field reconnaissance of the Project Area to identify areas supporting potential state and federal jurisdictional waters. The November and January field surveys were a formal delineation

PC ORIGINAL PKG

conducted to verify preliminary results observed in the September surveys and to collect additional data and photographs. The entire Project Area was visually surveyed to determine the location and extent of aquatic resources, and special attention was given to the features identified during the preliminary survey described above.

3.3 Post-Processing

The data collected in the field utilized ArcGIS™ Collector on a device (smartphone or tablet) connected to a submeter external receiver. The submeter receiver applies differential correction instantaneously in the field using the Satellite Based Augmentation System. The data were then viewed and analyzed for verification, edited, and compiled in GIS format at the time of download. ArcGIS™ software was used to develop the geodatabase and the shapefiles depicted on the figures included in this report.

4.0 RESULTS

4.1 Existing Site Conditions

The Project Area is located within relatively flat to gently sloping terrain situated at an elevational range of approximately -20 meters (-65 feet) and 22 meters (71 feet) above mean sea level (amsl) in the Sonoran Desert Region of the Desert Province (Baldwin et. al. 2012). The average winter low temperature in the vicinity of the Project Area is 41.7 degrees Fahrenheit (˚F) and the average summer high temperature is 104.7˚F. Average annual precipitation for Imperial, California is approximately 2.90 inches, which falls as rain (National Oceanic and Atmospheric Administration [NOAA] 2020a). During the 2019-2020 rain year prior to the to the November field survey (October 1, 2019 to April 30, 2020), approximately 4.74 inches of precipitation were recorded at the Imperial, CA weather station located approximately 25 miles southwest of the Project Area (NOAA 2020b). The most recent significant precipitation event prior to the surveys occurred April 8-11, 2020, with a total of 0.80 inches of rainfall accumulating over four days.

A typical year analysis of the Project Area via a single point method was conducted using the USACE Antecedent Precipitation Tool (APT, USACE 2021). The APT is an automation tool that utilizes standardized methodology to calculate precipitation normalcy at a given location using publicly available data sources. The APT analysis determines whether precipitation, drought, and other climatic conditions from the previous three months are *wet*, *normal*, or *dry* for the geographic area based on a rolling 30-year period (USEPA 2021). The APT was run for the dates the wetland delineation data were collected between September 29, 2020 and January 25, 2021. The APT demonstrated the site conditions on these dates represent a time of year referenced as the dry season, that the general region and site were in a moderate to severe drought, and that site conditions were normal to wetter than normal in climatic conditions.

The southwestern portion of the Project Area is primarily composed of undeveloped land that was historically used for agriculture. The northeastern section is comprised of an ephemeral drainage and associated wetland and riparian habitats. The ephemeral drainage system (ED-3001) associated with Siphon Five runs northeast-southwest through the Project Area. A majority of ED-3001 is located outside of the Impact Area. The East Highline Canal bisects the western portion of the Project Area, and the Project Area is bisected by a railroad right-of-way in the northeastern portion of the Project Area. The

PC ORIGINAL PKG

Project Area is surrounded to the west and south by agricultural fields and undeveloped land to the north, east, and southeast.

4.1.1 Vegetation Communities

The western portion of the Project Area is primarily composed of active and fallow agriculture. The eastern portion of the Project Area is primarily composed of a braided ephemeral drainage system with riparian scrub and wetland habitats. The Impact Area supports three vegetation communities: bush seepweed (*Suaeda nigra*) scrub, creosote bush (*Larrea tridentata*) scrub, and tamarisk (*Tamarix* spp.) thickets. The Impact Area also includes the following land cover types: fallow agricultural land and urban/developed. Two additional land cover types, iodine bush (*Allenrolfea occidentalis*) scrub and active agricultural land, were observed within the buffer, but not within the Impact Area. Descriptions of the vegetation communities and land cover within the Impact Area only are provided below.

Vegetation Communities with the Impact Area

Bush seepweed scrub is typically found in flat to gently sloping valley bottoms, playas, toe slopes adjacent to alluvial fans, and bajadas (CNPS 2020). Bush seepweed scrub is found within an alkali sink that makes up most of the eastern portion of the Impact Area. Alkali sinks are composed of poorly drained soils with high salinity and/or alkalinity from evaporation of water that accumulates in closed drainages. These sinks are often seasonally inundated and lose water through evaporation. Within the Impact Area, bush sweepweed dominated the shrub cover with occasional occurrences of four-wing saltbush (*Atriplex canescens*), arrow weed (*Pluchea sercia*), big saltbush (*Atriplex lentiformis*), alkali goldenbush (*Isocoma acradenia*), and tamarisk.

Creosote bush scrub is typically found on alluvial fans, bajadas, upland slopes, and washes (CNPS 2020). Within the Impact Area, creosote bush scrub is located in the upland areas adjacent to the alkali sink and is dominated by a nearly monotypic stand of creosote bush with an open canopy and an herbaceous layer of seasonal annuals and perennials. Creosote was typically dominant in the shrub canopy, but occasionally was co-dominant with white bursage (*Ambrosia dumosa*), with an absent to intermittent herbaceous layer of seasonal annuals. Other plant species include four-wing saltbush, big saltbush, Mediterranean grass (*Schismus barbatus*) and occasional bush seepweed on the banks of established drainages.

Tamarisk thickets are typically found in sandy or gravelly braided washes or streams, areas where evaporation is high therefore increasing the saltiness. Within the Impact Area, tamarisk thickets are located within the ephemeral drainage and within the wetlands adjacent to East Highline Canal, and are characterized by a weedy, monoculture of tamarisk. Within the Impact Area, tamarisk and arrow weed were often co-dominant in this vegetation community. Other plant species observed include arrow weed, bush seepweed, four-wing saltbush, and big saltbush.

Land Cover Types within the Impact Area

Fallow agricultural lands include remnant signs of row crops with open space between rows. Agricultural lands often occur in upland areas with high soil quality, or floodplains and are almost always artificially irrigated. This land cover was observed in the southwestern portion of the Impact Area. With the Impact

PC ORIGINAL PKG

Area, this land cover consisted primarily of ruderal vegetation including bush seepweed, amaranth (*Amaranthus* sp.), sudangrass (*Sorghum bicolor* ssp. *drummondii*), and occasional big saltbush.

Urban/Developed areas do not constitute a vegetation classification, but rather a land cover type. Areas mapped as developed have been constructed upon or otherwise physically altered to an extent that natural vegetation communities are no longer supported. There may be irrigated landscaped, ornamental species present between the hardscape. Within the Impact Area, this land cover consisted primarily of compacted dirt roads, structures, including utility towers.

4.1.2 Soils

According to the Web Soil Survey (NRCS 2020a), eight soil units, or types, have been mapped within the Project Area (Figure 2. *Natural Resources Conservation Service Soil Types*). These include:

- 103 - Carsitas gravelly sand, 0 to 5 percent slopes
- 115 - Imperial-Glenbar silty clay loams, wet, 0 to 2 percent slopes
- 122 - Meloland very fine sandy loam, wet
- 124 - Niland gravelly sand
- 125 - Niland gravelly sand, wet
- 132 - Rositas fine sand, 0 to 2 percent slopes
- 133 - Rositas fine sand, 2 to 9 percent slopes
- 135 - Rositas fine sand, wet, 0 to 2 percent slopes
- 141 - Torriorthents and Orthids, 5 to 30 percent slopes
- 142 - Vint loamy very fine sand, wet
- 144 - Vint and Indio very fine sandy loams, wet
- 145 - Water

The Niland gravelly sand (124) and the Niland gravelly sand, wet map units (125) both contain hydric minor components (NCRS 2020c). Three water state classes (dry, moist, and wet) are used as soil moisture status entries for map unit components and designate a mean monthly soil water state at a specified depth. A summary of characteristics based on official series descriptions for each of the soil series mapped within the alignments are provided below (NRCS 2020b).

Figure 2. Natural Resources Conservation Service Soil Types

2020-144 Vega SES 5

Carsitas Series

The Carsitas series consists of very deep, somewhat excessively drained soils that formed in alluvium from granitoid and/or gneissic rocks. The Carsitas soils are on alluvial fans, fan aprons, valley fills, dissected remnants of alluvial fans and in drainageways. Slopes range from 0 to 30 percent. The mean annual precipitation is about three inches and the mean annual air temperature is about 77°F.

Imperial Series

The Imperial series consists very deep, well and moderately well-drained soils that formed in calcareous alluvium from mixed sources. The Imperial soils are nearly level to gently sloping are on flood plains and in old lake beds. The climate is arid with hot dry summers and cool dry winters. Average annual precipitation is less than four inches and the average annual temperature is about 72°F.

Glenbar Series

The Glenbar series consists of very deep, well-drained soils that formed in stratified stream alluvium. Glenbar soils are on flood plains and alluvial fans and have slopes of 0 to 3 percent. The mean annual precipitation is about seven inches and the mean annual air temperature is about 71°F.

Meloland Series

The Meloland series consists of naturally well-drained soils that commonly have perched water tables under irrigation. Typically, Meloland soils have light brown and very pale brown, calcareous very fine sandy loam, loamy fine sand, and silt loam upper horizons underlain by pink calcareous silty clay at depth of 26 inches that extends to a depth of 71 inches. Meloland soils are found in nearly level lacustrine basins and flood plains in the deserts. These soils have low to medium surface runoff and slow permeability.

Niland Series

The Niland series consists of well and moderately well-drained soils with slopes that formed in coarse mixed alluvium overlying fine alluvium at depths of less than 36 inches. Niland soils are on basin and floodplain edges and have slopes that are typically less than one percent, but can range up to five percent. Average annual precipitation is less than four inches and the average annual temperature is about 72°F.

Rositas Series

The Rositas series consists of very deep, somewhat excessively drained soils. These soils are formed in sandy eolian material and have less than 15 percent coarse and very coarse sand. Rositas soils are on dunes and sand sheets and have slopes that range from 0 to 30 percent. The mean annual precipitation is about four inches and the mean annual air temperature is about 72°F.

PC ORIGINAL PKG

Torriorthents and Orthids Series

The Torriorthents and Orthids series consists of deep, well drained to excessively drained soils formed on terrace escarpments and old alluvial fans dissected by geologic erosion. These soils are formed in mixed, unconsolidated alluvial sediment. These soils have rapid surface runoff and slow to rapid permeability.

Vint Series

The Vint series consists of very deep, somewhat excessively drained soils formed in stratified stream alluvium. These soils are on flood plains with a mean annual precipitation is about seven inches and the mean annual air temperature is about 71°F.

4.1.3 National Wetland Inventory

According to the National Wetlands Inventory (NWI, USFWS 2020a), there are four general types of drainage features mapped within the Project Area. These include freshwater pond, freshwater forested/shrub wetland, fluvial natural drainage features, and fluvial unnatural features (Figure 3. *National Wetland Inventory*).

4.1.4 Hydrology

The Project Area is within the Salton Sea Watershed (Hydrologic Unit Code #18100204, NRCS et al. 2016). The Project Area and adjacent upslope areas are within an alluvial fan drainage system that produces ephemeral conditions with surface waters flowing in direct response to large rain events for short durations. soils. A number of ephemeral features within the Project Area are relic remains of rain events and do not actively transport surface flow within the site; they would therefore be considered inactive ephemeral drainages. Furthermore, these features lack connectivity to the ephemeral system further upstream due to the presence of the railroad right-of-way.

The hydrology of the ephemeral system within the Project Area supports associated wetland, alkali sink, and riparian habitat. The ephemeral system ultimately drains into wetlands existing along the eastern end of the East Highline Canal, and additional wetlands exist along the western end of the canal. Runoff within the Project Area generally flows southwest from the direction of the Chocolate Mountains toward the East Highline Canal and associated wetlands. The East Highline Canal supplies water to the Imperial Valley via smaller lateral canals and drains that ultimately drain to the Salton Sea. The Salton Sea is a traditional navigable water (TNW) per Section 404 of the CWA.

4.2 Aquatic Resources

Aquatic resources have been mapped within the Impact Area; each resource is summarized by feature in Table 2 and depicted on Figure 4. *Aquatic Resources Delineation*. The regulated limits that are presented in Table 2 serve as an estimate and are subject to agency verification. Features identified as an aquatic resource had wetland indicators present and/or physical evidence of flow including OHWM, defined bed and bank, scour, presence of a clear and natural line impressed on the bank, disturbance of leaf litter, the presence or absence of sediment deposits, changes in the character of soil, destruction of terrestrial vegetation, and/or exposed roots indicating active hydrology within the channel.

Figure 4. Aquatic Resources Delineation
Sheet 3 of 3
2020-144 Vega SES 5

Contiguous riparian habitat associated with a nearby aquatic feature was mapped, and the aquatic feature with which the habitat was associated was also recorded. Riparian habitat not associated with an active aquatic feature was also mapped. OHWM and Wetland Determination Data Forms are included as Attachment B, representative site photographs are included as Attachment C, the USACE OMBIL Regulatory Module (ORM) aquatic resources table is included as Attachment D, and digital data are provided as Attachment E.

4.2.1 Wetlands

No wetlands were delineated within the Impact Area. Three freshwater forested/shrub wetlands and one freshwater pond were identified and mapped within the Project Area but outside of the Impact Area. These features are discussed below to provide context for the aquatic resources within the Impact Area only and not to support verification of these features.

Freshwater Forested/Shrub Wetland

Freshwater forested/shrub wetlands (FSW) are dominated by woody vegetation such as true shrubs, young trees (saplings), and trees or shrubs that are stunted due to environmental conditions. In seasonally flooded wetlands, surface water is present for extended periods, particularly in the early growing season, but is absent by the end of the growing season in most years. The water table can be variable after a flooding event, and ranges from saturation at the ground surface to a water table well below the ground surface (USFWS 2020b).

Three freshwater forested/shrub wetlands were identified and mapped within the Project Area but outside of the Impact Area. Two of these features are located adjacent to the East Highline Canal in the southwest parcel, and one feature is associated with the ephemeral drainage in the northeast parcel of the Project Area. These features are documented with Sampling Points 502, 521, 525, 526, 527, 542, 543, 544, 548, and 603 (Attachment B) and Photos 6-8 (Attachment C). Sampling Points 500, 502, 542, 543, 548, and 544 were collected in the wetland in the northeast parcel of the Project Area. Sampling Points 521, 525, 526, and 527 were collected in the wetland east of the East Highline Canal. Sampling Point 603 was collected in the freshwater forested/shrub wetland west of the East Highline Canal. At the time of the aquatic resource delineation in 2020 and 2021, these sampling points were inside the Project impact limits. The Impact Area was revised in 2022 and it now no longer includes the location of the aforementioned Sampling Points.

All freshwater forested/shrub wetlands were sparsely vegetated and dominated by hydrophytic vegetation characterized as tamarisk scrub. Plant species observed within the wetlands included tamarisk, bush seepweed, arrow-weed, iodine bush, big saltbush, and saltgrass. All sampling points met the F8 (redox depressions) hydric soil indicator. All sampling points met the surface soil cracks (B6) primary wetland hydrology indicator, and multiple sampling points met additional primary or secondary indicators. Additional primary indicators present included sediment deposits (B2) and drift deposits (B3). Additional secondary indicators present included water marks (B1), sediment deposits (B2), drift deposits (B3), drainage patterns (B10), and the FAC-neutral test (D5). Soil at Sampling Point 525 and Sampling Point 526

PC ORIGINAL PKG

are representative of soil conditions within the wetlands throughout the Project Area. Conditions at these sampling points are described below.

At Sampling Point 525, the matrix color at a depth of 0 to 4 inches was 10YR 4/4 with no redox features; and at a depth of 4 to 12 inches the matrix color was 10YR 4/3 with 5 percent redox features colored 5YR 5/8. Texture was the primary difference between these horizons. The A horizon was loamy sand, and the B horizon was silty clay loam. The soil was moist at a depth of approximately four inches, indicating possible ground water connection to the adjacent East Highline Canal at the time of the assessment. It was determined that the redox depressions (F8) hydric soil indicator was met at this sampling location. Wetland hydrology indicators observed included the surface soil cracks (B6) primary indicator and the sediment deposits (B2), drift deposits (B3), drainage patterns (B10), and FAC-neutral test (D5) secondary indicators.

At Sampling Point 526, the matrix color at a depth of 0 to 2 inches was 10YR 4/3 with no redox features; at a depth of 2 to 4 inches the matrix color was 85 percent 10YR 4/3 and 10 percent N 2.5/0 with 5 percent redox features colored 5YR 5/8; and at a depth of 4 to 12 inches the matrix color was 10YR 4/3 with no redox features. The presence of redox features was the primary difference between these horizons. It was determined that the redox depressions (F8) hydric soil indicator was met at this sampling location. Wetland hydrology indicators observed included the surface soil cracks (B6) primary indicator and the sediment deposits (B2), drift deposits (B3), drainage patterns (B10), and FAC-neutral test (D5) secondary indicators.

Freshwater Pond

Freshwater ponds (FP) are non-tidal wetlands that are typically dominated by trees, shrubs, persistent emergents, emergent mosses, or lichens. They consist of unconsolidated substrates with less than 75 percent coverage of stones, boulders or bedrock and less than 30 percent coverage of vegetation. In intermittently flooded wetlands, substrate is usually exposed but surface water is present for variable periods without detectable seasonal periodicity. Weeks, months, or years may pass between periods of inundation (USFWS 2020a).

One freshwater pond was identified and mapped within the northeast portion of the Project Area, outside of the Impact Area. This feature is documented by Sampling Point 500 (Attachment B) and Photo 5 (Attachment C). At the time of the aquatic resource delineation in 2020 and 2021, this Sampling Point was inside the Project impact limits. The Impact Area was revised in 2022 and it now no longer includes the location of the Sampling Point 500. Plant species observed within the wetland included tamarisk and iodine bush. The matrix color at a depth of 0 to 6 inches was 7.5YR 4/4 with 5 percent redox features colored 7.5R 5/8; and at a depth of 6 to 15 inches the matrix color was 7.5YR 4/3 with 30 percent redox features colored 7.5R 5/8. Texture and the percentage of redox features were the primary differences between these horizons. The A horizon was clay loam, and the B horizon was silty clay. It was determined that the redox depressions (F8) hydric soil indicator was met at this sampling location. Wetland hydrology indicators met included the surface soil cracks (B6) primary indicator and FAC-neutral test (D5) secondary indicator.

PC ORIGINAL PKG

4.2.2 Other Aquatic Resources (Non-Wetland Waters)

Ephemeral Drainage

Ephemeral drainages are linear features that exhibit a bed and bank and an OHWM. These features typically convey runoff for short periods of time, during and immediately following rain events, and are not influenced by groundwater sources at any time during the year. As previously described, the Project Area and adjacent upslope areas are within an alluvial fan drainage system. Multiple ephemeral drainages that are part of this system flow through the Project Area and appear to transport surface water from the direction of the Chocolate Mountains to the East Highline Canal, the ephemeral drainage (ED-3001), and/or the freshwater forested/shrub wetland directly northeast of the East Highline Canal. These features lack connectivity to the ephemeral system further upstream due to the presence of the railroad right-of-way.

Four ephemeral drainage features associated with Siphon Five are located fully or partially within the Impact Area (ED-3001, ED-28, ED-951, and ED-1034). Feature ED-3001 is documented by OHWM Transect 200 (Attachment B) and Photo 3 (Attachment C). A majority of feature ED-3001 is outside of the Impact Area. At the time of the field delineation in 2020, the OHWM Transect was located inside the Project impact limits, as previously provided by the Applicant. The Impact Area limits were revised in 2022 and the OHWM Transect was no longer located fully within the revised Impact Area, but was partially within and directly adjacent. The OHWM Transect data sheet has been included in this report because the field conditions documented are representative of the ephemeral drainages mapped within the revised Impact Area limits. At the time of the field assessment, this feature contained no surface flow and had sparse vegetation within the bed. The OHWM was delineated in the field primarily by changes in sediment, vegetation, a natural scour line, bank erosion, and the presence of litter and debris. ED-3001 flows southwest under the railroad via a concrete underpass. It diverts surface flow from the direction of the Chocolate Mountains to the southwest, bypassing the Coachella Canal and the railroad right-of-way, and ultimately connects to the East Highline Canal and/or associated wetlands within the southwest portion of the Project Area. The East Highline Canal supplies water to the Imperial Valley via smaller lateral canals and drains that ultimately drain to the Salton Sea.

At the time of the field assessment, all other ephemeral features contained no surface flow. The OHWM was delineated in the field primarily by the changes in vegetation, sediment changes, and the break in bank slope. Other features observed included mud cracks and surface relief caused by flowing water. Channel surface features within ephemeral drainages indicated weak bed and bank along with a narrow scoured area that varied in width. Other indicators present included drainage patterns and sediment deposits..

4.2.3 Manmade Features

No manmade features were delineated within the Impact Area. One canal and three irrigation channels were identified and mapped within the Project Area and buffer but are located outside of the Impact Area. These features are discussed below to provide context for the aquatic resources within the Impact Area only and not to support verification of these features.

PC ORIGINAL PKG

Canal

One major canal, the East Highline Canal, is located within the Project Area but outside of the Impact Area. The East Highline Canal is managed by the Imperial Irrigation District (IID) and was constructed for the purposes of water delivery. It is an unvegetated, concrete (or other impervious material)-lined channel that transports water year-round. Within the Project Area, lateral canals transport water from the East Highline Canal east towards active agricultural land within the buffer area. The East Highline Canal ultimately flows into the Salton Sea through a series of lateral canals and drains.

Irrigation Channel

Features classified as irrigation channels include concrete-lined lateral canals and concrete-lined irrigation ditches. The irrigation channels located within the buffer of the Project Area are used for agricultural purposes and are part of a larger interconnected system that supplies water throughout the Imperial Valley.

Lateral Canals

The lateral canals within the buffer of the Project Area are managed by IID and supply water to irrigation ditches that are used by private farming operations. The concrete-lined lateral canals are managed by IID to be free of vegetation and therefore lack habitat for wildlife species. Lateral canals that fall adjacent to the Project Area include the O Lateral along the northern end and the N Lateral along the southern end of the western portion of the Project Area.

Irrigation Ditches

There is one concrete-lined irrigation ditch within the Project Area, but outside of the Impact Area, that is associated with a fallow agricultural field and is no longer in use. This irrigation ditch runs parallel to the East Highline Canal and associated wetlands. The concrete-lined irrigation ditch is free of vegetation and therefore lacks habitat for wildlife species.

4.2.4 Potential CDFW Regulated Habitats

The following describes vegetation communities or habitat features that could be regulated by CDFW but are not expected to be regulated by the USACE under Section 404 of the CWA because they do not appear to meet the current definition of waters of the U.S.

Alkali Sink

Alkali sinks are composed of poorly drained soils with high salinity and/or alkalinity from evaporation of water that accumulates in closed drainages. These sinks are often temporarily flooded during large precipitation events, but do not stay inundated long enough to form hydric soils.

The alkali sink habitat is documented with Sampling Points 501, 522, 524, 545, and 547 (Attachment B) and Photo 9 (Attachment C). At the time of the aquatic resource delineation in 2020 and 2021, these sampling points were inside the Project impact limits. The Impact Area was revised in 2022 and it now no longer includes the location of the aforementioned Sampling Points. However, alkali sink habitat is still

PC ORIGINAL PKG

present within the revised Impact Area and is subject to direct impacts. Sampling Points 501, 522, 524, 545, and 547 are representative of the alkali sink habitat of the Project Area as a whole. Sparse hydrophytic vegetation was present at all sampling point locations within the alkali sink habitat, including iodine bush, arrow weed, bush seepweed, and big saltbush. Indicators of wetland hydrology were observed at multiple upland sampling points within the alkali sinks, including primary indicator surface soil cracks (B6) and secondary indicators sediment deposits (B2), drift deposits (B3), and drainage patterns (B10). All sampling points within the alkali sink habitat lacked hydric soil indicators. Upland Sampling Points 522 and 545 document locations which had hydrophytic vegetation but lacked wetland hydrology and hydric soils. Upland Sampling Points 524 and 547 document locations which had hydrophytic vegetation and wetland hydrology but lacked hydric soils.

Riparian Habitat

Riparian habitat associated with the drainage systems throughout the Project Area consists of tamarisk thickets, which is characterized by a weedy, monoculture of tamarisk. This habitat is typically in ditches, washes, rivers, arroyo margins, lake margins, and other watercourses. Throughout the Project Area, other species observed included four-wing saltbush and arrow weed. There is additional riparian habitat within the southwest portion of the Impact Area near the N Lateral canal that is not associated with an active aquatic feature. This habitat likely established opportunistically in areas that were recently left fallow and consists of tamarisk thickets. This area was determined to be remnant of a relic unlined irrigation channel that is no longer in use.

5.0 JURISDICTIONAL ASSESSMENT

Aquatic resources that are potentially regulated under the CWA, the Porter-Cologne Act, and California Fish and Game Code Section 1602 within the Impact Area are summarized below. These results are subject to modification following agency verification.

5.1 Clean Water Act

Per Regulatory Guidance Letter 16-01, an applicant may request a PJD "in order to move ahead expeditiously to obtain a Corps permit authorization where the requestor determine*s that it is in his or her best interest to do so … even where initial indications are that the aquatic resources on a parcel may not be jurisdictional*" (USACE 2016b). The following information on connectivity of wetlands and other waters in the Survey Area to TNW is provided should an Approved Jurisdictional Determination (AJD) be necessary.

The ephemeral drainages within the Impact Area are tributary to the Salton Sea, which is a TNW. Under the current definition of waters of the U.S., the *Rapanos* guidance, the ephemeral drainages onsite would be considered non-navigable tributaries that are not relatively permanent. In which, case, a significant nexus evaluation of the ephemeral drainages would be necessary to determine jurisdiction if seeking an AJD.

PC ORIGINAL PKG

5.2 Porter-Cologne Water Quality Control Act

Ephemeral drainages meet the definition of Waters of the State and are regulated pursuant to the Porter-Cologne Act. The Porter-Cologne Act defines Waters of the State as "any surface water or groundwater, including saline waters, within the boundaries of the state" [Water Code 13050 (e)]. The Porter Cologne Act defines "Waters of the State" very broadly, with no physical descriptors, and no interstate commerce limitation.

5.3 California Fish and Game Code Section 1600-1602

The following categories meet the criteria for resources that are regulated under section 1600 of the California Fish and Game Code. This includes all resources with surface or subsurface flow, and a body of water that "flows at least periodically or intermittently through a bed or channel having banks and supports fish or other aquatic life." Areas with associated riparian vegetation that is supported by the surface and subsurface flow through these streambeds are also added to CDFW's jurisdiction under 1600. The categories are:

- Ephemeral Drainages
- Riparian Habitat
- Alkali Sinks

OHWM and Wetland Determination Data Forms – Arid West Region

PC ORIGINAL PKG

Arid West Ephemeral and Intermittent Streams OHWM Datasheet

Project: Vega SES 5
Project Number:
Stream: ED-3001 (Cross section #200)
Investigator(s): C. Congedo, C. Torres

Date: 09/29/2020
Town: Calipatria
Photo begin file#:

Time: 10:30AM
State: CA
Photo end file#:

Y [x] / N [ ] Do normal circumstances exist on the site?

Y [ ] / N [x] Is the site significantly disturbed?

Location Details: Cross section taken of ED-3001 adjacent to railroad right-of-way at northeast portion of Project Area.

Projection:
Datum: NAD83
Coordinates:

Potential anthropogenic influences on the channel system:

Channel diverted under railroad tracks using a concrete culvert, and drainage system eventually meets with the East Highline Canal at the southwest end of the site. Lateral canals divert water from the East Highline Canal to active agriculture that is adjacent to the Project Area.

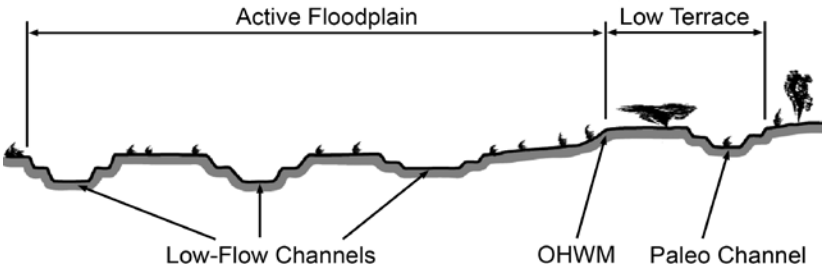
Brief site description: The East Highline Canal bisects the western portion of the Study Area and a railroad bisects the eastern portion of the Study Area. The portion of the site that is southwest of the canal consists of undeveloped land that was historically used for agriculture. The portion of the site that is northeast of the canal is comprised of an ephemeral drainage system and associated wetland and riparian habitats. Wetland habitat lines both sides of the East Highline Canal.

Checklist of resources (if available):

- [x] Aerial photography
  Dates: 1953- 2015
- [x] Topographic maps
- [ ] Geologic maps
- [x] Vegetation maps
- [x] Soils maps
- [x] Rainfall/precipitation maps
- [ ] Existing delineation(s) for site
- [x] Global positioning system (GPS)
- [ ] Other studies

- [ ] Stream gage data
  Gage number:
  Period of record:
- [ ] History of recent effective discharges
- [ ] Results of flood frequency analysis
- [ ] Most recent shift-adjusted rating
- [ ] Gage heights for 2-, 5-, 10-, and 25-year events and the most recent event exceeding a 5-year event

Hydrogeomorphic Floodplain Units



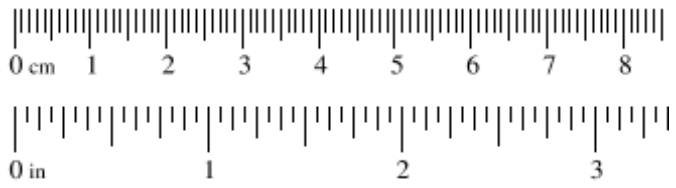
Procedure for identifying and characterizing the floodplain units to assist in identifying the OHWM:

1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.
2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.
3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.
   a) Record the floodplain unit and GPS position.
   b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.
   c) Identify any indicators present at the location.
4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.
5. Identify the OHWM and record the indicators. Record the OHWM position via:
   - [ ] Mapping on aerial photograph
   - [ ] Digitized on computer
   - [x] GPS
   - [ ] Other:

PC ORIGINAL PKG

Wentworth Size Classes

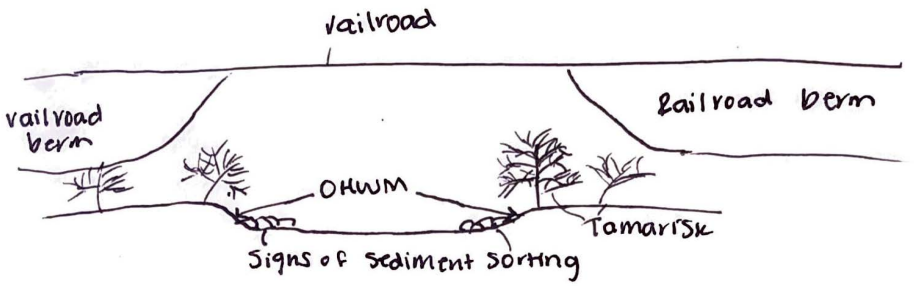
Inches (in)	Millimeters (mm)	Wentworth size class	
10.08	256	Boulder	
		Cobble	Gravel
2.56	64	Pebble	
0.157	4	Granule	
0.079	2.00	Very coarse sand	
0.039	1.00	Coarse sand	
0.020	0.50	Medium sand	Sand
1/2 0.0098	0.25	Fine sand	
1/4 0.005	0.125	Very fine sand	
1/8 0.0025	0.0625	Coarse silt	
1/16 0.0012	0.031	Medium silt	
1/32 0.00061	0.0156	Fine silt	Silt
1/64 0.00031	0.0078	Very fine silt	
1/128 0.00015	0.0039	Clay	Mud



PC ORIGINAL PKG

Project ID: Vega SES 5 **Cross section ID:** ED-3001 (#200) **Date:** 09/29/2020 **Time:** 10:30 AM

Cross section drawing:



OHWM

GPS point: 33.206767, -115.431705

Indicators:

- [x] Change in average sediment texture
- [x] Change in vegetation species
- [x] Change in vegetation cover
- [x] Break in bank slope
- [ ] Other: _____
- [ ] Other: _____

Comments:

Cross section taken adjacent to railroad. Drainage width eventually increases further downstream as feature continues through site.
OHWM: 3' width, 4" depth
B2B: 4' width, 1' depth

Floodplain unit:

- [x] Low-Flow Channel
- [ ] Active Floodplain
- [ ] Low Terrace

GPS point: 33.206767, -115.431705

Characteristics of the floodplain unit:

Average sediment texture: Medium to fine sand
Total veg cover: 10 % Tree: 10 % Shrub: 0 % Herb: 0 %
Community successional stage:

- [ ] NA
- [x] Early (herbaceous & seedlings)
- [ ] Mid (herbaceous, shrubs, saplings)
- [ ] Late (herbaceous, shrubs, mature trees)

Indicators:

- [ ] Mudcracks
- [ ] Ripples
- [x] Drift and/or debris
- [x] Presence of bed and bank
- [ ] Benches
- [x] Soil development
- [x] Surface relief
- [ ] Other: _____
- [ ] Other: _____
- [ ] Other: _____

Comments:

Channel itself is unvegetated. *Tamarix* sp. present on banks of channel. Further downstream there a few scattered individuals of ironwood mixed with tamarisk.

1.0 INTRODUCTION

1.1 PROJECT DESCRIPTION

It is our understanding that the proposed VEGA 2, 3, 5 Project will consist of the design and construction of a 350-megawatt photovoltaic solar energy facility with an integrated 350-megawatt battery storage system to provide a renewable and reliable source of electrical power. Project components will include a ground mounted photovoltaic solar power generating system, supporting structures, on-site substations, battery storage systems, interconnection facilities, and internal access roads. The project would employ the use of PV power systems to convert solar energy into electricity using non-reflective technology. All proposed improvements will be located on approximately 1,963 acres of land in central Imperial County, California.

1.2 SITE LOCATION AND DESCRIPTION

The proposed VEGA 2, 3, 5 Project is located approximately 5.5 miles southeast of Niland in Imperial County, California. The Project site consists of five parcels (Assessor Parcel Numbers (APN) 025-260- 022, 025-260-019, 025-270-023, 025-260-011, and 025-010-006) and crosses over the East Highline and Coachella Canals. The site location is shown on Figure 1, Site Location Map in Appendix A.

Based on our site visit, the five parcels are unimproved with some minimal vegetation consisting of native small brush, cactus, and grass, to bare ground. Agricultural fields are located west of the parcels. The VEGA 5 site consists of two parcels located south of the Noffsinger Road, and a portion of APN 025-260-011 located north of Noffsinger Road.

The VEGA 5 site is traversed by the East Highline Canal. The ground surface at the VEGA 5 site was generally covered with dense vegetation ranging in height between about 3 and 7 feet tall. Transmission towers and overhead power lines run along the eastern and western edges of the south and north quadrants of the VEGA 5 site.

The VEGA 2 and 3 sites are located northeast of the Noffsinger Road. Generally, the ground surface at these parcels consisted of sparse dry vegetation. The northern portion of the parcels were found to contain minimal vegetation, or bare ground. The Coachella Canal traverses one of the northernmost parcels of VEGA 2. During our site visit, some of the north areas of VEGA 2 and VEGA 3 were inaccessible due to soft upper soils or deep erosion gullies on dirt roads.

The topography of the Project site is relatively flat with elevations ranging from approximately -64 feet at the west to +192 feet at the east. The coordinates at the center of the Project site are approximately:

Latitude: 33.21672ºN Longitude: 115.423951ºW

1.3 PURPOSE AND SCOPE

The purpose of this preliminary geological and geotechnical study was to review existing geologic/geotechnical data and evaluate preliminary geological and geotechnical hazards for the proposed Project. This report is preliminary in scope and does not include a subsurface field investigation. A final design report must be performed prior to development after subsurface investigation and laboratory testing has been performed.

Our scope of services for this project included the following tasks:

PC ORIGINAL PKG

Literature Review: Reviewed various readily available published and unpublished geologic and geotechnical documents pertinent to the Project site. A list of references used in preparation of this report is presented in Section 6.0.

Site Reconnaissance: Performed a brief site reconnaissance to visually observe the existing site conditions including existing on-site near-surface soils and potential geologic hazards. Selected photographs from our site reconnaissance are included in Appendix B, Site Photographs. The VEGA 3 area was inaccessible during our visit due to soft upper soils and erosion of dirt roads, therefore no photographs were taken at that location.

Preliminary Geologic and Geotechnical Hazards Evaluation: This evaluation included location of known and mapped nearby earthquake faults and seismic zones in relation to the Project site, intensity of ground shaking, potential for liquefaction, ground rupture, landslides, and flooding. Other potential hazards such as expansion, collapse, and corrosivity potentials of on-site soils were also evaluated. Our evaluations were performed based on literature review only. Field and laboratory testing program was not included as a part of our services.

Report Preparation: Relevant geotechnical and geological data were compiled in this report along with our findings and conclusions for the proposed Project.

PC ORIGINAL PKG

2.0 GEOLOGY, FAULTING AND SEISMICITY

2.1 REGIONAL GEOLOGIC SETTING

The Project site is located in the Imperial Valley, a part of the Salton Trough, located in the Colorado Desert physiographic province of California. With surface elevations as low as 275 feet below sea level, the Salton Trough formed as a structural depression resulting from tectonic boundary adjustment between the Pacific and the North American plates. The Salton Trough is bounded on the east and northeast by the San Andreas Fault and on the west by the San Jacinto Fault Zone. The structural trough is filled with more than 15,000 feet of Miocene and younger, marine and non-marine sediments capped by approximately 100 feet of Pleistocene and later lacustrine deposits that have been deposited by intermittent filling derived from periodic flooding of the Colorado River and Lake Cahuilla (Morton, 1977). A Regional Geologic Map is shown on Figure 2 (Appendix A).

2.2 SURFACE SUBGRADE SOILS AND GROUNDWATER CONDITIONS

Based on a review of published data by the California Geological Survey (CGS, 2010), the Project site is generally underlain by stratified alluvial deposits, predominately consisting of interbedded layers of silt, sand and clay. According to the Soil Survey of Imperial County prepared by United States Department of Agriculture Soil Conservation Service (2020), the near-surface soils are predominantly comprised of very fine to fine sand and occasionally gravelly sand. The soil map for the Project site is shown on Figure 3.

A review of online water well databases from USGS (2021b) and California Department of Water Resources (2021) indicate that there is one water well within a mile radius from the site (less than a mile south of Parcel No. 025-270-023 [VEGA 2 Site]). Groundwater at Well No. 11S15E23M001S was measured at about 50 feet below ground surface in March 2020. Groundwater information should be obtained after conducting a subsurface field investigation during the design phase of the Project. Seasonal fluctuations of shallow groundwater should be expected during periods of rainfall, irrigation of adjacent properties, and site grading. The groundwater levels shown herein should not be interpreted to represent accurate current or permanent conditions.

2.3 FAULTING

Southern California straddles the boundary between two global tectonic plates known as the North American Plate (on the east) and the Pacific Plate (on the west). The main plate boundary is represented by the San Andreas Fault, which extends northwest from the Gulf of California in Mexico, through the desert region of the Imperial Valley, through the San Bernardino region, and into Northern California, where it eventually trends offshore, north of San Francisco (Jennings and Bryant, 2010).

In Southern California, the plate boundary is a complex system of numerous faults known as the San Andreas Fault System (SAFS) that span a 150-mile-wide zone from the main San Andreas fault in the Imperial Valley westward to offshore of San Diego (Powell et al., 1993 and Wallace, 1990). The major faults east of San Diego (from east to west) include the San Andreas Fault, the San Jacinto fault, and the Elsinore fault. The SAFS is a transform plate boundary dominated by right-lateral fault displacement with the Pacific Plate moving northwest relative to the North

PC ORIGINAL PKG

American Plate (Wallace, 1990 and Weldon and Sieh, 1985). The significance of this lateral faulting is that transform plate interactions typically generate much smaller maximum magnitude earthquakes than convergent or subduction plate boundaries. Thus, in Southern California the expected maximum moment magnitudes for most faults are typically in the M6.5 to M7.5 range, with only a few faults (San Andreas Fault, possibly some thrust faults of the Transverse Ranges) capable of generating earthquakes in the M8 range, such as the 1906 San Francisco and 1857 Fort Tejon earthquakes, on the San Andreas Fault itself.

Most of the seismic energy and associated fault displacement within the SAFS occurs along the fault structures closest to the plate boundary (i.e., on the Elsinore, San Jacinto, and San Andreas faults) (Powell et al. 1993). Approximately 1.9 inches/year (49 millimeters per year, [mm/yr.]) of overall lateral displacement have been measured geodetically and as fault slip across the plate boundary. Combined, the Elsinore, San Jacinto, and San Andreas faults account for up to 1.6 inches/year (41 mm/yr.), or 84 percent, of the total plate displacement. The remaining 16 percent is accommodated across the faults to the west (Bennett et al., 1996).

The Project site is located in the seismically active Southern California region, within the influence of several fault systems that are considered to be active or potentially active. Several active or potentially active faults are located in the vicinity of the Project site. The locations of these faults relative to the site are shown on Figure 4, Fault Map (Appendix A).

Under the current understanding of regional seismology and tectonics, the largest maximum earthquake to impact the project may be generated by the Brawley Seismic Zone having an estimated maximum magnitude of M7.4. Table 2-1 lists faults with a risk contribution greater than 1 percent, along with pertinent data such as fault type, distance to fault, and maximum magnitude. Other nearby faults are shown in Figure 4.

Table 2-1. Contributing Faults

Fault Name	Distance (km)	Site Location (Latitude and Longitude)	Maximum Magnitude
Brawley Seismic Zone	21.0	33.21672ºN 115.423951ºW	7.4
Elmore Ranch	21.6		6.5

Note:

Listed faults were derived from United States Geologic Survey (USGS) Deaggregation online tool and lists faults with a risk contribution greater than 1 percent of the total seismic risk. Site Class D was assumed and using USGS Dynamic 2014 dataset (V4.2.0) with a 2,475-year return period. See USGS (2021d) for details.

2.4 HISTORICAL SEISMICITY

The Project site and vicinity are located in an area characterized by high seismicity.

The seismicity of the region surrounding the project site was evaluated using the earthquake database from USGS website (2021c). Based on the review of the available data, 163 earthquake events with magnitudes equal or greater than 4.5 have occurred within a radius of 60 miles of the site in the last 100 years. Selected location of the earthquake epicenter, year of occurrence, and

PC ORIGINAL PKG

earthquake magnitude are summarized in Table 2-2. The earthquakes listed below are based on largest magnitudes.

Table 2-2. List of Selected Historic Earthquakes

Earthquake Location	Date of Earthquake	Earthquake Magnitude
4km N of Holtville, CA	05-19-1940	6.9
22km W of Westmorland, CA	11-24-1987	6.6

PC ORIGINAL PKG

3.0 ASSESSMENT OF POTENTIAL GEOLOGIC AND GEOTECHNICAL HAZARDS

3.1 SEISMIC SHAKING

The Project site is located in the highly seismic Southern California region within the influence of several fault systems that are considered to be active or potentially active. A list of known faults considered capable of producing potentially damaging seismic shaking at the site is presented in Table 2-1. It is anticipated that the Project site will periodically experience ground accelerations and shaking as the result of small to moderate magnitude earthquakes occurring along these faults and other faults within the Southern California region.

The results of our preliminary seismic hazard analyses indicated that the estimated horizontal peak ground acceleration (PGA) having a 2 percent probability of exceedance in 50 years and corresponding to the statistical return period of approximately 2,475 years, which is defined as the Maximum Considered Earthquake (MCE), is on the order of 0.55g.

3.2 FAULT-RUPTURE HAZARD

Surface rupture usually occurs along traces of known active or potentially active faults. However, many historic seismic events, including the 1994 Northridge Earthquake, have occurred on faults without surface expression (blind faults) that were not previously known to exist or to be active.

The California Geologic Survey (CGS) established criteria for faults as active, potentially active, and inactive. Active faults are those that show evidence of surface displacement within the last 11,000 years (Holocene age). Potentially active faults are those that demonstrate displacement within the past 1.6 million years (Quaternary age). Faults showing no evidence of displacement within the last 1.6 million years may be, in general, considered inactive for most structures, except for critical structures. In 1972 the Alquist-Priolo Special Studies Earthquake Hazards Act (APEHA) was passed, which required fault studies within 500 feet of active or potentially active faults. The APEHA designates “active” and “potentially active” faults utilizing the same age criteria as that used by the CGS. The site is not located within a currently-delineated State of California Alquist-Priolo Earthquake Fault Zone (Bryant and Hart, 2007 and CGS, 2019) and therefore the likelihood of fault rupture at the Project site is considered low. Location of known Alquist Priolo Earthquake Fault Zones in the general vicinity of the Project Site is shown on Figure 5, Seismic Hazard Map (Appendix A).

3.3 FLOOD HAZARD AND TSUNAMIS

Flooding can occur as a result of several factors in developed areas. These factors include: rainfall rates that exceed an area’s ability to absorb or control the runoff; impounded water retained behind a flood control structure (upstream-inundation), failure of a flood control structure (downstream-inundation), seiches, and tsunami.

According to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map Number 06025C0750C (2008), the Project site is considered a Zone X site, which is an area that is determined to be outside the 0.2% annual chance of flooding. Therefore, the risk related to natural flooding is low.

PC ORIGINAL PKG

Due to the site's inland location and the lack of any local impounded bodies of water, tsunami, and seiches do not represent potential hazards to the site.

3.4 LANDSLIDING

Landslides and other forms of mass wasting, including mud flows, debris flows, and soil slips occur as soil moves downslope under the influence of gravity. Landslides are frequently triggered by intense rainfall or seismic shaking. Because the site is located in a relatively flat area, we do not consider landslides or other forms of natural slope instability to represent a significant hazard to the project.

3.5 LIQUEFACTION/SEISMIC SETTLEMENT

The term liquefaction describes a phenomenon in which saturated, cohesionless soils temporarily lose shear strength (liquefy) when subjected to cyclic ground motions. Cyclic loading of saturated soils leads to the build-up of pore water pressure as a result of soil particles being rearranged with a tendency toward closer packing. Under undrained conditions, shaking of loose non-cohesive soils may result in loads being transferred from the soil skeleton to the pore water with consequent reduction in the soil strength and stiffness. Structures founded on or above potentially liquefiable soils may experience bearing capacity failures due to the temporary loss of foundation support, vertical settlements (both total and differential), and/or undergo lateral spreading. The factors known to influence liquefaction potential include soil type, relative density, grain size distribution, confining pressure, depth to groundwater, and the intensity and duration of the seismic ground shaking. Liquefaction is most prevalent in loose- to medium-dense, silty, sandy, and gravelly soils below the groundwater table.

The Project site has not been mapped for liquefaction potential by CGS. Due to the limited soils and groundwater information, the liquefaction potential at the project site cannot be determined. The liquefaction potential should be evaluated during the design phase of the Project, using site-specific information collected from future site-specific exploratory boreholes.

3.6 LATERAL SPREADING

Liquefaction-induced lateral spreading is defined as the lateral displacement of ground as a result of pore pressure build-up or liquefaction in shallow underlying soils during an earthquake. Lateral spreading can occur on sloping ground or where nearby slopes are present. The factors known to influence the magnitude of lateral spreading include earthquake magnitude, peak ground acceleration, distance between the site and the seismic event, the slope height and gradient, thickness of the liquefied layer, fines content, soil particle gradation, and residual strength of the liquefied soil.

A site-specific geotechnical investigation should be performed and mitigation measures, if necessary, should be developed to reduce the magnitude of lateral displacement due to lateral spreading.

3.7 LAND SUBSIDENCE

Subsidence is the sinking of the ground surface caused by the compression of earth materials or the loss of subsurface soil due to underground mining, tunneling, or erosion. The major causes of subsidence include fluid withdrawal from the ground, decomposing organics, underground

PC ORIGINAL PKG

mining or tunneling, and placing large fills over compressible earth materials. The effective stress on underlying soils is increased resulting in consolidation and settlement. Subsidence may also be caused by tectonic processes. The Project site is not located in an area of known ground subsidence or within any delineated zones of subsidence due to groundwater pumping or oil extraction (USGS, 2021a). Accordingly, the potential for subsidence to occur at the site is considered to be low.

3.8 EXPANSIVE SOILS

Expansive soils are characterized by their ability to undergo significant volume changes (shrink or swell) due to variations in moisture content. Changes in soil moisture content can result from precipitation, landscape irrigation, utility leakage, roof drainage, perched groundwater, drought, or other factors and may result in unacceptable settlement or heave of structures. Based on available data, the onsite near-surface soil deposits primarily consist of sand, gravelly sand and clay/silty clay. Generally, sands are considered not expansive soils and clays may exhibit moderate to high expansion potential due to variation in moisture content. A site-specific geotechnical investigation should be performed to evaluate soil expansiveness and potential impact, if any, of expansive soil on the Project.

3.9 COLLAPSIBLE SOILS

Collapsible soil is generally defined as soil that will undergo a sudden decrease in volume and its internal support is lost under applied loads when water is introduced into the soil. The internal support is considered to be a temporary strength and is derived from a number of sources including capillary tension, cementing agents, e.g. iron oxide and calcium carbonate, clay-welding of grains, silt bonds, clay bonds and clay bridges. Soils found to be most susceptible to collapse include loess (fine grained wind-deposited soils), valley alluvium deposited within a semi-arid to arid climate, and residual soil deposits. At this time, it is unknown whether collapsible soils are present at the site. A site-specific geotechnical investigation should be performed to assess the presence of collapsible soils and evaluate potential impact, if any, of collapsible soils on the proposed improvements.

3.10 SOIL CORROSION

A site-specific corrosion study should be performed and mitigation measures should be recommended if the soils are found to be corrosive to concrete or steel. Generally, fine grained soils like clay are more likely to be corrosive. Typical remediation for the corrosive soil conditions consists of using concrete mix with higher cement contents (Type V Portland Cement) and appropriate steel corrosion protection. Because fine grained soils are expected to be encountered at the subject site, corrosion potential should be further evaluated during the design phase of this Project.

3.11 OTHER GEOLOGIC HAZARDS

Volcanic Eruption: The Project site is not located in an area of a recent volcanism. Therefore, the potential for volcanic activity is very low.

Radon Gas: Radon gas is a radioactive product of uranium which can reach high levels depending on the local geology and building construction. According to Environmental Protection

PC ORIGINAL PKG

Agency (EPA) Map of Radon Zones, the Project site, as the entire Imperial County, is located in Zone 3 with predicted average indoor radon screening levels less than 2 picocuries per liter (pCi/L). Since the site is not located within an area of high potential for indoor radon levels (above 4 pCi/L), the potential for radon gas accumulation is considered low.

Naturally Occurring Asbestos: The site is not located in an area of known naturally occurring asbestos (CGS, 2011). Therefore, the potential for occurring asbestos is considered low.

Hazardous Materials: The site is not located in proximity to any known hazardous materials (methane gas, hydrogen sulfide gas) and the risk of hazardous materials is considered low.

PC ORIGINAL PKG

4.0 PRELIMINARY SEISMIC DESIGN RECOMMENDATIONS

To reduce the effects of ground shaking produced by regional seismic events, seismic design should be performed in accordance with the applicable building codes. Preliminary seismic parameters were calculated using the California's Office of Statewide Health Planning and Development [OSHPD] (2018) and in accordance with the 2016 California Building Code and the American Society of Civil Engineers/Structural Engineering Institute (ASCE/SEI) (2017) 7-16. Site Class D was assumed for preliminary design and must be confirmed prior to final design. Seismic design parameters for Site Class D are provided in Table 4-1.

Table 4-1. Preliminary Seismic Design Parameters

Category	Recommended Value
Risk Category	II (1)
Site Class	D
Latitude	33.21672ºN
Longitude	115.423951ºW
Mapped (5% damped) spectral response acceleration parameter at short period (0.2 sec), S_S	1.333
Mapped (5% damped) spectral response acceleration parameter at long period (1.0 sec), S_1	0.469
Short period (0.2 sec) site coefficient, F_a	1.0
Long period (1.0 sec) site coefficient, F_v	1.87
Spectral response acceleration parameter at short period (0.2 sec), S_{MS}	1.333
Spectral response acceleration parameter at long period (1.0 sec), S_{M1}	0.877
Design (5% damped) spectral response acceleration parameter at short period (0.2 sec), S_{DS}	0.889
Design (5% damped) spectral response acceleration parameter at long period (1.0 sec) S_{D1}	0.585 (2)
Peak Ground Acceleration (PGA) (g)	0.50
Site -adjusted PGA (PGA_M) (g)	0.55
Design Magnitude(3) Mw	7.3

Notes:

(1) Risk category was assumed and should be verified by designer during final design.

(2) See the commentary in ASCE/SEI 7-16, Section 11.4.8 for site-specific ground motion analysis and "Exception note" 2.

(3) Design magnitude based on USGS Probabilistic Deaggregation with 2% chance of exceedance in 50 years (2,475 year return interval) (USGS, 2021d).

PC ORIGINAL PKG

5.0 CONCLUSIONS AND LIMITATIONS

Our review of available geological and geotechnical literature did not reveal conditions that would preclude development of the proposed Project provided, as mentioned above, a site-specific geotechnical investigation is conducted prior to the site development. The proposed project is considered feasible for development from a geotechnical perspective.

This preliminary geological and geotechnical hazard evaluation report has been prepared for the use of HDR and Imperial County for the proposed VEGA 2,3,5 Project. The report may not be used by others without the written consent of our client and our firm. The findings, conclusions, and preliminary recommendations presented in this report were prepared in a manner consistent with the standard of care and skill ordinarily exercised by members of its profession, practicing under similar conditions in the geographic vicinity, and at the time the services were performed. No other warranty is either expressed or implied.

Our findings, conclusions and preliminary recommendations presented in this report may be used for preliminary consideration of the feasibility and cost of site development purposes only. They are not intended for the design of the project. Additionally, a site-specific geotechnical investigation should be performed during the planning process for the proposed Project, in order to develop recommendations for the specific foundation designs and earthwork construction being considered for this project.

We appreciate the opportunity to provide our services on this Project. Please do not hesitate to contact undersigned if you have questions, comments, or need additional information.

Respectfully submitted,

Phase I Environmental Site Assessment Report
Vega 2/3 (Tong Li, Mesa Ranch and Clark) Solar Site
Flowing Wells and PegLeg Well Roads at Coachella Canal
Niland, California
GSL Report No. GS2020

Dear Mr. Alaynon:

We have performed a Phase I Environmental Site Assessment in general conformance with the scope and limitations of ASTM E1527-13 of the approximately 1,713-acre subject property located at Flowing Wells and PegLeg Well Roads at the Coachella Canal approximately 9 miles southeast of Niland, California. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report.

This assessment has not revealed any recognized environmental conditions (REC's) in connection with the property.

We declare that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312 and we have the specific qualifications based on education, training and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

PC ORIGINAL PKG

Attached is our report which describes the procedures used and results of the assessment. If you have any questions or require additional information, please do not hesitate to contact the undersigned at (760) 337-1100. We appreciate the opportunity to provide our professional review for this subject property.

Respectfully Submitted,

1.0 INTRODUCTION

1.1 Purpose

GS Lyon Consultants, Inc. was retained by Apex Energy Solutions, LLC to conduct a Phase I Environmental Site Assessment (ESA) for the Property (herein referred to as the subject property or subject sites in this Phase I ESA Report) as a prerequisite to property transaction (purchase, sale, refinance, etc.). The 1,713-acre subject property located at Flowing Wells Road and PegLeg Well Road at the Coachella Canal approximately 9 miles southeast of Niland, California. See Plate 1 in Appendix B for a Vicinity Map of the subject property.

The purpose of this Phase I Environmental Site Assessment (ESA) is to identify, to the extent feasible, recognized environmental conditions (RECs) associated with past and present activities on the subject property or in the immediate subject property vicinity in general conformance to ASTM Standard E1527-13 "*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*" that may affect future uses of the subject property.

This report is intended to satisfy the Phase I ESA portion of "*all appropriate inquiry*" into the previous ownership and uses of the subject property as defined under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) at Title 42 of the United States Code (U.S.C.) §9601(35)(B) and in accordance with 40 Code of Federal Regulations (CFR) Part 312, Standards and Practices for All Appropriate Inquiries; Final Rule (AAI Rule).

1.2 Scope of Services

The scope of work for this ESA is in general accordance with the requirements of ASTM Standard E1527-13. This assessment included:

- Reconnaissance of the subject property and adjacent properties
- Review user-provided information
- Interviews with persons with significant knowledge of the subject property
- Review of a regulatory database report provided by a third-party vendor
- Review readily-available historical sources (including but not limited to: aerial photographs, fire insurance maps, property tax files, recorded land title records, and topographical maps)
- Prepare report of findings

PC ORIGINAL PKG

1.3 Limitations

No Phase I ESA can completely eliminate uncertainty regarding the potential for RECs in connection with a property. Conformance of this assessment with ASTM Standard E1527-13 is intended to reduce, but not eliminate uncertainty regarding the potential for RECs in connection with the Subject Property. While GS Lyon has made reasonable effort to discover and interpret available historical and current information on the property within the time available, the possibility of undiscovered contamination remains. Our assessment of the subject property and surrounding areas was conducted in accordance with ASTM guidelines and the *generally accepted environmental engineering standard of practice* which existed in Imperial County, California at the time that the report was prepared. No warranty, express or implied, is made.

GS Lyon Consultants, Inc. derived the data in this report primarily from visual inspections, examination of public records and information in the public domain, informal interviews with individuals, and readily available information about the subject property. The passage of time, manifestation of latent conditions or occurrence of future events may require further exploration of the subject property, analysis of the data, and reevaluation of the findings, observations, and conclusions expressed in this report.

The findings, observations, and conclusions expressed by GS Lyon Consultants in this report are not, and should not be considered, an opinion concerning the compliance of any past or present owner or operator of the subject property with any federal, state or local law or regulation.

This report should not be relied upon after **180 days** from the date of issuance, unless additional services are performed as defined in ASTM E1527-13 - Section 4.7.

1.4 Deviations or Data Gaps

ASTM Standard E1527-13 requires any significant data gaps, deviations, and deletions from the ASTM Standard to be identified and addressed in the Phase I ESA. A significant data gap would be one that affected the ability to identify a REC on the subject property or adjacent properties.

Through the course of this assessment, *data failures* or *data gaps* may have been encountered. These failures or gaps, if any, are discussed below. The following provides the opinion of the Environmental Professional as to the significance of the data gaps in terms of defining *recognized environmental conditions* at the subject property. Data failures may or may not be significant data gaps, and the discussion also provides information pertaining to whether the data failures resulted in significant data gaps.

PC ORIGINAL PKG

1.4.1 Data Failures

Data failure is a failure to achieve the historical (property use) research objectives specified in the ASTM Standard Practice even after reviewing the eight standard historical sources that are reasonably ascertainable and likely to be useful. Data failure is one type of data gap.

No *data failures w*ere encountered during this investigation.

1.4.2 Data Gaps

A *data gap* is a lack of or inability to obtain information required by the ASTM Standard Practice, despite good faith efforts by the Environmental Professional to gather such information. This could include any component of the Practice, e.g., standard environmental records, interviews, or a complete reconnaissance. A data gap by itself is not inherently significant, but if other information and/or the EP's experience raises reasonable concerns about the gap, it may be judged to be significant.

Due to the location of the subject property, Sanborn Fire Insurance maps were not available for the subject property. Because there is no historical data or physical indications that the property has ever been developed or occupied by a business that would have produced hazardous materials, the lack of Sanborn Fire Insurance maps is not considered a significant data gap.

Aerial photographs and other historical records were not available at 5 year intervals as required under the ASTM E1527-13 standard. This resulted in a data gap for years that records were not available regarding the area of the subject property. However, based upon other historical information reviewed, the subject property has been vacant desert land. Therefore, this data gap is not considered to be significant.

Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.

1.5 Significant Assumptions

In preparing this report, GS Lyon Consultants, Inc. has relied upon and presumed accurate certain information (or the absence thereof) about the subject property and adjacent properties by governmental officials and agencies, the Client, and others identified herein. Except as otherwise stated in the report, GS Lyon Consultants has not attempted to verify the accuracy or completeness of any such information.

PC ORIGINAL PKG

1.6 User Reliance

This report has been prepared on behalf of and for the exclusive use of Apex Energy Solutions, LLC for the particular subject property identified in this report, and is subject to and issued in connection with the referenced Agreement and the provisions thereof. This report should not be relied upon by any party other than the client, its legal counsel, and financial institution without the express permission of GS Lyon Consultants, Inc. Any reliance on this report by other parties shall be at such party's sole risk. Any future consultation or provision of services to third parties related to the subject property requires written authorization from Apex Energy Solutions, LLC or their representatives. Any such services may be provided at GS Lyon Consultants sole discretion and under terms and conditions acceptable to GS Lyon Consultants, including potential additional compensation.

PC ORIGINAL PKG

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The approximately 1,713-acre subject property (APNs 025-260-011, 025-270-023 and 025-010-006) is located at Flowing Wells Road and PegLeg Well Road at the Coachella Canal approximately 9 miles southeast of Niland, California. The subject property location is depicted on Plate 1, Site Map.

2.2 Current Property Use and Description

The subject property currently consists of three distinct parcels consisting of vacant desert land located on the east side of the Union Pacific Railroad mainline tracks. Descriptions of the three parcels are provided below.

APN 025-260-011: This parcel is irregularly shaped area on the north side of the Union Pacific Railroad (UPRR) tracks which form the southern boundary of the parcel. A dry ephemeral wash bed (subject to flash flooding) crosses the southeast corner of this parcel in a northeast to southwest direction. Desert vegetation is scattered throughout the site. A high voltage powerline (230-kV) parallels the western boundary of the parcel. Scattered desert vegetation covers the subject site. The high stand shoreline at Elev. +43 ft. MSL of ancient Lake Cahuilla crosses diagonally (southeast to northwest) across the subject property and is expressed and a sharp change in elevation.

APN 025-010-006: This parcel is square in plan view and is comprised of approximately 640 acres of vacant desert land. The Coachella Canal, a concrete lined major irrigation supply canal to the Coachella Valley, crosses the southwest portion of this site. Flowing Wells Road and Coachella Canal Road, which are unpaved roads, are located in the southwest portion of this parcel. Desert vegetation is scattered throughout the site. A dry ephemeral wash bed (subject to periodic flooding) crosses the northwest corner of this parcel in a northeast to southwest direction. An earth flood diversion berm runs north-south within the eastern portion of this parcel to divert desert flood waters to the Siphon 5 crossing of the Coachella Canal.

APN 025-270-023: This parcel is approximately square in plan view and comprised of approximately 625 acres of vacant desert land. The Coachella Canal crosses the southwest portion of this site. PegLeg Well Road, an unpaved road, crosses the northern portion of this parcel. Ted Kipf Road (unpaved) spits southeasterly from PegLeg Road and diagonally crosses the northeastern portion of the parcel. Desert vegetation is scattered throughout the site.

PC ORIGINAL PKG

Dry ephemeral wash beds (subject to flash flooding) cross the northwest and southeast corners of this parcel in a northeast to southwest direction aligning to siphons 4 and 5 in the Coachella Canal.

2.3 Adjoining Property Use

The subject property is located near the boundary between the cultivated portion and the desert margins of the Imperial Valley southeast of Niland, California. Adjacent properties consist of agricultural fields and citrus orchards west of the East Highline (EHL) Canal and vacant desert lands east of the EHL Canal. The Coachella Canal, a large concrete lined supply canal, crosses through a portion of the subject properties. The Union Pacific Railroad mainline tracks form the southwestern boundary of the westernmost parcel of the subject site.

2.4 Physical Site Characteristics

Topography: Topographic maps (USGS 7.5 minute Iris, CA Quadrangle) indicate that the subject property elevation is approximately 5 feet below to 190 feet above mean sea level (MSL) or Elevation 995 to 1190 (local datum). The Imperial Irrigation District, which supplies power and raw (irrigation) water to the area, established local datum by equating mean sea level to El. 1000.00 feet.

Geologic Setting: The subject property is located in the Colorado Desert Physiographic province of southern California. The dominant feature of the Colorado Desert province is the Salton Trough, a geologic structural depression resulting from large-scale regional faulting. The trough is bounded on the northeast by the San Andreas Fault and the southwest by faults of the San Jacinto Fault Zone. The Salton Trough represents northward extension of the Gulf of California, which has experienced continual in-filling with both marine and non-marine sediments since the Miocene Epoch (25 million years before present). The tectonic activity that formed the trough continues at a high rate as evidenced by deformed young sedimentary deposits and high levels of historic seismicity.

The subject property is directly underlain by Holocene (0-11,000 years before present) Cahuilla Lake sediments, which consist of interbedded lenticular and tabular sand, silt, and clay. The predominant surface soil is silty clay. The Holocene lake deposits are considered to be less than 100 feet thick and are characterized by surficial clay and silt deposits with varying amounts of fine sand. The topography of the Imperial Valley is relatively flat, with few significant land features. The valley floor slopes gently to the north (less than 0.5 percent) from an elevation of sea level at Calexico to approximately 225 feet below sea level at the Salton Sea.

PC ORIGINAL PKG

Soil Conditions: The U. S. Soil Conservation Service compiled a map of surface soil conditions and published a soil survey report including maps in 1980. The soil survey maps indicate that surficial deposits at the subject property and surrounding area consist predominantly of sandy loams of the Carsitas and Rositas soil groups (see Appendix B). These loams are formed in sediment and alluvium of mixed origin (Colorado River overflows, fresh-water lake-bed sediments, and alluvial fan deposits). Based on Unified Soil Classification System presented in the Soils Survey Report, the permeability of these soils is expected to be low to moderate.

Groundwater Conditions: The groundwater adjacent to the Coachella Canal is encountered at a depth of approximately 40 feet below the ground surface and gets deeper to the east. Little seepage is expected downslope from the canal due to the concrete canal lining.

Groundwater levels may fluctuate with precipitation, drainage, and site grading. Based on the regional topography, groundwater flow is assumed to be generally towards the southwest within the subject property area. Flow directions may also vary locally in the vicinity of the subject property.

PC ORIGINAL PKG

3.0 USER PROVIDED INFORMATION

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiry* is not complete. The user was asked to provide information or knowledge of the following:

- Environmental cleanup liens that are filed or recorded against the subject property.
- Activity and land use limitations that are in place on the subject property or that have been filed or recorded in a registry.
- Specialized knowledge or experience of the person seeking to qualify for the LLPs.
- Relationship of the purchase price to the fair market value of the *property* if it were not contaminated.
- Commonly known or *reasonably ascertainable* information about the *property*.
- The degree of obviousness of the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation.
- The reason for preparation of this Phase I ESA.

A user questionnaire was provided to the user to aid in gathering information that may be pertinent to the evaluation of the subject property for environmental conditions. The completed user questionnaire is provided in Appendix I.

3.1 Title Records

GS Lyon reviewed preliminary title reports as part of this assessment and did not find past ownership or easements that would indicate environmentally hazardous uses on the parcels.

3.2 Environmental Liens or Activity and Use Limitations

An environmental lien is a charge, security, or encumbrance upon the title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products upon the property. According to the User Questionnaire, Ms. Jamie Nagel of Apex Energy Solutions, LLC is not aware of any Environmental Liens or Activity and Use Limitations associated with the subject property that have been filed or recorded under federal, tribal, state or local law (Appendix I).

GS Lyon Consultants contracted Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut to conduct a search of environmental liens for the subject property. According to the EDR environmental lien report, there are no environmental liens associated with the subject property. The EDR environmental lien report is included in Appendix I.

PC ORIGINAL PKG

3.3 Specialized Knowledge

According to the User Questionnaire, Ms. Nagel is not aware of any specialized knowledge or experience associated with the subject property or nearby properties. GS Lyon does not have any personal knowledge of the subject property.

3.4 Commonly Known or Reasonable Ascertainable Information

No information was provided by the Client regarding any commonly known or reasonably ascertainable information within the local community that is material to RECs in connection with the subject property.

3.5 Valuation Reduction for Environmental Issues

The client indicated that the purchase price of this property reasonably reflects the fair market value of the property with no discounts for environmental issues.

3.6 Owner, Property Manager, and Occupant Information

The current owners for APN 025-260-011 are The Marjorie A. Hoffmeister Gardner Trust, Bay Family Trust, and the Joseph G. Clark Revocable Trust. The current owner of APN 025-010-006 is Mesa West Ranch, LLC. The current owners for APN 025-270-023 are Ernest and Traci Lo Living Trust 1999 and the Wang Family Trust and Tien-shih Lin.

The subject property is currently undeveloped desert land. No property manager or occupant information is available.

3.7 Previous Reports and Other Provided Documentation

No previous reports or other pertinent documentation was provided to GS Lyon for review during the course of this assessment.

PC ORIGINAL PKG

4.0 RECORDS REVIEW

A review of historic aerial photographs (Appendix C), historic topographic maps (Appendix D), historic Sanborn Fire Insurance maps (Appendix E), governmental regulatory databases (Appendix F), other regulatory and agency databases (Appendix G), and historic telephone and city directories (Appendix H) was performed to evaluate potentially adverse environmental conditions resulting from previous ownership and uses of the subject property. The details of the review are presented in Sections 4.1 through 4.5 of this report.

4.1 Regulatory Database Review

4.1.1 Standard Environmental Record Sources

GS Lyon Consultants contracted Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut which queries and maintains comprehensive environmental databases and historical information, including proprietary databases, aerial photography, topographic maps, Sanborn Maps, and city directories to generate a compilation of Federal, State and Tribal regulatory lists containing information regarding hazardous materials occurrences on or within the prescribed radii of ASTM E1527-13. The search of each database was conducted using the approximate minimum search distances from the subject property defined by the ASTM E1527-13 Standard. The purpose of the records review is to obtain and review *reasonably ascertainable* records that will help identify *recognized environmental conditions* or *historical recognized environmental conditions* in connection with the subject property.

EDR‘s Phase I ESA search package was ordered and performed on August 28, 2020. The search package included: Radius Map with Geocheck, aerial photographs, and historic topographic maps.

The results of EDR’s search were used to evaluate if the subject property and/or properties within prescribed search distances are listed as having a past or present record of actual or potential environmental impact. Inclusion of a property in a government database list does not necessarily indicate that the property has an environmental problem.

The following is a brief synopsis of sites identified in the EDR Radius Map with Geocheck report. The government record search report is included in its entirety in Appendix F.

PC ORIGINAL PKG

Federal NPL List

The Environmental Protection Agency's (EPA) National Priorities List (NPL) of uncontrolled or abandoned hazardous waste sites was reviewed for risk sites within a 1 mile radius of the subject property. The NPL identifies sites for priority cleanup and long-term care of properties under the Superfund Program that are contaminated with hazardous substances.

The database search did not identify any NPL sites within 1 mile of the subject property.

Federal CERCLIS List

The EPA's Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) listings were reviewed to determine if risks sites within ½ mile are listed for investigation. The CERCLIS database identifies hazardous waste sites that are on or proposed to be included in the NPL and sites that require investigation and possible remedial action to mitigate potential negative impacts on human health or the environment.

The CERCLIS database search did not identify any risk sites within 0.5 mile of the subject property.

Federal CERCLIS – No Further Remedial Action Planned

The EPA's CERCLIS – No Further Remedial Action Planned (NFRAP) database was reviewed to determine if risks sites within ½ mile are listed. CERCLIS NFRAP site are risk sites that have been removed from and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at the subject property has been completed and the EPA has determined that no further steps will be taken to list this subject property on the NPL, unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time.

This designation is for sites where no contamination was found, contamination was quickly removed without the need for the subject property to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration.

The CERCLIS – NFRAP database search did not identify any risk sites within ½mile of the subject property.

PC ORIGINAL PKG

Federal RCRA List

The Federal Resource Conservation Recovery Act (RCRA) Notifiers List was reviewed to determine if RCRA treatment, storage or disposal sites (TSD) are located within 1 mile of the subject property. The RCRA Correction Action Sites List (CORRACTS) is maintained for risk sites which are undergoing "a corrective action". A corrective action order is issued when there has been a release of hazardous waste constituents into the environment from a RCRA facility.

The RCRA and RCRA CORRACTS database searches did not identify any RCRA TSD or RCRA CORRACTS risk sites within ½ mile of the subject property.

The RCRA regulated hazardous waste generator notifiers list was reviewed to determine if RCRA generator facilities are located on or adjoining the subject property. No RCRA generator facilities within ¼ mile of the subject property were identified in the database.

Federal ERNS List

The Federal Emergency Response Notification System (ERNS) List was reviewed to determine if reported release of oil and/or hazardous substances occurred on the subject property.

The ERNS database searches did not identify any reported releases for the subject property.

State and Tribal NPL List

The Environmental Protection Agency's (EPA) National Priorities List (NPL) of uncontrolled or abandoned hazardous waste sites was reviewed for risk sites within a 1 mile radius of the subject property. The NPL identifies sites for priority cleanup and long-term care of properties under the Superfund Program that are contaminated with hazardous substances.

The database search did not identify any NPL sites within 1 mile of the subject property.

State and Tribal equivalent CERCLIS

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

PC ORIGINAL PKG

EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

The EnviroStor database search did not identify and risk sites within 1 mile of the subject property.

State and Tribal Leaking Underground Storage Tank Sites
The California State Water Resources Control Board (SWRCB) maintains a list of information concerning reported leaking underground storage tanks (LUST). The LUST inventory list was reviewed to determine if any LUSTs are located within ½ mile the subject property.

The SWRCB LUST database did not identify any risk sites within ½ mile of the subject property.

State and Tribal Underground and Aboveground Storage Tank Sites
The California State Water Resource Control Board (SWRCB) underground storage tank (UST) and above ground storage tank (AST) inventory list was reviewed to determine if any UAST's are located on or adjacent to the subject property.

The SWRCB UST and AST databases did not identify any risk sites within ¼ mile of the subject property.

Solid Waste Disposal/Landfill Facilities
The Solid Waste Disposal/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data comes from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list database did not identify any risk sites within ½ mile of the subject property.

Unmapped (Orphan) Sites
Not all sites or facilities identified in the database records can be accurately located in relation to the Subject Property due to incomplete information being supplied to the regulatory agencies and are referred to as "orphan sites" by EDR.

PC ORIGINAL PKG

The "Orphan Summary" section of the EDR Radius Map Report identified several orphan sites. Based on a drive-by reconnaissance of the Subject Property vicinity and review of location and status information provided in the database report, none of the identified orphan sites are located within the search radii for databases specified by the Standard.

4.1.2 Additional Environmental Record Sources

California Department of Toxic Substances Control (DTSC) Records – Envirostor Database: EnviroStor is an online search and Geographic Information System tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. Public Access to EnviroStor is accessible via the DTSC Web Page located at: http://www.envirostor.dtsc.ca.gov/public/. The EnviroStor database includes the following site types: Federal Superfund sites (National Priority List); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. The information includes site name, site type, status, address, any restricted use (recorded deed restrictions), past use(s) that caused contamination, potential contaminants of concern, potential environmental media affected, site history, planned and completed activities. The EnviroStor database also contains current and historical information relating to Permitted and Corrective Action facilities. The EnviroStor database includes current and historical information on the following permit-related documents: facility permits; permit renewal applications; permit modifications to an existing permit; closure of hazardous waste management units (HWMUs) or entire facilities; facility corrective action (investigation and/or cleanup); and/or post-closure permits or other required post-closure activities.

The EnviroStor database was queried on September 10, 2020. A map showing the results of the query is provided in Appendix G. No reported cases were found on the subject property. No risk sites were located within ½ mile of the subject property.

California State Water Resources Control Board Records – GeoTracker Database: GeoTracker is a geographic information system (GIS) maintained by the California State Water Resources Control Board (SWRCB) that provides online access to environmental data at http://www.geotracker.swrcb.ca.gov\. GeoTracker tracks regulatory data about underground fuel tanks, fuel pipelines, and public drinking water supplies. Site information from the Spills, Leaks, Investigations, and Cleanups (SLIC) Program is also included in GeoTracker.

PC ORIGINAL PKG

The GeoTracker database was queried for environmental data pertaining to the Subject property on September 10, 2020. A map showing the results of the query is provided in Appendix G. No reported cases were found on the subject property. No risk sites were located within ½ mile of the subject property.

CUPA Records Search: The Unified Program consolidates, coordinates, and makes consistent the administrative requirements, permits, inspections, and enforcement activities of six environmental and emergency response programs. Cal/EPA and other state agencies set the standards for their programs while local governments implement the standards—these local implementing agencies are called Certified Unified Program Agencies (CUPA).

The DTSC Imperial CUPA office was contacted (Veronica Lopez) by email on September 16, 2020. CUPA records were searched for environmental issues related to the subject property. The DTSC indicated that records are filed per address, and with no known address associated with the subject property, no records were found associated with the subject property.

4.2 Historical Use Records

ASTM E1527-13 requires the environmental professional to identify all obvious uses of the property from the present back to the property's first developed use or 1940, whichever is earliest. This information is collected to identify the likelihood that past uses have led to RECs in connection with the property. This task is accomplished by reviewing standard historical sources to the extent that they are necessary, reasonably ascertainable, and likely to be useful. These standard records include aerial photographs, fire insurance maps, property tax files, land title records, topographic maps, city directories, telephone directories, building department records, and zoning/land use records.

The general type of historical use (i.e., commercial, retail, residential, industrial, undeveloped, office) should be identified at 5-year intervals, unless the specific use of the property appears to be unchanged over a period longer than 5 years. The historical research is complete when the use is defined or when data failure occurs. Data failure occurs when all of the standard historical sources have been reviewed, yet the property use cannot be identified back to its first developed use or to 1940. Data failure is not uncommon in trying to identify the use of the property at 5-year intervals back to first use or 1940, whichever is earlier.

PC ORIGINAL PKG

GS Lyon reviewed the following historical records to identify obvious uses of the subject property from the present back to the property's first developed use, or to 1940, whichever is earlier. The results of this research and data failure, if encountered, are presented in the following sections.

4.2.1 Title Records

GS Lyon was provided with preliminary title records for review as part of this assessment.

4.2.2 Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps are large scale maps depicting the commercial, industrial, and residential sections of various cities across the United States. Since the primary use of the fire insurance maps was to assess the buildings that were being insured, the existence and location of fuel storage tanks, flammable or other potentially toxic substances, and the nature of businesses are often shown on these maps.

Due to the rural undeveloped nature of the subject property and vicinity for the years the Sanborn Fire Insurance Maps were available for this subject property, no maps are available for the subject property. An "Unmapped Property" letter for the Sanborn Fire Insurance Maps is included in Appendix E.

4.2.3 Aerial Photographs

Aerial photographs obtained from Environmental Data Resources (EDR) dating back to 1937 and Google Earth aerial photographs dating back to 1996 were reviewed for historical development of the subject property. Reproductions of the historical aerial photographs reviewed are included in Appendix C.

The 1937 aerial photograph shows the subject sites as being vacant desert ground with dry washes crossing the parcels from a northeast to southwest direction. Adjacent parcels appear to be vacant desert lands. The Union Pacific railroad mainline tracks are visible on the southwest boundary of APN 025-260-011. The high stand shoreline (45' elevation contour) of ancient Lake Cahuilla is visible crossing APN 025-260-011 from northwest to southeast.

The 1940, 1953 and 1976 aerial photographs show the subject sites being similar to the 1937 aerial photograph except the Coachella Canal had been constructed and is visible adjacent to APN 025-270-023 and crossing through the western portion of APN 025-010-006.

PC ORIGINAL PKG

The 1984 aerial photograph shows the subject sites being similar to the 1976 aerial photograph except the Coachella Canal channel had been shifted to the east and concrete lined.

The 2004, 2008, 2012 and 2016 aerial photographs show the subject site as being similar to the 1984 aerial photograph and at the present time.

4.2.4 Street Directories

City directories are used for locating individuals and businesses in a particular urban or suburban area. City directories are generally divided into three sections: a business index, a list of resident names and addresses, the name and type of businesses (if unclear from the name). While city directory coverage is comprehensive for major cities, it may be spotty for rural and small towns.

Polk City Directories: The Polk City Directories for the years 1965 and 1983 were reviewed. No listings for the subject properties were found.

4.2.5 Historic Topographic Maps

Historic topographic maps (1940, 1945, 1947, 1956, 1965, 1976, 1992, 2002, and 2012), USGS 7.5 Min. Iris, CA Quadrangle, showed the subject property the subject property as being vacant. The historical topographic maps showed powerlines crossing the northern and western sites from 1940 to 1947 and several unpaved roads crossing the sites.

4.2.6 Historical Telephone Directories

Telephone Directories: Telephone directories for the Imperial County, which included the City of Niland businesses published in 1941, 1955, 1965, 1974, 1994, and 2004 were reviewed. No service stations, chemical manufacturers, petroleum manufacturers, distributors, or automotive repair facilities were noted at or in the immediate vicinity of the subject property. No listings for the subject site were found.

4.3 Historical Use Summary

4.3.1 Summary of the Historical Use of Property

Based on a review of the historical information, the subject sites have been vacant desert land since 1937.

4.3.2 Summary of the Historical Use of Adjacent Properties

Historically, the properties located immediately adjacent to the subject property have been comprised of agricultural field to the west and south and vacant desert lands to the east and north. Development of the agricultural fields began in the 1930s.

PC ORIGINAL PKG

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

A site reconnaissance was performed by Mr. Pete LaBrucherie, a consulting engineer to GS Lyon Consultants, on September 29, 2020. The site visit consisted of a walking the perimeter of the subject property and randomly crossing the subject property. The reconnaissance included visual observations of surficial conditions at the subject property and observation of adjoining properties to the extent that they were visible from public areas. Mr. LaBrucherie was unaccompanied during the site reconnaissance.

The site reconnaissance was limited to visual and/or physical observation of the exterior and interior of the subject property and its improvements, the current uses of the property and adjoining properties, and the current condition of the property. The site visit evaluated the subject property and adjoining properties for potential hazardous materials/waste and petroleum product use, storage, disposal, or accidental release, including the following: presence of tank and drum storage; mechanical or electrical equipment likely to contain liquids; evidence of soil or pavement staining or stressed vegetation; ponds, pits, lagoons, or sumps; suspicious odors; fill and depressions; or any other condition indicative of potential contamination. The site visit did not evaluate the presence of asbestos-containing materials, radon, lead-based paint, mold, indoor air quality, or structural defects, or other non-scope items.

A site reconnaissance can be limited by weather conditions, bodies of water, adjacent buildings, or other obstacles. The weather was warm and sunny and no access limitations were placed on the site visit.

5.2 General Site Setting

The subject property currently consists of three separate parcels, all of which are vacant desert land. Descriptions of the three individual parcels are provided below.

APN 025-260-011: This parcel is irregularly shaped area on the north side of the Union Pacific Railroad (UPRR) tracks which form the southern boundary of the parcel. A dry ephemeral wash bed (subject to flash flooding) crosses the southeast corner of this parcel in a northeast to southwest direction. Desert vegetation is scattered throughout the site. A high voltage powerline (230-kV) parallels the western boundary of the parcel. Scattered desert vegetation covers the subject site. The high stand shoreline at Elev. +43 ft. MSL of ancient Lake Cahuilla crosses diagonally (southeast to northwest) across the subject property and is expressed and a sharp change in elevation.

PC ORIGINAL PKG

APN 025-010-006: This parcel is square in plan view and is comprised of approximately 640 acres of vacant desert land. The Coachella Canal, a concrete lined major irrigation supply canal to the Coachella Valley, crosses the southwest portion of this site. Flowing Wells Road and Coachella Canal Road, which are unpaved roads, are located in the southwest portion of this parcel. Desert vegetation is scattered throughout the site. A dry ephemeral wash bed (subject to periodic flooding) crosses the northwest corner of this parcel in a northeast to southwest direction. An earth flood diversion berm runs north-south within the eastern portion of this parcel to divert desert flood waters to the Siphon 5 crossing of the Coachella Canal.

APN 025-270-023: This parcel is approximately square in plan view and comprised of approximately 625 acres of vacant desert land. The Coachella Canal crosses the southwest portion of this site. PegLeg Well Road, an unpaved road, crosses the northern portion of this parcel. Ted Kipf Road (unpaved) spits southeasterly from PegLeg Road and diagonally crosses the northeastern portion of the parcel. Desert vegetation is scattered throughout the site. Dry ephemeral wash beds (subject to flash flooding) cross the northwest and southeast corners of this parcel in a northeast to southwest direction aligning to siphons 4 and 5 in the Coachella Canal.

Photographs of the subject property taken on September 29, 2020 during our site reconnaissance are included in Appendix A.

5.3 Adjacent Properties

The subject property is located near the boundary between the cultivated portion and the desert margins of the Imperial Valley southeast of Niland, California. Adjacent properties consist of agricultural fields and citrus orchards west of the East Highline (EHL) Canal and vacant desert lands east of the EHL Canal. The Coachella Canal, a large concrete lined supply canal, crosses through a portion of the subject properties. The Union Pacific Railroad mainline tracks form the southwestern boundary of the westernmost parcel of the subject site.

5.4 Exterior and Interior Observations

The following conditions were specifically assessed for their potential to indicate RECs and may include conditions inside or outside structures on the subject property.

5.4.1 Hazardous Substances and Petroleum Products

GS Lyon did not observe operations that use, treat, store, dispose of, or generate hazardous materials or petroleum products on the subject property.

PC ORIGINAL PKG

5.4.2 Storage Tanks

Underground Storage Tanks (USTs) – No obvious visual evidence indicating the current presence of USTs (i.e. vent pipes, fill ports, etc.) was noted.

Aboveground Storage Tanks (ASTs) – No obvious visual evidence indicating the historical presence of ASTs (i.e. secondary containments, concrete saddles, etc.) was observed.

5.4.3 Odors

No obvious strong, pungent, or noxious odors were noted during the site reconnaissance.

5.4.4 Pools of Liquid

Pools of liquid were not observed during the site reconnaissance.

5.4.5 Drums and Containers

GS Lyon did not observe drums or storage containers on the subject property.

5.4.6 Unidentified Substance Containers

GS Lyon did not observe open or damaged containers containing unidentified substances at the subject property.

5.4.7 Suspect Polychlorinated Biphenyl (PCB) Containing Equipment

No potential PCB containing equipment such as electrical transformers, capacitors, and hydraulic equipment were observed during the site reconnaissance on the subject property or immediate vicinity.

5.5 Interior Observations

The subject property is currently vacant with no structures; therefore, no interior observations were made.

5.6 Exterior Observations

5.6.1 Pits, Ponds, and Lagoons

No pits, ponds, or lagoons were noted on the subject property.

5.6.2 Stained Soils or Pavement

No evidence of significantly stained soil or pavement was noted on the subject property.

5.6.3 Stressed Vegetation

No evidence of stressed vegetation attributed to potential contamination was noted on the subject property.

PC ORIGINAL PKG

5.6.4 Solid Waste

No dumpsters or solid waste containers exist on the subject property.

5.6.5 Wastewater

No wastewater is generated at the subject property

5.6.6 Wells

No evidence of wells (dry wells, drinking water, observation wells, groundwater monitoring wells, irrigation wells, injection wells or abandoned wells) was noted on the subject property.

5.6.7 Septic Systems

No septic systems are present on the subject property.

5.7 Non-Scope Issues

ASTM guidelines identify non-scope issues, which are beyond the scope of a Phase I ESA as defined by ASTM. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment. Some of these non-scope issues include; asbestos-containing building materials, radon, lead-based paint, and wetlands which are discussed below.

5.7.1 Asbestos-Containing Building Materials

The potential for asbestos containing materials (ACM) existing at the subject property is very low due to the lack of subject property structures.

5.7.2 Lead-Based Paint

The potential or lead based paint residues existing at the subject property is very low due to the lack of subject property development.

5.7.3 Radon

The subject property is located in Zone 3 as shown on the EPA Map of Radon Zones indicating a predicted average indoor radon screening level of less than 2 pCi/L; therefore, r gas is not believed to be a potential hazard at the subject property.

5.7.4 Wetlands

No wetlands are located within one (1) mile of the subject property.

PC ORIGINAL PKG

5.7.5 Agricultural Use

Based on our review of environmental records and historical documents, the subject property has been vacant desert land.

PC ORIGINAL PKG

6.0 INTERVIEWS

GS Lyon interviewed various individuals familiar with the subject property, as identified to us, and/or government officials in order to evaluate historical uses and identify potential RECs existing on the subject property. The individuals interviewed were asked to provide responses in good faith and to the best of their knowledge. The following sections identify the individuals interviewed and summarize the information each provided; however, additional information provided by these individuals may be presented in other sections of this report.

6.1 Interview with Owner

GS Lyon we not able to contact the current property owner; therefore, no interview was conducted.

6.2 Interview with the Site Manager

The subject property is vacant, undeveloped land; therefore, there is no site manager.

6.3 Interview with Occupants

The subject property is vacant, undeveloped land; therefore, there are no occupants.

6.4 Interview with Local Government Officials

The DTSC Imperial CUPA office was contacted (Veronica Lopez) by email on September 16, 2020. CUPA records were searched for environmental issues related to the subject property. The DTSC indicated that records are filed per address, and with no known address associated with the subject property, no records were found associated with the subject property.

Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap.

PC ORIGINAL PKG

7.0 EVALUATION

7.1 Summary of Findings

The approximately 1,713-acre subject property located at Flowing Wells Road and PegLeg Well Road at the Coachella Canal approximately 9 miles southeast of Niland, California. The subject property has been undeveloped desert lands since at least 1937 according to the historical information obtained and reviewed during this site assessment. The subject property is generally planar, with surface water drainage toward the southwest. The regional topographic gradient is generally toward the west to the Salton Sea.

7.2 Conclusions

GS Lyon has performed a Phase I Environmental Site Assessment in general conformance with the scope and limitations of ASTM E1527-13 of the property located at Flowing Wells Road and PegLeg Well Road at the Coachella Canal approximately 9 miles southeast of Niland, California. Any exceptions to, or deviations from, this practice are described in Section 1.4 of this Phase I ESA report. This assessment has not revealed recognized environmental conditions (RECs) in connection with the subject property.

7.2.1 Recognized Environmental Conditions

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term REC includes hazardous substances and petroleum products even under conditions that might be in compliance with laws. The term is not intended to include "de minimis" conditions as defined in Section 7.2.3 of this report.

This Phase I ESA has revealed no evidence of *recognized environmental conditions* in connection with the subject property.

PC ORIGINAL PKG

7.2.2 Historical Recognized Environmental Conditions

A *historical recognized environmental condition (HREC)* refers to a past *release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls (for example, *property* use restrictions, *activity and use limitations*, *institutional controls*, or *engineering controls*).

This Phase I ESA has revealed no evidence of *historical recognized environmental conditions* in connection with the subject property.

7.2.3 Environmental Concerns and De Minimis Conditions

A *de minimis condition* is a condition that generally does not present a threat to human health or the *environment* and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis conditions* are not *recognized environmental conditions* nor *controlled recognized environmental conditions*.

This Phase I ESA has revealed no *de minimis* conditions or environmental concerns in connection with the subject property.

7.3 Recommendations

Based on the scope of work performed for this assessment, it is our professional opinion that no RECs have been identified in connection with the subject property that would warrant further environmental study (Phase II) at this time.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by GS Lyon Consultants were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by GS Lyon Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SUBJECT PROPERTY INFORMATION

ADDRESS

NEC SCHRIMPF AND WIEST RD. IMPERIAL COUNTY
CALIPATRIA, CA 92233

TARGET PROPERTY SEARCH RESULTS

The Target Property was identified in the following databases.

Page Numbers and Map Identifcations refer to the EDR Area/Corridor Report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

MINES: Mines Site Location Listing

A review of the MINES list, as provided by EDR, and dated 06/08/2020 has revealed that there is 1 MINES site within the requested target property.

Site	Address	Map ID / Focus Map(s)	Page
FLOWING WELLS	2095 HIGHWAY 111	2 / 5	26

MINES MRDS: Mineral Resources Data System

A review of the MINES MRDS list, as provided by EDR, and dated 04/06/2018 has revealed that there is 1 MINES MRDS site within the requested target property.

Site	Address	Map ID / Focus Map(s)	Page
FLOWING WELLS PIT		1 / 5	25

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

PC ORIGINAL PKG

EXECUTIVE SUMMARY

Page Numbers and Map Identifcations refer to the EDR Area/Corridor Report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

A review of the MINES list, as provided by EDR, and dated 06/08/2020 has revealed that there is 1 MINES site within approximately 0.25 miles of the requested target property.

MINES **S117661553**
N/A

MINES:

Name:	FLOWING WELLS
Address:	Not reported
City,State,Zip:	CA
Latitude:	33.221111
Longitude:	-115.438889
Lead Agency identification code:	13
Lead Agency name:	County of Imperial
Year of the operator supplied annual report:	1995
Type of report submitted by operator:	2
Number of acres disturbed by the mine:	0
Status of mining operation:	RECLAIMED
Status of mine reclamation:	RECLAMATION CERTIFIED COMPLETE BY LEAD AGENCY
Mine operator:	IMPERIAL COUNTY, DEPARTMENT OF PUBLIC WORKS
Operator Address:	155 S. 11TH STREET
Operator City, State, Zip:	EL CENTRO, CA 92243
Operator County:	Not reported
Mine owner:	IMPERIAL COUNTY, DEPARTMENT OF PUBLIC WORKS
Owner Address:	155 S. 11TH STREET
Owner City, State, Zip:	EL CENTRO, CA 92243

FLOWING WELLS (Continued) **S117661553**

Owner County:	Not reported
Reclamation plan identification number:	Not reported
Primary product produced by the mine:	Sand and Gravel
Other products produced by the mine:	Not reported
Type of mining utilized by mine:	OPEN PIT
Conditional use permit identification number:	CA 28594
Number of acres permitted for mining disturbance:	0
Total amount of funds posted by the mine for reclamation:	Not reported
Financial Assurance Cost Estimate for reclamation:	Not reported

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

DOD: Consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

A review of the DOD list, as provided by EDR, and dated 12/31/2005 has revealed that there is 1 DOD site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

PC ORIGINAL PKG

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

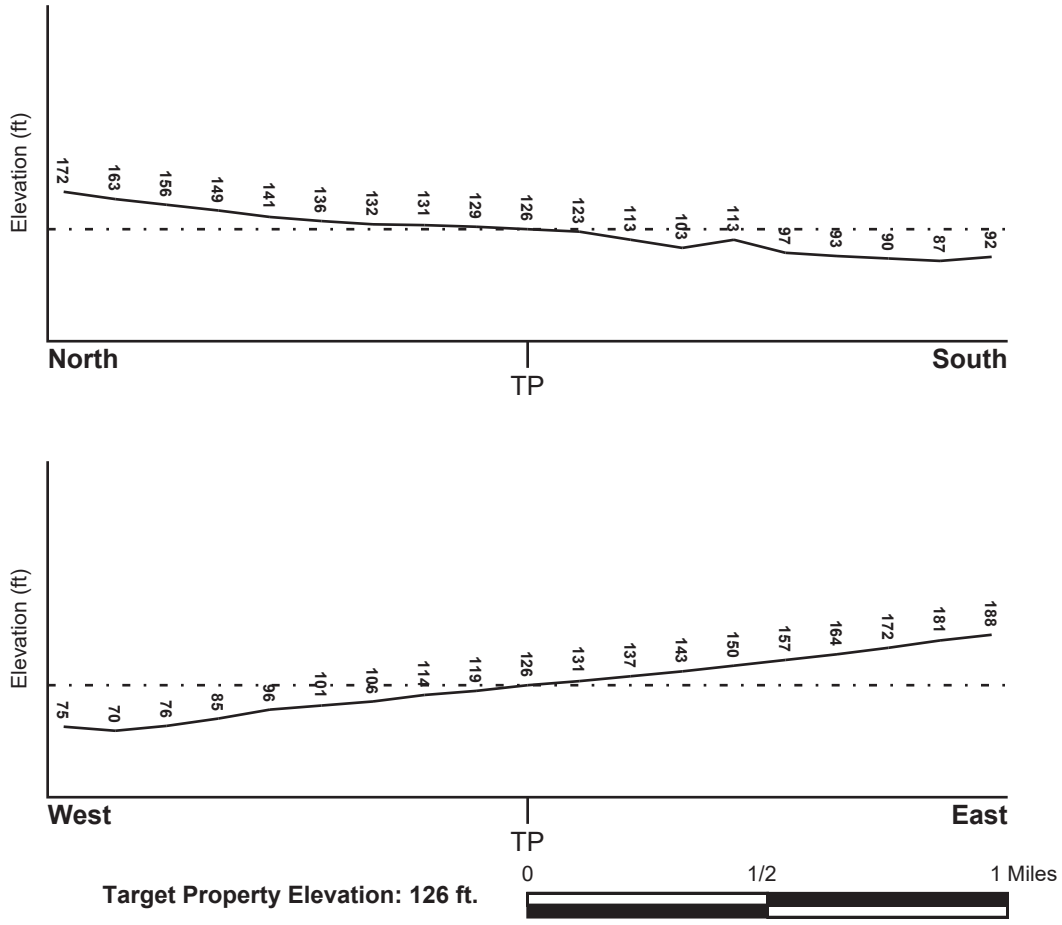
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

PC ORIGINAL PKG

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06025C0750C	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
Not Reported	

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
IRIS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

PC ORIGINAL PKG

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	CARSITAS
Soil Surface Texture:	gravelly - sand
Hydrologic Group:	Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.
Soil Drainage Class:	Excessively. Soils have very high and high hydraulic conductivity and low water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	HIGH
Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 60 inches

PC ORIGINAL PKG

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	10 inches	gravelly - sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 20.00 Min: 6.00	Max: 8.40 Min: 7.40
2	10 inches	60 inches	gravelly - sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 20.00 Min: 6.00	Max: 8.40 Min: 7.40

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: fine sand
cobbly - sand
stony - sand
very gravelly - sand

Surficial Soil Types: fine sand
cobbly - sand
stony - sand
very gravelly - sand

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: sand
very stony - coarse sand
stratified

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW[R] Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

PC ORIGINAL PKG

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

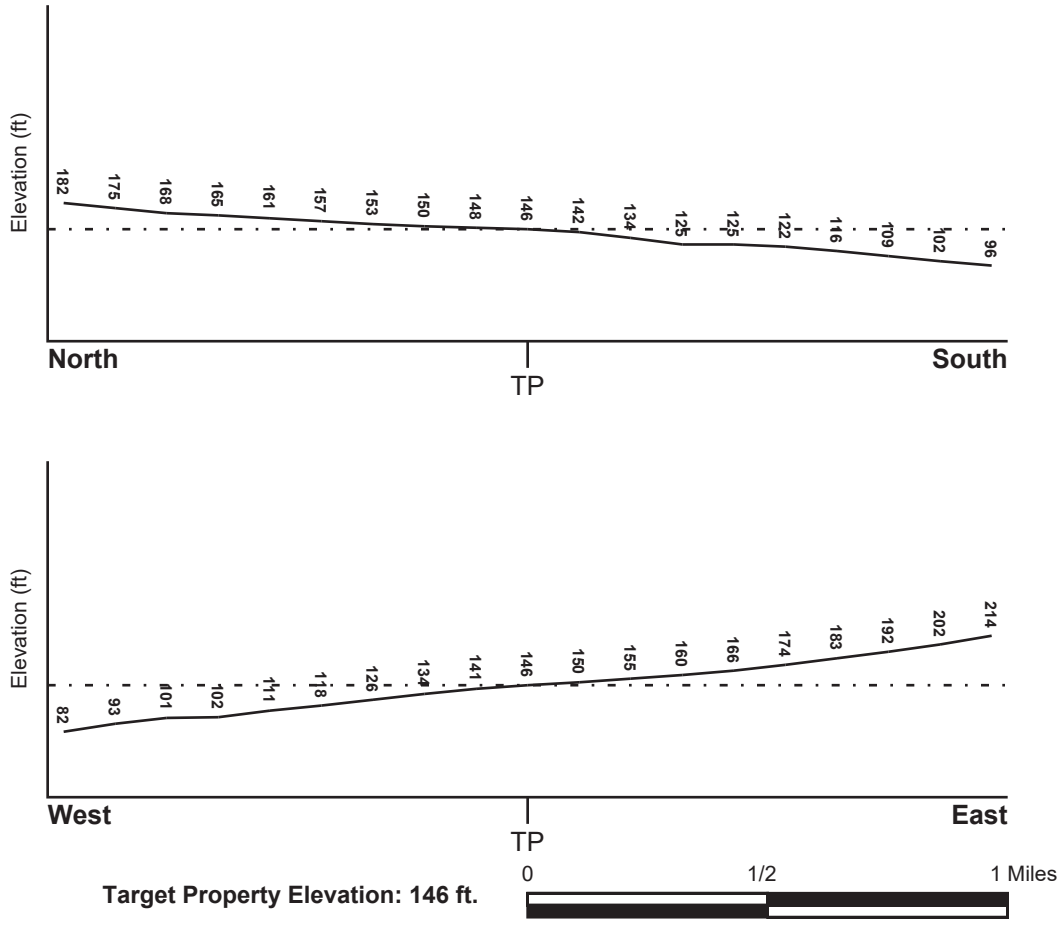
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

PC ORIGINAL PKG

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06025C0750C	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
Not Reported	

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
IRIS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

PC ORIGINAL PKG

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Rositas

Soil Surface Texture: sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	27 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9
2	27 inches	59 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: Carsitas

Soil Surface Texture: gravelly sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

PC ORIGINAL PKG

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	gravelly sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.4
2	9 inches	59 inches	gravelly sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.4

Soil Map ID: 3

Soil Component Name: Rositas

Soil Surface Texture: fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

PC ORIGINAL PKG

780 N. 4th Street
El Centro, CA 92243
(760) 337-1100

Phase I Environmental Site Assessment (ESA)
User Questionnaire

1) Environmental liens that are filed or recorded against the *property*.

Did a search of *recorded land title records* (or judicial records where appropriate) identify any environmental liens filed or recorded against the *property* under federal, tribal, state, or local law?

Not to our knowledge.

2) Activity and use limitations that are in place on the *property* or that have been filed or recorded against the *property*.

Did a search of *recorded land title records* (or judicial records where appropriate) identify any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the property and/or have been filed or recorded against the *property* under federal, tribal, state or local law?

Not to our knowledge.

3) Specialized knowledge or experience of the person seeking to qualify for the LLP.

Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the *property* or an *adjoining property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?

No.

PC ORIGINAL PKG

4) Relationship of the purchase price to the fair market value of the *property* if it were not contaminated.

Does the purchase price being paid for this *property* reasonable reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?

Yes.

5) Commonly known or *reasonably ascertainable* information about the *property*.

Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example,

a. Do you know the past uses of the *property*?

   Vacant Land

b. Do you know of specific chemicals or oils that are present or once were present at the *property*?

   None that we know of or suspect.

c. Do you know of spills or other chemical releases that have taken place at the *property*?

   None that we know of or suspect.

d. Do you know of any environmental cleanups that have taken place at the *property*?

   None that we know of or suspect.

6) The degree of obviousness of the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation.

Based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of releases at the *property*?

None that we know of or suspect.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

PRELIMINARY REPORT

*In response to the application for a policy of title insurance referenced herein, **Fidelity National Title Company** hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception herein or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations or Conditions of said policy forms.*

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Attachment One. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Attachment One. Copies of the policy forms should be read. They are available from the office which issued this report.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

The policy(s) of title insurance to be issued hereunder will be policy(s) of Fidelity National Title Insurance Company, a Florida Corporation.

PC ORIGINAL PKG

Please read the exceptions shown or referred to herein and the exceptions and exclusions set forth in Attachment One of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects and encumbrances affecting title to the land.

PC ORIGINAL PKG

EXCEPTIONS

AT THE DATE HEREOF, ITEMS TO BE CONSIDERED AND EXCEPTIONS TO COVERAGE IN ADDITION TO THE PRINTED EXCEPTIONS AND EXCLUSIONS IN SAID POLICY FORM WOULD BE AS FOLLOWS:

A. Property taxes, which are a lien not yet due and payable, including any assessments collected with taxes to be levied for the fiscal year 2020-2021.

B. Taxes and assessments levied by the Imperial Irrigation District.

C. The lien of supplemental or escaped assessments of property taxes, if any, made pursuant to the provisions of Chapter 3.5 (commencing with Section 75) or Part 2, Chapter 3, Articles 3 and 4, respectively, of the Revenue and Taxation Code of the State of California as a result of the transfer of title to the vestee named in Schedule A or as a result of changes in ownership or new construction occurring prior to Date of Policy.

1. Water rights, claims or title to water, whether or not disclosed by the public records.

2. Easement(s) in favor of the public over any existing roads lying within said Land.

3. Lack of legal right of access to and from a public street or highway.

4. The right, title or interest which the County of Imperial may have or claim in and to those portions of the herein described lands lying within the bounds of Noffsinger Road.

5. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

Granted to:	Southern Sierras Power Company, a corporation, it's successors and/or assigns
Purpose:	Power transmission line
Recording Date:	July 19, 1930
Recording No:	Book 283, Page 9 of Official Records
Affects:	A portion of said land as more particularly described in said document.

6. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

Granted to:	R. S. Harrington, et ux.
Purpose:	Drain canal
Recording Date:	July 11, 1952
Recording No:	Book 841, Page 484 of Official Records
Affects:	A portion of said land as more particularly described in said document.

7. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

Granted to:	Imperial Irrigation District, it's successors and/or assigns
Purpose:	Power line or lines, underground and/or overhead and necessary appurtenances together with the right of ingress and egress
Recording Date:	December 22, 1987
Recording No:	book 1594, Page 1685 of Official Records
Affects:	The West 100 feet of said land, except Southern Pacific Railroad right of way.

PC ORIGINAL PKG

EXCEPTIONS
(Continued)

8. The effect of a Grant Deed dated May 16, 2013, executed by Leslie Ann Ash, Trustee of the Bay Family Trust dated April 9, 2003, grantor to Victoria Gabbard, a married woman, as her sole and separate property, Grantee, recorded June 16, 2013 as Instrument No. 2013010916 of Official Records.

   Recital on said document states "This deed is intended to sever any joint Tenancy Deed".

9. A document entitled "Easement Deed by Court Order in Settlement of Landowner Action", issued out of the United States District Court for the Northern District of California San Francisco Division, Case No. 3:11-cv-02599-TEH, recorded January 30, 2014 as Instrument No. 2014001714 of Official Records.

   Said document provides for a Telecommunications Cable System Easement together with right of reasonable ingress and egress.

   Subject to the terms, conditions and provisions contained therein.

10. Any invalidity or defect in the title of the vestees in the event that the trust referred to herein is invalid or fails to grant sufficient powers to the trustee(s) or in the event there is a lack of compliance with the terms and provisions of the trust instrument.

    If title is to be insured in the trustee(s) of a trust, (or if their act is to be insured), this Company will require a Trust Certification pursuant to California Probate Code Section 18100.5.

    The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

11. Please be advised that our search did not disclose any open Deeds of Trust of record. If you should have knowledge of any outstanding obligation, please contact the Title Department immediately for further review prior to closing.

12. Any rights of the parties in possession of a portion of, or all of, said Land, which rights are not disclosed by the public records.

    The Company will require, for review, a full and complete copy of any unrecorded agreement, contract, license and/or lease, together with all supplements, assignments and amendments thereto, before issuing any policy of title insurance without excepting this item from coverage.

    The Company reserves the right to except additional items and/or make additional requirements after reviewing said documents.

13. Any facts an accurate survey would disclose as to the location the exterior boundaries of said land or as to the location of canals, laterals, waste and drain ditches thereon in use by Imperial Irrigation District as part of its irrigation system.

PC ORIGINAL PKG

EXCEPTIONS
(Continued)

14. Any easements not disclosed by the public records as to matters affecting title to real property, whether or not said easements are visible and apparent.

15. Matters which may be disclosed by an inspection and/or by a correct ALTA/NSPS Land Title Survey of said Land that is satisfactory to the Company, and/or by inquiry of the parties in possession thereof.

PLEASE REFER TO THE "INFORMATIONAL NOTES" AND "REQUIREMENTS" SECTIONS WHICH FOLLOW FOR INFORMATION NECESSARY TO COMPLETE THIS TRANSACTION.

END OF EXCEPTIONS

PC ORIGINAL PKG

REQUIREMENTS SECTION

1. The Company will require either (a) a complete copy of the trust agreement and any amendments thereto certified by the trustee(s) to be a true and complete copy with respect to the hereinafter named trust, or (b) a Certification, pursuant to California Probate Code Section 18100.5, executed by all of the current trustee(s) of the hereinafter named trust, a form of which is attached.

   Name of Trust: Exemption Trust Under the Bay Family Trust Dated April 9, 2003

2. The Company will require either (a) a complete copy of the trust agreement and any amendments thereto certified by the trustee(s) to be a true and complete copy with respect to the hereinafter named trust, or (b) a Certification, pursuant to California Probate Code Section 18100.5, executed by all of the current trustee(s) of the hereinafter named trust, a form of which is attached.

   Name of Trust: Survivor's Trust Under the Bay Family Trust Dated April 9, 2003

3. Prior to the close of escrow, the Company requires a Statement of Information to be completed by the following party(s),

   Party(s): All Parties

   The Company reserves the right to add additional items or make further requirements after review of the requested Statement of Information.

4. Unrecorded matters which may be disclosed by an Owner's Affidavit or Declaration. A form of the Owner's Affidavit/Declaration is attached to this Preliminary Report/Commitment. This Affidavit/Declaration is to be completed by the record owner of the land and submitted for review prior to the closing of this transaction. Your prompt attention to this requirement will help avoid delays in the closing of this transaction. Thank you.

   The Company reserves the right to add additional items or make further requirements after review of the requested Affidavit/Declaration.

END OF REQUIREMENTS

PG ORIGINAL PKG

INFORMATIONAL NOTES SECTION

1. Note: Property taxes, including any personal property taxes and any assessments collected with taxes, are paid. For proration purposes the amounts were:

Tax Identification No.:	025-260-011-000
Fiscal Year:	2019-2020
1st Installment:	$148.44
2nd Installment:	$148.44
Exemption:	$0.00
Code Area:	058-003

   Affects: A portion of the Land described herein.

2. Note: Property taxes, including any personal property taxes and any assessments collected with taxes, are paid. For proration purposes the amounts were:

Tax Identification No.:	025-260-019-000
Fiscal Year:	2019-2020
1st Installment:	$48.86
2nd Installment:	$48.86
Exemption:	$0.00
Code Area:	058-003

   Affects: A portion of the Land described herein.

3. Note: The policy of title insurance will include an arbitration provision. The Company or the insured may demand arbitration. Arbitrable matters may include, but are not limited to, any controversy or claim between the Company and the insured arising out of or relating to this policy, any service of the Company in connection with its issuance or the breach of a policy provision or other obligation. Please ask your escrow or title officer for a sample copy of the policy to be issued if you wish to review the arbitration provisions and any other provisions pertaining to your Title Insurance coverage.

4. Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, manufacture or sale of marijuana, the Company is not able to close or insure any transaction involving Land that is associated with these activities.

5. Pursuant to Government Code Section 27388.1, as amended and effective as of 1-1-2018, a Documentary Transfer Tax (DTT) Affidavit may be required to be completed and submitted with each document when DTT is being paid or when an exemption is being claimed from paying the tax. If a governmental agency is a party to the document, the form will not be required. DTT Affidavits may be available at a Tax Assessor-County Clerk-Recorder.

6. Note: There are NO conveyances affecting said Land recorded within 24 months of the date of this report.

END OF INFORMATIONAL NOTES

Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened**. DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

For more information on wire-fraud scams or to report an incident, please refer to the following links:

Effective April 9, 2020

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This Privacy Notice explains how we collect, use, and protect personal information, when and to whom we disclose such information, and the choices you have about the use and disclosure of that information.

A limited number of FNF subsidiaries have their own privacy notices. If a subsidiary has its own privacy notice, the privacy notice will be available on the subsidiary's website and this Privacy Notice does not apply.

Collection of Personal Information

FNF may collect the following categories of Personal Information:

- contact information (*e.g.*, name, address, phone number, email address);
- demographic information (*e.g.*, date of birth, gender, marital status);
- identity information (*e.g.* Social Security Number, driver's license, passport, or other government ID number);
- financial account information (*e.g.* loan or bank account information); and
- other personal information necessary to provide products or services to you.

We may collect Personal Information about you from:

- information we receive from you or your agent;
- information about your transactions with FNF, our affiliates, or others; and
- information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others.

Collection of Browsing Information

FNF automatically collects the following types of Browsing Information when you access an FNF website, online service, or application (each an "FNF Website") from your Internet browser, computer, and/or device:

- Internet Protocol (IP) address and operating system;
- browser version, language, and type;
- domain name system requests; and
- browsing history on the FNF Website, such as date and time of your visit to the FNF Website and visits to the pages within the FNF Website.

Like most websites, our servers automatically log each visitor to the FNF Website and may collect the Browsing Information described above. We use Browsing Information for system administration, troubleshooting, fraud investigation, and to improve our websites. Browsing Information generally does not reveal anything personal about you, though if you have created a user account for an FNF Website and are logged into that account, the FNF Website may be able to link certain browsing activity to your user account.

Other Online Specifics

Cookies. When you visit an FNF Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. Information gathered using cookies helps us improve your user experience. For example, a cookie can help the website load properly or can customize the display page based on your browser type and user preferences. You can choose whether or not to accept cookies by changing your Internet browser settings. Be aware that doing so may impair or limit some functionality of the FNF Website.

Web Beacons. We use web beacons to determine when and how many times a page has been viewed. This information is used to improve our websites.

Do Not Track. Currently our FNF Websites do not respond to "Do Not Track" features enabled through your browser.

Links to Other Sites. FNF Websites may contain links to unaffiliated third-party websites. FNF is not responsible for the privacy practices or content of those websites. We recommend that you read the privacy policy of every website you visit.

Use of Personal Information

FNF uses Personal Information for three main purposes:

- To provide products and services to you or in connection with a transaction involving you.
- To improve our products and services.
- To communicate with you about our, our affiliates', and others' products and services, jointly or independently.

When Information Is Disclosed

We may disclose your Personal Information and Browsing Information in the following circumstances:

- to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to nonaffiliated service providers who provide or perform services or functions on our behalf and who agree to use the information only to provide such services or functions;

PC ORIGINAL PKG
Copyright © 2020. Fidelity National Financial, Inc. All Rights Reserved
Order No. 30052456-997-MAT-ML6

- to nonaffiliated third party service providers with whom we perform joint marketing, pursuant to an agreement with them to jointly market financial products or services to you;
- to law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order; or
- in the good-faith belief that such disclosure is necessary to comply with legal process or applicable laws, or to protect the rights, property, or safety of FNF, its customers, or the public.

The law does not require your prior authorization and does not allow you to restrict the disclosures described above. Additionally, we may disclose your information to third parties for whom you have given us authorization or consent to make such disclosure. We do not otherwise share your Personal Information or Browsing Information with nonaffiliated third parties, except as required or permitted by law. We may share your Personal Information with affiliates (other companies owned by FNF) to directly market to you. Please see "Choices with Your Information" to learn how to restrict that sharing.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of bankruptcy, reorganization, insolvency, receivership, or an assignment for the benefit of creditors. By submitting Personal Information and/or Browsing Information to FNF, you expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings.

Security of Your Information
We maintain physical, electronic, and procedural safeguards to protect your Personal Information.

Choices With Your Information
If you do not want FNF to share your information among our affiliates to directly market to you, you may send an "opt out" request by email, phone, or physical mail as directed at the end of this Privacy Notice. We do not share your Personal Information with nonaffiliates for their use to direct market to you without your consent.

Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you.

For California Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties, except as permitted by California law. For additional information about your California privacy rights, please visit the "California Privacy" link on our website (https://fnf.com/pages/californiaprivacy.aspx) or call (888) 413-1748.

For Nevada Residents: You may be placed on our internal Do Not Call List by calling (888) 934-3354 or by contacting us via the information set forth at the end of this Privacy Notice. Nevada law requires that we also provide you with the following contact information: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: BCPINFO@ag.state.nv.us.
For Oregon Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes.

For Vermont Residents: We will not disclose information about your creditworthiness to our affiliates and will not disclose your personal information, financial information, credit report, or health information to nonaffiliated third parties to market to you, other than as permitted by Vermont law, unless you authorize us to make those disclosures.

Information From Children
The FNF Websites are not intended or designed to attract persons under the age of eighteen (18).We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian.

International Users
FNF's headquarters is located within the United States. If you reside outside the United States and choose to provide Personal Information or Browsing Information to us, please note that we may transfer that information outside of your country of residence. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection, transfer, and use of such information in accordance with this Privacy Notice.

FNF Website Services for Mortgage Loans
Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice titled When Information is Disclosed, Choices with Your Information, and Accessing and Correcting Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Personal Information. FNF does not share Personal Information collected through the Service Websites, except as required or authorized by contract with the mortgage loan servicer or lender, or as required by law or in the good-faith belief that such disclosure is necessary: to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

Your Consent To This Privacy Notice; Notice Changes; Use of Comments or Feedback

By submitting Personal Information and/or Browsing Information to FNF, you consent to the collection and use of the information in accordance with this Privacy Notice. We may change this Privacy Notice at any time. The Privacy Notice's effective date will show the last date changes were made. If you provide information to us following any change of the Privacy Notice, that signifies your assent to and acceptance of the changes to the Privacy Notice. We may use comments or feedback that you submit to us in any manner without notice or compensation to you.

Accessing and Correcting Information; Contact Us

If you have questions, would like to correct your Personal Information, or want to opt-out of information sharing for affiliate marketing, send your requests to privacy@fnf.com, by phone to (888) 934-3354, or by mail to:

ATTACHMENT ONE (Revised 05-06-16)

CALIFORNIA LAND TITLE ASSOCIATION
STANDARD COVERAGE POLICY – 1990

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE (12-02-13)
ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE

EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
   a. building;
   b. zoning;
   c. land use;
   d. improvements on the Land;
   e. land division; and
   f. environmental protection.
   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;

© California Land Title Association. All rights reserved.
The use of this Form is restricted to CLTA subscribers in good standing as of the date of use. All other uses are prohibited. Reprinted under license or express permission from the California Land Title Association.

PC ORIGINAL PKG

c. that result in no loss to You; or
d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.

5. Failure to pay value for Your Title.
6. Lack of a right:
   a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.
   This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.
8. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
9. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 10,000.00
Covered Risk 18:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 19:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 21:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 5,000.00

2006 ALTA LOAN POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13 or 14); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

{Except as provided in Schedule B - Part II,{ t{or T}his policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

© California Land Title Association. All rights reserved.
The use of this Form is restricted to CLTA subscribers in good standing as of the date of use. All other uses are prohibited. Reprinted under license or express permission from the California Land Title Association.

{PART I

{The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.}

PART II

In addition to the matters set forth in Part I of this Schedule, the Title is subject to the following matters, and the Company insures against loss or damage sustained in the event that they are not subordinate to the lien of the Insured Mortgage:}

2006 ALTA OWNER'S POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
   (a) a fraudulent conveyance or fraudulent transfer; or
   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:
{The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY – ASSESSMENTS PRIORITY (04-02-15)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.
10. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
11. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

OWNER'S DECLARATION

Escrow No.: 30052456-997-MAT-ML6
Property Address: No situs APN 025-260-011 & 025-260-019
Unincorporated County of Imperial, CA

The undersigned hereby declares as follows:

1. (Fill in the applicable paragraph and strike the other)

   a. Declarant ("Owner") is the owner or lessee, as the case may be, of certain premises located at No situs APN 025-260-011 & 025-260-019, Unincorporated County of Imperial, CA, further described as follows: See Preliminary Report/Commitment No. for full legal description (the "Land").

   b. Declarant is the _____ of _____ ("Owner"), which is the owner or lessee, as the case may be, of certain premises located at No situs APN 025-260-011 & 025-260-019, Unincorporated County of Imperial, CA, further described as follows: See Preliminary Report/Commitment No. for full legal description (the "Land").

2. (Fill in the applicable paragraph and strike the other)

   a. During the period of six months immediately preceding the date of this declaration no work has been done, no surveys or architectural or engineering plans have been prepared, and no materials have been furnished in connection with the erection, equipment, repair, protection or removal of any building or other structure on the Land or in connection with the improvement of the Land in any manner whatsoever.

   b. During the period of six months immediately preceding the date of this declaration certain work has been done and materials furnished in connection with _____ upon the Land in the approximate total sum of $_____, but no work whatever remains to be done and no materials remain to be furnished to complete the construction in full compliance with the plans and specifications, nor are there any unpaid bills incurred for labor and materials used in making such improvements or repairs upon the Land, or for the services of architects, surveyors or engineers, except as follows: _____. Owner, by the undersigned Declarant, agrees to and does hereby indemnify and hold harmless Fidelity National Title Company against any and all claims arising therefrom.

3. Owner has not previously conveyed the Land; is not a debtor in bankruptcy (and if a partnership, the general partner thereof is not a debtor in bankruptcy); and has not received notice of any pending court action affecting the title to the Land.

4. Except as shown in the above-referenced Preliminary Report/Commitment, there are no unpaid or unsatisfied mortgages, deeds of trust, Uniform Commercial Code financing statements, regular assessments, special assessments, periodic assessments or any assessment from any source, claims of lien, special assessments, or taxes that constitute a lien against the Land or that affect the Land but have not been recorded in the public records. There are no violations of the covenants, conditions and restrictions as shown in the above-referenced Preliminary Report/Commitment.

5. The Land is currently in use as _____; _____ occupy/occupies the Land; and the following are all of the leases or other occupancy rights affecting the Land:

   _____

6. There are no other persons or entities that assert an ownership interest in the Land, nor are there unrecorded easements, claims of easement, or boundary disputes that affect the Land.

7. There are no outstanding options to purchase or rights of first refusal affecting the Land.

PC ORIGINAL PKG

8. Between the most recent Effective Date of the above-referenced Preliminary Report/Commitment and the date of recording of the Insured Instrument(s), Owner has not taken or allowed, and will not take or allow, any action or inaction to encumber or otherwise affect title to the Land.

This declaration is made with the intention that Fidelity National Title Company (the "Company") and its policy issuing agents will rely upon it in issuing their title insurance policies and endorsements. Owner, by the undersigned Declarant, agrees to indemnify the Company against loss or damage (including attorneys fees, expenses, and costs) incurred by the Company as a result of any untrue statement made herein.

I declare under penalty of perjury that the foregoing is true and correct and that this declaration was executed on _____ at _____.

PROPERTY ADDRESS: No Situs APN 025-010-006-000, Imperial, CA

PRELIMINARY REPORT

In response to the application for a policy of title insurance referenced herein, ***Fidelity National Title Company*** *hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception herein or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations or Conditions of said policy forms.*

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Attachment One. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Attachment One. Copies of the policy forms should be read. They are available from the office which issued this report.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

The policy(s) of title insurance to be issued hereunder will be policy(s) of Fidelity National Title Insurance Company, a Florida Corporation.

Please read the exceptions shown or referred to herein and the exceptions and exclusions set forth in Attachment One of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects and encumbrances affecting title to the land.

Penalty:	$175.17
2nd Installment:	$1,751.76, OPEN (Delinquent after April 10, 2021)
Penalty and Cost:	$185.17
Homeowners Exemption:	$0.00
Code Area:	058-003

B. Taxes and assessments levied by the Imperial Irrigation District.

C. The lien of supplemental or escaped assessments of property taxes, if any, made pursuant to the provisions of Chapter 3.5 (commencing with Section 75) or Part 2, Chapter 3, Articles 3 and 4, respectively, of the Revenue and Taxation Code of the State of California as a result of the transfer of title to the vestee named in Schedule A or as a result of changes in ownership or new construction occurring prior to Date of Policy.

1. Water rights, claims or title to water, whether or not disclosed by the public records.

2. Easement(s) in favor of the public over any existing roads lying within said Land.

3. Lack of a legal right of access to and from a public street or highway.

4. Rights or claims of easements for canals, drains, laterals, irrigation pipelines, and gates not recorded in the public records.

5. The right, title, or interest which the Imperial Irrigation District may have or claim in and to that portion of the herein described land lying within the bounds of the Coachella Canal and Siphon #6 Canal.

6. The right, title, or interest which the County of Imperial may have or claim in and to those portions of the herein described lands lying within the bounds of Coachella Canal Road and Flowing Wells Road.

7. Serial No. LA 039762, dated February 28, 1921, Imperial Irrigation District affects said Section 9, Township 11 South, Range 15 East, as disclosed by the District Land Office of the Bureau of Land Management.

8. The herein described Land is located in an area frequently subject to Land Conservation Contracts executed pursuant to the Williamson Act (Cal. Govt. Code §§ 51200 et seq.). Land Conservation Contracts restrict the land use to agricultural, recreational, open-space and other compatible uses. If the herein described Land is subject to a Land Conservation Contract, please notify the Title Department.

The Company reserves the right to add additional items and/or make further requirements.

EXCEPTIONS
(Continued)

9. Easement(s) for the purpose(s) shown below and rights incidental thereto as reserved in a document;

Reserved by:	Southern Pacific Railroad Company
Purpose:	A right of way of lawful width for any and all County Roads heretofore lawfully established and now in public use
Recording Date:	April 01, 1923
Recording No:	Book 30, Page 235 of Deeds
Affects:	A portion of said land as more particularly described in said document

10. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

Granted to:	Southern Sierras Power Company
Purpose:	Power line 50 feet in width
Recording Date:	July 19, 1930
Recording No:	Book 283, Page 9 of Official Records
Affects:	A portion of said land as more particularly described in said document

11. Any existing rights of way in favor of the public or third parties for highways, roads, telegraph, telephone, and electrical transmission lines, and canals, laterals, ditches, flumes, siphons, and pipe lines on, over, and across said land as disclosed in deed recorded July 24, 1940 in Book 553, Page 210 of Official Records.

12. Covenants, conditions and restrictions but omitting any covenants or restrictions, if any, including but not limited to those based upon race, color, religion, sex, gender, gender identity, gender expression, sexual orientation, marital status, national origin, ancestry, familial status, source of income, disability, veteran or military status, genetic information, medical condition, citizenship, primary language, and immigration status, as set forth in applicable state or federal laws, except to the extent that said covenant or restriction is permitted by applicable law, as set forth in the document

Recording Date:	September 01, 1964
Recording No:	Book 1190, Page 762 of Official Records

13. Covenants, conditions and restrictions but omitting any covenants or restrictions, if any, including but not limited to those based upon race, color, religion, sex, gender, gender identity, gender expression, sexual orientation, marital status, national origin, ancestry, familial status, source of income, disability, veteran or military status, genetic information, medical condition, citizenship, primary language, and immigration status, as set forth in applicable state or federal laws, except to the extent that said covenant or restriction is permitted by applicable law, as set forth in the document

Recording Date:	September 25, 1964
Recording No:	Book 1194, Page 355 of Official Records

14. Please be advised that our search did not disclose any open Deeds of Trust of record. If you should have knowledge of any outstanding obligation, please contact the Title Department immediately for further review prior to closing.

PC ORIGINAL PKG

EXCEPTIONS
(Continued)

15. Any rights of the parties in possession of a portion of, or all of, said Land, which rights are not disclosed by the public records.

    The Company will require, for review, a full and complete copy of any unrecorded agreement, contract, license and/or lease, together with all supplements, assignments and amendments thereto, before issuing any policy of title insurance without excepting this item from coverage.

    The Company reserves the right to except additional items and/or make additional requirements after reviewing said documents.

16. Any easements not disclosed by the public records as to matters affecting title to real property, whether or not said easements are visible and apparent.

17. Matters which may be disclosed by an inspection and/or by a correct ALTA/NSPS Land Title Survey of said Land that is satisfactory to the Company, and/or by inquiry of the parties in possession thereof.

PLEASE REFER TO THE "INFORMATIONAL NOTES" AND "REQUIREMENTS" SECTIONS WHICH FOLLOW FOR INFORMATION NECESSARY TO COMPLETE THIS TRANSACTION.

END OF EXCEPTIONS

PC ORIGINAL PKG

REQUIREMENTS SECTION

1. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance from the entity named below:

   Limited Liability Company: Mesa West Ranch, L.L.C.

   a) A copy of its operating agreement, if any, and all amendments, supplements and/or modifications thereto, certified by the appropriate manager or member.

   b) If a domestic Limited Liability Company, a copy of its Articles of Organization and all amendments thereto with the appropriate filing stamps.

   c) If the Limited Liability Company is member-managed, a full and complete current list of members certified by the appropriate manager or member.

   d) A current dated certificate of good standing from the proper governmental authority of the state in which the entity is currently domiciled.

   e) If less than all members, or managers, as appropriate, will be executing the closing documents, furnish evidence of the authority of those signing.

   f) If Limited Liability Company is a Single Member Entity, a Statement of Information for the Single Member will be required.

   g) Each member and manager of the LLC without an Operating Agreement must execute in the presence of a notary public the Certificate of California LLC (Without an Operating Agreement) Status and Authority form.

2. Unrecorded matters which may be disclosed by an Owner's Affidavit or Declaration. A form of the Owner's Affidavit/Declaration is attached to this Preliminary Report/Commitment. This Affidavit/Declaration is to be completed by the record owner of the land and submitted for review prior to the closing of this transaction. Your prompt attention to this requirement will help avoid delays in the closing of this transaction. Thank you.

   The Company reserves the right to add additional items or make further requirements after review of the requested Affidavit/Declaration.

END OF REQUIREMENTS

PC ORIGINAL PKG

INFORMATIONAL NOTES SECTION

1. None of the items shown in this report will cause the Company to decline to attach CLTA Endorsement Form 100 to an Extended Coverage Loan Policy, when issued.

2. The policy of title insurance will include an arbitration provision. The Company or the insured may demand arbitration. Arbitrable matters may include, but are not limited to, any controversy or claim between the Company and the insured arising out of or relating to this policy, any service of the Company in connection with its issuance or the breach of a policy provision or other obligation. Please ask your escrow or title officer for a sample copy of the policy to be issued if you wish to review the arbitration provisions and any other provisions pertaining to your Title Insurance coverage.

3. Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, manufacture or sale of marijuana, the Company is not able to close or insure any transaction involving Land that is associated with these activities.

4. Pursuant to Government Code Section 27388.1, as amended and effective as of 1-1-2018, a Documentary Transfer Tax (DTT) Affidavit may be required to be completed and submitted with each document when DTT is being paid or when an exemption is being claimed from paying the tax. If a governmental agency is a party to the document, the form will not be required. DTT Affidavits may be available at a Tax Assessor-County Clerk-Recorder.

5. There are NO conveyances affecting said Land recorded within 24 months of the date of this report.

END OF INFORMATIONAL NOTES

Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened**. DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

For more information on wire-fraud scams or to report an incident, please refer to the following links:

Notice of Available Discounts

Pursuant to Section 2355.3 in Title 10 of the California Code of Regulations Fidelity National Financial, Inc. and its subsidiaries ("FNF") must deliver a notice of each discount available under our current rate filing along with the delivery of escrow instructions, a preliminary report or commitment. Please be aware that the provision of this notice does not constitute a waiver of the consumer's right to be charged the filed rate. As such, your transaction may not qualify for the below discounts.

You are encouraged to discuss the applicability of one or more of the below discounts with a Company representative. These discounts are generally described below; consult the rate manual for a full description of the terms, conditions and requirements for such discount. These discounts only apply to transactions involving services rendered by the FNF Family of Companies. This notice only applies to transactions involving property improved with a one-to-four family residential dwelling.

Not all discounts are offered by every FNF Company. The discount will only be applicable to the FNF Company as indicated by the named discount.

FIDELITY NATIONAL FINANCIAL, INC.
PRIVACY NOTICE

Effective April 9, 2020

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This Privacy Notice explains how we collect, use, and protect personal information, when and to whom we disclose such information, and the choices you have about the use and disclosure of that information.

A limited number of FNF subsidiaries have their own privacy notices. If a subsidiary has its own privacy notice, the privacy notice will be available on the subsidiary's website and this Privacy Notice does not apply.

Collection of Personal Information

FNF may collect the following categories of Personal Information:

- contact information (*e.g.*, name, address, phone number, email address);
- demographic information (*e.g.*, date of birth, gender, marital status);
- identity information (*e.g.* Social Security Number, driver's license, passport, or other government ID number);
- financial account information (*e.g.* loan or bank account information); and
- other personal information necessary to provide products or services to you.

We may collect Personal Information about you from:

- information we receive from you or your agent;
- information about your transactions with FNF, our affiliates, or others; and
- information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others.

Collection of Browsing Information

FNF automatically collects the following types of Browsing Information when you access an FNF website, online service, or application (each an "FNF Website") from your Internet browser, computer, and/or device:

- Internet Protocol (IP) address and operating system;
- browser version, language, and type;
- domain name system requests; and
- browsing history on the FNF Website, such as date and time of your visit to the FNF Website and visits to the pages within the FNF Website.

Like most websites, our servers automatically log each visitor to the FNF Website and may collect the Browsing Information described above. We use Browsing Information for system administration, troubleshooting, fraud investigation, and to improve our websites. Browsing Information generally does not reveal anything personal about you, though if you have created a user account for an FNF Website and are logged into that account, the FNF Website may be able to link certain browsing activity to your user account.

Other Online Specifics

Cookies. When you visit an FNF Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. Information gathered using cookies helps us improve your user experience. For example, a cookie can help the website load properly or can customize the display page based on your browser type and user preferences. You can choose whether or not to accept cookies by changing your Internet browser settings. Be aware that doing so may impair or limit some functionality of the FNF Website.

Web Beacons. We use web beacons to determine when and how many times a page has been viewed. This information is used to improve our websites.

Do Not Track. Currently our FNF Websites do not respond to "Do Not Track" features enabled through your browser.

Links to Other Sites. FNF Websites may contain links to unaffiliated third-party websites. FNF is not responsible for the privacy practices or content of those websites. We recommend that you read the privacy policy of every website you visit.

Use of Personal Information

FNF uses Personal Information for three main purposes:

- To provide products and services to you or in connection with a transaction involving you.
- To improve our products and services.
- To communicate with you about our, our affiliates', and others' products and services, jointly or independently.

When Information Is Disclosed

We may disclose your Personal Information and Browsing Information in the following circumstances:

- to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to nonaffiliated service providers who provide or perform services or functions on our behalf and who agree to use the information only to provide such services or functions;

PC ORIGINAL PKG

Order No. 30053823-997-MAT-ML6

- to nonaffiliated third party service providers with whom we perform joint marketing, pursuant to an agreement with them to jointly market financial products or services to you;
- to law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order; or
- in the good-faith belief that such disclosure is necessary to comply with legal process or applicable laws, or to protect the rights, property, or safety of FNF, its customers, or the public.

The law does not require your prior authorization and does not allow you to restrict the disclosures described above. Additionally, we may disclose your information to third parties for whom you have given us authorization or consent to make such disclosure. We do not otherwise share your Personal Information or Browsing Information with nonaffiliated third parties, except as required or permitted by law. We may share your Personal Information with affiliates (other companies owned by FNF) to directly market to you. Please see "Choices with Your Information" to learn how to restrict that sharing.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of bankruptcy, reorganization, insolvency, receivership, or an assignment for the benefit of creditors. By submitting Personal Information and/or Browsing Information to FNF, you expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings.

Security of Your Information
We maintain physical, electronic, and procedural safeguards to protect your Personal Information.

Choices With Your Information
If you do not want FNF to share your information among our affiliates to directly market to you, you may send an "opt out" request by email, phone, or physical mail as directed at the end of this Privacy Notice. We do not share your Personal Information with nonaffiliates for their use to direct market to you without your consent.

Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you.

For California Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties, except as permitted by California law. For additional information about your California privacy rights, please visit the "California Privacy" link on our website (https://fnf.com/pages/californiaprivacy.aspx) or call (888) 413-1748.

For Nevada Residents: You may be placed on our internal Do Not Call List by calling (888) 934-3354 or by contacting us via the information set forth at the end of this Privacy Notice. Nevada law requires that we also provide you with the following contact information: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: BCPINFO@ag.state.nv.us.
For Oregon Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes.

For Vermont Residents: We will not disclose information about your creditworthiness to our affiliates and will not disclose your personal information, financial information, credit report, or health information to nonaffiliated third parties to market to you, other than as permitted by Vermont law, unless you authorize us to make those disclosures.

Information From Children
The FNF Websites are not intended or designed to attract persons under the age of eighteen (18).We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian.

International Users
FNF's headquarters is located within the United States. If you reside outside the United States and choose to provide Personal Information or Browsing Information to us, please note that we may transfer that information outside of your country of residence. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection, transfer, and use of such information in accordance with this Privacy Notice.

FNF Website Services for Mortgage Loans
Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice titled When Information is Disclosed, Choices with Your Information, and Accessing and Correcting Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Personal Information. FNF does not share Personal Information collected through the Service Websites, except as required or authorized by contract with the mortgage loan servicer or lender, or as required by law or in the good-faith belief that such disclosure is necessary: to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

ATTACHMENT ONE (Revised 05-06-16)

CALIFORNIA LAND TITLE ASSOCIATION
STANDARD COVERAGE POLICY – 1990

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE (12-02-13)
ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE

EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
   a. building;
   b. zoning;
   c. land use;
   d. improvements on the Land;
   e. land division; and
   f. environmental protection.
   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;

© California Land Title Association. All rights reserved.
The use of this Form is restricted to CLTA subscribers in good standing as of the date of use. All other uses are prohibited. Reprinted under license or express permission from the California Land Title Association.

PC ORIGINAL PKG

c. that result in no loss to You; or
d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.

5. Failure to pay value for Your Title.
6. Lack of a right:
   a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.
   This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.
8. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
9. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 10,000.00
Covered Risk 18:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 19:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 21:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 5,000.00

2006 ALTA LOAN POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13 or 14); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

{Except as provided in Schedule B - Part II,{ t{or T}his policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

© California Land Title Association. All rights reserved.
The use of this Form is restricted to CLTA subscribers in good standing as of the date of use. All other uses are prohibited. Reprinted under license or express permission from the California Land Title Association.

{PART I

{The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.}

PART II

In addition to the matters set forth in Part I of this Schedule, the Title is subject to the following matters, and the Company insures against loss or damage sustained in the event that they are not subordinate to the lien of the Insured Mortgage:}

2006 ALTA OWNER'S POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
   (a) a fraudulent conveyance or fraudulent transfer; or
   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY – ASSESSMENTS PRIORITY (04-02-15)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.
10. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
11. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

OWNER'S DECLARATION

Escrow No.: 30053823-997-MAT-ML6
Property Address: No Situs APN 025-010-006-000
Imperial, CA

The undersigned hereby declares as follows:

1. (Fill in the applicable paragraph and strike the other)

   a. Declarant ("Owner") is the owner or lessee, as the case may be, of certain premises located at No Situs APN 025-010-006-000, Imperial, CA, further described as follows: See Preliminary Report/Commitment No. for full legal description (the "Land").

   b. Declarant is the _____ of _____ ("Owner"), which is the owner or lessee, as the case may be, of certain premises located at No Situs APN 025-010-006-000, Imperial, CA, further described as follows: See Preliminary Report/Commitment No. for full legal description (the "Land").

2. (Fill in the applicable paragraph and strike the other)

   a. During the period of six months immediately preceding the date of this declaration no work has been done, no surveys or architectural or engineering plans have been prepared, and no materials have been furnished in connection with the erection, equipment, repair, protection or removal of any building or other structure on the Land or in connection with the improvement of the Land in any manner whatsoever.

   b. During the period of six months immediately preceding the date of this declaration certain work has been done and materials furnished in connection with _____ upon the Land in the approximate total sum of $_____, but no work whatever remains to be done and no materials remain to be furnished to complete the construction in full compliance with the plans and specifications, nor are there any unpaid bills incurred for labor and materials used in making such improvements or repairs upon the Land, or for the services of architects, surveyors or engineers, except as follows: _____. Owner, by the undersigned Declarant, agrees to and does hereby indemnify and hold harmless Fidelity National Title Company against any and all claims arising therefrom.

3. Owner has not previously conveyed the Land; is not a debtor in bankruptcy (and if a partnership, the general partner thereof is not a debtor in bankruptcy); and has not received notice of any pending court action affecting the title to the Land.

4. Except as shown in the above-referenced Preliminary Report/Commitment, there are no unpaid or unsatisfied mortgages, deeds of trust, Uniform Commercial Code financing statements, regular assessments, special assessments, periodic assessments or any assessment from any source, claims of lien, special assessments, or taxes that constitute a lien against the Land or that affect the Land but have not been recorded in the public records. There are no violations of the covenants, conditions and restrictions as shown in the above-referenced Preliminary Report/Commitment.

5. The Land is currently in use as _____; _____ occupy/occupies the Land; and the following are all of the leases or other occupancy rights affecting the Land:

   _____

6. There are no other persons or entities that assert an ownership interest in the Land, nor are there unrecorded easements, claims of easement, or boundary disputes that affect the Land.

7. There are no outstanding options to purchase or rights of first refusal affecting the Land.

8. Between the most recent Effective Date of the above-referenced Preliminary Report/Commitment and the date of recording of the Insured Instrument(s), Owner has not taken or allowed, and will not take or allow, any action or inaction to encumber or otherwise affect title to the Land.

This declaration is made with the intention that Fidelity National Title Company (the "Company") and its policy issuing agents will rely upon it in issuing their title insurance policies and endorsements. Owner, by the undersigned Declarant, agrees to indemnify the Company against loss or damage (including attorneys fees, expenses, and costs) incurred by the Company as a result of any untrue statement made herein.

I declare under penalty of perjury that the foregoing is true and correct and that this declaration was executed on _____ at _____.

Signature: _____

604 Sutter Street, Suite 250
Folsom, CA 95630

ATTN: **Jamie Nichole Nagel**
YOUR REFERENCE: **025-270-023**

PROPERTY ADDRESS: **No situs APN 025-270-023, Unincorporated County of Imperial, CA**

PRELIMINARY REPORT

In response to the application for a policy of title insurance referenced herein, ***Fidelity National Title Company*** *hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception herein or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations or Conditions of said policy forms.*

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Attachment One. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Attachment One. Copies of the policy forms should be read. They are available from the office which issued this report.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

The policy(s) of title insurance to be issued hereunder will be policy(s) of Fidelity National Title Insurance Company, a Florida Corporation.

Please read the exceptions shown or referred to herein and the exceptions and exclusions set forth in Attachment One of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects and encumbrances affecting title to the land.

ALTA Standard Owners Policy (6-17-06)

1. THE ESTATE OR INTEREST IN THE LAND HEREINAFTER DESCRIBED OR REFERRED TO COVERED BY THIS REPORT IS:

   A FEE

2. TITLE TO SAID ESTATE OR INTEREST AT THE DATE HEREOF IS VESTED IN:

   ERNEST LO and TRACI LO as Trustees of the Ernest & Traci Lo Living Trust 1999, dated October 11, 1999, as to an undivided 40% interest; LI TONG WANG and SUCHU CHOU WANG, Co-Trustees or their successor trustees, under The Wang Family Trust, dated June 21, 2001, and any amendments thereto, as to an undivided 30% interest and TIEN-SHIH LIN, a married man, as to an undivided 30% interest, subject to Item No. 7 of Schedule "B"

3. THE LAND REFERRED TO IN THIS REPORT IS DESCRIBED AS FOLLOWS:

   See Exhibit A attached hereto and made a part hereof.

PC ORIGINAL PKG

EXHIBIT A

LEGAL DESCRIPTION

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE UNINCORPORATED AREA OF IMPERIAL, IN THE COUNTY OF IMPERIAL, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

ALL OF SECTION 15, TOWNSHIP 11 SOUTH, RANGE 15 EAST, SAN BERNARDINO MERIDIAN, IN THE UNINCORPORATED AREA OF THE COUNTY OF IMPERIAL, STATE OF CALIFORNIA, ACCORDING TO THE OFFICIAL PLAT THEREOF.

EXCEPTING THEREFROM THAT PORTION CONVEYED TO THE U.S.A. BY DEED RECORDED AUGUST 11, 1978 IN BOOK 1420, PAGE 912 OF OFFICIAL RECORDS.

APN: 025-270-023

PC ORIGINAL PKG

EXCEPTIONS

AT THE DATE HEREOF, ITEMS TO BE CONSIDERED AND EXCEPTIONS TO COVERAGE IN ADDITION TO THE PRINTED EXCEPTIONS AND EXCLUSIONS IN SAID POLICY FORM WOULD BE AS FOLLOWS:

A. Property taxes, including any personal property taxes and any assessments collected with taxes, are as follows:

Tax Identification No.:	025-270-023-000
Fiscal Year:	2020-2021
1st Installment:	$290.65, OPEN (Delinquent after December 10)
Penalty:	$29.06
2nd Installment:	$290.65, OPEN (Delinquent after April 10)
Penalty and Cost:	$39.06
Homeowners Exemption:	$0.00
Code Area:	058-003

B. The lien of supplemental or escaped assessments of property taxes, if any, made pursuant to the provisions of Chapter 3.5 (commencing with Section 75) or Part 2, Chapter 3, Articles 3 and 4, respectively, of the Revenue and Taxation Code of the State of California as a result of the transfer of title to the vestee named in Schedule A or as a result of changes in ownership or new construction occurring prior to Date of Policy.

1. Water rights, claims or title to water, whether or not disclosed by the public records.

2. Easement(s) in favor of the public over any existing roads lying within said Land.

3. Lack of a legal right of access to and from a public street or highway.

4. The right, title, or interest, which the Imperial Irrigation District may have or claim in and to that portion of the herein described land lying within the bounds of:

   The Coachella Canal

5. The right, title, or interest, which the Imperial Irrigation District may have or claim in and to that portion of the herein described land lying within the bounds of:

   County Road No. 7G01

6. Rights or claims of easements for canals, drains, laterals, irrigation pipelines and gates not recorded in the public records.

7. The community interest of the spouse of the vestee named below.

   Vestee: Tien-Shih Lin

   The Company will require that the spouse of the vestee shown above join in any conveyance or encumbrance before such transaction will be insured.

PC ORIGINAL PKG

EXCEPTIONS
(Continued)

8. Any invalidity or defect in the title of the vestees in the event that the trust referred to herein is invalid or fails to grant sufficient powers to the trustee(s) or in the event there is a lack of compliance with the terms and provisions of the trust instrument.

   If title is to be insured in the trustee(s) of a trust, (or if their act is to be insured), this Company will require a Trust Certification pursuant to California Probate Code Section 18100.5.

   The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

9. Please be advised that our search did not disclose any open Deeds of Trust of record. If you should have knowledge of any outstanding obligation, please contact the Title Department immediately for further review prior to closing.

10. Any rights of the parties in possession of a portion of, or all of, said Land, which rights are not disclosed by the public records.

    The Company will require, for review, a full and complete copy of any unrecorded agreement, contract, license and/or lease, together with all supplements, assignments and amendments thereto, before issuing any policy of title insurance without excepting this item from coverage.

    The Company reserves the right to except additional items and/or make additional requirements after reviewing said documents.

11. Any easements not disclosed by the public records as to matters affecting title to real property, whether or not said easements are visible and apparent.

12. Matters which may be disclosed by an inspection and/or by a correct ALTA/NSPS Land Title Survey of said Land that is satisfactory to the Company, and/or by inquiry of the parties in possession thereof.

PLEASE REFER TO THE "INFORMATIONAL NOTES" AND "REQUIREMENTS" SECTIONS WHICH FOLLOW FOR INFORMATION NECESSARY TO COMPLETE THIS TRANSACTION.

END OF EXCEPTIONS

PC ORIGINAL PKG

REQUIREMENTS SECTION

1. Prior to the close of escrow, the Company requires a Statement of Information to be completed by the following party(s),

   Party(s): All Parties

   The Company reserves the right to add additional items or make further requirements after review of the requested Statement of Information.

2. The Company will require either (a) a complete copy of the trust agreement and any amendments thereto certified by the trustee(s) to be a true and complete copy with respect to the hereinafter named trust, or (b) a Certification, pursuant to California Probate Code Section 18100.5, executed by all of the current trustee(s) of the hereinafter named trust, a form of which is attached.

   Name of Trust: Ernest and Traci Lo Living Trust 1999, dated 10-11-1999

3. The Company will require either (a) a complete copy of the trust agreement and any amendments thereto certified by the trustee(s) to be a true and complete copy with respect to the hereinafter named trust, or (b) a Certification, pursuant to California Probate Code Section 18100.5, executed by all of the current trustee(s) of the hereinafter named trust, a form of which is attached.

   Name of Trust: Li Tong Wang & Suchu Chou Wang, Co-Trustees under the Wang Family Trust, dated June 21, 2001

4. Unrecorded matters which may be disclosed by an Owner's Affidavit or Declaration. A form of the Owner's Affidavit/Declaration is attached to this Preliminary Report/Commitment. This Affidavit/Declaration is to be completed by the record owner of the land and submitted for review prior to the closing of this transaction. Your prompt attention to this requirement will help avoid delays in the closing of this transaction. Thank you.

   The Company reserves the right to add additional items or make further requirements after review of the requested Affidavit/Declaration.

END OF REQUIREMENTS

PG ORIGINAL PKG

INFORMATIONAL NOTES SECTION

1. Note: The policy of title insurance will include an arbitration provision. The Company or the insured may demand arbitration. Arbitrable matters may include, but are not limited to, any controversy or claim between the Company and the insured arising out of or relating to this policy, any service of the Company in connection with its issuance or the breach of a policy provision or other obligation. Please ask your escrow or title officer for a sample copy of the policy to be issued if you wish to review the arbitration provisions and any other provisions pertaining to your Title Insurance coverage.

2. Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, manufacture or sale of marijuana, the Company is not able to close or insure any transaction involving Land that is associated with these activities.

3. Pursuant to Government Code Section 27388.1, as amended and effective as of 1-1-2018, a Documentary Transfer Tax (DTT) Affidavit may be required to be completed and submitted with each document when DTT is being paid or when an exemption is being claimed from paying the tax. If a governmental agency is a party to the document, the form will not be required. DTT Affidavits may be available at a Tax Assessor-County Clerk-Recorder.

4. Note: There are NO conveyances affecting said Land recorded within 24 months of the date of this report.

END OF INFORMATIONAL NOTES

Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened**. DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

For more information on wire-fraud scams or to report an incident, please refer to the following links:

Notice of Available Discounts

Pursuant to Section 2355.3 in Title 10 of the California Code of Regulations Fidelity National Financial, Inc. and its subsidiaries ("FNF") must deliver a notice of each discount available under our current rate filing along with the delivery of escrow instructions, a preliminary report or commitment. Please be aware that the provision of this notice does not constitute a waiver of the consumer's right to be charged the filed rate. As such, your transaction may not qualify for the below discounts.

You are encouraged to discuss the applicability of one or more of the below discounts with a Company representative. These discounts are generally described below; consult the rate manual for a full description of the terms, conditions and requirements for such discount. These discounts only apply to transactions involving services rendered by the FNF Family of Companies. This notice only applies to transactions involving property improved with a one-to-four family residential dwelling.

Not all discounts are offered by every FNF Company. The discount will only be applicable to the FNF Company as indicated by the named discount.

FIDELITY NATIONAL FINANCIAL, INC.
PRIVACY NOTICE

Effective April 9, 2020

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This Privacy Notice explains how we collect, use, and protect personal information, when and to whom we disclose such information, and the choices you have about the use and disclosure of that information.

A limited number of FNF subsidiaries have their own privacy notices. If a subsidiary has its own privacy notice, the privacy notice will be available on the subsidiary's website and this Privacy Notice does not apply.

Collection of Personal Information

FNF may collect the following categories of Personal Information:

- contact information (*e.g.*, name, address, phone number, email address);
- demographic information (*e.g.*, date of birth, gender, marital status);
- identity information (*e.g.* Social Security Number, driver's license, passport, or other government ID number);
- financial account information (*e.g.* loan or bank account information); and
- other personal information necessary to provide products or services to you.

We may collect Personal Information about you from:

- information we receive from you or your agent;
- information about your transactions with FNF, our affiliates, or others; and
- information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others.

Collection of Browsing Information

FNF automatically collects the following types of Browsing Information when you access an FNF website, online service, or application (each an "FNF Website") from your Internet browser, computer, and/or device:

- Internet Protocol (IP) address and operating system;
- browser version, language, and type;
- domain name system requests; and
- browsing history on the FNF Website, such as date and time of your visit to the FNF Website and visits to the pages within the FNF Website.

Like most websites, our servers automatically log each visitor to the FNF Website and may collect the Browsing Information described above. We use Browsing Information for system administration, troubleshooting, fraud investigation, and to improve our websites. Browsing Information generally does not reveal anything personal about you, though if you have created a user account for an FNF Website and are logged into that account, the FNF Website may be able to link certain browsing activity to your user account.

Other Online Specifics

Cookies. When you visit an FNF Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. Information gathered using cookies helps us improve your user experience. For example, a cookie can help the website load properly or can customize the display page based on your browser type and user preferences. You can choose whether or not to accept cookies by changing your Internet browser settings. Be aware that doing so may impair or limit some functionality of the FNF Website.

Web Beacons. We use web beacons to determine when and how many times a page has been viewed. This information is used to improve our websites.

Do Not Track. Currently our FNF Websites do not respond to "Do Not Track" features enabled through your browser.

Links to Other Sites. FNF Websites may contain links to unaffiliated third-party websites. FNF is not responsible for the privacy practices or content of those websites. We recommend that you read the privacy policy of every website you visit.

Use of Personal Information

FNF uses Personal Information for three main purposes:

- To provide products and services to you or in connection with a transaction involving you.
- To improve our products and services.
- To communicate with you about our, our affiliates', and others' products and services, jointly or independently.

When Information Is Disclosed

We may disclose your Personal Information and Browsing Information in the following circumstances:

- to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to nonaffiliated service providers who provide or perform services or functions on our behalf and who agree to use the information only to provide such services or functions;

PC ORIGINAL PKG
Copyright © 2020. Fidelity National Financial, Inc. All Rights Reserved
Order No. 30053937-997-MAT-ML6

- to nonaffiliated third party service providers with whom we perform joint marketing, pursuant to an agreement with them to jointly market financial products or services to you;
- to law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order; or
- in the good-faith belief that such disclosure is necessary to comply with legal process or applicable laws, or to protect the rights, property, or safety of FNF, its customers, or the public.

The law does not require your prior authorization and does not allow you to restrict the disclosures described above. Additionally, we may disclose your information to third parties for whom you have given us authorization or consent to make such disclosure. We do not otherwise share your Personal Information or Browsing Information with nonaffiliated third parties, except as required or permitted by law. We may share your Personal Information with affiliates (other companies owned by FNF) to directly market to you. Please see "Choices with Your Information" to learn how to restrict that sharing.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of bankruptcy, reorganization, insolvency, receivership, or an assignment for the benefit of creditors. By submitting Personal Information and/or Browsing Information to FNF, you expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings.

Security of Your Information
We maintain physical, electronic, and procedural safeguards to protect your Personal Information.

Choices With Your Information
If you do not want FNF to share your information among our affiliates to directly market to you, you may send an "opt out" request by email, phone, or physical mail as directed at the end of this Privacy Notice. We do not share your Personal Information with nonaffiliates for their use to direct market to you without your consent.

Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you.

For California Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties, except as permitted by California law. For additional information about your California privacy rights, please visit the "California Privacy" link on our website (https://fnf.com/pages/californiaprivacy.aspx) or call (888) 413-1748.

For Nevada Residents: You may be placed on our internal Do Not Call List by calling (888) 934-3354 or by contacting us via the information set forth at the end of this Privacy Notice. Nevada law requires that we also provide you with the following contact information: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: BCPINFO@ag.state.nv.us.
For Oregon Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes.

For Vermont Residents: We will not disclose information about your creditworthiness to our affiliates and will not disclose your personal information, financial information, credit report, or health information to nonaffiliated third parties to market to you, other than as permitted by Vermont law, unless you authorize us to make those disclosures.

Information From Children
The FNF Websites are not intended or designed to attract persons under the age of eighteen (18).We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian.

International Users
FNF's headquarters is located within the United States. If you reside outside the United States and choose to provide Personal Information or Browsing Information to us, please note that we may transfer that information outside of your country of residence. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection, transfer, and use of such information in accordance with this Privacy Notice.

FNF Website Services for Mortgage Loans
Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice titled When Information is Disclosed, Choices with Your Information, and Accessing and Correcting Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Personal Information. FNF does not share Personal Information collected through the Service Websites, except as required or authorized by contract with the mortgage loan servicer or lender, or as required by law or in the good-faith belief that such disclosure is necessary: to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

ATTACHMENT ONE (Revised 05-06-16)

CALIFORNIA LAND TITLE ASSOCIATION
STANDARD COVERAGE POLICY – 1990

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE (12-02-13)
ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE

EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
   a. building;
   b. zoning;
   c. land use;
   d. improvements on the Land;
   e. land division; and
   f. environmental protection.
   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;

PC ORIGINAL PKG

c. that result in no loss to You; or
d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.

5. Failure to pay value for Your Title.
6. Lack of a right:
   a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.
   This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.
8. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
9. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 10,000.00
Covered Risk 18:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 19:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 21:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 5,000.00

2006 ALTA LOAN POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13 or 14); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

{Except as provided in Schedule B - Part II,{ t{or T}his policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

{PART I

{The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.}

PART II

In addition to the matters set forth in Part I of this Schedule, the Title is subject to the following matters, and the Company insures against loss or damage sustained in the event that they are not subordinate to the lien of the Insured Mortgage:}

2006 ALTA OWNER'S POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
   (a) a fraudulent conveyance or fraudulent transfer; or
   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY – ASSESSMENTS PRIORITY (04-02-15)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.
10. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
11. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

OWNER'S DECLARATION

Escrow No.: 30053937-997-MAT-ML6
Property Address: No situs APN 025-270-023
Unincorporated County of Imperial, CA

The undersigned hereby declares as follows:

1. (Fill in the applicable paragraph and strike the other)

   a. Declarant ("Owner") is the owner or lessee, as the case may be, of certain premises located at No situs APN 025-270-023, Unincorporated County of Imperial, CA, further described as follows: See Preliminary Report/Commitment No. for full legal description (the "Land").

   b. Declarant is the _____ of _____ ("Owner"), which is the owner or lessee, as the case may be, of certain premises located at No situs APN 025-270-023, Unincorporated County of Imperial, CA, further described as follows: See Preliminary Report/Commitment No. for full legal description (the "Land").

2. (Fill in the applicable paragraph and strike the other)

   a. During the period of six months immediately preceding the date of this declaration no work has been done, no surveys or architectural or engineering plans have been prepared, and no materials have been furnished in connection with the erection, equipment, repair, protection or removal of any building or other structure on the Land or in connection with the improvement of the Land in any manner whatsoever.

   b. During the period of six months immediately preceding the date of this declaration certain work has been done and materials furnished in connection with _____ upon the Land in the approximate total sum of $_____, but no work whatever remains to be done and no materials remain to be furnished to complete the construction in full compliance with the plans and specifications, nor are there any unpaid bills incurred for labor and materials used in making such improvements or repairs upon the Land, or for the services of architects, surveyors or engineers, except as follows: _____. Owner, by the undersigned Declarant, agrees to and does hereby indemnify and hold harmless Fidelity National Title Company against any and all claims arising therefrom.

3. Owner has not previously conveyed the Land; is not a debtor in bankruptcy (and if a partnership, the general partner thereof is not a debtor in bankruptcy); and has not received notice of any pending court action affecting the title to the Land.

4. Except as shown in the above-referenced Preliminary Report/Commitment, there are no unpaid or unsatisfied mortgages, deeds of trust, Uniform Commercial Code financing statements, regular assessments, special assessments, periodic assessments or any assessment from any source, claims of lien, special assessments, or taxes that constitute a lien against the Land or that affect the Land but have not been recorded in the public records. There are no violations of the covenants, conditions and restrictions as shown in the above-referenced Preliminary Report/Commitment.

5. The Land is currently in use as _____; _____ occupy/occupies the Land; and the following are all of the leases or other occupancy rights affecting the Land:

   _____

6. There are no other persons or entities that assert an ownership interest in the Land, nor are there unrecorded easements, claims of easement, or boundary disputes that affect the Land.

7. There are no outstanding options to purchase or rights of first refusal affecting the Land.

8. Between the most recent Effective Date of the above-referenced Preliminary Report/Commitment and the date of recording of the Insured Instrument(s), Owner has not taken or allowed, and will not take or allow, any action or inaction to encumber or otherwise affect title to the Land.

This declaration is made with the intention that Fidelity National Title Company (the "Company") and its policy issuing agents will rely upon it in issuing their title insurance policies and endorsements. Owner, by the undersigned Declarant, agrees to indemnify the Company against loss or damage (including attorneys fees, expenses, and costs) incurred by the Company as a result of any untrue statement made herein.

I declare under penalty of perjury that the foregoing is true and correct and that this declaration was executed on _____ at _____.

APPENDIX K

PC ORIGINAL PKG

GS Lyon

Steven K. Williams, CEG
Senior Engineering Geologist

Education
M.S. Geology
University of Utah, 1993
B.S. Geology
University of Utah, 1989

Registration
Registered Geologist
Arizona 3759
California 6975
Certified Engineering Geologist
California 2261

Professional Experience

2000 – Present	Project Geologist GS Lyon Consultants, Inc.
1994 - 2000	Staff Geologist GS Lyon Consultants, Inc.
1994	Field Geologist Bureau of Land Management
1991 - 1992	Exploration Geologist Kennecott Corporation

Summary of Experience
Mr. Williams has performed geotechnical investigations in southern California and southwestern Arizona. His field experience includes logging of soil borings and exploratory trenches, collection and documentation of soil samples, collection of field geotechnical data, and monitoring pile driving operations. Mr. Williams is also responsible for preparing computer generated data and figures, drafting and subsequent writing of geotechnical reports for a variety of projects including road improvements, fault studies, liquefaction potential evaluation, foundation preparation, seepage studies, structural distress, and soil investigations. He has performed geotechnical, geologic, and environmental studies for a wide variety of projects including correctional facilities, water and wastewater facilities, schools, residential subdivisions, commercial developments, and landfills throughout southern California and southwestern Arizona.

Mr. Williams also performs Phase I Environmental Site Assessments throughout the Imperial and Coachella Valleys. The scope of work for these projects typically include a site reconnaissance, review of government records pertaining to previous site uses, and preparation of a report identifying potential environmental risks.

He also conducts investigations for the potential of asbestos-containing materials and lead-based paint in old building projects and potential for soil contamination by hydrocarbons, pesticides, and other hazardous materials.

Professional Affiliations
Geological Society of America, Member

Selected Project Experience
- **El Centro Seniors Apartments, El Centro, CA**

Performed Phase I and Phase II environmental site assessments for apartment complex at old school district office site with underground storage tanks.
- **Central Main Canal Seepage Study, Imperial, CA**

Conducted 6-month groundwater seepage study for Imperial Irrigation District to evaluate high groundwater levels in Sandalwood Glen Subdivision
- **Gateway to the Americas, Calexico, CA**

Conducted Phase I ESA, geologic hazards study and geotechnical investigation including liquefaction evaluation for 1,700 acre development associated with new Port of Entry east of Calexico
- **El Centro Magistrate Court, El Centro, CA**

Conducted geotechnical investigation and Phase I ESA for new Federal Magistrate Court building at site with soft soil conditions requiring foundation settlement analysis
- **El Centro Regional Medical Center, El Centro, CA**

Conducted Phase I ESA and geotechnical investigation for 50,000 sf, 2-story addition to the medical center's emergency room, operating rooms, and recovery rooms.
- **Brawley Union High School, Brawley, CA**

Conducted Phase II investigation for PCB and lead contamination of surficial soil and hydrocarbon contamination of subsurface soil of a property proposed for purchase.
- **EW Corporation Site, Westmorland, CA**

Conducted Phase II investigation for hydrocarbon contamination of subsurface soil of a service station site with leaking underground storage tanks prior to property purchase
- **Various Apartment Complexes, Imperial County, CA**

Conducted Phase I environmental investigation at numerous proposed apartment complex site within the Imperial Valley
- **Oasis Elementary School, Mecca, CA**

Conducted PEA environmental investigation for the new Oasis Elementary School prior to construction of school

Phase I Environmental Site Assessment Report
Vega 5 (Te Dana and SW Clark) Solar Site
NEC Schrimpf and Wiest Roads
Niland, California
GSL Report No. GS2016

Dear Mr. Alaynon:

We have performed a Phase I Environmental Site Assessment in general conformance with the scope and limitations of ASTM E1527-13 of the approximately 240-acre property located at the northeast corner of Schrimpf Road and Wiest Road approximately 4.5 miles southeast of Niland, California. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report. **This assessment has revealed the following "de minimis" condition in connection with the property:**

- Pesticide residues (low concentrations) typical to agricultural crop applications may be present in the near surface soils in the agricultural field in the southwestern portion of the subject property.

This assessment has not revealed any recognized environmental conditions (REC's) in connection with the property.

We declare that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312 and we have the specific qualifications based on education, training and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

PC ORIGINAL PKG

Attached is our report which describes the procedures used and results of the assessment. If you have any questions or require additional information, please do not hesitate to contact the undersigned at (760) 337-1100. We appreciate the opportunity to provide our professional review for this subject property.

Respectfully Submitted,
GS Lyon Consultants, Inc.

Jeffrey O. Lyon, PE
Principal Engineer

Steven K. Williams, PG, CEG
Consulting Geologist

1.0 INTRODUCTION

1.1 Purpose

GS Lyon Consultants, Inc. was retained by Apex Energy Solutions, LLC to conduct a Phase I Environmental Site Assessment (ESA) for the Property (herein referred to as the subject property or subject property in this Phase I ESA Report) as a prerequisite to property transaction (purchase, sale, refinance, etc.). The subject property is located at the northeast corner of Schrimpf Road and Wiest Road approximately 4.5 miles southeast of Niland, California. See Plate 1 in Appendix B for a Vicinity Map of the subject property.

The purpose of this Phase I Environmental Site Assessment (ESA) is to identify, to the extent feasible, recognized environmental conditions (RECs) associated with past and present activities on the subject property or in the immediate subject property vicinity in general conformance to ASTM Standard E1527-13 "*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*" that may affect future uses of the subject property.

This report is intended to satisfy the Phase I ESA portion of "*all appropriate inquiry*" into the previous ownership and uses of the subject property as defined under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) at Title 42 of the United States Code (U.S.C.) §9601(35)(B) and in accordance with 40 Code of Federal Regulations (CFR) Part 312, Standards and Practices for All Appropriate Inquiries; Final Rule (AAI Rule).

1.2 Scope of Services

The scope of work for this ESA is in general accordance with the requirements of ASTM Standard E1527-13. This assessment included:

- Reconnaissance of the subject property and adjacent properties
- Review user-provided information
- Interviews with persons with significant knowledge of the subject property
- Review of a regulatory database report provided by a third-party vendor
- Review readily-available historical sources (including but not limited to: aerial photographs, fire insurance maps, property tax files, recorded land title records, and topographical maps)
- Prepare report of findings

PC ORIGINAL PKG

1.3 Limitations

No Phase I ESA can completely eliminate uncertainty regarding the potential for RECs in connection with a property. Conformance of this assessment with ASTM Standard E1527-13 is intended to reduce, but not eliminate uncertainty regarding the potential for RECs in connection with the Subject Property. While GS Lyon has made reasonable effort to discover and interpret available historical and current information on the property within the time available, the possibility of undiscovered contamination remains. Our assessment of the subject property and surrounding areas was conducted in accordance with ASTM guidelines and the *generally accepted environmental engineering standard of practice* which existed in Imperial County, California at the time that the report was prepared. No warranty, express or implied, is made.

GS Lyon Consultants, Inc. derived the data in this report primarily from visual inspections, examination of public records and information in the public domain, informal interviews with individuals, and readily available information about the subject property. The passage of time, manifestation of latent conditions or occurrence of future events may require further exploration of the subject property, analysis of the data, and reevaluation of the findings, observations, and conclusions expressed in this report.

The findings, observations, and conclusions expressed by GS Lyon Consultants in this report are not, and should not be considered, an opinion concerning the compliance of any past or present owner or operator of the subject property with any federal, state or local law or regulation.

This report should not be relied upon after **180 days** from the date of issuance, unless additional services are performed as defined in ASTM E1527-13 - Section 4.7.

1.4 Deviations or Data Gaps

ASTM Standard E1527-13 requires any significant data gaps, deviations, and deletions from the ASTM Standard to be identified and addressed in the Phase I ESA. A significant data gap would be one that affected the ability to identify a REC on the subject property or adjacent properties.

Through the course of this assessment, *data failures* or *data gaps* may have been encountered. These failures or gaps, if any, are discussed below. The following provides the opinion of the Environmental Professional as to the significance of the data gaps in terms of defining *recognized environmental conditions* at the subject property. Data failures may or may not be significant data gaps, and the discussion also provides information pertaining to whether the data failures resulted in significant data gaps.

PC ORIGINAL PKG

1.4.1 Data Failures

Data failure is a failure to achieve the historical (property use) research objectives specified in the ASTM Standard Practice even after reviewing the eight standard historical sources that are reasonably ascertainable and likely to be useful. Data failure is one type of data gap.

No *data failures w*ere encountered during this investigation.

1.4.2 Data Gaps

A *data gap* is a lack of or inability to obtain information required by the ASTM Standard Practice, despite good faith efforts by the Environmental Professional (EP) to gather such information. This could include any component of the Practice, e.g., standard environmental records, interviews, or a complete reconnaissance. A data gap by itself is not inherently significant, but if other information and/or the EP's experience raises reasonable concerns about the gap, it may be judged to be significant.

Due to the location of the subject property, Sanborn Fire Insurance maps were not available for the subject property. Because there is no historical data or physical indications that the property has ever been developed or occupied by a business that would have produced hazardous materials, the lack of Sanborn Fire Insurance maps is not considered a significant data gap.

Aerial photographs and other historical records were not available at 5 year intervals as required under the ASTM E1527-13 standard. This resulted in a data gap for years that records were not available regarding the area of the subject property. However, based upon other historical information reviewed, the subject property has been agricultural fields along the west of the East Highline (EHL) Canal and vacant desert land to the east of the East Highline Canal. Therefore, this data gap is not considered to be significant.

Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.

PC ORIGINAL PKG

1.5 Significant Assumptions

In preparing this report, GS Lyon Consultants, Inc. has relied upon and presumed accurate certain information (or the absence thereof) about the subject property and adjacent properties by governmental officials and agencies, the Client, and others identified herein. Except as otherwise stated in the report, GS Lyon Consultants has not attempted to verify the accuracy or completeness of any such information.

1.6 User Reliance

This report has been prepared on behalf of and for the exclusive use of Apex Energy Solutions, LLC for the particular subject property identified in this report, and is subject to and issued in connection with the referenced Agreement and the provisions thereof. This report should not be relied upon by any party other than the client, its legal counsel, and financial institution without the express permission of GS Lyon Consultants, Inc. Any reliance on this report by other parties shall be at such party's sole risk. Any future consultation or provision of services to third parties related to the subject property requires written authorization from Apex Energy Solutions, LLC or their representatives. Any such services may be provided at GS Lyon Consultants sole discretion and under terms and conditions acceptable to GS Lyon Consultants, including potential additional compensation.

PC ORIGINAL PKG

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The approximately 240-acre subject property (APNs 025-260-019 and 025-260-022) is located at the northeast corner of Schrimpf Road and Wiest Road approximately 4.5 miles southeast of Niland, California. The subject property location is depicted on Plate 1, Site Map.

2.2 Current Property Use and Description

The subject property currently consists of two distinct parcels: a fallow agricultural field located along the west side of the East Highline (EHL) Canal and vacant desert land located on the east side of the EHL Canal. Descriptions of the two parcels are provided below.

Agricultural Area: The parcel west of the EHL consists of a fallow agricultural field. Scattered dry crop residue and weeds cover the site. The field is bounded on the north by McDonald Road and the south by Schrimpf Road. Wiest Road forms the western boundary. The EHL earthen canal banks are approximately 6 to 20 feet higher in elevation than the agricultural land west of the canal. The EHL Canal is aligned diagonally in a northwest-southeast direction. Citrus orchards are located to the south and north sides of the subject site. The "O" and "N" Lateral irrigation canals are located parallel to the north and south sides, respectively, of the agricultural field.

Subsurface tile drainage pipelines exist within the farm field. The tile lines are generally aliened north-south and are spaced at 100 feet on center, with some closer spaced lines along east side of the field. The tile lines carry irrigation wastewater to the N Drain at the southwest corner of the field.

Desert Area: The desert area consist of two triangular areas located east of the EHL Canal. The Union Pacific Railroad (UPRR) tracks form the eastern boundary of the desert area. Dry wash beds cross the desert area in a northeast to southwest direction. Flash flooding can occur in the desert wash that fans out across the subject parcel. Desert vegetation is scattered throughout the site. High voltage powerlines (230-kV) form the western boundary of the northern triangle parcel and the eastern boundary of the southern triangle parcel. Noffsinger Road, an unpaved road that parallels the railroad tracks, forms the northeastern boundary of the desert area.

PC ORIGINAL PKG

2.3 Adjoining Property Use

The subject property is located at the boundary between the cultivated portion and the desert margins of the Imperial Valley southeast of Niland, California. Adjacent properties consist of agricultural fields and citrus orchards west of the EHL Canal and vacant desert lands east of the EHL Canal.

2.4 Physical Site Characteristics

Topography: Topographic maps (USGS 7.5 minute Iris, CA Quadrangle) indicate that the subject property elevation is approximately 65 feet below to 16 feet above mean sea level (MSL) or Elevation 935 to 1015 (local datum). The Imperial Irrigation District, which supplies power and raw (irrigation) water to the area, established local datum by equating mean sea level to El. 1000.00 feet.

Geologic Setting: The subject property is located in the Colorado Desert Physiographic province of southern California. The dominant feature of the Colorado Desert province is the Salton Trough, a geologic structural depression resulting from large-scale regional faulting. The trough is bounded on the northeast by the San Andreas Fault and the southwest by faults of the San Jacinto Fault Zone. The Salton Trough represents northward extension of the Gulf of California, which has experienced continual in-filling with both marine and non-marine sediments since the Miocene Epoch (25 million years before present). The tectonic activity that formed the trough continues at a high rate as evidenced by deformed young sedimentary deposits and high levels of historic seismicity.

The subject property is directly underlain by Holocene (0-11,000 years before present) Cahuilla Lake sediments, which consist of interbedded lenticular and tabular sand, silt, and clay. The predominant surface soil is silty clay. The Holocene lake deposits are considered to be less than 100 feet thick and are characterized by surficial clay and silt deposits with varying amounts of fine sand. The topography of the Imperial Valley is relatively flat, with few significant land features. The valley floor slopes gently to the north (less than 0.5 percent) from an elevation of sea level at Calexico to approximately 225 feet below sea level at the Salton Sea.

Soil Conditions: The U. S. Soil Conservation Service compiled a map of surface soil conditions and published a soil survey report including maps in 1980. The soil survey maps indicate that surficial deposits at the subject property and surrounding area consist predominantly of sandy loams of the Meloland, Niland, Rositas, and Vint-Indio soil groups (see Appendix B).

PC ORIGINAL PKG

These loams are formed in sediment and alluvium of mixed origin (Colorado River overflows, fresh-water lake-bed sediments, and alluvial fan deposits). Based on Unified Soil Classification System presented in the Soils Survey Report, the permeability of these soils is expected to be low to moderate.

Groundwater Conditions: The groundwater in the agricultural portion of the subject property is brackish and is encountered at a depth of 2.5 to 12 feet below the ground surface. The groundwater is shallowest along the unlined EHL Canal due to seepage.

Groundwater levels may fluctuate with precipitation, EHL Canal water elevation, irrigation of adjacent properties, site watering, drainage, and site grading. Based on the regional topography, groundwater flow is assumed to be generally towards the southwest within the subject property area. Flow directions may also vary locally in the vicinity of the subject property.

PC ORIGINAL PKG

3.0 USER PROVIDED INFORMATION

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiry* is not complete. The user was asked to provide information or knowledge of the following:

- Environmental cleanup liens that are filed or recorded against the subject property.
- Activity and land use limitations that are in place on the subject property or that have been filed or recorded in a registry.
- Specialized knowledge or experience of the person seeking to qualify for the LLPs.
- Relationship of the purchase price to the fair market value of the *property* if it were not contaminated.
- Commonly known or *reasonably ascertainable* information about the *property*.
- The degree of obviousness of the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation.
- The reason for preparation of this Phase I ESA.

A user questionnaire was provided to the user to aid in gathering information that may be pertinent to the evaluation of the subject property for environmental conditions. The completed user questionnaire is provided in Appendix I.

3.1 Title Records

GS Lyon reviewed preliminary title reports as part of this assessment and did not find past ownership or easements that would indicate environmentally hazardous uses on the parcels.

3.2 Environmental Liens or Activity and Use Limitations

An environmental lien is a charge, security, or encumbrance upon the title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products upon the property. According to the User Questionnaire, Ms. Jamie Nagel of Apex Energy Solutions, LLP is not aware of any Environmental Liens or Activity and Use Limitations associated with the subject property that have been filed or recorded under federal, tribal, state or local law (Appendix G). No environmental liens associated with the subject property were noted in the preliminary title report.

3.3 Specialized Knowledge

According to the User Questionnaire, Ms. Nagel is not aware of any specialized knowledge or experience associated with the subject property or nearby properties.

PC ORIGINAL PKG

GS Lyon does not have any personal knowledge of the subject property.

3.4 Commonly Known or Reasonable Ascertainable Information

No information was provided by the Client regarding any commonly known or reasonably ascertainable information within the local community that is material to RECs in connection with the subject property.

3.5 Valuation Reduction for Environmental Issues

The client indicated that the purchase price of this property reasonably reflects the fair market value of the property with no discounts for environmental issues.

3.6 Owner, Property Manager, and Occupant Information

The current owner of the subject property APN 025-260-022 is Ms. Dana Te and the property owners of APN 025-260-019 are The Marjorie A. Hoffmeister Gardner Trust, Bay Family Trust, and the Joseph G. Clark Revocable Trust.

The subject property is currently undeveloped desert land and fallow agricultural land. No property manager or occupant information is available.

3.7 Previous Reports and Other Provided Documentation

No previous reports or other pertinent documentation was provided to GS Lyon for review during the course of this assessment.

PC ORIGINAL PKG

4.0 RECORDS REVIEW

A review of historic aerial photographs (Appendix C), historic topographic maps (Appendix D), governmental regulatory databases (Appendix E), other regulatory and agency databases (Appendix F), and historic telephone and city directories was performed to evaluate potentially adverse environmental conditions resulting from previous ownership and uses of the subject property. The details of the review are presented in Sections 4.1 through 4.5 of this report.

4.1 Regulatory Database Review

4.1.1 Standard Environmental Record Sources

GS Lyon Consultants contracted Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut which queries and maintains comprehensive environmental databases and historical information, including proprietary databases, aerial photography, topographic maps, Sanborn Maps, and city directories to generate a compilation of Federal, State and Tribal regulatory lists containing information regarding hazardous materials occurrences on or within the prescribed radii of ASTM E1527-13. The search of each database was conducted using the approximate minimum search distances from the subject property defined by the ASTM E1527-13 Standard. The purpose of the records review is to obtain and review *reasonably ascertainable* records that will help identify *recognized environmental conditions* or *historical recognized environmental conditions* in connection with the subject property.

EDR‘s Phase I ESA search package was ordered and performed on August 28, 2020. The search package included: Radius Map with Geocheck, aerial photographs, and historic topographic maps.

The results of EDR’s search were used to evaluate if the subject property and/or properties within prescribed search distances are listed as having a past or present record of actual or potential environmental impact. Inclusion of a property in a government database list does not necessarily indicate that the property has an environmental problem.

The following is a brief synopsis of sites identified in the EDR Radius Map with Geocheck report. The government record search report is included in its entirety in Appendix D.

PC ORIGINAL PKG

Federal NPL List

The Environmental Protection Agency's (EPA) National Priorities List (NPL) of uncontrolled or abandoned hazardous waste sites was reviewed for risk sites within a 1 mile radius of the subject property. The NPL identifies sites for priority cleanup and long-term care of properties under the Superfund Program that are contaminated with hazardous substances.

The database search did not identify any NPL sites within 1 mile of the subject property.

Federal CERCLIS List

The EPA's Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) listings were reviewed to determine if risks sites within ½ mile are listed for investigation. The CERCLIS database identifies hazardous waste sites that are on or proposed to be included in the NPL and sites that require investigation and possible remedial action to mitigate potential negative impacts on human health or the environment.

The CERCLIS database search did not identify any risk sites within 0.5 mile of the subject property.

Federal CERCLIS – No Further Remedial Action Planned

The EPA's CERCLIS – No Further Remedial Action Planned (NFRAP) database was reviewed to determine if risks sites within ½ mile are listed. CERCLIS NFRAP site are risk sites that have been removed from and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at the subject property has been completed and the EPA has determined that no further steps will be taken to list this subject property on the NPL, unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time.

This designation is for sites where no contamination was found, contamination was quickly removed without the need for the subject property to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration.

The CERCLIS – NFRAP database search did not identify any risk sites within ½mile of the subject property.

PC ORIGINAL PKG

Federal RCRA List

The Federal Resource Conservation Recovery Act (RCRA) Notifiers List was reviewed to determine if RCRA treatment, storage or disposal sites (TSD) are located within 1 mile of the subject property. The RCRA Correction Action Sites List (CORRACTS) is maintained for risk sites which are undergoing "a corrective action". A corrective action order is issued when there has been a release of hazardous waste constituents into the environment from a RCRA facility.

The RCRA and RCRA CORRACTS database searches did not identify any RCRA TSD or RCRA CORRACTS risk sites within ½ mile of the subject property.

The RCRA regulated hazardous waste generator notifiers list was reviewed to determine if RCRA generator facilities are located on or adjoining the subject property. No RCRA generator facilities within ¼ mile of the subject property were identified in the database.

Federal ERNS List

The Federal Emergency Response Notification System (ERNS) List was reviewed to determine if reported release of oil and/or hazardous substances occurred on the subject property.

The ERNS database searches did not identify any reported releases for the subject property.

State and Tribal NPL List

The Environmental Protection Agency's (EPA) National Priorities List (NPL) of uncontrolled or abandoned hazardous waste sites was reviewed for risk sites within a 1 mile radius of the subject property. The NPL identifies sites for priority cleanup and long-term care of properties under the Superfund Program that are contaminated with hazardous substances.

The database search did not identify any NPL sites within 1 mile of the subject property.

State and Tribal equivalent CERCLIS

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

PC ORIGINAL PKG

EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

The EnviroStor database search did not identify and risk sites within 1 mile of the subject property.

State and Tribal Leaking Underground Storage Tank Sites

The California State Water Resources Control Board (SWRCB) maintains a list of information concerning reported leaking underground storage tanks (LUST). The LUST inventory list was reviewed to determine if any LUSTs are located within ½ mile the subject property.

The SWRCB LUST database did not identify any risk sites within ½ mile of the subject property.

State and Tribal Underground and Aboveground Storage Tank Sites

The California State Water Resource Control Board (SWRCB) underground storage tank (UST) and above ground storage tank (AST) inventory list was reviewed to determine if any UAST's are located on or adjacent to the subject property.

The SWRCB UST and AST databases did not identify any risk sites within ¼ mile of the subject property.

Solid Waste Disposal/Landfill Facilities

The Solid Waste Disposal/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data comes from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list database did not identify any risk sites within ½ mile of the subject property.

Unmapped (Orphan) Sites

Not all sites or facilities identified in the database records can be accurately located in relation to the Subject Property due to incomplete information being supplied to the regulatory agencies and are referred to as "orphan sites" by EDR.

PC ORIGINAL PKG

The "Orphan Summary" section of the EDR Radius Map Report identified several orphan sites. Based on a drive-by reconnaissance of the Subject Property vicinity and review of location and status information provided in the database report, none of the identified orphan sites are located within the search radii for databases specified by the Standard.

No unmapped (orphan) listings were reported.

4.1.2 Additional Environmental Record Sources

California Department of Toxic Substances Control (DTSC) Records – Envirostor Database: EnviroStor is an online search and Geographic Information System tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. Public Access to EnviroStor is accessible via the DTSC Web Page located at: http://www.envirostor.dtsc.ca.gov/public/. The EnviroStor database includes the following site types: Federal Superfund sites (National Priority List); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. The information includes site name, site type, status, address, any restricted use (recorded deed restrictions), past use(s) that caused contamination, potential contaminants of concern, potential environmental media affected, site history, planned and completed activities. The EnviroStor database also contains current and historical information relating to Permitted and Corrective Action facilities. The EnviroStor database includes current and historical information on the following permit-related documents: facility permits; permit renewal applications; permit modifications to an existing permit; closure of hazardous waste management units (HWMUs) or entire facilities; facility corrective action (investigation and/or cleanup); and/or post-closure permits or other required post-closure activities.

The EnviroStor database was queried on September 10, 2020. A map showing the results of the query is provided in Appendix F. No reported cases were found on the subject property. No risk sites were located within ½ mile of the subject property.

California State Water Resources Control Board Records – GeoTracker Database: GeoTracker is a geographic information system (GIS) maintained by the California State Water Resources Control Board (SWRCB) that provides online access to environmental data at http://www.geotracker.swrcb.ca.gov\. GeoTracker tracks regulatory data about underground fuel tanks, fuel pipelines, and public drinking water supplies. Site information from the Spills, Leaks, Investigations, and Cleanups (SLIC) Program is also included in GeoTracker.

PC ORIGINAL PKG

The GeoTracker database was queried for environmental data pertaining to the Subject property on September 10, 2020. A map showing the results of the query is provided in Appendix F. No reported cases were found on the subject property. No risk sites were located within ½ mile of the subject property.

CUPA Records Search: The Unified Program consolidates, coordinates, and makes consistent the administrative requirements, permits, inspections, and enforcement activities of six environmental and emergency response programs. Cal/EPA and other state agencies set the standards for their programs while local governments implement the standards—these local implementing agencies are called Certified Unified Program Agencies (CUPA).

The DTSC Imperial CUPA office was contacted (Veronica Lopez) by email on September 16, 2020. CUPA records were searched for environmental issues related to the subject property. The DTSC indicated that records are filed per address, and with no known address associated with the subject property, no records were found associated with the subject property.

4.2 Historical Use Records

ASTM E1527-13 requires the environmental professional to identify all obvious uses of the property from the present back to the property's first developed use or 1940, whichever is earliest. This information is collected to identify the likelihood that past uses have led to RECs in connection with the property. This task is accomplished by reviewing standard historical sources to the extent that they are necessary, reasonably ascertainable, and likely to be useful. These standard records include aerial photographs, fire insurance maps, property tax files, land title records, topographic maps, city directories, telephone directories, building department records, and zoning/land use records.

The general type of historical use (i.e., commercial, retail, residential, industrial, undeveloped, office) should be identified at 5-year intervals, unless the specific use of the property appears to be unchanged over a period longer than 5 years. The historical research is complete when the use is defined or when data failure occurs. Data failure occurs when all of the standard historical sources have been reviewed, yet the property use cannot be identified back to its first developed use or to 1940. Data failure is not uncommon in trying to identify the use of the property at 5-year intervals back to first use or 1940, whichever is earlier.

PC ORIGINAL PKG

GS Lyon reviewed the following historical records to identify obvious uses of the subject property from the present back to the property's first developed use, or to 1940, whichever is earlier. The results of this research and data failure, if encountered, are presented in the following sections.

4.2.1 Title Records

GS Lyon reviewed preliminary title reports as part of this assessment and did not find past ownership or easements that would indicate environmentally hazardous uses on the parcels.

4.2.2 Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps are large scale maps depicting the commercial, industrial, and residential sections of various cities across the United States. Since the primary use of the fire insurance maps was to assess the buildings that were being insured, the existence and location of fuel storage tanks, flammable or other potentially toxic substances, and the nature of businesses are often shown on these maps.

Due to the rural undeveloped nature of the subject property and vicinity for the years the Sanborn Fire Insurance Maps were available for this subject property, no maps are available for the subject property.

4.2.3 Aerial Photographs

Aerial photographs obtained from Environmental Data Resources (EDR) dating back to 1937 and Google Earth aerial photographs dating back to 1996 were reviewed for historical development of the subject property. Reproductions of the historical aerial photographs reviewed are included in Appendix C.

The 1937 aerial photograph shows the subject site as being vacant desert ground. The East Highline Canal crosses diagonally through the western parcel. A dry wash is shown crossing both parcels from a northeast to southwest direction. Adjacent parcels appear to be vacant desert lands. An agricultural field is present to the southwest of the subject site.

The 1940 and 1953 aerial photographs show the subject site as being similar to the 1937 aerial photograph except there are several small structures located adjacent to the west side of the EHL Canal on McDonald Road. The vegetation in the dry was area adjacent to the EHL Canal is thicker. Agricultural fields are located to the west and south of the western parcel.

PC ORIGINAL PKG

The 1976 aerial photograph shows the subject site to the west of the EHL Canal has been cleared of vegetation and the structures in the northeast corner of this parcel have been removed. The parcels east of the EHL Canal are still vacant desert land.

The 1984 aerial photograph shows the subject site as being similar to the 1976 photograph.

The 2004, 2008, and 2012 aerial photographs show the subject site west of the EHL Canal is apparently fallow agricultural land. The parcels east of the EHL Canal are still vacant desert land.

The 1992 and 1996 aerial photographs show the subject site west of the EHL Canal is under cultivation. The parcels east of the EHL Canal are still vacant desert land.

The 2015 aerial photograph shows the northern portion of the subject site west of the EHL Canal is under agricultural cultivation and the southern portion is fallow. The parcels east of the EHL Canal are still vacant desert land.

4.2.4 Street Directories

City directories are used for locating individuals and businesses in a particular urban or suburban area. City directories are generally divided into three sections: a business index, a list of resident names and addresses, the name and type of businesses (if unclear from the name). While city directory coverage is comprehensive for major cities, it may be spotty for rural and small towns.

Polk City Directories: The Polk City Directories for the years 1965 and 1983 were reviewed. No listings for the subject properties were found.

4.2.5 Historic Topographic Maps

Historic topographic maps (1940, 1945, 1947, 1956, 1965, 1976, 1992, 2002, and 2012), USGS 7.5 Min. Iris, CA Quadrangle, showed the subject property the subject property as being predominantly vacant. The 1940, 1945, and 1947 historical topographic maps showed development in the northeast portion of the parcel west of the East Highline Canal (Appendix D).

4.2.6 Historical Telephone Directories

Telephone Directories: Telephone directories for the Imperial County, which included the City of Niland businesses published in 1941, 1955, 1965, 1974, 1994, and 2004 were reviewed.

PC ORIGINAL PKG

No service stations, chemical manufacturers, petroleum manufacturers, distributors, or automotive repair facilities were noted at or in the immediate vicinity of the subject property. No listings for the subject site were found.

4.3 Historical Use Summary

4.3.1 Summary of the Historical Use of Property

Based on a review of the historical information, the western portion of the subject property was first developed in the 1960-70s for agricultural use. The portion of the subject property east of the East Highline Canal has remained vacant desert land.

4.3.2 Summary of the Historical Use of Adjacent Properties

Historically, the properties located immediately adjacent to the subject property have been comprised of agricultural field to the west and south and vacant desert lands to the east and north. Development of the agricultural fields began in the 1930s.

PC ORIGINAL PKG

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

A site reconnaissance was performed by Mr. Pete LaBrucherie, a consulting engineer to GS Lyon Consultants, on September 29, 2020. The site visit consisted of a walking the perimeter of the subject property and randomly crossing the subject property. The reconnaissance included visual observations of surficial conditions at the subject property and observation of adjoining properties to the extent that they were visible from public areas. Mr. LaBrucherie was unaccompanied during the site reconnaissance.

The site reconnaissance was limited to visual and/or physical observation of the exterior and interior of the subject property and its improvements, the current uses of the property and adjoining properties, and the current condition of the property. The site visit evaluated the subject property and adjoining properties for potential hazardous materials/waste and petroleum product use, storage, disposal, or accidental release, including the following: presence of tank and drum storage; mechanical or electrical equipment likely to contain liquids; evidence of soil or pavement staining or stressed vegetation; ponds, pits, lagoons, or sumps; suspicious odors; fill and depressions; or any other condition indicative of potential contamination. The site visit did not evaluate the presence of asbestos-containing materials, radon, lead-based paint, mold, indoor air quality, or structural defects, or other non-scope items.

A site reconnaissance can be limited by weather conditions, bodies of water, adjacent buildings, or other obstacles. The weather was warm and sunny and no access limitations were placed on the site visit.

5.2 General Site Setting

The subject property currently consists of two distinct parcels: a fallow agricultural field located on the west side of the East Highline (EHL) Canal and vacant desert land located on the east side of the EHL Canal. Descriptions of the two parcels are provided below.

Agricultural Area: The parcel west of the EHL consists of a fallow agricultural field. Scattered dry crop residue and weeds cover the site. The field is bounded on the north by McDonald Road and the south by Schrimpf Road. Wiest Road forms the western boundary. The EHL earthen canal banks are approximately 6 to 20 feet higher in elevation than the agricultural land west of the canal. The EHL Canal is aligned diagonally in a northwest-southeast direction. Citrus orchards are located to the south and north sides of the subject site. The "O" and "N" Lateral irrigation canals are located parallel to the north and south sides, respectively, of the agricultural field.

PC ORIGINAL PKG

Subsurface tile drainage pipelines exist within the farm field. The tile lines are generally aliened north-south and are spaced at 100 feet on center, with some closer spaced lines along east side of the field. The tile lines carry irrigation wastewater to the N Drain at the southwest corner of the field.

Desert Area: The desert area consist of two triangular areas located east of the EHL Canal. The Union Pacific Railroad (UPRR) tracks form the eastern boundary of the desert area. Dry wash beds cross the desert area in a northeast to southwest direction. Desert vegetation is scattered throughout the site. High voltage powerlines (230-kV) parallel the western boundary of the northern triangle parcel and the eastern boundary of the southern triangle parcel. Noffsinger Road, an unpaved road that parallels the railroad tracks, forms the northeastern boundary of the desert area.

Photographs of the subject property taken on September 29, 2020 during our site reconnaissance are included in Appendix A.

5.3 Adjacent Properties

The subject property is located at the boundary between the cultivated portion and the desert margins of the Imperial Valley southeast of Niland, California. Adjacent properties consist of agricultural fields and citrus orchards west of the EHL Canal and vacant desert lands east of the EHL Canal.

5.4 Exterior and Interior Observations

The following conditions were specifically assessed for their potential to indicate RECs and may include conditions inside or outside structures on the subject property.

5.4.1 Hazardous Substances and Petroleum Products

GS Lyon did not observe operations that use, treat, store, dispose of, or generate hazardous materials or petroleum products on the subject property.

5.4.2 Storage Tanks

Underground Storage Tanks (USTs) – No obvious visual evidence indicating the current presence of USTs (i.e. vent pipes, fill ports, etc.) was noted.

Aboveground Storage Tanks (ASTs) – No obvious visual evidence indicating the historical presence of ASTs (i.e. secondary containments, concrete saddles, etc.) was observed.

5.4.3 Odors

No obvious strong, pungent, or noxious odors were noted during the site reconnaissance.

PC ORIGINAL PKG

5.4.4 Pools of Liquid

Pools of liquid were not observed during the site reconnaissance.

5.4.5 Drums and Containers

GS Lyon did not observe drums or storage containers on the subject property.

5.4.6 Unidentified Substance Containers

GS Lyon did not observe open or damaged containers containing unidentified substances at the subject property.

5.4.7 Suspect Polychlorinated Biphenyl (PCB) Containing Equipment

No potential PCB containing equipment such as electrical transformers, capacitors, and hydraulic equipment were observed during the site reconnaissance on the subject property or immediate vicinity.

5.5 Interior Observations

The subject property is currently vacant with no structures; therefore, no interior observations were made.

5.6 Exterior Observations

5.6.1 Pits, Ponds, and Lagoons

No pits, ponds, or lagoons were noted on the subject property.

5.6.2 Stained Soils or Pavement

No evidence of significantly stained soil or pavement was noted on the subject property.

5.6.3 Stressed Vegetation

No evidence of stressed vegetation attributed to potential contamination was noted on the subject property.

5.6.4 Solid Waste

No dumpsters or solid waste containers exist on the subject property.

5.6.5 Wastewater

No wastewater is generated at the subject property.

PC ORIGINAL PKG

5.6.6 Wells

No evidence of wells (dry wells, drinking water, observation wells, groundwater monitoring wells, irrigation wells, injection wells or abandoned wells) was noted on the subject property.

5.6.7 Septic Systems

No septic systems are present on the subject property.

5.7 Non-Scope Issues

ASTM guidelines identify non-scope issues, which are beyond the scope of a Phase I ESA as defined by ASTM. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment. Some of these non-scope issues include; asbestos-containing building materials, radon, lead-based paint, and wetlands which are discussed below.

5.7.1 Asbestos-Containing Building Materials

The potential for asbestos containing materials (ACM) existing at the subject property is very low due to the lack of subject property structures.

5.7.2 Lead-Based Paint

The potential or lead based paint residues existing at the subject property is very low due to the lack of subject property development.

5.7.3 Radon

The subject property is located in Zone 3 as shown on the EPA Map of Radon Zones indicating a predicted average indoor radon screening level of less than 2 pCi/L; therefore, no further action is required. Radon gas is not believed to be a potential hazard at the subject property.

5.7.4 Wetlands

No wetlands are located within one (1) mile of the subject property.

PC ORIGINAL PKG

5.7.5 Agricultural Use

Based on our review of environmental records, historical documents, and subject property conditions, the property has been in agricultural use intermittently and/or vacant since the 1960's. Residues of currently available pesticides and currently banned pesticides such as DDT/DDE may be present in near surface soils in limited concentrations. The concentrations of these pesticides found on other Imperial Valley agricultural sites are typically less than 25% of the current regulatory threshold limits and, at those levels, are not considered a significant environmental hazard. The presence and concentration of near surface pesticides at this subject property can be accurately characterized only by site-specific sampling and testing.

PC ORIGINAL PKG

6.0 INTERVIEWS

GS Lyon interviewed various individuals familiar with the subject property, as identified to us, and/or government officials in order to evaluate historical uses and identify potential RECs existing on the subject property. The individuals interviewed were asked to provide responses in good faith and to the best of their knowledge. The following sections identify the individuals interviewed and summarize the information each provided; however, additional information provided by these individuals may be presented in other sections of this report.

6.1 Interview with Owner

GS Lyon we not able to contact the current property owner; therefore, no interview was conducted.

6.2 Interview with the Site Manager

The subject property is vacant, undeveloped land; therefore, there is no site manager.

6.3 Interview with Occupants

The subject property is vacant, undeveloped land and fallow agricultural land; therefore, there are no occupants.

6.4 Interview with Local Government Officials

The DTSC Imperial CUPA office was contacted (Veronica Lopez) by email on September 16, 2020. CUPA records were searched for environmental issues related to the subject property. The DTSC indicated that records are filed per address, and with no known address associated with the subject property, no records were found associated with the subject property.

Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap.

PC ORIGINAL PKG

7.0 EVALUATION

7.1 Summary of Findings

The approximately 240-acre property located at the northeast corner of Schrimpf Road and Wiest Road approximately 4.5 miles southeast of Niland, California. The western portion of the subject property was first developed in the 1960-70s for agricultural use. The portion of the subject property east of the East Highline Canal has remained vacant desert land.

7.2 Conclusions

GS Lyon has performed a Phase I Environmental Site Assessment in general conformance with the scope and limitations of ASTM E1527-13 of the property located at the northeast corner of Schrimpf Road and Wiest Road approximately 4.5 miles southeast of Niland, California. Any exceptions to, or deviations from, this practice are described in Section 1.4 of this Phase I ESA report.

7.2.1 Recognized Environmental Conditions

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term REC includes hazardous substances and petroleum products even under conditions that might be in compliance with laws. The term is not intended to include "de minimis" conditions as defined in Section 7.2.3 of this report.

This Phase I ESA has revealed no evidence of *recognized environmental conditions* in connection with the subject property.

7.2.2 Historical Recognized Environmental Conditions

A *historical recognized environmental condition (HREC)* refers to a past *release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls (for example, *property* use restrictions, *activity and use limitations*, *institutional controls*, or *engineering controls*).

PC ORIGINAL PKG

This Phase I ESA has revealed no evidence of *historical recognized environmental conditions* in connection with the subject property.

7.2.3 Environmental Concerns and De Minimis Conditions

A *de minimis condition* is a condition that generally does not present a threat to human health or the *environment* and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis conditions* are not *recognized environmental conditions* nor *controlled recognized environmental conditions*.

This Phase I ESA has revealed the following *de minimis* conditions or environmental concerns in connection with the subject property:

1. Pesticide residues (low concentrations) typical to agricultural crop applications may be present in the near surface soils in the agricultural field in the southwestern portion of the subject property.

7.3 Recommendations

Based on the scope of work performed for this assessment, it is our professional opinion that no RECs have been identified in connection with the subject property that would warrant further environmental study (Phase II) at this time.

Contact: Peter E. Labrucherie

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by GS Lyon Consultants were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# NA
Project: GS2016

Coordinates:

Latitude:	33.208248 33° 12' 30" North
Longitude:	-115.438914 -115° 26' 20" West
UTM Zone:	Zone 11 North
UTM X Meters:	645493.86
UTM Y Meters:	3675459.43

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

Page Numbers and Map Identifcations refer to the EDR Area/Corridor Report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

A review of the MINES list, as provided by EDR, and dated 06/08/2020 has revealed that there is 1 MINES site within approximately 0.25 miles of the requested target property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/29/2020
Date Data Arrived at EDR: 08/03/2020
Date Made Active in Reports: 08/25/2020
Number of Days to Update: 22

Source: EPA
Telephone: N/A
Last EDR Contact: 08/03/2020
Next Scheduled EDR Contact: 10/12/2020
Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/29/2020
Date Data Arrived at EDR: 08/03/2020
Date Made Active in Reports: 08/25/2020

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

PC ORIGINAL PKG

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

PC ORIGINAL PKG

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

ATTN: **Jamie Nichole Nagel**
YOUR REFERENCE: **025-260-022**

PROPERTY ADDRESS: No situs APN 025-260-022, Unincorporated County of Imperial, CA

PRELIMINARY REPORT

In response to the application for a policy of title insurance referenced herein, ***Fidelity National Title Company*** *hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception herein or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations or Conditions of said policy forms.*

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Attachment One. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Attachment One. Copies of the policy forms should be read. They are available from the office which issued this report.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

The policy(s) of title insurance to be issued hereunder will be policy(s) of Fidelity National Title Insurance Company, a Florida Corporation.

Please read the exceptions shown or referred to herein and the exceptions and exclusions set forth in Attachment One of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects and encumbrances affecting title to the land.

PC ORIGINAL PKG

EXCEPTIONS

AT THE DATE HEREOF, ITEMS TO BE CONSIDERED AND EXCEPTIONS TO COVERAGE IN ADDITION TO THE PRINTED EXCEPTIONS AND EXCLUSIONS IN SAID POLICY FORM WOULD BE AS FOLLOWS:

A. Property taxes, which are a lien not yet due and payable, including any assessments collected with taxes to be levied for the fiscal year 2020-2021.

B. Taxes and assessments levied by the Imperial Irrigation District.

C. The lien of supplemental or escaped assessments of property taxes, if any, made pursuant to the provisions of Chapter 3.5 (commencing with Section 75) or Part 2, Chapter 3, Articles 3 and 4, respectively, of the Revenue and Taxation Code of the State of California as a result of the transfer of title to the vestee named in Schedule A or as a result of changes in ownership or new construction occurring prior to Date of Policy.

1. Water rights, claims or title to water, whether or not disclosed by the public records.

2. Easement(s) in favor of the public over any existing roads lying within said Land.

3. Lack of legal right of access to and from a public street or highway.

4. Rights or claims of easements for canals, drains, laterals, irrigation pipelines and gates not recorded in the public records.

5. The right, title or interest which the County of Imperial may have or claim in and to those portions of the herein described lands lying within the boundaries of McDonald Road and Road 8041.

6. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

Granted to:	County of Imperial
Purpose:	Road
Recording Date:	May 12, 1914
Recording No:	Book 59, Page 376 of Deeds
Affects:	Strip of land 60 feet in width affecting portion of said land.
and Recording Date:	February 21, 1919
and Recording No:	Book 96, Page 214 of Deeds

7. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

Granted to:	Southern Sierra Power Company
Purpose:	Pole lines and rights incidental thereto
Recording Date:	January 22, 1930
Recording No:	Book 263, Page 103 of Official Records
Affects:	A portion of said land as more particularly described in said document.

PC ORIGINAL PKG

EXCEPTIONS
(Continued)

8. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

Granted to:	Imperial Irrigation District
Purpose:	canals, telephone and/or electric power lines
Recording Date:	September 19, 1956
Recording No:	Book 952, Page 290 of Official Records
Affects:	A portion of said land as more particularly described in said document.

9. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

Granted to:	Imperial Irrigation District
Purpose:	"O" lateral canal, "N" Lateral canal and East Highline Canal
Recording Date:	September 19, 1956
Recording No:	Book 952, Page 290 of Official Records
Affects:	A portion of said land as more particularly described in said document.

10. Rights incidental to the ownership and development of the mineral interest excepted or reserved in the document recorded December 15, 1975 in Book 1382, Page 258 of Official Records.

11. Rights incidental to the ownership and development of the mineral interest excepted or reserved in the document recorded January 30, 1981 in Book 1464, Page 673 of Official Records.

12. An unrecorded lease with certain terms, covenants, conditions and provisions set forth therein as disclosed by the document

Entitled:	Memorandum of Option and Solar System Site Lease Agreement
Lessor:	Alexander Tang and Dana Te, individuals
Lessee:	91MC 8ME, LLC, a California limited liability company
Recording Date:	January 14, 2011
Recording No:	2011-001092 of Official Records

The present ownership of the leasehold created by said lease and other matters affecting the interest of the lessee are not shown herein.

13. Please be advised that our search did not disclose any open Deeds of Trust of record. If you should have knowledge of any outstanding obligation, please contact the Title Department immediately for further review prior to closing.

14. Any rights of the parties in possession of a portion of, or all of, said Land, which rights are not disclosed by the public records.

The Company will require, for review, a full and complete copy of any unrecorded agreement, contract, license and/or lease, together with all supplements, assignments and amendments thereto, before issuing any policy of title insurance without excepting this item from coverage.

The Company reserves the right to except additional items and/or make additional requirements after reviewing said documents.

PC ORIGINAL PKG

EXCEPTIONS
(Continued)

15. Any facts an accurate survey would disclose as to the location the exterior boundaries of said land or as to the location of canals, laterals, waste and drain ditches thereon in use by Imperial Irrigation District as part of its irrigation system.

16. Any easements not disclosed by the public records as to matters affecting title to real property, whether or not said easements are visible and apparent.

17. Matters which may be disclosed by an inspection and/or by a correct ALTA/NSPS Land Title Survey of said Land that is satisfactory to the Company, and/or by inquiry of the parties in possession thereof.

PLEASE REFER TO THE "INFORMATIONAL NOTES" AND "REQUIREMENTS" SECTIONS WHICH FOLLOW FOR INFORMATION NECESSARY TO COMPLETE THIS TRANSACTION.

END OF EXCEPTIONS

REQUIREMENTS SECTION

1. Prior to the close of escrow, the Company requires a Statement of Information to be completed by the following party(s),

   Party(s): All Parties

   The Company reserves the right to add additional items or make further requirements after review of the requested Statement of Information.

2. Unrecorded matters which may be disclosed by an Owner's Affidavit or Declaration. A form of the Owner's Affidavit/Declaration is attached to this Preliminary Report/Commitment. This Affidavit/Declaration is to be completed by the record owner of the land and submitted for review prior to the closing of this transaction. Your prompt attention to this requirement will help avoid delays in the closing of this transaction. Thank you.

   The Company reserves the right to add additional items or make further requirements after review of the requested Affidavit/Declaration.

END OF REQUIREMENTS

PC ORIGINAL PKG

INFORMATIONAL NOTES SECTION

1. Note: Property taxes, including any personal property taxes and any assessments collected with taxes, are paid. For proration purposes the amounts were:

Tax Identification No.:	025-260-022-000
Fiscal Year:	2019-2020
1st Installment:	$2,340.93
2nd Installment:	$2,340.93
Exemption:	$0.00
Code Area:	058-003

2. Note: The policy of title insurance will include an arbitration provision. The Company or the insured may demand arbitration. Arbitrable matters may include, but are not limited to, any controversy or claim between the Company and the insured arising out of or relating to this policy, any service of the Company in connection with its issuance or the breach of a policy provision or other obligation. Please ask your escrow or title officer for a sample copy of the policy to be issued if you wish to review the arbitration provisions and any other provisions pertaining to your Title Insurance coverage.

3. Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, manufacture or sale of marijuana, the Company is not able to close or insure any transaction involving Land that is associated with these activities.

4. Pursuant to Government Code Section 27388.1, as amended and effective as of 1-1-2018, a Documentary Transfer Tax (DTT) Affidavit may be required to be completed and submitted with each document when DTT is being paid or when an exemption is being claimed from paying the tax. If a governmental agency is a party to the document, the form will not be required. DTT Affidavits may be available at a Tax Assessor-County Clerk-Recorder.

5. Note: There are NO conveyances affecting said Land recorded within 24 months of the date of this report.

END OF INFORMATIONAL NOTES

Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened**. DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

For more information on wire-fraud scams or to report an incident, please refer to the following links:

Notice of Available Discounts

Pursuant to Section 2355.3 in Title 10 of the California Code of Regulations Fidelity National Financial, Inc. and its subsidiaries ("FNF") must deliver a notice of each discount available under our current rate filing along with the delivery of escrow instructions, a preliminary report or commitment. Please be aware that the provision of this notice does not constitute a waiver of the consumer's right to be charged the filed rate. As such, your transaction may not qualify for the below discounts.

You are encouraged to discuss the applicability of one or more of the below discounts with a Company representative. These discounts are generally described below; consult the rate manual for a full description of the terms, conditions and requirements for such discount. These discounts only apply to transactions involving services rendered by the FNF Family of Companies. This notice only applies to transactions involving property improved with a one-to-four family residential dwelling.

Not all discounts are offered by every FNF Company. The discount will only be applicable to the FNF Company as indicated by the named discount.

FIDELITY NATIONAL FINANCIAL, INC.
PRIVACY NOTICE

Effective April 9, 2020

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This Privacy Notice explains how we collect, use, and protect personal information, when and to whom we disclose such information, and the choices you have about the use and disclosure of that information.

A limited number of FNF subsidiaries have their own privacy notices. If a subsidiary has its own privacy notice, the privacy notice will be available on the subsidiary's website and this Privacy Notice does not apply.

Collection of Personal Information

FNF may collect the following categories of Personal Information:

- contact information (*e.g.*, name, address, phone number, email address);
- demographic information (*e.g.*, date of birth, gender, marital status);
- identity information (*e.g.* Social Security Number, driver's license, passport, or other government ID number);
- financial account information (*e.g.* loan or bank account information); and
- other personal information necessary to provide products or services to you.

We may collect Personal Information about you from:

- information we receive from you or your agent;
- information about your transactions with FNF, our affiliates, or others; and
- information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others.

Collection of Browsing Information

FNF automatically collects the following types of Browsing Information when you access an FNF website, online service, or application (each an "FNF Website") from your Internet browser, computer, and/or device:

- Internet Protocol (IP) address and operating system;
- browser version, language, and type;
- domain name system requests; and
- browsing history on the FNF Website, such as date and time of your visit to the FNF Website and visits to the pages within the FNF Website.

Like most websites, our servers automatically log each visitor to the FNF Website and may collect the Browsing Information described above. We use Browsing Information for system administration, troubleshooting, fraud investigation, and to improve our websites. Browsing Information generally does not reveal anything personal about you, though if you have created a user account for an FNF Website and are logged into that account, the FNF Website may be able to link certain browsing activity to your user account.

Other Online Specifics

Cookies. When you visit an FNF Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. Information gathered using cookies helps us improve your user experience. For example, a cookie can help the website load properly or can customize the display page based on your browser type and user preferences. You can choose whether or not to accept cookies by changing your Internet browser settings. Be aware that doing so may impair or limit some functionality of the FNF Website.

Web Beacons. We use web beacons to determine when and how many times a page has been viewed. This information is used to improve our websites.

Do Not Track. Currently our FNF Websites do not respond to "Do Not Track" features enabled through your browser.

Links to Other Sites. FNF Websites may contain links to unaffiliated third-party websites. FNF is not responsible for the privacy practices or content of those websites. We recommend that you read the privacy policy of every website you visit.

Use of Personal Information

FNF uses Personal Information for three main purposes:

- To provide products and services to you or in connection with a transaction involving you.
- To improve our products and services.
- To communicate with you about our, our affiliates', and others' products and services, jointly or independently.

When Information Is Disclosed

We may disclose your Personal Information and Browsing Information in the following circumstances:

- to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to nonaffiliated service providers who provide or perform services or functions on our behalf and who agree to use the information only to provide such services or functions;

PC ORIGINAL PKG
Copyright © 2020. Fidelity National Financial, Inc. All Rights Reserved
Order No. 30052457-997-MAT-ML6

- to nonaffiliated third party service providers with whom we perform joint marketing, pursuant to an agreement with them to jointly market financial products or services to you;
- to law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order; or
- in the good-faith belief that such disclosure is necessary to comply with legal process or applicable laws, or to protect the rights, property, or safety of FNF, its customers, or the public.

The law does not require your prior authorization and does not allow you to restrict the disclosures described above. Additionally, we may disclose your information to third parties for whom you have given us authorization or consent to make such disclosure. We do not otherwise share your Personal Information or Browsing Information with nonaffiliated third parties, except as required or permitted by law. We may share your Personal Information with affiliates (other companies owned by FNF) to directly market to you. Please see "Choices with Your Information" to learn how to restrict that sharing.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of bankruptcy, reorganization, insolvency, receivership, or an assignment for the benefit of creditors. By submitting Personal Information and/or Browsing Information to FNF, you expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings.

Security of Your Information
We maintain physical, electronic, and procedural safeguards to protect your Personal Information.

Choices With Your Information
If you do not want FNF to share your information among our affiliates to directly market to you, you may send an "opt out" request by email, phone, or physical mail as directed at the end of this Privacy Notice. We do not share your Personal Information with nonaffiliates for their use to direct market to you without your consent.

Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you.

For California Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties, except as permitted by California law. For additional information about your California privacy rights, please visit the "California Privacy" link on our website (https://fnf.com/pages/californiaprivacy.aspx) or call (888) 413-1748.

For Nevada Residents: You may be placed on our internal Do Not Call List by calling (888) 934-3354 or by contacting us via the information set forth at the end of this Privacy Notice. Nevada law requires that we also provide you with the following contact information: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: BCPINFO@ag.state.nv.us.
For Oregon Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes.

For Vermont Residents: We will not disclose information about your creditworthiness to our affiliates and will not disclose your personal information, financial information, credit report, or health information to nonaffiliated third parties to market to you, other than as permitted by Vermont law, unless you authorize us to make those disclosures.

Information From Children
The FNF Websites are not intended or designed to attract persons under the age of eighteen (18).We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian.

International Users
FNF's headquarters is located within the United States. If you reside outside the United States and choose to provide Personal Information or Browsing Information to us, please note that we may transfer that information outside of your country of residence. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection, transfer, and use of such information in accordance with this Privacy Notice.

FNF Website Services for Mortgage Loans
Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice titled When Information is Disclosed, Choices with Your Information, and Accessing and Correcting Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Personal Information. FNF does not share Personal Information collected through the Service Websites, except as required or authorized by contract with the mortgage loan servicer or lender, or as required by law or in the good-faith belief that such disclosure is necessary: to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

ATTACHMENT ONE (Revised 05-06-16)

CALIFORNIA LAND TITLE ASSOCIATION
STANDARD COVERAGE POLICY – 1990

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE (12-02-13)
ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE

EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
   a. building;
   b. zoning;
   c. land use;
   d. improvements on the Land;
   e. land division; and
   f. environmental protection.
   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;

© California Land Title Association. All rights reserved.
The use of this Form is restricted to CLTA subscribers in good standing as of the date of use. All other uses are prohibited. Reprinted under license or express permission from the California Land Title Association.

PC ORIGINAL PKG

c. that result in no loss to You; or
d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.

5. Failure to pay value for Your Title.
6. Lack of a right:
   a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.
   This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.
8. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
9. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 10,000.00
Covered Risk 18:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 19:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 21:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 5,000.00

2006 ALTA LOAN POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13 or 14); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

{Except as provided in Schedule B - Part II,{ t{or T}his policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

© California Land Title Association. All rights reserved.
The use of this Form is restricted to CLTA subscribers in good standing as of the date of use. All other uses are prohibited. Reprinted under license or express permission from the California Land Title Association.

PC ORIGINAL PKG

{PART I

{The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.}

PART II

In addition to the matters set forth in Part I of this Schedule, the Title is subject to the following matters, and the Company insures against loss or damage sustained in the event that they are not subordinate to the lien of the Insured Mortgage:}

2006 ALTA OWNER'S POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
   (a) a fraudulent conveyance or fraudulent transfer; or
   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY – ASSESSMENTS PRIORITY (04-02-15)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.
10. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
11. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

OWNER'S DECLARATION

Escrow No.: 30052457-997-MAT-ML6
Property Address: No situs APN 025-260-022
Unincorporated County of Imperial, CA

The undersigned hereby declares as follows:

1. (Fill in the applicable paragraph and strike the other)

   a. Declarant ("Owner") is the owner or lessee, as the case may be, of certain premises located at No situs APN 025-260-022, Unincorporated County of Imperial, CA, further described as follows: See Preliminary Report/Commitment No. for full legal description (the "Land").

   b. Declarant is the _____ of _____ ("Owner"), which is the owner or lessee, as the case may be, of certain premises located at No situs APN 025-260-022, Unincorporated County of Imperial, CA, further described as follows: See Preliminary Report/Commitment No. for full legal description (the "Land").

2. (Fill in the applicable paragraph and strike the other)

   a. During the period of six months immediately preceding the date of this declaration no work has been done, no surveys or architectural or engineering plans have been prepared, and no materials have been furnished in connection with the erection, equipment, repair, protection or removal of any building or other structure on the Land or in connection with the improvement of the Land in any manner whatsoever.

   b. During the period of six months immediately preceding the date of this declaration certain work has been done and materials furnished in connection with _____ upon the Land in the approximate total sum of $_____, but no work whatever remains to be done and no materials remain to be furnished to complete the construction in full compliance with the plans and specifications, nor are there any unpaid bills incurred for labor and materials used in making such improvements or repairs upon the Land, or for the services of architects, surveyors or engineers, except as follows: _____. Owner, by the undersigned Declarant, agrees to and does hereby indemnify and hold harmless Fidelity National Title Company against any and all claims arising therefrom.

3. Owner has not previously conveyed the Land; is not a debtor in bankruptcy (and if a partnership, the general partner thereof is not a debtor in bankruptcy); and has not received notice of any pending court action affecting the title to the Land.

4. Except as shown in the above-referenced Preliminary Report/Commitment, there are no unpaid or unsatisfied mortgages, deeds of trust, Uniform Commercial Code financing statements, regular assessments, special assessments, periodic assessments or any assessment from any source, claims of lien, special assessments, or taxes that constitute a lien against the Land or that affect the Land but have not been recorded in the public records. There are no violations of the covenants, conditions and restrictions as shown in the above-referenced Preliminary Report/Commitment.

5. The Land is currently in use as _____; _____ occupy/occupies the Land; and the following are all of the leases or other occupancy rights affecting the Land:

   _____

6. There are no other persons or entities that assert an ownership interest in the Land, nor are there unrecorded easements, claims of easement, or boundary disputes that affect the Land.

7. There are no outstanding options to purchase or rights of first refusal affecting the Land.

PC ORIGINAL PKG

8. Between the most recent Effective Date of the above-referenced Preliminary Report/Commitment and the date of recording of the Insured Instrument(s), Owner has not taken or allowed, and will not take or allow, any action or inaction to encumber or otherwise affect title to the Land.

This declaration is made with the intention that Fidelity National Title Company (the "Company") and its policy issuing agents will rely upon it in issuing their title insurance policies and endorsements. Owner, by the undersigned Declarant, agrees to indemnify the Company against loss or damage (including attorneys fees, expenses, and costs) incurred by the Company as a result of any untrue statement made herein.

I declare under penalty of perjury that the foregoing is true and correct and that this declaration was executed on _____ at _____.

PRELIMINARY REPORT

*In response to the application for a policy of title insurance referenced herein, **Fidelity National Title Company** hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception herein or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations or Conditions of said policy forms.*

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Attachment One. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Attachment One. Copies of the policy forms should be read. They are available from the office which issued this report.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

The policy(s) of title insurance to be issued hereunder will be policy(s) of Fidelity National Title Insurance Company, a Florida Corporation.

PC ORIGINAL PKG

Please read the exceptions shown or referred to herein and the exceptions and exclusions set forth in Attachment One of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects and encumbrances affecting title to the land.

APN 025-260-011-000 AND APN 025-260-019-000

PC ORIGINAL PKG

EXCEPTIONS

AT THE DATE HEREOF, ITEMS TO BE CONSIDERED AND EXCEPTIONS TO COVERAGE IN ADDITION TO THE PRINTED EXCEPTIONS AND EXCLUSIONS IN SAID POLICY FORM WOULD BE AS FOLLOWS:

A. Property taxes, which are a lien not yet due and payable, including any assessments collected with taxes to be levied for the fiscal year 2020-2021.

B. Taxes and assessments levied by the Imperial Irrigation District.

C. The lien of supplemental or escaped assessments of property taxes, if any, made pursuant to the provisions of Chapter 3.5 (commencing with Section 75) or Part 2, Chapter 3, Articles 3 and 4, respectively, of the Revenue and Taxation Code of the State of California as a result of the transfer of title to the vestee named in Schedule A or as a result of changes in ownership or new construction occurring prior to Date of Policy.

1. Water rights, claims or title to water, whether or not disclosed by the public records.

2. Easement(s) in favor of the public over any existing roads lying within said Land.

3. Lack of legal right of access to and from a public street or highway.

4. The right, title or interest which the County of Imperial may have or claim in and to those portions of the herein described lands lying within the bounds of Noffsinger Road.

5. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

Granted to:	Southern Sierras Power Company, a corporation, it's successors and/or assigns
Purpose:	Power transmission line
Recording Date:	July 19, 1930
Recording No:	Book 283, Page 9 of Official Records
Affects:	A portion of said land as more particularly described in said document.

6. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

Granted to:	R. S. Harrington, et ux.
Purpose:	Drain canal
Recording Date:	July 11, 1952
Recording No:	Book 841, Page 484 of Official Records
Affects:	A portion of said land as more particularly described in said document.

7. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

Granted to:	Imperial Irrigation District, it's successors and/or assigns
Purpose:	Power line or lines, underground and/or overhead and necessary appurtenances together with the right of ingress and egress
Recording Date:	December 22, 1987
Recording No:	book 1594, Page 1685 of Official Records
Affects:	The West 100 feet of said land, except Southern Pacific Railroad right of way.

PC ORIGINAL PKG

EXCEPTIONS
(Continued)

8. The effect of a Grant Deed dated May 16, 2013, executed by Leslie Ann Ash, Trustee of the Bay Family Trust dated April 9, 2003, grantor to Victoria Gabbard, a married woman, as her sole and separate property, Grantee, recorded June 16, 2013 as Instrument No. 2013010916 of Official Records.

   Recital on said document states "This deed is intended to sever any joint Tenancy Deed".

9. A document entitled "Easement Deed by Court Order in Settlement of Landowner Action", issued out of the United States District Court for the Northern District of California San Francisco Division, Case No. 3:11-cv-02599-TEH, recorded January 30, 2014 as Instrument No. 2014001714 of Official Records.

   Said document provides for a Telecommunications Cable System Easement together with right of reasonable ingress and egress.

   Subject to the terms, conditions and provisions contained therein.

10. Any invalidity or defect in the title of the vestees in the event that the trust referred to herein is invalid or fails to grant sufficient powers to the trustee(s) or in the event there is a lack of compliance with the terms and provisions of the trust instrument.

    If title is to be insured in the trustee(s) of a trust, (or if their act is to be insured), this Company will require a Trust Certification pursuant to California Probate Code Section 18100.5.

    The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

11. Please be advised that our search did not disclose any open Deeds of Trust of record. If you should have knowledge of any outstanding obligation, please contact the Title Department immediately for further review prior to closing.

12. Any rights of the parties in possession of a portion of, or all of, said Land, which rights are not disclosed by the public records.

    The Company will require, for review, a full and complete copy of any unrecorded agreement, contract, license and/or lease, together with all supplements, assignments and amendments thereto, before issuing any policy of title insurance without excepting this item from coverage.

    The Company reserves the right to except additional items and/or make additional requirements after reviewing said documents.

13. Any facts an accurate survey would disclose as to the location the exterior boundaries of said land or as to the location of canals, laterals, waste and drain ditches thereon in use by Imperial Irrigation District as part of its irrigation system.

PC ORIGINAL PKG

EXCEPTIONS
(Continued)

14. Any easements not disclosed by the public records as to matters affecting title to real property, whether or not said easements are visible and apparent.

15. Matters which may be disclosed by an inspection and/or by a correct ALTA/NSPS Land Title Survey of said Land that is satisfactory to the Company, and/or by inquiry of the parties in possession thereof.

PLEASE REFER TO THE "INFORMATIONAL NOTES" AND "REQUIREMENTS" SECTIONS WHICH FOLLOW FOR INFORMATION NECESSARY TO COMPLETE THIS TRANSACTION.

END OF EXCEPTIONS

PC ORIGINAL PKG

REQUIREMENTS SECTION

1. The Company will require either (a) a complete copy of the trust agreement and any amendments thereto certified by the trustee(s) to be a true and complete copy with respect to the hereinafter named trust, or (b) a Certification, pursuant to California Probate Code Section 18100.5, executed by all of the current trustee(s) of the hereinafter named trust, a form of which is attached.

   Name of Trust: Exemption Trust Under the Bay Family Trust Dated April 9, 2003

2. The Company will require either (a) a complete copy of the trust agreement and any amendments thereto certified by the trustee(s) to be a true and complete copy with respect to the hereinafter named trust, or (b) a Certification, pursuant to California Probate Code Section 18100.5, executed by all of the current trustee(s) of the hereinafter named trust, a form of which is attached.

   Name of Trust: Survivor's Trust Under the Bay Family Trust Dated April 9, 2003

3. Prior to the close of escrow, the Company requires a Statement of Information to be completed by the following party(s),

   Party(s): All Parties

   The Company reserves the right to add additional items or make further requirements after review of the requested Statement of Information.

4. Unrecorded matters which may be disclosed by an Owner's Affidavit or Declaration. A form of the Owner's Affidavit/Declaration is attached to this Preliminary Report/Commitment. This Affidavit/Declaration is to be completed by the record owner of the land and submitted for review prior to the closing of this transaction. Your prompt attention to this requirement will help avoid delays in the closing of this transaction. Thank you.

   The Company reserves the right to add additional items or make further requirements after review of the requested Affidavit/Declaration.

END OF REQUIREMENTS

PC ORIGINAL PKG

INFORMATIONAL NOTES SECTION

1. Note: Property taxes, including any personal property taxes and any assessments collected with taxes, are paid. For proration purposes the amounts were:

Tax Identification No.:	025-260-011-000
Fiscal Year:	2019-2020
1st Installment:	$148.44
2nd Installment:	$148.44
Exemption:	$0.00
Code Area:	058-003

   Affects: A portion of the Land described herein.

2. Note: Property taxes, including any personal property taxes and any assessments collected with taxes, are paid. For proration purposes the amounts were:

Tax Identification No.:	025-260-019-000
Fiscal Year:	2019-2020
1st Installment:	$48.86
2nd Installment:	$48.86
Exemption:	$0.00
Code Area:	058-003

   Affects: A portion of the Land described herein.

3. Note: The policy of title insurance will include an arbitration provision. The Company or the insured may demand arbitration. Arbitrable matters may include, but are not limited to, any controversy or claim between the Company and the insured arising out of or relating to this policy, any service of the Company in connection with its issuance or the breach of a policy provision or other obligation. Please ask your escrow or title officer for a sample copy of the policy to be issued if you wish to review the arbitration provisions and any other provisions pertaining to your Title Insurance coverage.

4. Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, manufacture or sale of marijuana, the Company is not able to close or insure any transaction involving Land that is associated with these activities.

5. Pursuant to Government Code Section 27388.1, as amended and effective as of 1-1-2018, a Documentary Transfer Tax (DTT) Affidavit may be required to be completed and submitted with each document when DTT is being paid or when an exemption is being claimed from paying the tax. If a governmental agency is a party to the document, the form will not be required. DTT Affidavits may be available at a Tax Assessor-County Clerk-Recorder.

6. Note: There are NO conveyances affecting said Land recorded within 24 months of the date of this report.

END OF INFORMATIONAL NOTES

WIRE SAFE™ | Inquire before you wire!

Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened**. DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

For more information on wire-fraud scams or to report an incident, please refer to the following links:

FIDELITY NATIONAL FINANCIAL, INC.
PRIVACY NOTICE

Effective April 9, 2020

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This Privacy Notice explains how we collect, use, and protect personal information, when and to whom we disclose such information, and the choices you have about the use and disclosure of that information.

A limited number of FNF subsidiaries have their own privacy notices. If a subsidiary has its own privacy notice, the privacy notice will be available on the subsidiary's website and this Privacy Notice does not apply.

Collection of Personal Information

FNF may collect the following categories of Personal Information:

- contact information (*e.g.*, name, address, phone number, email address);
- demographic information (*e.g.*, date of birth, gender, marital status);
- identity information (*e.g.* Social Security Number, driver's license, passport, or other government ID number);
- financial account information (*e.g.* loan or bank account information); and
- other personal information necessary to provide products or services to you.

We may collect Personal Information about you from:

- information we receive from you or your agent;
- information about your transactions with FNF, our affiliates, or others; and
- information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others.

Collection of Browsing Information

FNF automatically collects the following types of Browsing Information when you access an FNF website, online service, or application (each an "FNF Website") from your Internet browser, computer, and/or device:

- Internet Protocol (IP) address and operating system;
- browser version, language, and type;
- domain name system requests; and
- browsing history on the FNF Website, such as date and time of your visit to the FNF Website and visits to the pages within the FNF Website.

Like most websites, our servers automatically log each visitor to the FNF Website and may collect the Browsing Information described above. We use Browsing Information for system administration, troubleshooting, fraud investigation, and to improve our websites. Browsing Information generally does not reveal anything personal about you, though if you have created a user account for an FNF Website and are logged into that account, the FNF Website may be able to link certain browsing activity to your user account.

Other Online Specifics

Cookies. When you visit an FNF Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. Information gathered using cookies helps us improve your user experience. For example, a cookie can help the website load properly or can customize the display page based on your browser type and user preferences. You can choose whether or not to accept cookies by changing your Internet browser settings. Be aware that doing so may impair or limit some functionality of the FNF Website.

Web Beacons. We use web beacons to determine when and how many times a page has been viewed. This information is used to improve our websites.

Do Not Track. Currently our FNF Websites do not respond to "Do Not Track" features enabled through your browser.

Links to Other Sites. FNF Websites may contain links to unaffiliated third-party websites. FNF is not responsible for the privacy practices or content of those websites. We recommend that you read the privacy policy of every website you visit.

Use of Personal Information

FNF uses Personal Information for three main purposes:

- To provide products and services to you or in connection with a transaction involving you.
- To improve our products and services.
- To communicate with you about our, our affiliates', and others' products and services, jointly or independently.

When Information Is Disclosed

We may disclose your Personal Information and Browsing Information in the following circumstances:

- to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to nonaffiliated service providers who provide or perform services or functions on our behalf and who agree to use the information only to provide such services or functions;

PC ORIGINAL PKG

Copyright © 2020. Fidelity National Financial, Inc. All Rights Reserved

- to nonaffiliated third party service providers with whom we perform joint marketing, pursuant to an agreement with them to jointly market financial products or services to you;
- to law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order; or
- in the good-faith belief that such disclosure is necessary to comply with legal process or applicable laws, or to protect the rights, property, or safety of FNF, its customers, or the public.

The law does not require your prior authorization and does not allow you to restrict the disclosures described above. Additionally, we may disclose your information to third parties for whom you have given us authorization or consent to make such disclosure. We do not otherwise share your Personal Information or Browsing Information with nonaffiliated third parties, except as required or permitted by law. We may share your Personal Information with affiliates (other companies owned by FNF) to directly market to you. Please see "Choices with Your Information" to learn how to restrict that sharing.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of bankruptcy, reorganization, insolvency, receivership, or an assignment for the benefit of creditors. By submitting Personal Information and/or Browsing Information to FNF, you expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings.

Security of Your Information
We maintain physical, electronic, and procedural safeguards to protect your Personal Information.

Choices With Your Information
If you do not want FNF to share your information among our affiliates to directly market to you, you may send an "opt out" request by email, phone, or physical mail as directed at the end of this Privacy Notice. We do not share your Personal Information with nonaffiliates for their use to direct market to you without your consent.

Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you.

For California Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties, except as permitted by California law. For additional information about your California privacy rights, please visit the "California Privacy" link on our website (https://fnf.com/pages/californiaprivacy.aspx) or call (888) 413-1748.

For Nevada Residents: You may be placed on our internal Do Not Call List by calling (888) 934-3354 or by contacting us via the information set forth at the end of this Privacy Notice. Nevada law requires that we also provide you with the following contact information: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: BCPINFO@ag.state.nv.us.
For Oregon Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes.

For Vermont Residents: We will not disclose information about your creditworthiness to our affiliates and will not disclose your personal information, financial information, credit report, or health information to nonaffiliated third parties to market to you, other than as permitted by Vermont law, unless you authorize us to make those disclosures.

Information From Children
The FNF Websites are not intended or designed to attract persons under the age of eighteen (18).We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian.

International Users
FNF's headquarters is located within the United States. If you reside outside the United States and choose to provide Personal Information or Browsing Information to us, please note that we may transfer that information outside of your country of residence. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection, transfer, and use of such information in accordance with this Privacy Notice.

FNF Website Services for Mortgage Loans
Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice titled When Information is Disclosed, Choices with Your Information, and Accessing and Correcting Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Personal Information. FNF does not share Personal Information collected through the Service Websites, except as required or authorized by contract with the mortgage loan servicer or lender, or as required by law or in the good-faith belief that such disclosure is necessary: to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

CALIFORNIA LAND TITLE ASSOCIATION
STANDARD COVERAGE POLICY – 1990

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE (12-02-13)
ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE

EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
   a. building;
   b. zoning;
   c. land use;
   d. improvements on the Land;
   e. land division; and
   f. environmental protection.
   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;

© California Land Title Association. All rights reserved.
The use of this Form is restricted to CLTA subscribers in good standing as of the date of use. All other uses are prohibited. Reprinted under license or express permission from the California Land Title Association.

PC ORIGINAL PKG

c. that result in no loss to You; or
d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.

5. Failure to pay value for Your Title.
6. Lack of a right:
   a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.
   This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.
8. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
9. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 10,000.00
Covered Risk 18:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 19:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 21:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 5,000.00

2006 ALTA LOAN POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13 or 14); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

{Except as provided in Schedule B - Part II,{ t{or T}his policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

{PART I

{The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.}

PART II

In addition to the matters set forth in Part I of this Schedule, the Title is subject to the following matters, and the Company insures against loss or damage sustained in the event that they are not subordinate to the lien of the Insured Mortgage:}

2006 ALTA OWNER'S POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
   (a) a fraudulent conveyance or fraudulent transfer; or
   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY – ASSESSMENTS PRIORITY (04-02-15)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.
10. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
11. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

OWNER'S DECLARATION

Escrow No.: 30052456-997-MAT-ML6
Property Address: No situs APN 025-260-011 & 025-260-019
Unincorporated County of Imperial, CA

The undersigned hereby declares as follows:

1. (Fill in the applicable paragraph and strike the other)

   a. Declarant ("Owner") is the owner or lessee, as the case may be, of certain premises located at No situs APN 025-260-011 & 025-260-019, Unincorporated County of Imperial, CA, further described as follows: See Preliminary Report/Commitment No. for full legal description (the "Land").

   b. Declarant is the _____ of _____ ("Owner"), which is the owner or lessee, as the case may be, of certain premises located at No situs APN 025-260-011 & 025-260-019, Unincorporated County of Imperial, CA, further described as follows: See Preliminary Report/Commitment No. for full legal description (the "Land").

2. (Fill in the applicable paragraph and strike the other)

   a. During the period of six months immediately preceding the date of this declaration no work has been done, no surveys or architectural or engineering plans have been prepared, and no materials have been furnished in connection with the erection, equipment, repair, protection or removal of any building or other structure on the Land or in connection with the improvement of the Land in any manner whatsoever.

   b. During the period of six months immediately preceding the date of this declaration certain work has been done and materials furnished in connection with _____ upon the Land in the approximate total sum of $_____, but no work whatever remains to be done and no materials remain to be furnished to complete the construction in full compliance with the plans and specifications, nor are there any unpaid bills incurred for labor and materials used in making such improvements or repairs upon the Land, or for the services of architects, surveyors or engineers, except as follows: _____. Owner, by the undersigned Declarant, agrees to and does hereby indemnify and hold harmless Fidelity National Title Company against any and all claims arising therefrom.

3. Owner has not previously conveyed the Land; is not a debtor in bankruptcy (and if a partnership, the general partner thereof is not a debtor in bankruptcy); and has not received notice of any pending court action affecting the title to the Land.

4. Except as shown in the above-referenced Preliminary Report/Commitment, there are no unpaid or unsatisfied mortgages, deeds of trust, Uniform Commercial Code financing statements, regular assessments, special assessments, periodic assessments or any assessment from any source, claims of lien, special assessments, or taxes that constitute a lien against the Land or that affect the Land but have not been recorded in the public records. There are no violations of the covenants, conditions and restrictions as shown in the above-referenced Preliminary Report/Commitment.

5. The Land is currently in use as _____; _____ occupy/occupies the Land; and the following are all of the leases or other occupancy rights affecting the Land:

   _____

6. There are no other persons or entities that assert an ownership interest in the Land, nor are there unrecorded easements, claims of easement, or boundary disputes that affect the Land.

7. There are no outstanding options to purchase or rights of first refusal affecting the Land.

PC ORIGINAL PKG

8. Between the most recent Effective Date of the above-referenced Preliminary Report/Commitment and the date of recording of the Insured Instrument(s), Owner has not taken or allowed, and will not take or allow, any action or inaction to encumber or otherwise affect title to the Land.

This declaration is made with the intention that Fidelity National Title Company (the "Company") and its policy issuing agents will rely upon it in issuing their title insurance policies and endorsements. Owner, by the undersigned Declarant, agrees to indemnify the Company against loss or damage (including attorneys fees, expenses, and costs) incurred by the Company as a result of any untrue statement made herein.

I declare under penalty of perjury that the foregoing is true and correct and that this declaration was executed on _____ at _____.

Phase I Environmental Site Assessment (ESA)
User Questionnaire

1) Environmental liens that are filed or recorded against the *property*.

Did a search of *recorded land title records* (or judicial records where appropriate) identify any environmental liens filed or recorded against the *property* under federal, tribal, state, or local law?

Not to our knowledge.

2) Activity and use limitations that are in place on the *property* or that have been filed or recorded against the *property*.

Did a search of *recorded land title records* (or judicial records where appropriate) identify any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the property and/or have been filed or recorded against the *property* under federal, tribal, state or local law?

Not to our knowledge.

3) Specialized knowledge or experience of the person seeking to qualify for the LLP.

Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the *property* or an *adjoining property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?

No.

PC ORIGINAL PKG

4) Relationship of the purchase price to the fair market value of the *property* if it were not contaminated.

Does the purchase price being paid for this *property* reasonable reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?

Yes.

5) Commonly known or *reasonably ascertainable* information about the *property*.

Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example,

a. Do you know the past uses of the *property*?

   Vacant Land

b. Do you know of specific chemicals or oils that are present or once were present at the *property*?

   None that we know of or suspect.

c. Do you know of spills or other chemical releases that have taken place at the *property*?

   None that we know of or suspect.

d. Do you know of any environmental cleanups that have taken place at the *property*?

   None that we know of or suspect.

6) The degree of obviousness of the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation.

Based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of releases at the *property*?

None that we know of or suspect.

APPENDIX I

PC ORIGINAL PKG

Jeffrey O. Lyon, PE
Principal Engineer

Education

B.S. Civil Engineering (Magna Cum Laude)
California Polytechnic University, Pomona Campus 1978

Registration

Registered Civil Engineer No. 31921, California
Registered Civil Engineer No. 16994, Arizona

Professional Experience

1987 - Present	Principal Engineer Southland Geotechnical, Inc.
1982 - 1987	Principal Engineer Lyon Engineers, Inc.
1978 - 1981	Partner/Senior Engineer Tesco Engineering
1974 - 1977	Survey Party Chief Tesco Engineering
1972 - 1973	Survey Party Chief Lyon & Associates

Summary of Experience

As Principal Engineer, Mr. Lyon is responsible for financial and technical management of all employees in Southland Geotechnical's four branch offices. Mr. Lyon has performed site investigations for residential subdivisions, geogrid-reinforced slopes, shopping centers, military airfields, roadways, administration and office buildings, elementary and high schools, goldmine mill processing facilities, hydro-electric plants, power transmission lines, electrical substations, co-generation power plants and geothermal power plants. He has provided design for drilled piers, driven piles, stone columns and floating (rigid) mats, and has performed seismic risk evaluations, ground shaking analyses, liquefaction studies and liquefaction induced settlements studies. Mr. Lyon has conducted Phase I and Phase II ESA's throughout the Imperial and Coachella Valleys for over 7 years. Mr. Lyon's experience also includes forensic investigations for foundation/structural distress to residential, commercial and educational facilities, and has performed pressure grout stabilization and lifting for distress remediation.

Selected Project Experience

- **Aten Road Improvements, Imperial, CA**

Performed Phase I environmental site assessment for improvements to Aten Road in accordance to CalTrans requirements.

- **Gateway to the Americas, Calexico, CA**

Conducted Phase I ESA, geologic hazards study and geotechnical investigation including liquefaction evaluation for 1,700 acre development associated with new Port of Entry east of Calexico

- **El Centro Magistrate Court, El Centro, CA**

Conducted geotechnical investigation and Phase I ESA for new Federal Magistrate Court building at site with soft soil conditions requiring foundation settlement analysis

- **El Centro Regional Medical Center, El Centro, CA**

Conducted Phase I ESA and geotechnical investigation for 50,000 sf, 2-story addition to the medical center's emergency room, operating rooms, and recovery rooms.

- **Brawley Union High School, Brawley, CA**

Conducted Phase II investigation for PCB and lead contamination of surficial soil and hydrocarbon contamination of subsurface soil of a property proposed for purchase.

- **EW Corporation Site, Westmorland, CA**

Conducted Phase II investigation for hydrocarbon contamination of subsurface soil of a service station site with leaking underground storage tanks prior to property purchase

- **Various Apartment Complexes, Imperial County, CA**

Conducted Phase I environmental investigation at numerous proposed apartment complex site within the Imperial Valley

- **Hwy 98 Improvements, Imperial, CA**

Performed Phase I environmental site assessment for improvements to Hwy 98 for a new intersection in accordance to CalTrans requirements.

1991 - 1992	Exploration Geologist Kennecott Corporation

Summary of Experience
Mr. Williams has performed geotechnical investigations in southern California and southwestern Arizona. His field experience includes logging of soil borings and exploratory trenches, collection and documentation of soil samples, collection of field geotechnical data, and monitoring pile driving operations. Mr. Williams is also responsible for preparing computer generated data and figures, drafting and subsequent writing of geotechnical reports for a variety of projects including road improvements, fault studies, liquefaction potential evaluation, foundation preparation, seepage studies, structural distress, and soil investigations. He has performed geotechnical, geologic, and environmental studies for a wide variety of projects including correctional facilities, water and wastewater facilities, schools, residential subdivisions, commercial developments, and landfills throughout southern California and southwestern Arizona.

Mr. Williams also performs Phase I Environmental Site Assessments throughout the Imperial and Coachella Valleys. The scope of work for these projects typically include a site reconnaissance, review of government records pertaining to previous site uses, and preparation of a report identifying potential environmental risks.

He also conducts investigations for the potential of asbestos-containing materials and lead-based paint in old building projects and potential for soil contamination by hydrocarbons, pesticides, and other hazardous materials.

Summary of Experience
As an Environmental Technician, Mr. LaBrucherie performs Phase I Environmental Site Assessments in Imperial County. The scope of work for these assessments typically includes site reconnaissance, review of government records pertaining to previous site uses, and preparation of a report identifying potential environmental risks.

Selected Project Experience

Seville Solar Farm, Westmorland, CA
Conducted Phase I environmental site assessment for solar project located about 9 miles northwest of Westmorland, Ca.

Clean Harbors Facility, Westmorland, CA
Conducted annual reports which included flood diversion, photo documentation and post closure for waste facility located about 5 miles west of Westmorland, Ca.

Ching Properties, Brawley, CA
Conducted Phase I environmental site assessment for vacant property located in Brawley, Ca.

Chelsea - 470 W. Wall Road, Imperial, CA
Conducted Phase I environmental site assessment for vacant property located in Imperial, Ca. Property is being proposed for apartment complex.

1409 E. Alamo Road, Holtville, CA
Conducted Phase I environmental site assessment for property (mostly vacant with some unused shop buildings and abandoned residential home) located west of Holtville, Ca.

BUSD School Site, Brawley, CA
Conducted Phase I environmental site assessment for school site proposal on a vacant property located in south Brawley, Ca.

CR&R Direct Transfer, El Centro, CA
Conducted Phase I environmental site assessment for commercial property (large warehouse and office with large laydown area) located in El Centro, Ca.

Villa Primavera Apartments, Calexico, CA
Conducted Phase I environmental site assessment for vacant property located in Calexico, Ca.

1.0 INTRODUCTION

This report documents the results of a Noise Impact Assessment completed for the Vega Complex Solar Energy Storage Project (Project), which includes the construction of up to a nominal 240-megawatt (MW) alternating current solar photovoltaic (PV) energy generation system with an integrated 240 MW battery storage system (known as Vega 2), a nominal 60 MW alternating current PV energy generation system with an integrated 60 MW battery storage system (known as Vega 3), and a nominal 50 MW alternating current solar PV energy generation system with an integrated 50 MW battery storage system (known as Vega 5), all spanning approximately 1,963 acres of land in the County of Imperial, California. This report was prepared as a comparison of predicted Project noise levels to noise standards promulgated by the County of Imperial General Plan Noise Element. The purpose of this report is to estimate Project-generated noise and to determine the level of impact the Project would have on the environment.

1.1 Project Overview

The Project proposes to construct a cluster of alternating current solar PV energy generation systems totaling 350 Megawatts (MWs) with accompanying battery storage. The Project consists of three individual site locations which make up the Vega SES Complex. Vega 2 is located on three non-contiguous parcels totaling 1,323 acres, Vega 3 is located on a 640-acre parcel but only compromising 230 acres, and Vague 5 is located on three parcels totaling 410 acres. It is proposed that Vega 2 & 3 will be constructed together beginning in early 2023 with Vega 5 being constructed in 2024.

All systems would be utilizing either thin film or crystalline solar PV technology modules mounted either on fixed frames or horizontal single-axis tracker (HSAT) systems. The fixed frame PV module arrays would be mounted on racks that would be supported by driven piles. The individual PV systems would be arranged in large arrays by placing them in columns spaced approximately ten feet apart to maximize operational performance and to allow access for panel cleaning and maintenance.

1.2 Project Location and Description

The total combined Project Site area spans approximately 1,963 acres and is located 5.67 miles southeast of the unincorporated community of Niland between the unincorporated communities of Iris and Slab City (see Figure 1. Project Vicinity). The Site is transected by the Coachella and East Highline Canals and the Union Pacific Railway in northcentral Imperial County, California.

1.3 Applicable Land Use Regulations

All Project parcels for Vega 2 & 3 are designated as "Recreation/Open Space" in the Imperial County General Plan and are zoned S-2-RE (Open Space/Preservation with a Renewable Energy overlay). Pursuant to Section 91703.02 (CONDITIONAL USE PERMITS), Renewable Energy Projects must be located within the Renewable Energy Overlay Zone and may be permitted only through the issuance of a Conditional Use Permit (CUP) as approved by the Approving Authority unless otherwise allowed by applicable law. All Project parcels in Vega 5 are designated as "Recreation/Open Space" in the Imperial County General Plan. Two of the Vega 5 properties are zoned S-2-RE (areas with intent to preserve the cultural, biological, and open spaces that are rich and natural as well as cultural resources). The third Vega 5 property is zoned A-

PC ORIGINAL PKG

2-RE (areas that are suitable and intended primarily for agricultural uses [limited] and agricultural related compatible uses), A-3-RE (areas that are suitable for agricultural land uses; to prevent the encroachment of incompatible uses onto and within agricultural lands; and to prohibit the premature conversion of such lands to non-agricultural uses) and S-2-RE (see above). At present, all portions of the proposed Project (Vega 2 & 3, and 5) are located within the Renewable Energy Zone.

1.4 Project Site Access

The Project Area would be accessible from McDonald Road, a paved road off State Route 111. The Vega 5 Project Site is located at the eastern end of McDonald Road. Access to the Vega 2 and 3 Project Site would require an additional 1.65 miles of travel on Wiest Road and Flowing Wells Road. Both of which are unpaved.

1.5 Project Construction

Construction activities would involve demolition and grubbing, grading of the Project Site to establish access roads and pads for electrical equipment (inverters and step–up transformers), trenching for underground electrical collection lines, and the installation of solar equipment and security fencing. The construction of each Project component (Vega 2 & 3 and Vega 5) is estimated to take 12-18 months each and would begin in early 2023. A temporary, portable construction supply container would be located at the Project Site at the beginning of construction and removed at the end of construction. The number of on–site construction workers for Vega 2 and 3 solar facility is not expected to exceed 150 workers at any one time. The number of on-site construction workers for the Vega 2 and 3 battery storage facility and substations is not expected to exceed 100 workers at any one time. The number of on–site construction workers for the Vega 5 solar facility is not expected to exceed 75 workers at any one time. The number of on-site construction workers for the Vega 5 battery storage facility and substation is not expected to exceed 50 workers at any one time. Onsite parking would be provided for all construction workers.

2.0 ENVIRONMENTAL NOISE AND GROUNDBORNE VIBRATION ANALYSIS

2.1 Fundamentals of Noise and Environmental Sound

2.1.1 Addition of Decibels

The decibel (dB) scale is logarithmic, not linear, and therefore sound levels cannot be added or subtracted through ordinary arithmetic. Two sound levels 10 dB apart differ in acoustic energy by a factor of 10. When the standard logarithmic decibel is A-weighted (dBA), an increase of 10 dBA is generally perceived as a doubling in loudness. For example, a 70-dBA sound is half as loud as an 80-dBA sound and twice as loud as a 60-dBA sound. When two identical sources are each producing sound of the same loudness, the resulting sound level at a given distance would be three dB higher than one source under the same conditions (Federal Transit Administration [FTA] 2018). For example, a 65-dB source of sound, such as a truck, when joined by another 65 dB source results in a sound amplitude of 68 dB, not 130 dB (i.e., doubling the source strength increases the sound pressure by three dB). Under the decibel scale, three sources of equal loudness together would produce an increase of five dB.

Typical noise levels associated with common noise sources are depicted in Figure 2. *Common Noise Levels*.

PC ORIGINAL PKG

2.1.2 Sound Propagation and Attenuation

Noise can be generated by a number of sources, including mobile sources such as automobiles, trucks and airplanes, and stationary sources such as construction sites, machinery, and industrial operations. Sound spreads (propagates) uniformly outward in a spherical pattern, and the sound level decreases (attenuates) at a rate of approximately six dB for each doubling of distance from a stationary or point source. Sound from a line source, such as a highway, propagates outward in a cylindrical pattern, often referred to as cylindrical spreading. Sound levels attenuate at a rate of approximately three dB for each doubling of distance from a line source, such as a roadway, depending on ground surface characteristics (Federal Highway Administration [FHWA] 2011). No excess attenuation is assumed for hard surfaces like a parking lot or a body of water. Soft surfaces, such as soft dirt or grass, can absorb sound, so an excess ground-attenuation value of 1.5 dB per doubling of distance is normally assumed. For line sources, an overall attenuation rate of three dB per doubling of distance is assumed (FHWA 2011).

Noise levels may also be reduced by intervening structures; generally, a single row of detached buildings between the receptor and the noise source reduces the noise level by about five dBA (FHWA 2006), while a solid wall or berm generally reduces noise levels by 10 to 20 dBA (FHWA 2011). However, noise barriers or enclosures specifically designed to reduce site-specific construction noise can provide a sound reduction 35 dBA or greater (Western Electro-Acoustic Laboratory, Inc. [WEAL] 2000). To achieve the most potent noise-reducing effect, a noise enclosure/barrier must physically fit in the available space, must completely break the “line of sight” between the noise source and the receptors, must be free of degrading holes or gaps, and must not be flanked by nearby reflective surfaces. Noise barriers must be sizable enough to cover the entire noise source and extend lengthwise and vertically as far as feasibly possible to be most effective. The limiting factor for a noise barrier is not the component of noise transmitted through the material, but rather the amount of noise flanking around and over the barrier. In general, barriers contribute to decreasing noise levels only when the structure breaks the "line of sight" between the source and the receiver.

The manner in which older homes in California were constructed generally provides a reduction of exterior-to-interior noise levels of about 20 to 25 dBA with closed windows (Caltrans 2002). The exterior-to-interior reduction of newer residential units is generally 30 dBA or more (Harris Miller, Miller & Hanson Inc. [HMMH] 2006). Generally, in exterior noise environments ranging from 60 dBA Community Noise Equivalent Level (CNEL) to 65 dBA CNEL, interior noise levels can typically be maintained below 45 dBA, a typically residential interior noise standard, with the incorporation of an adequate forced air mechanical ventilation system in each residential building, and standard thermal-pane residential windows/doors with a minimum rating of Sound Transmission Class (STC) 28. (STC is an integer rating of how well a building partition attenuates airborne sound. In the U.S., it is widely used to rate interior partitions, ceilings, floors, doors, windows, and exterior wall configurations.) In exterior noise environments of 65 dBA CNEL or greater, a combination of forced-air mechanical ventilation and sound-rated construction methods is often required to meet the interior noise level limit. Attaining the necessary noise reduction from exterior to interior spaces is readily achievable in noise environments less than 75 dBA CNEL with proper wall construction techniques following California Building Code methods, the selections of proper windows and doors, and the incorporation of forced-air mechanical ventilation systems.

PC ORIGINAL PKG

2.1.3 Noise Descriptors

The decibel scale alone does not adequately characterize how humans perceive noise. The dominant frequencies of a sound have a substantial effect on the human response to that sound. Several rating scales have been developed to analyze the adverse effect of community noise on people. Because environmental noise fluctuates over time, these scales consider that the effect of noise on people is largely dependent on the total acoustical energy content of the noise, as well as the time of day when the noise occurs. The L_{eq} is a measure of ambient noise, while the L_{dn} and CNEL (Community Noise Equivalent Level) are measures of community noise. Each is applicable to this analysis and defined in Table 2-1.

PC ORIGINAL PKG

Table 2-1. Common Acoustical Descriptors

Descriptor	Definition
Decibel, dB	A unit describing the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20.
Sound Pressure Level	Sound pressure is the sound force per unit area, usually expressed in micropascals (or 20 micronewtons per square meter), where 1 pascal is the pressure resulting from a force of 1 newton exerted over an area of 1 square meter. The sound pressure level is expressed in decibels as 20 times the logarithm to the base 10 of the ratio between the pressures exerted by the sound to a reference sound pressure (e.g., 20 micropascals). Sound pressure level is the quantity that is directly measured by a sound level meter.
Frequency, Hertz (Hz)	The number of complete pressure fluctuations per second above and below atmospheric pressure. Normal human hearing is between 20 Hz and 20,000 Hz. Infrasonic sound are below 20 Hz and ultrasonic sounds are above 20,000 Hz.
A-Weighted Sound Level, dBA	The sound pressure level in decibels as measured on a sound level meter using the A weighting filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.
Equivalent Noise Level, L_{eq}	The average acoustic energy content of noise for a stated period of time. Thus, the Leq of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.
L_{max}, L_{min}	The maximum and minimum A-weighted noise level during the measurement period.
L_{01}, L_{10}, L_{50}, L_{90}	The A-weighted noise levels that are exceeded 1%, 10%, 50%, and 90% of the time during the measurement period.
Day/Night Noise Level, L_{dn} or DNL	A 24-hour average Leq with a 10 dBA "weighting" added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the nighttime. The logarithmic effect of these additions is that a 60 dBA 24-hour Leq would result in a measurement of 66.4 dBA Ldn.
Community Noise Equivalent Level, CNEL	A 24-hour average Leq with a 5 dBA "weighting" during the hours of 7:00 p.m. to 10:00 p.m. and a 10 dBA "weighting" added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the evening and nighttime, respectively. The logarithmic effect of these additions is that a 60 dBA 24-hour Leq would result in a measurement of 66.7 dBA CNEL.
Ambient Noise Level	The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location.
Decibel, dB	A unit describing the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20.

The A weighted decibel sound level scale gives greater weight to the frequencies of sound to which the human ear is most sensitive. Because sound levels can vary markedly over a short period of time, a

PC ORIGINAL PKG

method for describing either the average character of the sound or the statistical behavior of the variations must be utilized. Most commonly, environmental sounds are described in terms of an average level that has the same acoustical energy as the summation of all the time-varying events.

The scientific instrument used to measure noise is the sound level meter. Sound level meters can accurately measure environmental noise levels to within about ±1 dBA. Various computer models are used to predict environmental noise levels from sources, such as roadways and airports. The accuracy of the predicted models depends on the distance between the receptor and the noise source. Close to the noise source, the models are accurate to within about ±1 to 2 dBA.

2.1.4 Human Response to Noise

The human response to environmental noise is subjective and varies considerably from individual to individual. Noise in the community has often been cited as a health problem, not in terms of actual physiological damage, such as hearing impairment, but in terms of inhibiting general well-being and contributing to undue stress and annoyance. The health effects of noise in the community arise from interference with human activities, including sleep, speech, recreation, and tasks that demand concentration or coordination. Hearing loss can occur at the highest noise intensity levels.

Noise environments and consequences of human activities are usually well represented by median noise levels during the day or night or over a 24-hour period. Environmental noise levels are generally considered low when the CNEL is below 60 dBA, moderate in the 60 to 70 dBA range, and high above 70 dBA. Examples of low daytime levels are isolated, natural settings with noise levels as low as 20 dBA and quiet, suburban, residential streets with noise levels around 40 dBA. Noise levels above 45 dBA at night can disrupt sleep. Examples of moderate-level noise environments are urban residential or semi-commercial areas (typically 55 to 60 dBA) and commercial locations (typically 60 dBA). People may consider louder environments adverse, but most will accept the higher levels associated with noisier urban residential or residential-commercial areas (60 to 75 dBA) or dense urban or industrial areas (65 to 80 dBA). Regarding increases in A-weighted noise levels (dBA), the following relationships should be noted in understanding this analysis:

- Except in carefully controlled laboratory experiments, a change of 1 dBA cannot be perceived by humans.
- Outside of the laboratory, a 3-dBA change is considered a just-perceivable difference.
- A change in level of at least 5 dBA is required before any noticeable change in community response would be expected. An increase of 5 dBA is typically considered substantial.
- A 10-dBA change is subjectively heard as an approximate doubling in loudness and would almost certainly cause an adverse change in community response.

PC ORIGINAL PKG

2.1.5 Effects of Noise on People

Hearing Loss

While physical damage to the ear from an intense noise impulse is rare, a degradation of auditory acuity can occur even within a community noise environment. Hearing loss occurs mainly due to chronic exposure to excessive noise but may be due to a single event such as an explosion. Natural hearing loss associated with aging may also be accelerated from chronic exposure to loud noise.

The Occupational Safety and Health Administration (OSHA) has a noise exposure standard that is set at the noise threshold where hearing loss may occur from long-term exposures. The maximum allowable level is 90 dBA averaged over eight hours. If the noise is above 90 dBA, the allowable exposure time is correspondingly shorter.

Annoyance

Attitude surveys are used for measuring the annoyance felt in a community for noises intruding into homes or affecting outdoor activity areas. In these surveys, it was determined that causes for annoyance include interference with speech, radio and television, house vibrations, and interference with sleep and rest. The L_{dn} as a measure of noise has been found to provide a valid correlation of noise level and the percentage of people annoyed. People have been asked to judge the annoyance caused by aircraft noise and ground transportation noise. There continues to be disagreement about the relative annoyance of these different sources. For ground vehicles, a noise level of about 55 dBA L_{dn} is the threshold at which a substantial percentage of people begin to report annoyance.

2.2 Fundamentals of Environmental Groundborne Vibration

2.2.1 Vibration Sources and Characteristics

Sources of earthborne vibrations include natural phenomena (e.g., earthquakes, volcanic eruptions, sea waves, landslides) or manmade causes (explosions, machinery, traffic, trains, construction equipment, etc.). Vibration sources may be continuous (e.g., factory machinery) or transient (e.g., explosions).

Ground vibration consists of rapidly fluctuating motions or waves with an average motion of zero. Several different methods are typically used to quantify vibration amplitude. One is the peak particle velocity (PPV); another is the root mean square (RMS) velocity. The PPV is defined as the maximum instantaneous positive or negative peak of the vibration wave. The RMS velocity is defined as the average of the squared amplitude of the signal. The PPV and RMS vibration velocity amplitudes are used to evaluate human response to vibration.

PPV is generally accepted as the most appropriate descriptor for evaluating the potential for building damage. For human response, however, an average vibration amplitude is more appropriate because it takes time for the human body to respond to the excitation (the human body responds to an average vibration amplitude, not a peak amplitude). Because the average particle velocity over time is zero, the RMS amplitude is typically used to assess human response. The RMS value is the average of the amplitude squared over time, typically a 1- sec. period (FTA 2018).

PC ORIGINAL PKG

Table 2-2 displays the reactions of people and the effects on buildings produced by continuous vibration levels. The annoyance levels shown in the table should be interpreted with care since vibration may be found to be annoying at much lower levels than those listed, depending on the level of activity or the sensitivity of the individual. To sensitive individuals, vibrations approaching the threshold of perception can be annoying. Low-level vibrations frequently cause irritating secondary vibration, such as a slight rattling of windows, doors, or stacked dishes. The rattling sound can give rise to exaggerated vibration complaints, even though there is very little risk of actual structural damage. In high-noise environments, which are more prevalent where groundborne vibration approaches perceptible levels, this rattling phenomenon may also be produced by loud airborne environmental noise causing induced vibration in exterior doors and windows.

Ground vibration can be a concern in instances where buildings shake, and substantial rumblings occur. However, it is unusual for vibration from typical urban sources such as buses and heavy trucks to be perceptible. For instance, heavy-duty trucks generally generate groundborne vibration velocity levels of 0.006 PPV at 50 feet under typical circumstances, which as identified in Table 2-2 is considered very unlikely to cause damage to buildings of any type. Common sources for groundborne vibration are planes, trains, and construction activities such as earth-moving which requires the use of heavy-duty earth moving equipment.

Table 2-2. Human Reaction and Damage to Buildings for Continuous or Frequent Intermittent Vibration Levels

Peak Particle Velocity (inches/second)	Approximate Vibration Velocity Level (VdB)	Human Reaction	Effect on Buildings
0.006–0.019	64–74	Range of threshold of perception	Vibrations unlikely to cause damage of any type
0.08	87	Vibrations readily perceptible	Recommended upper level to which ruins and ancient monuments should be subjected
0.1	92	Level at which continuous vibrations may begin to annoy people, particularly those involved in vibration sensitive activities	Virtually no risk of architectural damage to normal buildings
0.2	94	Vibrations may begin to annoy people in buildings	Threshold at which there is a risk of architectural damage to normal dwellings
0.4–0.6	98–104	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges	Architectural damage and possibly minor structural damage

PC ORIGINAL PKG

3.0 EXISTING ENVIRONMENTAL NOISE SETTING

3.1 Noise-Sensitive Land Uses

Noise-sensitive land uses are generally considered to include those uses where noise exposure could result in health-related risks to individuals, as well as places where quiet is an essential element of their intended purpose. Residential dwellings are of primary concern because of the potential for increased and prolonged exposure of individuals to both interior and exterior noise levels. Additional land uses such as hospitals, historic sites, cemeteries, and certain recreation areas are considered sensitive to increases in exterior noise levels. Schools, churches, hotels, libraries, and other places where low interior noise levels are essential are also considered noise-sensitive land uses.

The nearest existing noise-sensitive land use to the Project Site is a single-family residence located 523 feet from the southwestern corner of the Vega 5 Project component boundary.

3.2 Existing Ambient Noise Environment

The Project site is bound mostly by vacant undisturbed land, with the exception of agricultural lands and county roadways adjacent to the Vega 5 property. Noffsinger Road and Union Pacific Railway traverse the Vega 5 parcels, and the Coachella Canal crosses and runs adjacent to the Vega 2 properties. In order to quantify existing ambient noise levels in the Project area, ECORP Consulting, Inc. conducted four short-term noise measurements on January 12th, 2021. The noise measurement sites were representative of typical existing noise exposure within and adjacent to the Project Site during the daytime (see Attachment A for a visual depiction of the Noise Measurement Locations). The 15-minute measurements were taken between 11:35 a.m. and 12:54 p.m. Short-term (L_{eq}) measurements are considered representative of the noise levels throughout the day. As shown in Table 3-1, the existing noise levels (Baseline) in the Project-vicinity ranges from 45.5 to 48.1 dBA L_{eq}.

Table 3-1. Existing (Baseline) Noise Measurements

Location Number	Location	L_{eq} dBA	L_{min} dBA	L_{max} dBA	Time
1	W Schrimpf Road and Wiest Road	**45.5**	43.1	52.0	11:35 a.m. - 11:50 p.m.
2	Wiest Road and McDonald Road	**47.5**	37.2	61.9	11:57 a.m. - 11:12 p.m.
3	McDonald Road, ~700ft W of Wiest Road	**45.8**	31.6	70.7	12:16 p.m. - 12:31 p.m.
4	Wiest Rd ~1,000ft South of Wiest Road/Noffsinger Road Intersection	**48.1**	32.2	69.1	12:39 p.m. – 12:54 p.m.

Source: Measurements were taken by ECORP with a Larson Davis LxT SE precision sound level meter, which satisfies the American National Standards Institute for general environmental noise measurement instrumentation. See Attachment A for noise measurement outputs.

PC ORIGINAL PKG

The most common noise in the Project vicinity is produced by automotive vehicles (e.g., cars, trucks, buses, motorcycles) traversing county roads adjacent to the Project Site. Traffic moving along streets produces a sound level that remains relatively constant and is part of the minimum ambient noise level in the Project vicinity. Vehicular noise varies with the volume, speed and type of traffic. Slower traffic produces less noise than fast-moving traffic. Trucks typically generate more noise than cars. Infrequent or intermittent noise is also associated with vehicles, including sirens, vehicle alarms, slamming of doors, trains, garbage and construction vehicle activity and honking of horns. These noises add to urban noise and are regulated by a variety of agencies.

4.0 REGULATORY FRAMEWORK

4.1 Federal

4.1.1 Occupational Safety and Health Act of 1970

OSHA regulates onsite noise levels and protects workers from occupational noise exposure. To protect hearing, worker noise exposure is limited to 90 decibels with A-weighting (dBA) over an eight-hour work shift (29 Code of Regulations 1910.95). Employers are required to develop a hearing conservation program when employees are exposed to noise levels exceeding 85 dBA. These programs include provision of hearing protection devices and testing employees for hearing loss on a periodic basis.

4.2 State

4.2.1 State of California General Plan Guidelines

The State of California regulates vehicular and freeway noise affecting classrooms, sets standards for sound transmission and occupational noise control, and identifies noise insulation standards and airport noise/land-use compatibility criteria. The State of California General Plan Guidelines (State of California 2003), published by the Governor's Office of Planning and Research (OPR), also provides guidance for the acceptability of projects within specific CNEL/L_{dn} contours. The guidelines also present adjustment factors that may be used in order to arrive at noise acceptability standards that reflect the noise control goals of the community, the particular community's sensitivity to noise, and the community's assessment of the relative importance of noise pollution.

4.2.2 State Office of Planning and Research Noise Element Guidelines

The State OPR *Noise Element Guidelines* include recommended exterior and interior noise level standards for local jurisdictions to identify and prevent the creation of incompatible land uses due to noise. The Noise Element Guidelines contain a Land Use Compatibility table that describes the compatibility of various land uses with a range of environmental noise levels in terms of the CNEL.

PC ORIGINAL PKG

4.3 Local

4.3.1 Imperial County General Plan Noise Element

The County of Imperial General Plan Noise Element establishes maximum allowable average-hourly noise limits for various land use designations (refer to Table 4-1). These noise standards are to be applied at the property line of the noise-generating land use. In instances where the adjoining land use designations differ from that of the noise-generating land use, the more restrictive noise standard shall apply. Where the ambient noise level is equal to or exceeds the property line noise standard, the increase of the existing or proposed noise shall not exceed 3 dBA L_{eq}, which is just-perceivable increase in noise. $L_{eq\ is}$ defined as the average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure.

Table 4-1 County of Imperial Property Line Noise Standards

Land Use Zone	Time Period	Average-Hourly Noise Level (dBA L_{eq})
Residential	7 a.m. - 10 p.m. 10 p.m. - 7 a.m.	50 45
Multi-residential	7 a.m. - 10 p.m. 10 p.m. - 7 a.m.	55 50
Commercial	7 a.m. -10 p.m. 10 p.m. - 7 a.m.	60 55
Light Industrial/Industrial Park	Any time	70
General Industrial	Any time	75

Source: Imperial County 2015.

Notes: When the noise-generating property and the receiving property have different uses, the more restrictive standard shall apply. When the ambient noise level is equal to or exceeds the Property Line noise standard, the increase of the existing or proposed noise shall not exceed 3 dBA L_{eq}.

PC ORIGINAL PKG

Construction Noise Standards

Construction noise, from a single piece of equipment or a combination of equipment, shall not exceed 75 dB L_{eq}, when averaged over an eight (8) hour period, and measured at the nearest sensitive receptor. This standard assumes a construction period, relative to an individual sensitive receptor of days or weeks. In cases of extended length construction times, the standard may be tightened so as not to exceed 75 dB L_{eq} when averaged over a one (1) hour period.

Construction equipment operations are required to be limited to the hours of 7:00 a.m. to 7:00 p.m., Monday through Friday, and 9:00 a.m. to 5:00 p.m. Saturday. No commercial construction operations are permitted on Sunday or holidays. In cases of a person constructing or modifying a residence for himself/herself, and if the work is not being performed as a business, construction equipment operations may be performed on Sundays and holidays between the hours of 9:00 a.m. and 5:00 p.m. Such non-commercial construction activities may be further restricted where disturbing, excessive, or offensive noise causes discomfort or annoyance to reasonable persons of normal sensitivity residing in an area.

Significant Increase of Ambient Noise Levels

The increase of noise levels generally results in an adverse impact to the noise environment. The Noise/Land Use Compatibility Guidelines are not intended to allow the increase of ambient noise levels up to the maximum without consideration of feasible noise reduction measures. The following guidelines are established by the County of Imperial for the evaluation of significant noise impact.

- If the future noise level after a project is completed will be within the "normally acceptable" noise levels shown in the Noise/Land Use Compatibility Guidelines, but will result in an increase of 5 dB CNEL or greater, the project will have a potentially significant noise impact and mitigation measures must be considered.
- If the future noise level after a project is completed will be greater than the "normally acceptable" noise levels shown in the Noise/Land Use Compatibility Guidelines, a noise increase of 3 dB CNEL or greater shall be considered a potentially significant noise impact and mitigation measures must be considered.

Noise/Land Use Compatibility

The Imperial County General Plan Noise Element Noise/Land Use Compatibility Standards defines the acceptability of a land use in a specified noise environment. Table 4-2 provides the County of Imperial Noise/Land Use Compatibility Guidelines. When an acoustical analysis is performed, conformance of a proposed project with the Noise/Land Use Compatibility Guidelines is used to evaluate potential noise impacts and to provide criteria for environmental impact findings and conditions for project approval.

PC ORIGINAL PKG

Table 4-2. County of Imperial Noise/Land Use Compatibility Guidelines		
Land Use Category	**Community Noise Exposure L_{dn} or CNEL, dB**	**Acceptability**
Residential	< 60	Normally Acceptable
	60 - 70	Conditionally Acceptable

	75 - 80	Normally Unacceptable
	> 80	Clearly Unacceptable

Source: Imperial County 2015.

Notes: Interpretation (For Land Use Planning Purposes):

Normally Acceptable: Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements.

Conditionally Acceptable: New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design

Normally Unacceptable: New construction or development should be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.

Clearly Unacceptable: New construction or development clearly should not be undertaken.

PC ORIGINAL PKG

5.0 IMPACT ASSESSMENT

5.1 Thresholds of Significance

The impact analysis provided below is based on the following California Environmental Quality Act Guidelines Appendix G thresholds of significance. The project would result in a significant noise-related impact if it would produce:

1) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

2) Generation of excessive groundborne vibration or groundborne noise levels.

3) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels.

For purposes of this analysis, Project construction noise is compared to the County's construction noise standard of 75 dBA, when averaged over an eight (8) hour period and measured at the nearest sensitive receptor. Noise generated onsite is compared against the County's property line standards identified in Table 4-1.

5.2 Methodology

This analysis of the existing and future noise environments is based on empirical observations. Predicted construction noise levels were calculated utilizing the FHWA's Roadway Construction Model (see Attachment B). Groundborne vibration levels associated with construction-related activities for the Project have been evaluated utilizing typical groundborne vibration levels associated with construction equipment. Potential groundborne vibration impacts related to structural damage and human annoyance were evaluated, taking into account the distance from construction activities to nearby structures and typically applied criteria for structural damage and human annoyance.

In order to estimate the worst-case operational noise levels that may occur at the nearest noise-sensitive receptor, onsite operational noise levels have been calculated with the SoundPLAN 3D noise model (which predicts noise propagation from a noise source based on the location, noise level, and frequency spectra of the noise sources as well as the geometry and reflective properties of the local terrain, buildings, and barriers), coupled with reference noise measurements that were taken by ECORP Consulting, Inc. (ECORP) at an existing solar energy generation facility (see Attachment C).

PC ORIGINAL PKG

5.3 Impact Analysis

5.3.1 Project Construction Noise

Would the Project Result in Short-Term Construction-Generated Noise in Excess of Standards?

Onsite Construction Noise

Construction noise associated with the proposed Project would be temporary and would vary depending on the nature of the activities being performed. Noise generated would primarily be associated with the operation of off-road equipment for onsite construction activities as well as construction vehicle traffic on area roadways. Construction noise typically occurs intermittently and varies depending on the nature or phase of construction (e.g., land clearing, grading, excavation, paving). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. Typical operating cycles for these types of construction equipment may involve one or two minutes of full power operation followed by three to four minutes at lower power settings. Other primary sources of acoustical disturbance would be random incidents, which would last less than one minute (such as dropping large pieces of equipment or the hydraulic movement of machinery lifts). During construction, exterior noise levels could negatively affect sensitive land uses in the vicinity of the construction site. The nearest existing noise-sensitive land use to the Project Site is a single-family residence located 523 feet from the southwestern corner of the Vega 5 Project component boundary. However, Vega 2 and 3 are located on a different set of parcels than Vega 5. Therefore, the closest residence to Vega 2 and 3 is approximately 3,154 feet west of the Vega 2 boundary.

As previously described, the County's General Plan Noise Element states construction equipment operation shall be limited to the hours of 7:00 a.m. to 7:00 p.m., Monday through Friday, and 9:00 a.m. to 5:00 p.m. on Saturdays. No commercial construction operations are permitted on Sundays or holidays. Construction noise, from a single piece of equipment or a combination of equipment, shall not exceed 75 dB L_{eq}, when averaged over an eight (8) hour period, and measured at the nearest sensitive receptor. This standard assumes a construction period, relative to an individual sensitive receptor of days or weeks. In cases of extended length construction times, the standard may be tightened so as not to exceed 75 dB L_{eq} when averaged over a one (1) hour period. The anticipated short-term construction noise levels generated for the necessary construction equipment for Vega 2 and 3 are presented in Table 5-1. The anticipated short-term construction noise levels generated for the necessary construction equipment for Vega 5 are presented in Table 5-2.

PC ORIGINAL PKG

Table 5-1. Vega 2 and 3 Construction Average (dBA) Noise Levels at Nearest Receptors			
Combined Equipment	**Estimated Exterior Construction Noise Level at Existing Residences (dBA L_{eq})**	**Construction Noise Standards (dBA L_{eq})**	**Exceeds Standards?**
Demolition and Grubbing	50.4	*75*	**No**
Grading	52.2	*75*	**No**
Construction and Paving	54.6	*75*	**No**

Source: Construction noise levels were calculated by ECORP Consulting using the FHWA Roadway Noise Construction Model (FHWA 2006). Refer to Attachment B for Model Data Outputs.

Notes: The nearest residence is located approximately 3,154 feet from the Project's Vega 2 and 3 western boundaries.

L_{eq} = The equivalent energy noise level, is the average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.

As shown in Table 5-1, the individual or cumulative pieces of construction equipment during the construction of Vega 2 and 3 would not exceed the 75 dBA County construction noise standard at the nearby noise-sensitive receptors.

PC ORIGINAL PKG

Table 5-2. Vega 5 Construction Average (dBA) Noise Levels at Nearest Receptors			
Combined Equipment	**Estimated Exterior Construction Noise Level at Existing Residences (dBA L_{eq})**	**Construction Noise Standards (dBA L_{eq})**	**Exceeds Standards?**
Demolition and Grubbing	66.0	*75*	**No**
Grading	67.8	*75*	**No**
Construction and Paving	70.2	*75*	**No**

Source: Construction noise levels were calculated by ECORP Consulting using the FHWA Roadway Noise Construction Model (FHWA 2006). Refer to Attachment B for Model Data Outputs.

Notes: The nearest residence is located approximately 523 feet from the Project's Vega 5 southwestern boundary.

L_{eq} = The equivalent energy noise level, is the average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.

As shown in Table 5-2, no individual or cumulative pieces of construction equipment during the construction of Vega 5 would exceed the 75 dBA County construction noise standard at the nearby noise-sensitive receptors.

Offsite Construction Worker Traffic Noise

Project construction would result in additional traffic on adjacent roadways over the time period that construction occurs. As previously stated, the number of on–site construction workers for the solar project facilities are not expected to exceed 150 workers at any one time. The number of on-site construction workers for the battery storage facility and the substation is not expected to exceed 100 workers at any one time. Onsite parking would be provided for all construction workers. According to KOA Corporation (2021), a maximum of 510 daily automobile trips would be generated during Project construction, accounting for construction worker commutes and equipment deliveries. The majority of these trips are expected to be accommodated on State Route (SR) 78, SR 111, and SR 115. Construction workers would access the Vega 5 Project Site from SR 111 onto east on McDonald Road. The Vega 2 and 3 Project Site require an additional 1.65 miles of travel on Wiest Road and Flowing Wells Road.

According to the California Department of Transportation (Caltrans) *Technical Noise Supplement to the Traffic Noise Analysis Protocol* (2013), doubling of traffic on a roadway is required to result in an increase of 3 dB (outside of the laboratory, a 3-dBA change is considered a just-perceivable difference). According to the Caltrans Traffic Census Program (2018), the roadway segment of SR 111 closest to the Project Site currently accommodates 3,500 average daily traffic trips (ADT). The County General Plan Circulation and Scenic Highways Element (2008) designates the roadway segments of McDonald Road and Weist Road as Minor (Local) Collector, which on average can accommodate 1,900 to 16,200 ADT. Flowing Wells Road

PC ORIGINAL PKG

does not have a designation within the General Plan, but there are no sensitive receptors along Flowing Wells Road that would experience any sound changes along this roadway. Additionally, construction is temporary and once Project construction is completed, all construction-related traffic noise would cease.

Thus, the estimated 510 daily trips during Project construction would typically not result in a doubling of traffic on these facilities, and its contribution to existing traffic noise would not be perceptible.

5.3.2 Project Operational Noise

Would the Project Result in a Substantial Permanent Increase in Ambient Noise Levels in Excess of County or City Standards During Operations?

As previously described, noise-sensitive land uses are locations where people reside or where the presence of unwanted sound could adversely affect the use of the land. Residences, schools, hospitals, guest lodging, libraries, and some passive recreation areas would each be considered noise-sensitive and may warrant unique measures for protection from intruding noise. The nearest existing noise-sensitive land use to the Project Site is a single-family residence located 523 feet from the southwestern corner of the Vega 5 Project component boundary.

Operational Offsite Traffic Noise

Project operations would result in minimal additional traffic on adjacent roadways. The only visitors to the site would be that of repair or maintenance workers, whose presence at the site would be only be necessary infrequently and inconsistently. According to the California Department of Transportation (Caltrans) *Technical Noise Supplement to the Traffic Noise Analysis Protocol* (2013), doubling of traffic on a roadway is required to result in an increase of 3 dB (outside of the laboratory, a 3-dBA change is considered a just-perceivable difference). The proposed Project would not result in a doubling of traffic, and therefore its contribution to existing traffic noise would not be perceptible.

Project Land Use Compatibility

The County land use compatibility standards presented in the General Plan Noise Element provides the County with a tool to gauge the compatibility of new land uses relative to existing noise levels. This table, presented as Table 4-2, identifies acceptable noise levels for various land uses. In the case that the noise levels identified at the proposed Project Site fall within the "acceptable" levels presented in the General Plan, the Project is considered compatible with the existing noise environment.

As previously stated, the Project Site is proposing to develop an up to nominal 240, 60 and 50 MW alternating current PV solar energy generation and storage facilities. The proposed Project site is zoned A-3-RE (Heavy Agriculture with a Renewable Energy Overlay), A-2-RE (General Agriculture with a Renewable Energy Overlay) and S-2-RE (Open Space Preservation Zone with a Renewable Energy Overlay). As shown in Table 4-2, a normally acceptable noise standard for agricultural land uses is 69 dBA CNEL or under. In order to quantify existing ambient noise levels in the Project area, ECORP conducted four short-term noise measurements on January 12th, 2021. The noise measurement sites were representative of typical existing noise exposure in the Project vicinity and are considered representative of the noise levels throughout the day. As shown in Table 3-1, the ambient noise level recorded in the vicinity of the Project

PC ORIGINAL PKG

site ranges from 45.5 dBA to 66.1 dBA. However, it is noted that these short-term measurements were each conducted over 1,000 feet from the Vega 5 parcel center and adjacent to Wiest Rd and McDonald Rd, both substantial noise sources. Thus, the ambient noise levels experienced on the actual Project Site would most likely be less. As these noise levels fall below the County General Plan Noise Element (2015) standards for agricultural land uses as found in Table 4-2 above, the Project Site is considered an appropriate noise environment to locate the proposed land use.

Project Operations-Onsite Noise Sources

As previously stated, noise sensitive land uses are locations where people reside or where the presence of unwanted sound could adversely affect the use of the land. Residences, schools, hospitals, guest lodging, libraries, and some passive recreation areas would each be considered noise-sensitive and may warrant unique measures for protection from intruding noise. The nearest existing noise-sensitive land use to the Project Site is a single-family residence located 523 feet from the southwestern corner of the Vega 5 Project component boundary.

The main stationary operational noise associated with the Project would be from the proposed transformers, inverters, substation, and transmission lines. Onsite Project operations have been calculated using the SoundPLAN 3D noise model. As previously stated, a noise level of 47.1 dBA was employed as the reference noise level in the SoundPLAN 3D noise model to determine noise-level propagation associated with the Project operations. The results of this model can be found in Appendix C. Table 5-2 shows the predicted Project noise levels at the nearest noise-sensitive land use in the Project vicinity, as predicted by SoundPLAN.

Table 5-3. Modeled Operational Noise Levels at Nearest Sensitive Receptor

Location	Modeled Operational Noise Attributed to Project (L_{eq} dBA)	County Daytime Standard (L_{eq}, dB)	County Nighttime Standard (L_{eq} dB)	Exceed Standard?
Property line of the nearest residence	**36.7**	50.0	45.0	**No**

Source: Stationary source noise levels were modeled by ECORP using SoundPLAN 3D noise model. Refer to Appendix C for noise modeling assumptions and results.

Note: Reference noise measurement used to calculate Project onsite noise propagation identified at 47.1 dBA, per 30-minute measurements taken at a Vega SES Complex solar generation facility in Imperial County.

As shown in Table 5-3, Project operational noise would not exceed County daytime or nighttime standards.

PC ORIGINAL PKG

5.3.3 Project Construction Groundborne Vibration

Would the Project Expose Structures to Substantial Groundborne Vibration During Construction?

Excessive groundborne vibration impacts result from continuously occurring vibration levels. Increases in groundborne vibration levels attributable to the Project would be primarily associated with short-term construction-related activities. Construction on the Project Site would have the potential to result in varying degrees of temporary groundborne vibration, depending on the specific construction equipment used and the operations involved. Ground vibration generated by construction equipment spreads through the ground and diminishes in magnitude with increases in distance.

Construction-related ground vibration is normally associated with impact equipment such as pile drivers, jackhammers, and the operation of some heavy-duty construction equipment, such as dozers and trucks. It is noted that pile drivers would not be necessary during Project construction. Vibration decreases rapidly with distance and it is acknowledged that construction activities would occur throughout the Project Site and would not be concentrated at the point closest to sensitive receptors. Groundborne vibration levels associated with typical construction equipment at 25 feet distance are summarized in Table 5-4.

Table 5-4. Representative Vibration Source Levels for Construction Equipment

Equipment Type	Peak Particle Velocity at 25 Feet (inches per second)
Large Bulldozer	0.089
Caisson Drilling	0.089
Loaded Trucks	0.076
Hoe Ram	0.089
Jackhammer	0.035
Small Bulldozer/Tractor	0.003
Vibratory Roller	0.210

Source: FTA 2018; Caltrans 2020b

The County of Imperial does not regulate vibrations associated with construction. However, a discussion of construction vibration is included for full disclosure purposes. For comparison purposes, the Caltrans (2020b) recommended standard of 0.3 inch per second PPV with respect to the prevention of structural damage for older residential buildings is used as a threshold. This is also the level at which vibrations may begin to annoy people in buildings. Consistent with FTA recommendations for calculating construction vibration, construction vibration was measured from the center of the Project Site (FTA 2018). The nearest structure of concern to the construction site, with regard to groundborne vibrations, is the Coachella

PC ORIGINAL PKG

Canal located within the proposed Project Site boundary and approximately 30 feet across the Coachella Canal Access Road.

Based on the representative vibration levels presented for various construction equipment types in Table 5-3 and the construction vibration assessment methodology published by the FTA (2018), it is possible to estimate the potential project construction vibration levels. The FTA provides the following equation:

$$[PPVequip = PPVref \times (25/D)^{1.5}]$$

Table 5-5 presents the expected Project related vibration levels at a distance of 30 feet.

Table 5-5. Construction Vibration Levels at 30 Feet

Receiver PPV Levels (in/sec)[1]					Peak Vibration	Threshold	Exceed Threshold
Large Bulldozer, Caisson Drilling & Hoe Ram	Loaded Trucks	Jackhammer	Small Bulldozer	Vibratory Roller			
0.068	0.058	0.027	0.002	0.160	**0.160**	*0.3*	**No**

Notes: [1]Based on the Vibration Source Levels of Construction Equipment included on Table 5-4 (FTA 2018). Distance to the nearest structure of concern is approximately 30 feet measured from Project Site boundary.

As shown in Table 5-5, vibration as a result of construction activities would not exceed 0.3 PPV at the nearest structure. Thus, project construction would not exceed the recommended threshold.

5.3.4 Project Operational Groundborne Vibration

Would the Project Expose Structures to Substantial Groundborne Vibration During Operations?

Project operations would not include the use of any large-scale stationary equipment that would result in excessive vibration levels. Therefore, the project would not result groundborne vibration impacts during operations.

5.3.5 Excess Airport Noise

Would the Project Expose People Residing or Working in the Project area to Excessive Airport Noise?

The Project Site center is located approximately 8.39 miles northeast of the Calipatria Municipal Airport . The Imperial County Airport Land Use Commission has established a set of land use compatibility criteria for lands surrounding the airports in Imperial County in the Imperial County Airport Land Use Compatibility Plan (1996). Figure 3-C of the Imperial County Airport Land Use Compatibility Maps shows

PC ORIGINAL PKG

that the proposed Project Site lays outside of the noise contours of the Calipatria Municipal Airport. Thus, the Project would not expose residents to excessive airport noise.

5.3.6 Cumulative Noise

Would the Project Contribute to Cumulatively Considerable Noise During Construction?

Construction activities associated with the proposed Project and other construction projects in the area may overlap, resulting in construction noise in the area. However, construction noise impacts primarily affect the areas adjacent to the construction site. Construction noise for the proposed Project was determined to be less than significant following compliance with County noise standards. Cumulative development in the vicinity of the Project Site could result in elevated construction noise levels at sensitive receptors in the Project area. However, each project would be required to comply with the applicable noise limitations on construction. Therefore, the Project would not contribute to cumulative impacts during construction.

Would the Project Contribute to Cumulatively Considerable Noise from Offsite Traffic?

As described previously, Project operations would result in extremely minimal additional traffic on adjacent roadways. The only visitors to the site would be that of repair or maintenance work that would be done very infrequently. Thus, any cumulative noise impacts from Project-related traffic would be minimal.

Would the Project Contribute to Cumulatively Considerable Noise from Stationary Sources?

Cumulative noise impacts would primarily be associated with the transformers, inverters, substation, and transmission lines from the solar facility. Long-term noise sources associated with development at the Project, combined with other cumulative projects, could cause local noise-level increases. Noise levels associated with the proposed Project and related cumulative projects together could result in higher noise levels than considered separately. However, noise increase as a result of the Project would not be perceivable and thus would not exceed County standards.

1.0 Introduction

This traffic impact analysis (TIA) has been prepared to identify the potential traffic impacts associated with developing the Vega SES 2 and Vega SES 3 Solar Energy Storage (Projects) in Imperial County. The study was completed following the guidelines described in the County of Imperial Department of Public Works *Traffic Study and Report Policy* dated March 12, 2007, revised June 29, 2007 and approved by the Board of Supervisors of the County of Imperial on August 7, 2007 ("Traffic Study and Report Policy").

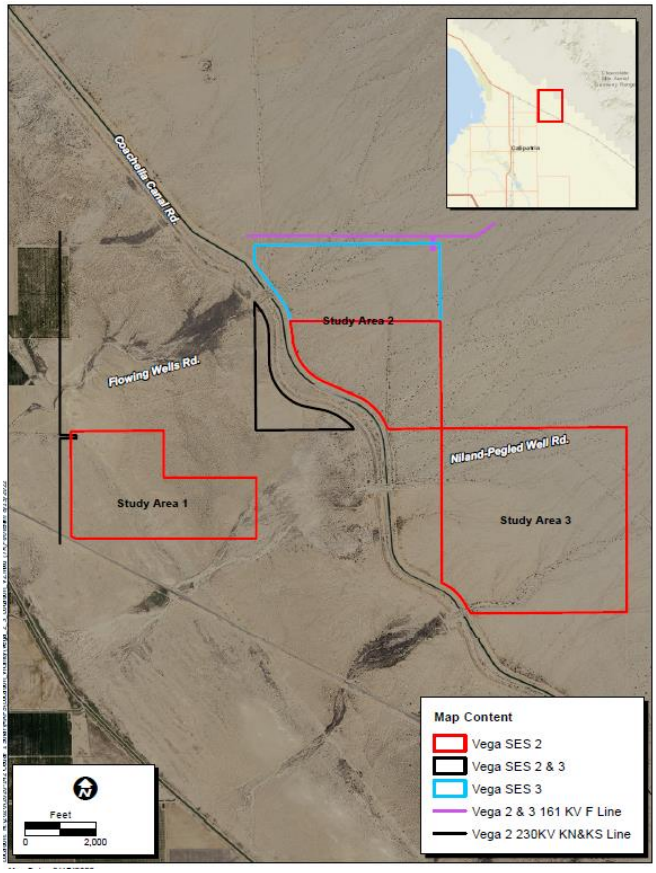
KOA has coordinated with the County's Engineering Department on the scope of the traffic analysis, including the study area and future year analysis assumptions. As necessary, if required, projects will be identified to offset or reduce significant impacts. Based on discussions with City staff, current and future traffic conditions at select intersections in close proximity to the proposed project have been evaluated for the purposes of this TIA.

This report describes the existing roadway network in the vicinity of the project site. It includes a review of the existing and proposed traffic activities for weekday peak AM and PM periods and daily traffic conditions.

Project Location

The project location is shown in Figure 1.1.

Figure 1.1 Study Area



Source: ECORP

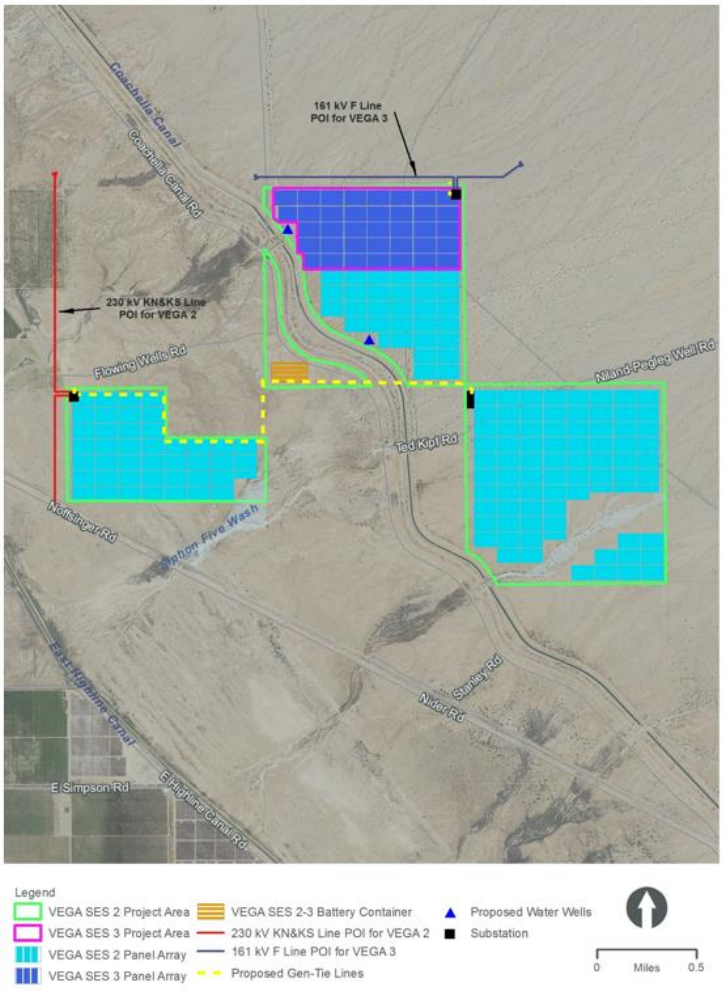
PC ORIGINAL PKG

Project Description

Vega SES 2, LLC and Vega SES 3, LLC. are proposing to develop the **Vega SES 2 site.** This is a two-hundred and forty (240)–megawatt alternating current (MWAC) solar photovoltaic (PV) energy generation project with an integrated 480 MW Battery Energy Storage System (BESS), on approximately 1,323 acres of land in Imperial County, California. The project site plan is shown in Figure 1.2.

The **Vega SES 3** project will be located within the Vega 2 site. The Vega SES 3 project will be a sixty (60)–megawatt alternating current (MWAC) solar photovoltaic (PV) energy generation project with an integrated 120 MW Battery Energy Storage System (BESS), on approximately 230 acres of land in Imperial County, California. The construction of both projects would occur simultaneously and so are being studied together. The projects are estimated to take 12-18 months and would begin in 2023. The project opening is anticipated to be in late 2023 or early 2024.

Figure 1.2 Site Plan



Source: First Administrative Draft EIR | VEGA SES 2, 3, & 5 Solar Energy Project

PC ORIGINAL PKG

Construction Activities

The construction of the site to include site preparation and construction is estimated to take 12-18 months and would begin in 2023. The number of on–site construction workers for the solar project facilities is not expected to exceed 150 workers at any one time. The number of on-site construction workers for the battery storage facility and the substation is not expected to exceed 100 workers at any one time.

Construction of the Projects will include the following activities:

- Site preparation
- Grading and earthwork
- Concrete foundations
- Structural steel work
- Electrical/instrumentation work
- Collector line installation
- Architecture and landscaping

PC ORIGINAL PKG

2.0 Capacity Analysis Methodologies

This section presents a brief overview of traffic analysis methodologies and concepts used in this study. Street system operating conditions are typically described in terms of "level of service (LOS)" to compare without project and with project alternatives. LOS is a report-card scale used to indicate the quality of traffic flow on roadway segments and at intersections. The levels of service range from Level A (free flow, little congestion) to Level F (forced flow, higher congestion).

Study Area Criteria

The study area is determined based on the County of Imperial Department of Public Works *Traffic Study and Report Policy* dated March 12, 2007, revised June 29, 2007 and approved by the Board of Supervisors of the County of Imperial on August 7, 2007 ("Traffic Study and Report Policy"). "Any project that has the potential to degrade an existing road section, an existing signalized intersection, or an existing unsignalized intersection to below the existing level of service or to cause it to be lower than a level of service (LOS) "C" during any peak hour, using the HCM Methods of analysis on any individual, existing traffic movement." Traffic Study and Report Policy, 4-5.

The study area for this project includes those locations that will likely be affected by this project where a minimum of 50 peak hour vehicles impact the location. The specific study area consists of the following intersections:

1. McDonald Road and Weist Road
2. McDonald Road and SR-111
3. SR-111 and SR-115
4. SR-111 and north ramps with SR-78
5. SR-111 and south ramps with SR-78

The study area also includes the following study segments:

1. McDonald Road from SR-111 to Weist Road
2. SR-111 from McDonald Road to Niland Ave
3. SR-111 from McDonald Road to SR-115
4. SR-111 from SR-115 to SR-78 north ramps
5. SR-111 from SR-78 north ramps to SR-78 south ramps

Scenario Criteria

The proposed project's traffic impacts were analyzed in three scenarios as listed below. The traffic analysis included intersections and roadway segments within Imperial County and Caltrans District 11 in the following scenarios to determine the potential impacts:

- Existing Year (2020) Conditions
- Construction Year (2023) Baseline Conditions
- Construction Year (2023) + Project Construction Conditions

PC ORIGINAL PKG

Peak Hour Intersection Level of Service Standards

Traffic conditions on most roadway facilities are analyzed using the principles of the specific analysis methods contained in the latest version (2010) of the *Highway Capacity Manual* (*HCM*), a publication of the Transportation Research Board, a research agency affiliated with the Federal Government. Chapter 18 of the *HCM 2010* is devoted to analysis of signalized intersections. The methodology in the *HCM 2010* for signalized intersections is based upon measurements or forecasts of control delay for traffic utilizing all approaches to the intersection.

Unsignalized intersections, including two-way and all-way stop controlled intersections were analyzed using the 2010 Highway Capacity Manual unsignalized intersection analysis methodology. The LOS for a two-way stop controlled (TWSC) intersection is determined by the computed or measured control delay and is defined for each minor movement. The analysis of peak hour intersection conditions was conducted using the Synchro 10 software program developed by Trafficware. Results are displayed in terms of control delay (seconds per vehicle) and an equivalent LOS as shown in Table 2.1.

Table 2.1 HCM Level of Service Definitions for Intersections

LOS	Signalized Intersection Delay (Seconds per Vehicle)	Unsignalized Intersection Average Stop Delay (Seconds)
A	<10	<10
B	>10 and <20	>10 and <15
C	>20 and <35	>15 and <25
D	>35 and <55	>25 and <35
E	>55 and <80	>35 and <50
F	>80	>50

Source: Highway Capacity Manual, 2010.

Roadway Segment Level of Service Standards

Roadway segment LOS standards and thresholds provide the basis for analysis of roadway segment performance. The analysis of roadway segment LOS is based on the functional classification of the roadway, the maximum capacity, roadway geometrics, and existing or forecast Average Daily Traffic (ADT) volumes.

The County of Imperial level of service analysis was performed by utilizing the *Circulation and Scenic Highways Element, January 2008*. The thresholds for each facility type are presented in Table 2.2.

PC ORIGINAL PKG

Table 2.2 County of Imperial ADT Level of Service Volumes by Roadway Type

Road		Level of Service (LOS)				
Class	X-Section	A	B	C	D	E
Expressway	154/210	30,000	42,000	60,000	70,000	80,000
Prime Arterial	106/136	22,200	37,000	44,600	50,000	57,000
Minor Arterial	82/102	14,800	24,700	29,600	33,400	37,000
Major Collector	64/84	13,700	22,800	27,400	30,800	34,200
Minor (Local) Collector	40/70	1,900	4,100	7,100	10,900	16,200

* Levels of service are not applied to residential streets since their primary purpose is to serve abutting lots, not carry through traffic. Levels of service normally apply to roads carrying through traffic between major trip generators and attractors.
Source: *Imperial County Circulation and Scenic Highways Element 2008 and Imperial County Long Range Transportation Plan 2013 Update*

Freeway Segments

Freeway level of service analysis is based upon procedures developed by Caltrans. The procedure for calculating freeway level of service involves calculating a peak hour volume to capacity (V/C) ratio. Peak hour volumes are calculated from Average Daily Traffic (ADT) volumes by applying design hour ("K"), directional ("D") and truck ("T") factors. The base capacities for Interstate 8 freeway lanes determined from the Highway Capacity Manual as assumed to be 2,350 passenger-car per hour per main lane (pc/h/ln).

The resulting V/C ratio is then compared to acceptable ranges of V/C values corresponding to the various levels of service for each facility classification, as shown in Table 2.3. The corresponding level of service represents an approximation of freeway operating conditions in the peak direction of travel during the peak hour. Constant with Caltrans requirements, LOS D or better is used in this study as the threshold for acceptable freeway operations.

Table 2.3 CALTRANS Level of Service Facility Classification

CALTRANS FREEWAY SEGMENT LEVEL OF SERVICE DEFINITIONS

LOS	Maximum V/C	Congestion/Delay	Traffic Description
A	≤ 0.30	None	Free flow.
B	> 0.30 - 0.50	None	Free to stable flow, light to moderate volumes.
C	> 0.50 - 0.71	None to minimal	Stable flow, moderate volumes, freedom to maneuver noticeably restricted.
D	> 0.71 - 0.89	Minimal to substantial	Approaches unstable flow, heavy volumes, very limited freedom to maneuver.
E	> 0.89 - 1.00	Significant	Extremely unstable flow, maneuverability and psychological comfort extremely poor.
F	> 1.00	Considerable	Forced or breakdown flow. Delay measured in average travel speed (MPH). Signalized segments experience delays >60.0 seconds/vehicle.

PC ORIGINAL PKG

Analysis of Significance

Imperial County

The significance criteria for traffic impacts are based on the Imperial County Planning & Development Services Department LOS standard as outlined in the "Circulation Element". "The County's goal for an acceptable traffic service standard on an Average Daily Traffic (ADT) basis and during AM and PM peak periods for all County-Maintained Roads shall be LOS C for all street segment links and intersections."

- Strive to maintain LOS "C" or better on arterial and collector streets, at all intersections, and on principal arterials during the hour of highest volume during the AM hours and also during the PM hours. Imperial County has established LOS "C" as the general threshold for acceptable overall traffic operations for both signalized and un-signalized intersections.

- Accept LOS "D" after finding that there is no practical and feasible way to mitigate to LOS "C;" and the development causing the lower level of service provides a clear, overall public benefit.

- For segments that operate at LOS D or lower, an incremental increase in V/C of greater than 0.02 is considered to be a significant impact. For intersections that operate at LOS D or lower, an incremental increase in vehicle delay of 2.0 seconds or greater is considered to be a significant impact.

Caltrans

- For segments that operate at LOS D or lower, an incremental increase in V/C of greater than 0.02 is considered to be a significant impact. For intersections that operate at LOS D or lower, an incremental increase in vehicle delay of 2.0 seconds or greater is considered to be a significant impact.

- For freeway segments that operate at LOS D or lower, an incremental increase in V/C of greater than 0.01 is considered to be a significant impact.

PC ORIGINAL PKG

3.0 Existing Conditions

This section documents the Existing Year Conditions in the study area. The Existing Year is taken to be 2020 for analysis purposes based on existing traffic counts taken in December, 2020 The discussion presented here is limited to segments and intersections in the project's vicinity.

Existing Roadways

Each of the key roadways, as well as associated study intersections within the study area, are discussed below.

Roadway Facilities

1. *State Route 111 (SR-111))* is a two-lane highway with no median and a posted speed limit of 65 mph.

2. *McDonald Road* is a two lane paved local roadway that runs in an east-west direction. This road provides access from the site to/from SR-111.

3. *Weist Road* is a north-south that connects Mc Donald Road. North of McDonald Road, Weist Road is unpaved. Weist Road also crosses over the Highland Canal, and has an at-grade crossing of the Union Pacific Railroad tracks

4. *Noffsinger Road* is a two lane unpaved local roadway that runs in a diagonal direction from northwest to southeast. A bridge is provided over the Highland Canal.

5. *Flowing Well Road* is a two lane unpaved local roadway that runs in an east-west direction that connects to Weist Road which leads to the project site.

6. *Coachella Canal Road* is classified as a Local County. It has two lanes and is unpaved.

7. *Ted Kipf Road is* classified as a Local County. It has two lanes and is unpaved.

Figure 3.1 displays the existing intersection geometrics for study area intersections.

Traffic Volumes

Existing turning movement counts at the study intersections were conducted on Tuesday, December 8, 2020. The existing condition reflects those land uses that were built and occupied at the time of the traffic counts and represent a typical weekday commute period. Intersection turning movement counts are provided in Appendix A. Existing average daily traffic (ADT) segment counts were obtained from the Caltrans for the year 2019. The ADT, weekday a.m. and p.m. peak hour traffic volumes are shown on Figure 3.2.

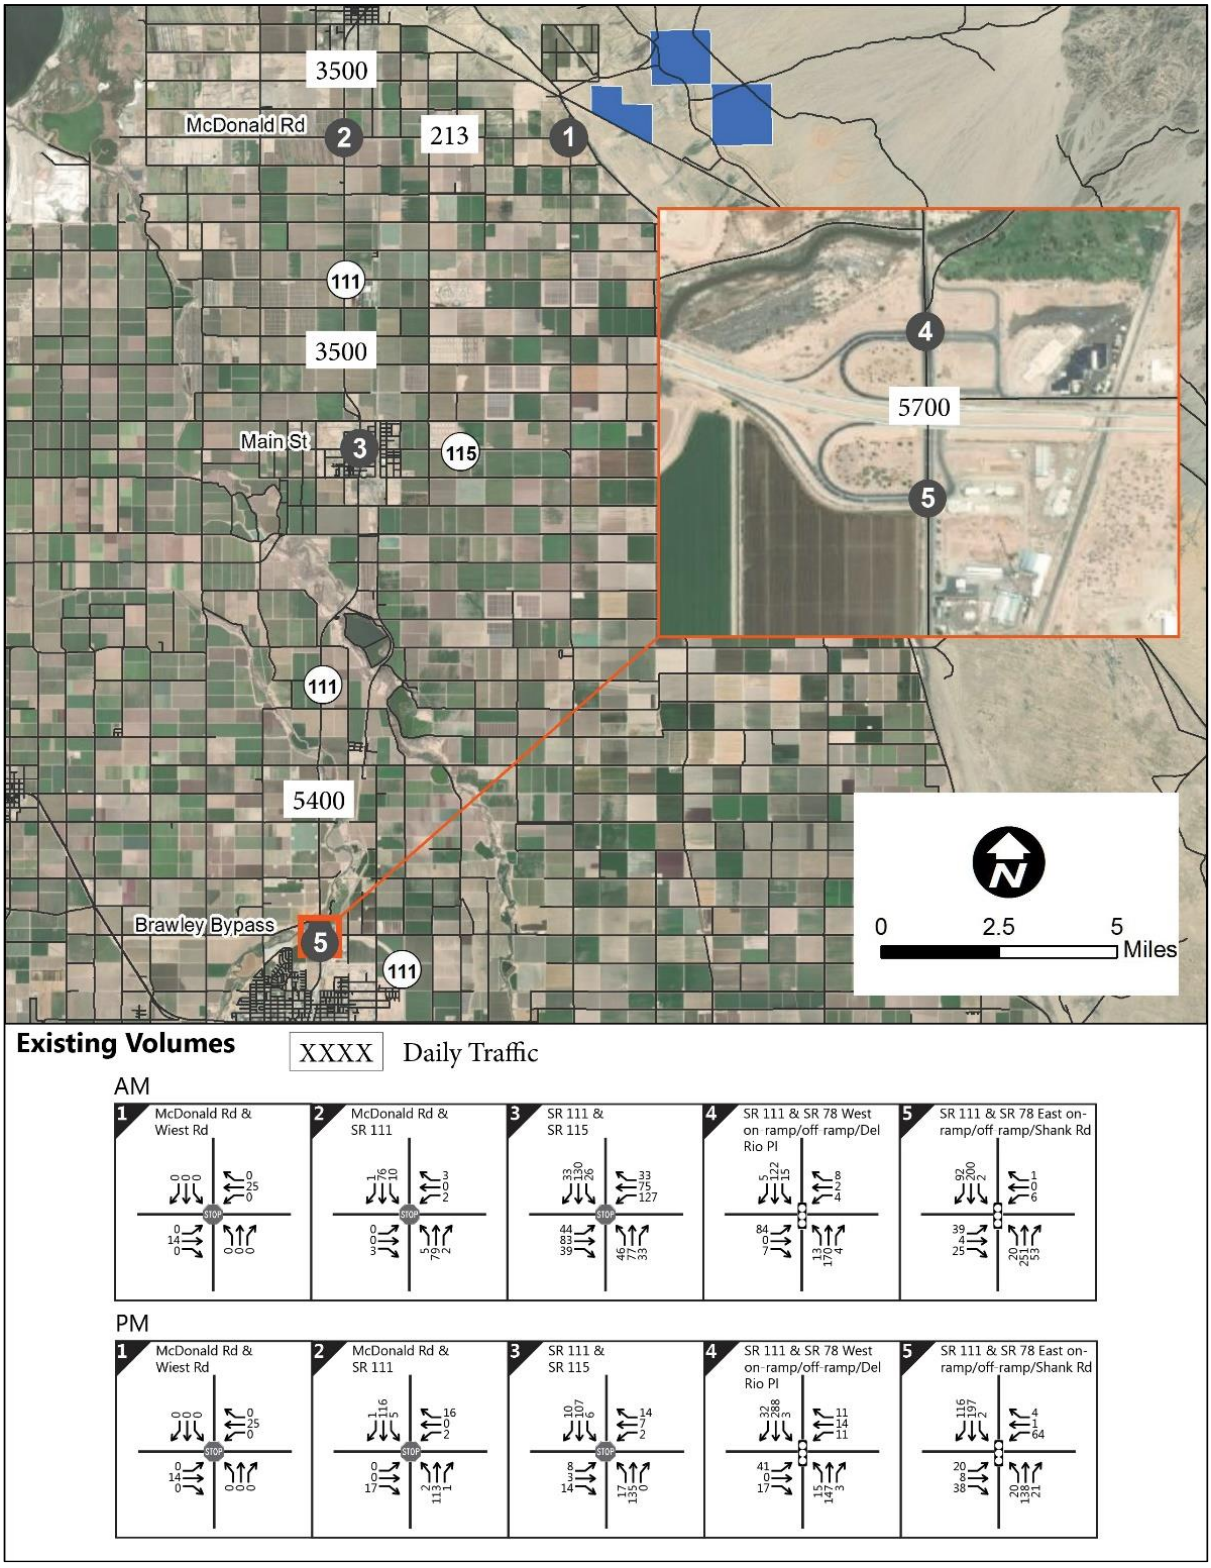
Figure 3.2 Existing Volumes



PC ORIGINAL PKG

Existing Year Conditions

This section documents the existing traffic conditions of study area segments and intersections.

Segments

Roadway segment analysis was conducted for the study area's specified segments. Using average daily traffic (ADT) counts, KOA was able to determine the existing level of service for the designated roadway segments. Table 3.1 below displays these levels of service.

Table 3.1 Existing Year Conditions Roadway Segment Analysis

Roadway Segment	From/ To	Lanes/ Class	LOS E Capacity	Existing		
				ADT	V/C	LOS
McDonald Rd	Project to SR 111	Minor Collector	16,200	213	0.01	A
SR-111	McDonald Road to Niland Ave	Major Collector 2 Lane	17,100	3,500	0.20	A
SR-111	McDonald Rd to SR-115	Major Collector 2 Lane	17,100	3,500	0.20	A
SR-111	SR-115 to SR-78 North Ramps	Major Collector 2 Lane	17,100	5,400	0.32	B
SR-111	SR-78 North Ramps to SR-78 South Ramps	Major Collector 4 Lane	34,200	5,700	0.17	A

Intersections

An intersection LOS analysis was prepared for the existing (without-project) condition and is summarized in Table 3.2 which indicates that there are two study area intersections. Detailed LOS worksheets are included in Appendix B.

Table 3.2 Existing Year Conditions Peak Hour Intersection Analysis

#	Intersection	Control	AM Peak Hour		PM Peak Hour	
			Delay	LOS	Delay	LOS
1	McDonald Road and Weist Road	SB Stop	0.0	A	0.0	A
2	McDonald Road and SR-111	EB/WB Stop	9.2	A	9.1	A
3	SR-111 and SR-115	AWSC	10.2	B	8	A
4	SR-111 and north ramps with SR-78	Sig	11.1	b	10.7	B
5	SR-111 and south ramps with SR-78	Sig	12.3	B	14.3	B

Delay is in seconds/vehicle. LOS = Level of Service

PC ORIGINAL PKG

4.0 Trip Generation/Distribution/Assignment

Project Trip Generation

The project trip generation consists of a construction phase and operations phase. Once constructed, the site will not require personnel to be present on-site and will not result in daily trip generation. For this reason, only the trip generation for the construction phase was analyzed.

The construction of the site is estimated to take 12-18 months and would begin in 2022. The number of on–site construction workers for the solar project facilities is not expected to exceed 150 workers at any one time. The number of on-site construction workers for the battery storage facility and the substation is not expected to exceed 100 workers at any one time. The trip generation was estimated if the construction phases were to overlap, so both are included. Delivery trucks are expected to follow the same routes as the construction workers. An estimated two trucks would arrive at the project site each day during the first few weeks of construction of the solar generating facility. Truck trips have been converted into passenger equivalent volumes (PCE) using a PCE factor of 2.5.

Work hours will be between the hours of 8:00 a.m. and 5:00 p.m. Monday through Saturday. The trips generated during the construction phase of construction are shown in Table 4.1.

Table 4.1 Construction Trip Generation–Construction Phase

	Intensity	Unit	Daily Rate (1)	Daily Trips		AM Peak Hour			PM Peak Hour		
						Total	In	Out	Total	In	Out
Solar Construction Workers	150.0	Employee	2	300	Rate	1.00	100%	0%	1.00	0%	100%
					Trips	150	150	0	150	0	150
Battery Storage Workers	100.0	Employee	2	200	Rate	1.00	100%	0%	1.00	0%	100%
					Trips	100	100	0	100	0	100
Equipment Deliveries and Construction Truck Trips (PCE)	4.0	trucks	2.5	10	Rate	0.13	75%	25%	0.13	25 %	75%
					Trips	1	1	0	1	0	1
Total				510	Trips	251	251	0	251	0	251

Once construction is completed, the facilities would be remotely operated, controlled and monitored and with no requirement for daily on-site employees.

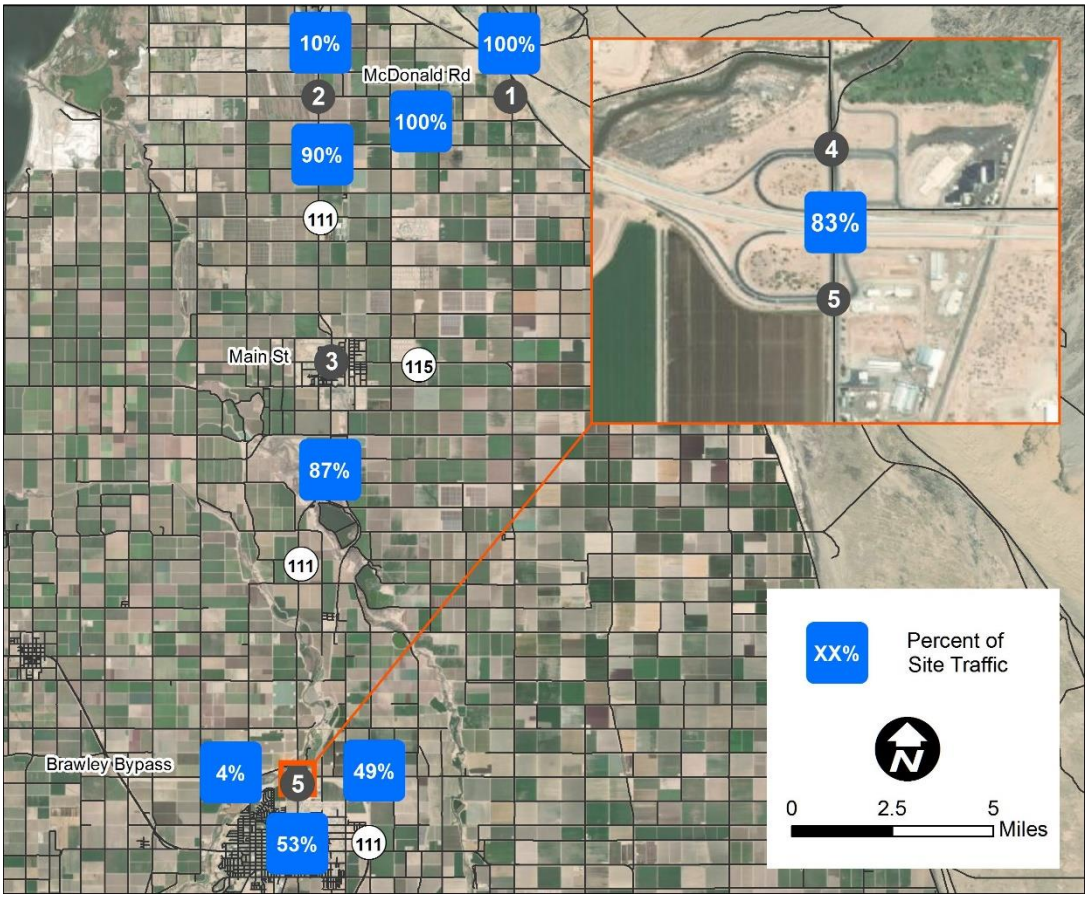
Trip Distribution and Assignment

Trip distribution and assignment is the process of identifying the probable destinations, directions and traffic routes that project related traffic will likely affect. Trip distribution and assignment information can be estimated from observed traffic patterns, experience or through use of a computerized travel forecast model. Once the proposed developments trips have been estimated, they are assigned to the study area street network. The trip distribution was estimated based on using logical travel paths between the project and local origins.

PC ORIGINAL PKG

Construction traffic to the VEGA SES 2 and 3 project sites is expected to travel along SR-111 east along McDonald Road to Noffsinger Road over the canal crossing, Wiest Road, over the Union Pacific railroad tracks crossing, then to Flowing Wells Road to access APNs 025-260-011 and 025-010-006, and beyond to Coachella Canal Road using Niland Pegleg Well Road to cross a second canal and access APN 025-270-023. The trip distribution for the project-related trips is shown in Figure 4.1.

Figure 4.1 Trip Distribution



PC ORIGINAL PKG

5.0 Construction Year Conditions

This section documents the analysis for the Project Completion Year conditions. This scenario considers the traffic conditions at the time that the proposed development is constructed by increasing the existing traffic counts by an ambient growth rate to reflect cumulative projects. Projected project only volumes are then added to create the 2023 Baseline with Project Scenario. It is anticipated that the project will be completed in Year 2023. An annual ambient growth of 1.8% was utilized to account for traffic growth between 2020 and 2023.

The growth rate is based on the California Economic Forecast *California County-Level Economic Forecast 2017-2050*, dated September 2017 documents an average annual growth factor of 1.8% from 2020 to 2025 for Imperial County. Year 2021 traffic data was obtained by factoring the 2019 traffic counts by the application of the 1.8% annual growth (5.4 percent for 2020-23). Figure 5.1 illustrates the Project Construction Year background volumes. Figure 5.2 shows the *Construction Year with Project* traffic volumes in the study area.

This section documents the construction year traffic conditions of study area segments and intersections with and without the project.

Segments

Roadway segment analysis was conducted for the study area's specified segments. Using average daily traffic (ADT) counts, KOA determined the opening year level of service for the designated roadway segments. Table 5.1 below displays these levels of service.

Summarized in Table 5.2 are Construction Year and Construction Year plus Project roadway segment average daily traffic volumes and their associated LOS on route segments without and with the project under the near term condition. All roadway segments would operate at LOS B or better with and without the project. Therefore, the project would not result in any significant impacts to any segments within the project study area under the construction year condition.

PC ORIGINAL PKG

Table 5.1: Construction Year Roadway Segment Analysis

Roadway Segment	From/ To	Lanes/ Class	LOS E Capacity	Project Volumes	Construction Year			Construction Year + Project			Comparison	
					Volume	V/C	LOS	Volume	V/C	LOS	Δ V/C	Sig?
Mc Donald Rd	Project to SR-111	Local Collector	16,200	510	225	0.01	A	735	0.05	A	0.03	No
SR-111	Mc Donald to Weist Rd	Minor Arterial 2	18,500	51	3,692	0.20	A	3,743	0.20	A	0.00	No
SR-111	Mc Donald to SR-115	Minor Arterial 2	18,500	459	5,697	0.31	A	6,156	0.33	A	0.02	No
SR-111	SR-115 to SR-78 north ramps	Minor Arterial 2	18,500	444	6,013	0.33	A	6,457	0.35	A	0.02	No
SR-111	SR-78 north ramps to So. Ramps	Minor Arterial 2	18,500	262	5,700	0.31	A	5,962	0.32	A	0.01	No

Intersections

Table 5.2 summarizes the LOS at each intersection during the AM and PM peak hours under the construction year condition in 2022, without and with the project volumes. The estimated change in project delay associated with the project is also reported. All intersections would operate at a LOS C or better during both AM and PM peak hours with and without the project. Therefore, the project would not result in any significant impacts to any intersections within the project study area under the construction year condition. Detailed LOS worksheets are for the Construction Year are included in Appendix C and for the Construction Year plus Project in Appendix D.

Table 5.2: Construction Year Peak Hour Intersection Analysis

No.	Intersection	Control	Construction Year		Construction Year + Project		Change Delay	Significant
			Delay	LOS	Delay	LOS		
AM Peak Hour between 7:00 to 9:00 a.m.								
1	McDonald Road and Weist Road	SB Stop	n/a	A	7.3	A	n/a	N
2	McDonald Road and SR-111	SB Stop	9.2	A	10.3	B	1.1	N
3	SR-111 and SR-115	AWSC	10.5	B	12.2	A	1.7	N
4	SR-111 and north ramps with SR-78	EB/WB Stop	11.2	B	12.2	B	1.0	N
5	SR-111 and south ramps with SR-78	EB Stop	10.5	B	12.9	B	2.4	N
PM Peak Hour between 4:00 to 6:00 p.m.								
1	McDonald Road and Weist Road	SB Stop	n/a	A	8.2	A	n/a	N
2	McDonald Road and SR-111	EB/WB Stop	9.2	A	10.4	B	1.2	N
3	SR-111 and SR-115	AWSC	8.1	A	8.9	A	0.8	N

6.0 Circulation

The following section discusses the proposed project's access and circulation characteristics.

Project Access and Circulation

The project site is located east of the U.P. Railroad tracks and east of the Highland Canal. Primary access to and from the site will be from SR-111 along McDonald Road to Weist Road. Construction related traffic would cross the Highland Canal at Noffsinger Road. Weist Road continues to Flowing Well Road. The crossing of the UP Railroad tracks is at an unsignalized crossing on Weist Road. The site will be accessed from Flowing Well Road. Weist Road, Noffsinger Road and Flowing Well Road are unpaved roadways. Flowing Well Road, although occasionally maintained by the County of Imperial, is on BLM land and a right-of-way (ROW) approval from the BLM is required. There is no alternative route that either exists or can be used to gain access to the VEGA SES 2 and 3 project sites that do not cross some Federal lands, hence Flowing Wells Road, is the only viable route.

The VEGA SES 2 and 3 projects would not require changes to Flowing Wells Road either in terms of alignment, cross section, width or length. The project applicant is requesting a 24-foot-wide ROW given that the road currently has no designated width. The VEGA SES 2 and 3 projects, if required as part of the permitting or ROW approval, would grade and maintain Flowing Wells Road during construction as required by the BLM, County and/or Air District, including future years maintenance for safe access to the sites. A maintenance agreement with the County/BLM will be included in the conditions of approval.

It is estimated that there will be two in-bound and two out-bound truck trips per day to the project site. Truck trips shall access the site from SR 111 using Pound Road, and Noffsinger Road. Access to the east side of the East Highline Canal shall utilize the Flowing Wells Road bridge, continue on Flowing Wells Road and Coachella Canal Road. The Project shall contribute towards a structural assessment of the capacity of the Flowing Wells Road bridge along the proposed Vega Project access route to support heavy truck trips in excess of 74,000 lbs. The assessment shall demonstrate the feasibility, bridge structure improvements if necessary, and Project fair share for improvements needed to support expected heavy truck loads during Project construction and operations. Should such assessment indicate needed improvements are infeasible, the Project shall identify and evaluate an alternative feasible alternative access route and enter into a Road Maintenance Agreement to the satisfaction of the County."

Parking

The existing parking demand for up to 250 vehicles and for construction equipment will be provided on site.

PC ORIGINAL PKG

7.0 Impacts and Mitigation

This traffic impact analysis (TIA) has been prepared to identify the potential traffic impacts associated with the Vega SES 2 Vega SES 3 located within the Vega SES 2 site.

The construction of both projects is estimated to take 12-18 months and would begin in 2023. During the construction phase, at peak construction, the project is anticipated to generate a net total of 510 trip ends per day with 251 AM peak hour trips and 251 PM peak hour trips. When constructed, the project will not generate any additional trips. The project opening is anticipated to be the end of 2023 or early 2024.

The project is not expected to create significant impacts at study intersections or study segments, therefore no mitigation measures are required. All study intersections and segments were found to operate at LOS C or better for all of the traffic scenarios analyzed.

1.0 Introduction

This traffic impact analysis (TIA) has been prepared to identify the potential traffic impacts associated with developing the Vega SES 5 Solar Energy Storage (Projects) in Imperial County. The study was completed following the guidelines described in the County of Imperial Department of Public Works *Traffic Study and Report Policy* dated March 12, 2007, revised June 29, 2007 and approved by the Board of Supervisors of the County of Imperial on August 7, 2007 ("Traffic Study and Report Policy").

KOA has coordinated with the County's Engineering Department on the scope of the traffic analysis, including the study area and future year analysis assumptions. As necessary, if required, projects will be identified to offset or reduce significant impacts. Based on discussions with City staff, current and future traffic conditions at select intersections in close proximity to the proposed project have been evaluated for the purposes of this TIA.

This report describes the existing roadway network in the vicinity of the project site. It includes a review of the existing and proposed traffic activities for weekday peak AM and PM periods and daily traffic conditions.

Project Location

The project location is adjacent to the Highland Canal at the eastern end of McDonald Road, as shown in Figure 1.1.

Figure 1.1 Study Area

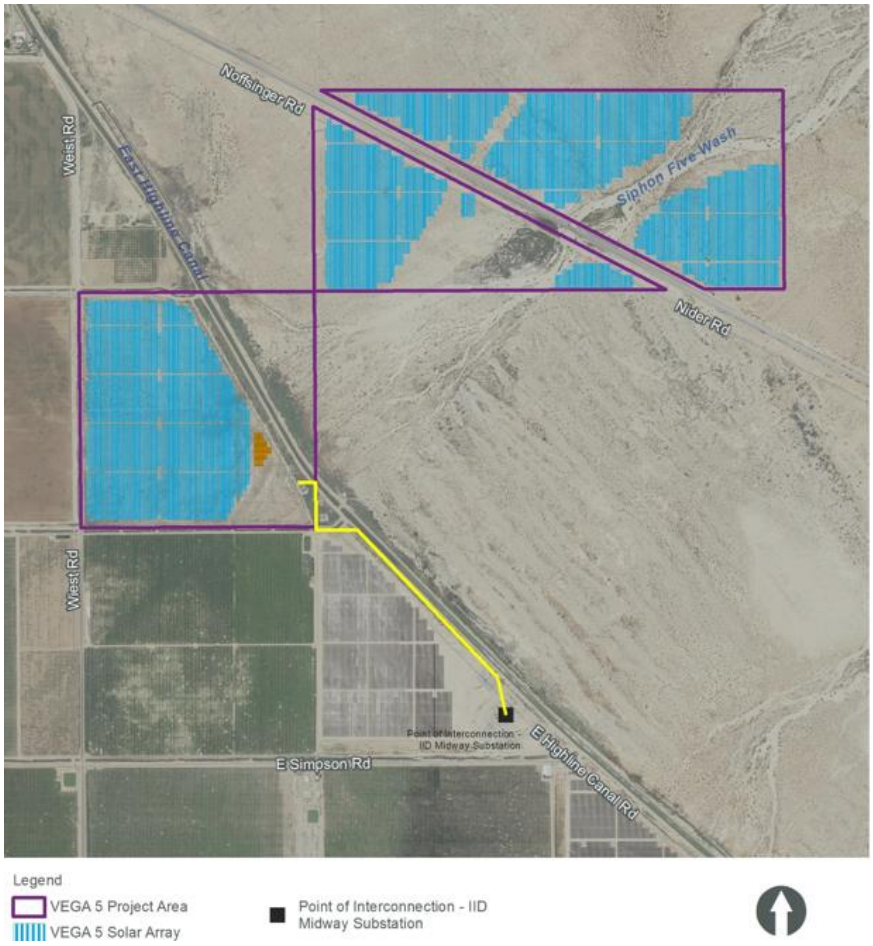
PC ORIGINAL PKG

Project Description

Vega SES 5, LLC is proposing to develop the **Vega SES 5 site.** This is a fifty (50) megawatt alternating current (MWAC) solar photovoltaic (PV) energy generation project with an integrated 100 MW Battery Energy Storage System (BESS), on approximately 410 acres of land in Imperial County, California. The project site plan is shown in Figure 1.2.

Figure 1.2 Site Plan



Source: First Administrative Draft EIR | VEGA SES 2, 3, & 5 Solar Energy Project

Construction Activities

The projects are estimated to take 12 months and would begin in 2023. The project opening is anticipated to be the end of 2024 or early 2025. . The number of on–site construction workers for the solar project facilities is not expected to exceed 75 workers at any one time. The number of on-site construction workers for the battery storage facility and the substation is not expected to exceed 50 workers at any one time.

PC ORIGINAL PKG

Construction of the Projects will include the following activities:

- Site preparation
- Grading and earthwork
- Concrete foundations
- Structural steel work
- Electrical/instrumentation work
- Collector line installation
- Architecture and landscaping

2.0 Capacity Analysis Methodologies

This section presents a brief overview of traffic analysis methodologies and concepts used in this study. Street system operating conditions are typically described in terms of "level of service (LOS)" to compare without project and with project alternatives. LOS is a report-card scale used to indicate the quality of traffic flow on roadway segments and at intersections. The levels of service range from Level A (free flow, little congestion) to Level F (forced flow, higher congestion).

Study Area Criteria

The study area is determined based on the County of Imperial Department of Public Works *Traffic Study and Report Policy* dated March 12, 2007, revised June 29, 2007 and approved by the Board of Supervisors of the County of Imperial on August 7, 2007 ("Traffic Study and Report Policy"). "Any project that has the potential to degrade an existing road section, an existing signalized intersection, or an existing unsignalized intersection to below the existing level of service or to cause it to be lower than a level of service (LOS) "C" during any peak hour, using the HCM Methods of analysis on any individual, existing traffic movement." Traffic Study and Report Policy, 4-5.

The study area for this project includes those locations that likely will be affected by this project where a minimum of 50 peak hour vehicles impact the location. The specific study area consists of the following intersections:

1. McDonald Road and Weist Road
2. McDonald Road and SR-111
3. SR-111 and SR-115
4. SR-111 and north ramps with SR-78
5. SR-111 and south ramps with SR-78

The study area also includes the following study segments:

1. McDonald Road from SR-111 to Weist Road
2. SR-111 from McDonald Road to Niland Ave
3. SR-111 from McDonald Road to SR-115
4. SR-111 from SR-115 to SR-78 north ramps
5. SR-111 from SR-78 north ramps to SR-78 south ramps

PC ORIGINAL PKG

Scenario Criteria

The proposed project's traffic impacts were analyzed in three scenarios as listed below. The traffic analysis included intersections and roadway segments within Imperial County and Caltrans District 11 in the following scenarios to determine the potential impacts:

- Existing Year (2020) Conditions
- Construction Year (2023) Baseline Conditions
- Construction Year (2023) + Project Construction Conditions

Peak Hour Intersection Level of Service Standards

Traffic conditions on most roadway facilities are analyzed using the principles of the specific analysis methods contained in the latest version (2010) of the *Highway Capacity Manual* (*HCM*), a publication of the Transportation Research Board, a research agency affiliated with the Federal Government. Chapter 18 of the *HCM 2010* is devoted to analysis of signalized intersections. The methodology in the *HCM 2010* for signalized intersections is based upon measurements or forecasts of control delay for traffic utilizing all approaches to the intersection.

Unsignalized intersections, including two-way and all-way stop controlled intersections were analyzed using the 2010 Highway Capacity Manual unsignalized intersection analysis methodology. The LOS for a two-way stop controlled (TWSC) intersection is determined by the computed or measured control delay and is defined for each minor movement. The analysis of peak hour intersection conditions was conducted using the Synchro 10 software program developed by Trafficware. Results are displayed in terms of control delay (seconds per vehicle) and an equivalent LOS as shown in Table 2.1.

Table 2.1 HCM Level of Service Definitions for Intersections

LOS	Signalized Intersection Delay (Seconds per Vehicle)	Unsignalized Intersection Average Stop Delay (Seconds)
A	<10	<10
B	>10 and <20	>10 and <15
C	>20 and <35	>15 and <25
D	>35 and <55	>25 and <35
E	>55 and <80	>35 and <50
F	>80	>50

Source: Highway Capacity Manual, 2010.

Roadway Segment Level of Service Standards

Roadway segment LOS standards and thresholds provide the basis for analysis of roadway segment performance. The analysis of roadway segment LOS is based on the functional classification of the roadway, the maximum capacity, roadway geometrics, and existing or forecast Average Daily Traffic (ADT) volumes. The County of Imperial level of service analysis was performed by utilizing the *Circulation and Scenic Highways Element, January 2008*. The thresholds for each facility type are presented in Table 2.2.

PC ORIGINAL PKG

Table 2.2 County of Imperial ADT Level of Service Volumes by Roadway Type

Road		Level of Service (LOS)				
Class	X-Section	A	B	C	D	E
Expressway	154/210	30,000	42,000	60,000	70,000	80,000
Prime Arterial	106/136	22,200	37,000	44,600	50,000	57,000
Minor Arterial	82/102	14,800	24,700	29,600	33,400	37,000
Major Collector	64/84	13,700	22,800	27,400	30,800	34,200
Minor (Local) Collector	40/70	1,900	4,100	7,100	10,900	16,200

* Levels of service are not applied to residential streets since their primary purpose is to serve abutting lots, not carry through traffic. Levels of service normally apply to roads carrying through traffic between major trip generators and attractors.
Source: *Imperial County Circulation and Scenic Highways Element 2008 and Imperial County Long Range Transportation Plan 2013 Update*

Freeway Segments

Freeway level of service analysis is based upon procedures developed by Caltrans. The procedure for calculating freeway level of service involves calculating a peak hour volume to capacity (V/C) ratio. Peak hour volumes are calculated from Average Daily Traffic (ADT) volumes by applying design hour ("K"), directional ("D") and truck ("T") factors. The base capacities for Interstate 8 freeway lanes determined from the Highway Capacity Manual as assumed to be 2,350 passenger-car per hour per main lane (pc/h/ln).

The resulting V/C ratio is then compared to acceptable ranges of V/C values corresponding to the various levels of service for each facility classification, as shown in Table 2.3. The corresponding level of service represents an approximation of freeway operating conditions in the peak direction of travel during the peak hour. Constant with Caltrans requirements, LOS D or better is used in this study as the threshold for acceptable freeway operations.

PC ORIGINAL PKG

Table 2.3 CALTRANS Level of Service Facility Classification

CALTRANS FREEWAY SEGMENT LEVEL OF SERVICE DEFINITIONS

LOS	Maximum V/C	Congestion/Delay	Traffic Description
A	≤ 0.30	None	Free flow.
B	> 0.30 - 0.50	None	Free to stable flow, light to moderate volumes.
C	> 0.50 - 0.71	None to minimal	Stable flow, moderate volumes, freedom to maneuver noticeably restricted.
D	> 0.71 - 0.89	Minimal to substantial	Approaches unstable flow, heavy volumes, very limited freedom to maneuver.
E	> 0.89 - 1.00	Significant	Extremely unstable flow, maneuverability and psychological comfort extremely poor.
F	> 1.00	Considerable	Forced or breakdown flow. Delay measured in average travel speed (MPH). Signalized segments experience delays >60.0 seconds/vehicle.

Source: Caltrans Guide for the Preparation of Traffic Impact Studies, 2002.

Analysis of Significance

Imperial County

The significance criteria for traffic impacts are based on the Imperial County Planning & Development Services Department LOS standard as outlined in the "Circulation Element". "The County's goal for an acceptable traffic service standard on an Average Daily Traffic (ADT) basis and during AM and PM peak periods for all County-Maintained Roads shall be LOS C for all street segment links and intersections."

- Strive to maintain LOS "C" or better on arterial and collector streets, at all intersections, and on principal arterials during the hour of highest volume during the AM hours and also during the PM hours. Imperial County has established LOS "C" as the general threshold for acceptable overall traffic operations for both signalized and un-signalized intersections.

- Accept LOS "D" after finding that there is no practical and feasible way to mitigate to LOS "C;" and the development causing the lower level of service provides a clear, overall public benefit.

- For segments that operate at LOS D or lower, an incremental increase in V/C of greater than 0.02 is considered to be a significant impact. For intersections that operate at LOS D or lower, an incremental increase in vehicle delay of 2.0 seconds or greater is considered to be a significant impact.

PC ORIGINAL PKG

Caltrans

- For segments that operate at LOS D or lower, an incremental increase in V/C of greater than 0.02 is considered to be a significant impact. For intersections that operate at LOS D or lower, an incremental increase in vehicle delay of 2.0 seconds or greater is considered to be a significant impact.
- For freeway segments that operate at LOS D or lower, an incremental increase in V/C of greater than 0.01 is considered to be a significant impact.

3.0 Existing Conditions

This section documents the Existing Year Conditions in the study area. The Existing Year is taken to be 2020 for analysis purposes based on existing traffic counts taken in December, 2020 The discussion presented here is limited to segments and intersections in the project's vicinity.

Existing Roadways

Each of the key roadways, as well as associated study intersections within the study area, are discussed below.

Roadway Facilities

1. *State Route 111 (SR-111))* is a two-lane highway with no median and a posted speed limit of 65 mph.

2. *McDonald Road* is a two lane paved local roadway that runs in an east-west direction. This road provides access from the site to/from SR-111.

3. Weist Road is a north-south roadway that connect McDonald Road. North of McDonald Rod, Weist Road is unpaved.

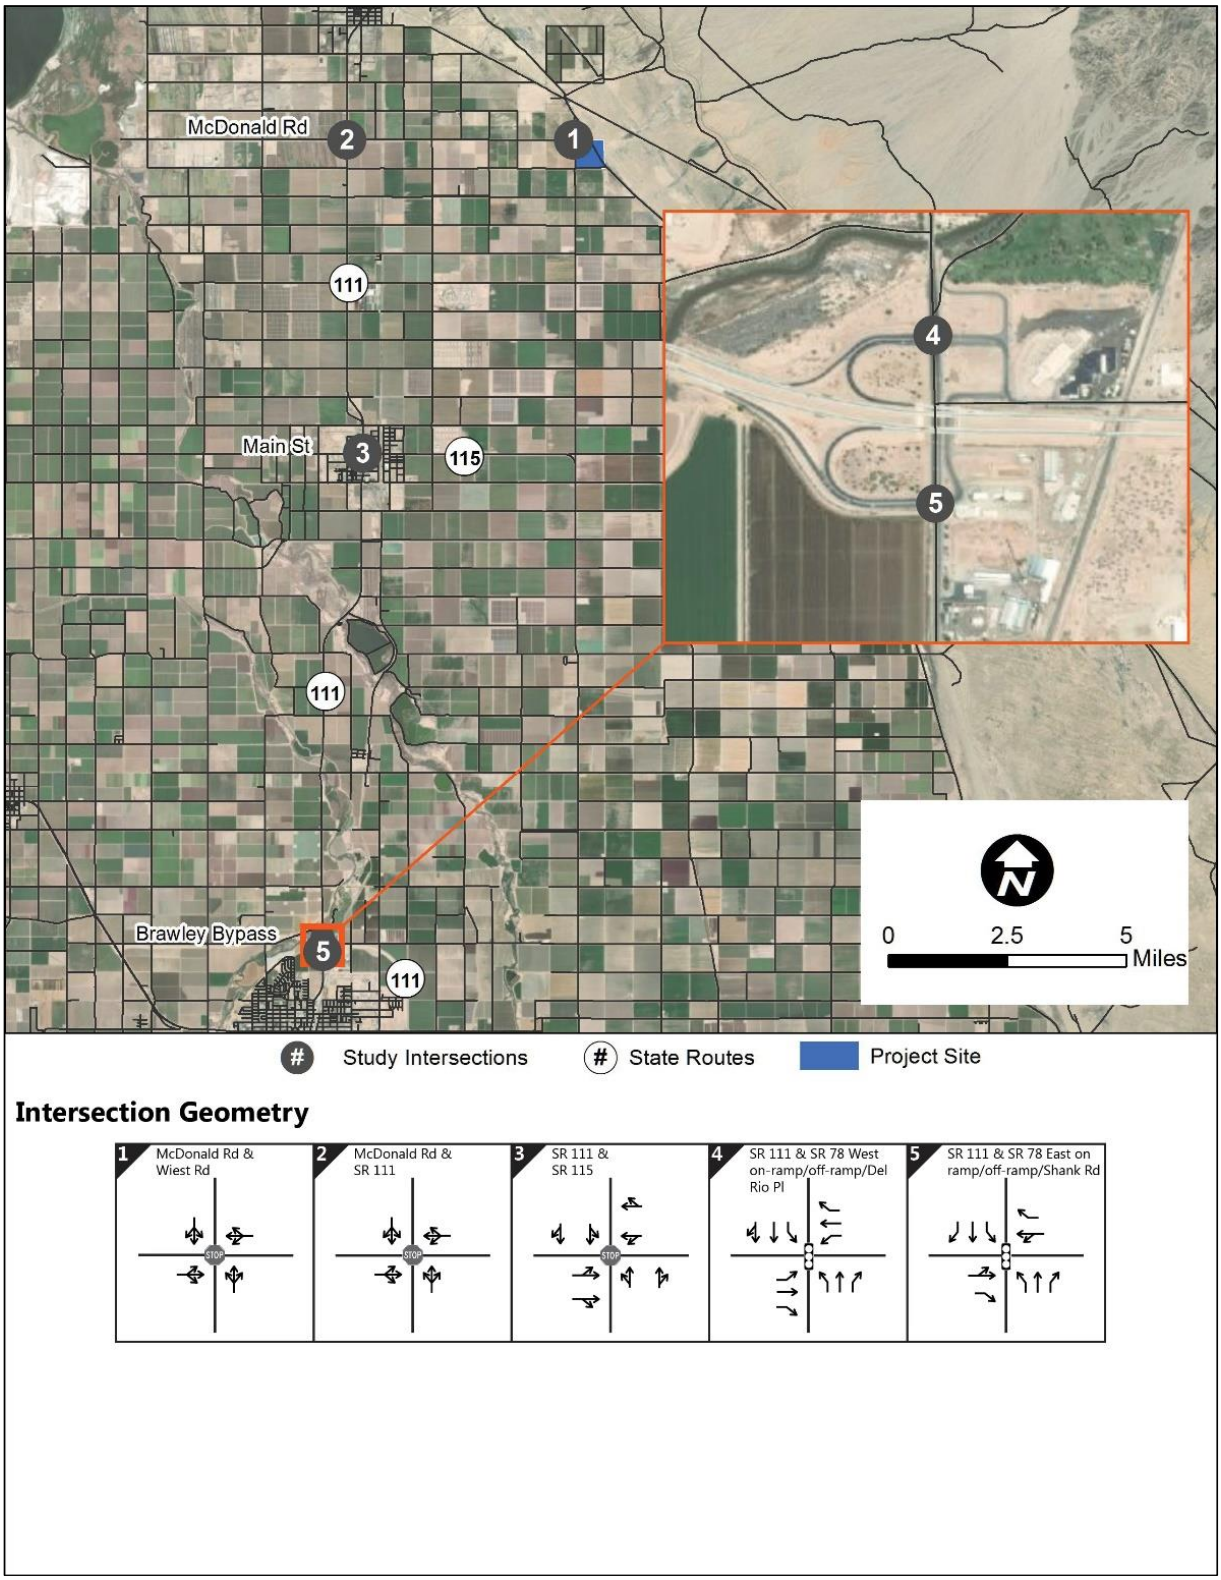
Figure 3.1 displays the existing intersection geometrics for study area intersections.

Traffic Volumes

Existing turning movement counts at the study intersections were conducted on Tuesday, December 8, 2020. The existing condition reflects those land uses that were built and occupied at the time of the traffic counts and represent a typical weekday commute period. Intersection turning movement counts are provided in Appendix A. Existing average daily traffic (ADT) segment counts were obtained from the Caltrans for the year 2019. The ADT, weekday a.m. and p.m. peak hour traffic volumes are shown on Figure 3.2.

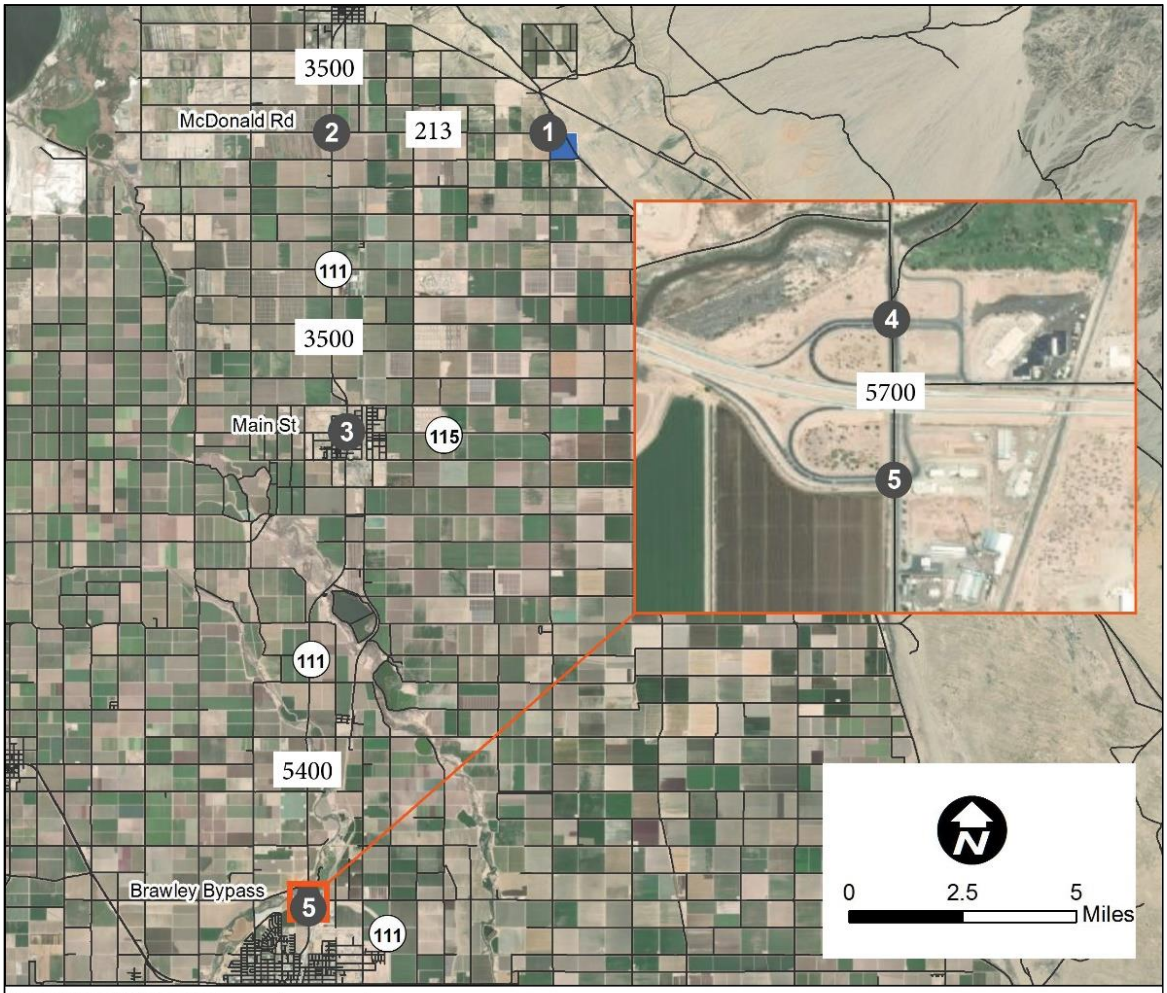
PC ORIGINAL PKG

Figure 3.1 Intersection Geometrics



PC ORIGINAL PKG

Figure 3.2 Existing Volumes



PC ORIGINAL PKG

Existing Year Conditions

This section documents the existing traffic conditions of study area segments and intersections.

Segments

Roadway segment analysis was conducted for the study area's specified segments. Using average daily traffic (ADT) counts, KOA was able to determine the existing level of service for the designated roadway segments. Table 3.1 below displays these levels of service.

Table 3.1 Existing Year Conditions Roadway Segment Analysis

Roadway Segment	From/ To	Lanes/ Class	LOS E Capacity	Existing		
				ADT	V/C	LOS
McDonald Rd	Project to SR 111	Minor Collector	16,200	213	0.01	A
SR-111	McDonald Road to Niland Ave	Major Collector 2 Lane	17,100	3,500	0.20	A
SR-111	McDonald Rd to SR-115	Major Collector 2 Lane	17,100	3,500	0.20	A
SR-111	SR-115 to SR-78 North Ramps	Major Collector 2 Lane	17,100	5,400	0.32	B
SR-111	SR-78 North Ramps to SR-78 South Ramps	Major Collector 4 Lane	34,200	5,700	0.17	A

Intersections

An intersection LOS analysis was prepared for the existing (without-project) condition and is summarized in Table 3.2 which indicates that there are two study area intersections. Detailed LOS worksheets are included in Appendix B.

Table 3.2 Existing Year Conditions Peak Hour Intersection Analysis

#	Intersection	Control	AM Peak Hour		PM Peak Hour	
			Delay	LOS	Delay	LOS
1	McDonald Road and Weist Road	SB Stop	0.0	A	0.0	A
2	McDonald Road and SR-111	EB/WB Stop	9.2	A	9.1	A
3	SR-111 and SR-115	AWSC	10.2	B	8	A
4	SR-111 and north ramps with SR-78	Sig	11.1	b	10.7	B
5	SR-111 and south ramps with SR-78	Sig	12.3	B	14.3	B

Delay is in seconds/vehicle. LOS = Level of Service

PC ORIGINAL PKG

4.0 Trip Generation/Distribution/Assignment

Project Trip Generation

The project trip generation consists of a construction phase and operations phase. Once constructed, the site will not require personnel to be present on-site and will not result in daily trip generation. For this reason, only the trip generation for the construction phase was analyzed.

The number of on–site construction workers for the solar project facilities is not expected to exceed 75 workers at any one time. The number of on-site construction workers for the battery storage facility and the substation is not expected to exceed 50 workers at any one time. The trip generation was estimated if the construction phases were to overlap, so both are included. Delivery trucks are expected to follow the same routes as the construction workers. An estimated two trucks would arrive at the project site each day during the first few weeks of construction of the solar generating facility. Truck trips have been converted into passenger equivalent volumes (PCE) using a PCE factor of 2.5.

Work hours will be between the hours of 8:00 a.m. and 5:00 p.m. Monday through Saturday. The trips generated during the construction phase of construction are shown in Table 4.1.

Table 4.1 Construction Trip Generation –Construction Phase

	Intensity	Unit	Daily Rate	Daily Trips		AM Peak Hour			PM Peak Hour		
						Total	In	Out	Total	In	Out
Solar Construction Workers	75.0	Employee	2	150	Rate	1.00	100%	0%	1.00	0%	100%
					Trips	75	75	0	75	0	75
Battery Storage Workers	50.0	Employee	2	100	Rate	1.00	100%	0%	1.00	0%	100%
					Trips	50	50	0	50	0	50
Equipment Deliveries and Construction Truck Trips (PCE)	4.0	trucks	2.5	10	Rate	0.13	75%	25%	0.13	25%	75%
					Trips	0	0	0	0	0	0
Total				260	Trips	125	125	0	125	0	125

Once construction is completed, the facilities would be remotely operated, controlled and monitored and with no requirement for daily on-site employees.

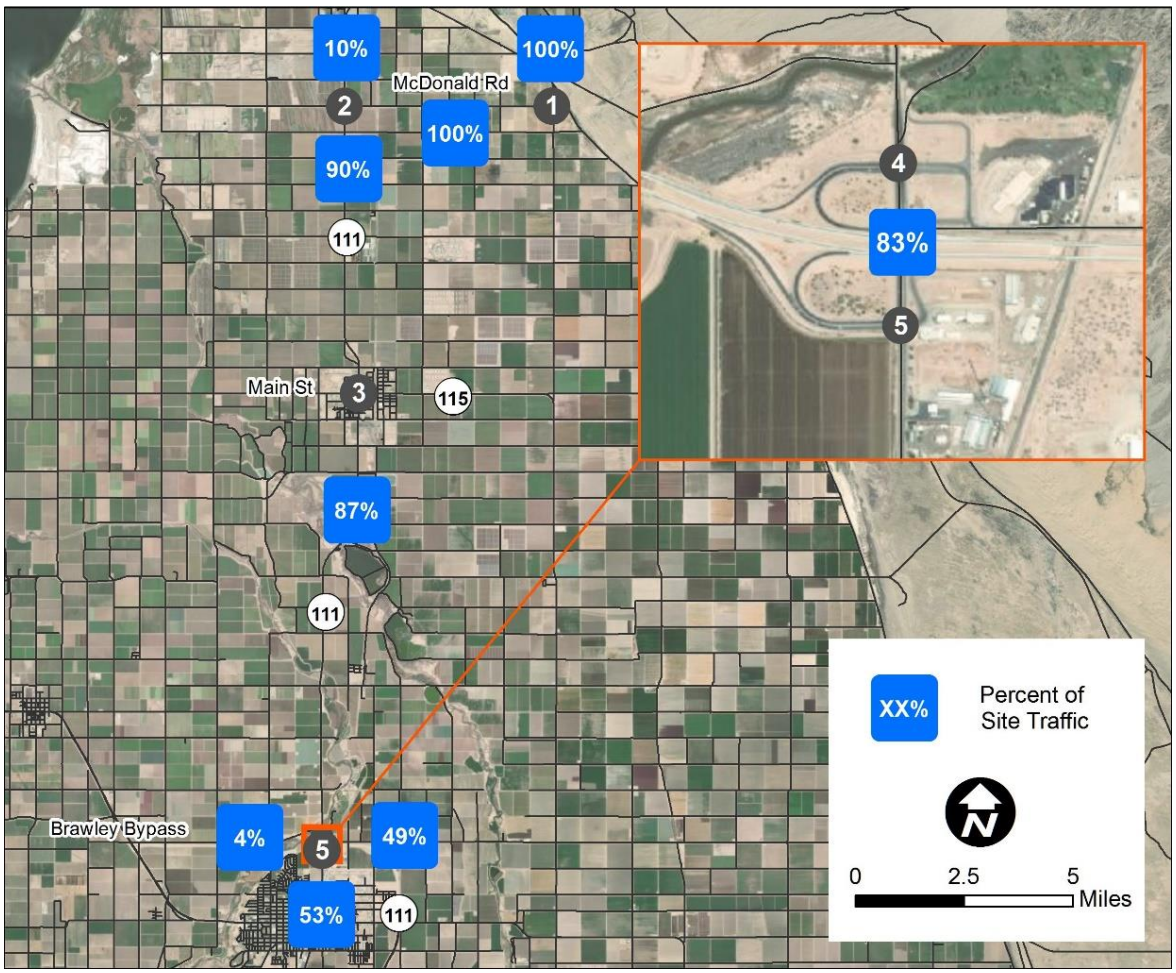
Trip Distribution and Assignment

Trip distribution and assignment is the process of identifying the probable destinations, directions and traffic routes that project related traffic will likely affect. Trip distribution and assignment information can be estimated from observed traffic patterns, experience or through use of a computerized travel forecast model. Once the proposed developments trips have been estimated, they are assigned to the study area street network. The trip distribution was estimated based on using logical travel paths between the project and local origins.

PC ORIGINAL PKG

For the VEGA SES 5 project, the construction worker traffic is expected to travel to the site from SR-111, then east on McDonald Road, north to Weist Road and then the project site. Delivery trucks are expected to follow the same travel route as construction workers. An estimated two trucks would arrive at each project site each day during the first few weeks of construction of each solar facility. The trip distribution for the project-related trips is shown in Figure 4.1.

Figure 4.1 Trip Distribution



PC ORIGINAL PKG

5.0 Construction Year Conditions

This section documents the analysis for the Project Completion Year conditions. This scenario considers the traffic conditions at the time that the proposed development is constructed by increasing the existing traffic counts by an ambient growth rate to reflect cumulative projects. Projected project only volumes are then added to create the 2023 Baseline with Project Scenario. It is anticipated that the project construction will begin in 2023. An annual ambient growth of 1.8% was utilized to account for traffic growth between 2020 and 2023.

The growth rate is based on the California Economic Forecast *California County-Level Economic Forecast 2017-2050*, dated September 2017 documents an average annual growth factor of 1.8% from 2020 to 2025 for Imperial County. Year 2021 traffic data was obtained by factoring the 2019 traffic counts by the application of the 1.8% annual growth (5.4 percent for 2020-23). Figure 5.1 illustrates the Project Construction Year background volumes. Figure 5.2 shows the *Construction Year with Project* traffic volumes in the study area.

This section documents the construction year traffic conditions of study area segments and intersections with and without the project.

Segments

Roadway segment analysis was conducted for the study area's specified segments. Using average daily traffic (ADT) counts, KOA determined the opening year level of service for the designated roadway segments. Table 5.1 below displays these levels of service.

Summarized in Table 5.2 are Construction Year and Construction Year plus Project roadway segment average daily traffic volumes and their associated LOS on route segments without and with the project under the near term condition. All roadway segments would operate at LOS B or better with and without the project. Therefore, the project would not result in any significant impacts to any segments within the project study area under the construction year condition.

Table 5.1: Construction Year Roadway Segment Analysis

Roadway Segment	From/ To	Lanes/ Class	LOS E Capacity	Project Volumes	Construction Year			Construction Year + Project			Comparison	
					Volume	V/C	LOS	Volume	V/C	LOS	Δ V/C	Sig?
Mc Donald Rd	Project to SR-111	Local Collector	16,200	260	225	0.01	A	485	0.03	A	0.02	No
SR-111	Mc Donald to Weist Rd	Minor Arterial 2	18,500	26	3,692	0.20	A	3,718	0.20	A	0.00	No
SR-111	Mc Donald to SR-115	Minor Arterial 2	18,500	234	5,697	0.31	A	5,931	0.32	A	0.01	No
SR-111	SR-115 to SR-78 north ramps	Minor Arterial 2	18,500	226	6,013	0.33	A	6,239	0.34	A	0.01	No
SR-111	SR-78 north ramps to So. Ramps	Minor Arterial 2	18,500	129	5,700	0.31	A	5,829	0.32	A	0.01	No

PC ORIGINAL PKG

Intersections

Table 5.2 summarizes the LOS at each intersection during the AM and PM peak hours under the construction year condition in 2022, without and with the project volumes. The estimated change in project delay associated with the project is also reported. All intersections would operate at a LOS C or better during both AM and PM peak hours with and without the project. Therefore, the project would not result in any significant impacts to any intersections within the project study area under the construction year condition. Detailed LOS worksheets are for the Construction Year are included in Appendix C and for the Construction Year plus Project in Appendix D.

Table 5.2: Construction Year Peak Hour Intersection Analysis

No.	Intersection	Control	Construction Year		Construction Year + Project		Change Delay	Significant
			Delay	LOS	Delay	LOS

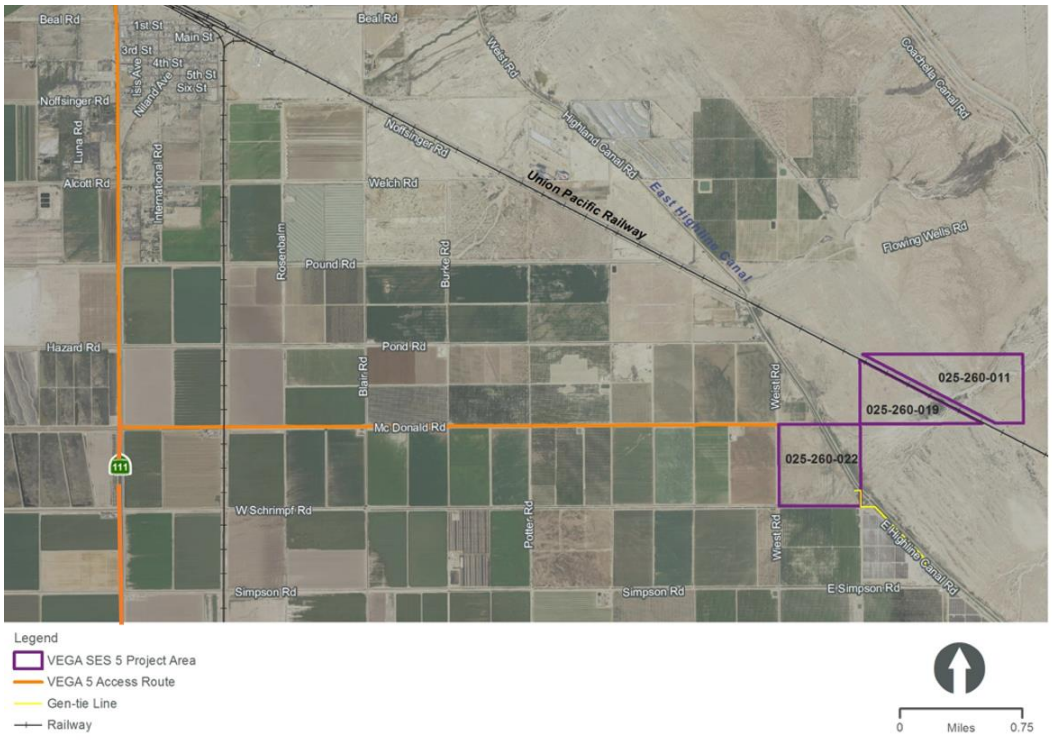
6.0 Circulation

The following section discusses the proposed project's access and circulation characteristics.

Project Access and Circulation

The project site is adjacent to the Highland Canal at McDonald Road and Weist Road. Access to and from the site will be from SR-111 along McDonald Road (see Figure 6.1). A portion of the site construction traffic will travel to the east side of the channel, by using Weist Road and Noffsinger Road. To access the portion of the site east of the UP Railroad tracks, access across the tracks will be made at Flowing Wells Road, and access to the property will be made via an easement that will be acquired. The easement will be a direct vertical south from Flowing Wells Road at the western boundary of AP 025-260-011.

Figure 6.1 Primary Vega 5 Access Route



Parking

The existing parking demand for up to vehicles and for construction equipment associated with site construction will be provided on site.

PC ORIGINAL PKG

7.0 Impacts and Mitigation

This traffic impact analysis (TIA) has been prepared to identify the potential traffic impacts associated with constructing a solar photovoltaic (PV) energy generation project and utility-scale battery energy storage system (BESS) at the Vega SES 5 site.

The construction of the project is estimated to take up to 12 months and would begin in late 2023. During the construction phase, at peak construction, the project is anticipated to generate a net total of 260 trips per day with 126 AM peak hour trips and 126 PM peak hour trips. When constructed, the project will not generate any additional trips. The project opening is anticipated to be in 2024.

The project is not expected to create significant impacts at study intersections or study segments, therefore no mitigation measures are required. All study intersections and segments were found to operate at LOS C or better for all of the traffic scenarios analyzed.

Water Supply Assessment
For the ZGlobal
Vega SES 2, LLC and Vega SES 3, LLC
Solar Energy Projects
Imperial County, California

1.0 INTRODUCTION

EMKO Environmental, Inc. (EMKO) has prepared this Water Supply Assessment (WSA) as a subconsultant to ECORP Consulting, Inc. for the proposed ZGlobal Vega SES 2, LLC and Vega SES 3, LLC Solar Energy Projects (Project or Projects) in Imperial County, California at the location indicated on Figure 1. Project water use includes dust control and soil conditioning requirements during construction and routine maintenance, primarily panel washing, during operation.

Water Code Sections 10910 through 10915 were amended by Senate Bill 610 (SB 610) in 2002. SB 610 requires that under specific circumstances, as detailed below, an assessment of available water supplies must be conducted. The purpose of the assessment is to determine if available water supplies are sufficient to serve the demand generated by the Project, as well as the reasonably foreseeable demand in the region over the next 20 years under average normal year, single dry year, and multiple dry year conditions. Water Code Section 10910 was further amended by SB 1262 on September 24, 2016 to require a Water Supply Assessment to include additional information regarding the groundwater basin designation and adjacent water systems. This report provides the information required for a Water Supply Assessment (WSA), as described in the October 2003 *Guidebook for Implementation of Senate Bill 610 and Senate Bill 221 of 2001 to Assist Water Suppliers, Cities, and Counties in Integrating Water and Land Use Planning*, published by the California Department of Water Resources (DWR Guidebook) along with the additional information required by SB 1262.

2.0 PROJECT DESCRIPTION

Vega SES 2, LLC and Vega SES 3, LLC are proposing to construct and operate solar energy generation and storage facilities on private lands in the Imperial Valley in Imperial County. The Project sites are located approximately four miles southeast of the community of Niland and 16 miles northeast of the City of Brawley (see Figure 1).

> **Vega SES 2** would cover approximately 1,323 acres in Sections 9, 15 and 17 of Township 11 South, Range 15 East of the San Bernardino Base and Meridian (SBB&M) within the “Iris” 7.5-minute U.S. Geologic Survey (USGS) quadrangle.

PC ORIGINAL PKG

The Project site includes all or part of Imperial County Assessor's Parcel Numbers (APNs) 025-260-011 (approximately 288 acres), APN 025-270-023 (approximately 625 acres) and APN 025-010-006 (approximately 410 acres). The site is located east of the East Highline Canal and partially straddles the Coachella Canal (see Figure 2). Vega SES 2 would include a 240-megawatt solar photovoltaic system and integrated 480-megawatt battery energy storage system along with related substations and transmission lines. Figure 3 is a Site Plan showing the Project layout and ancillary facilities.

Vega SES 3 would cover approximately 230 acres in Section 9 of Township 11 South, Range 15 East of the SBB&M within the "Iris" 7.5-minute USGS quadrangle. The Project site includes part of APN 025-010-006. The site is located east of the Coachella Canal (see Figure 2). Vega SES 3 would include a 60-megawatt solar photovoltaic system and integrated 120-megawatt battery energy storage system along with related substations and transmission lines. Figure 3 is a Site Plan showing the Project layout and ancillary facilities.

All parcels are located within the Imperial County Renewable Energy Overlay Zone, requiring projects to be permitted through the issuance of a Conditional Use Permit (CUP), which is a discretionary action by the County requiring compliance with the California Environmental Quality Act (CEQA). This Water Supply Assessment is intended to support and be a part of the CEQA analysis.

Domestic water and sanitation facilities would be required during construction. These would be provided through bottled water and portable facilities. A domestic/potable water connection would not be required.

Construction is anticipated to require 12 to 18 months to complete. Anticipated operational Project life is 25 to 30 years.

3.0 WATER SUPPLY PLANNING UNDER SB 610 and SB 1262

SB 610, effective January 1, 2002, amends Sections 10910 through 10915 of the Water Code by requiring preparation of a WSA for development projects subject to CEQA and other criteria, as discussed below. SB 610 also amends Section 10631 of the Water Code, which relates to Urban Water Management Plans (UWMPs). The WSA process under SB 610 is designed to rely on the information typically contained in UWMPs, where available.

On September 24, 2016, SB 1262 further amended Section 10910 of the Water Code to require additional information related to adjacent public water systems and the status of the groundwater basin. These amendments provide additional consistency with the Sustainable Groundwater Management Act of 2014, as discussed further in Section 4.4.

The first steps in the WSA process are to determine whether SB 610 applies to the proposed Project. If so, then documentation of available water supplies, anticipated Project demand, and the sufficiency of supplies must be conducted. These issues are summarized by the following questions, as outlined in the DWR Guidebook:

1. Is the proposed Project subject to CEQA?
2. Is the proposed Project a "Project" under SB 610?
3. Is there a public water system that will service the proposed Project?
4. Is there a current UWMP that accounts for the project demand?
5. Is groundwater a component of the supplies for the Project?
6. Are there sufficient supplies to serve the Project over the next twenty years?

Each of these issues are discussed in the following sections as they relate to the proposed Project.

3.1 Is the Proposed Project Subject to CEQA?

The first step in the SB 610 process is to determine whether the proposed project is subject to CEQA. Water Code Section 10910(a) states that any city or county that determines that an application meets the definition of "project", per Water Code Section 10912 (see Section 3.2, below), and is subject to CEQA, shall prepare a water supply assessment for the project. CEQA applies to projects requiring issuance of a discretionary permit by a public agency, projects undertaken by a public agency, or projects funded by a public agency. As noted in Section 2.0, the proposed Project is within the Imperial County Renewable Energy Overlay Zone, which requires discretionary approval of a CUP by Imperial County, a public agency. Therefore, the Project is subject

PC ORIGINAL PKG

to CEQA. This WSA has been prepared to support the environmental review that will be conducted by Imperial County under CEQA.

3.2 Is the Proposed Project a "Project" Under SB 610?

The second step in the SB 610 process is to determine if the proposed Project meets the definition of "project" under Water Code Section 10912(a). Under Section 10912(a) a "project" is defined as meeting any of the following criteria:

1. a proposed residential development of more than 500 dwelling units;
2. a proposed shopping center or business establishment employing more than 1,000 persons or having more than 500,000 square feet of floor space;
3. a proposed commercial office building employing more than 1,000 persons or having more than 250,000 square feet of floor space;
4. a proposed hotel or motel, or both, having more than 500 rooms;
5. a proposed industrial, manufacturing, or processing plant, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area;
6. a mixed-use project that includes one or more of the projects defined above; or
7. a project that would demand an amount of water equivalent to, or greater than, the amount of water required by a 500 dwelling unit project.

The Vega SES 2 site is 1,323 acres and the Vega SES 3 site is 230 acres. As a result, the Project will include an industrial site that is larger than 40 acres and thus this WSA is being prepared in accordance with criterion 5, above.

3.3 Is There a Public Water System That Will Service the Proposed Project?

Section 10912(c) of the Water Code identifies a public water system as a system for the provision of piped water to the public for human consumption that has 3,000 or more service connections. The Project site is approximately four miles southeast of the community of Niland and 16 miles northeast of the City of Brawley. APN 025-260-011 and parts of APN 025-010-006 and APN 025-270-023 are located within IID's East Mesa Unit (https://mygis.iid.com/portal/apps/webappviewer/index.html?id=a33cfeb3714f4eb8a1c85320613a2d1b) but do not have water service from IID. Thus, there is not a public water system that will serve the Project. The water supply will be provided by new onsite groundwater supply wells to be drilled and installed as part of the Project.

PC ORIGINAL PKG

3.4 Is There a Current Urban Water Management Plan That Accounts for the Project Demand?

The Water Code requires that all public water systems providing water for municipal purposes to more than 3,000 customers, or supplying more than 3,000 acre-feet per year, must prepare an UWMP. The DWR Guidebook (page iii) states that SB 610 repeatedly refers to the UWMP as a planning document that can be used to meet the standards set forth in the statute, and that UWMPs act as a foundation to fulfill the requirements of the statute. As noted in Section 3.3, above, there is no public water system that will serve the Project and, therefore, there is not an UWMP that addresses the Project area or Project demand. Since there is not an UWMP that accounts for the Project demand, this WSA is based upon available and relevant information from DWR, the U.S. Geological Survey (USGS), and other publicly available data. As this WSA has been prepared for use by the CEQA lead agency, this document includes an evaluation of whether the total projected water supplies, determined to be available during normal, single dry, and multiple dry water years during a 20-year projection, will meet the projected water demand associated with the proposed Project, in addition to existing and planned future uses, including agricultural and manufacturing uses, in accordance with Water Code § 10910(c)(4).

3.5 Is Groundwater a Component of the Supplies for the Project?

Water Code Section 10910(f), paragraphs 1 through 5, must be addressed if groundwater is a source of supply for the proposed Project. As described in Section 3.3, the water supply will be provided by new groundwater supply wells that will be drilled and installed as part of the Project. The proposed locations for two new groundwater supply wells are shown on Figure 3. Therefore, an assessment of groundwater conditions is included in this document.

Water Code Section 10910(f) paragraphs 1 through 5, as modified by SB 1262, state:

(f) If a water supply for a proposed project includes groundwater, the following additional information shall be included in the water supply assessment:

> (1) A review of any information contained in the urban water management plan relevant to the identified water supply for the proposed project.
>
> (2) (A) A description of any groundwater basin or basins from which the proposed project will be supplied. (B) For those basins for which a court or the board has adjudicated the rights to pump groundwater, a copy of the order or decree adopted by the court or the board and a description of the amount of groundwater the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), has the legal right to pump under the order or decree. (C) For a basin that has not been adjudicated that is a

PC ORIGINAL PKG

basin designated as high- or medium priority pursuant to Section 10722.4, information regarding the following: (i) Whether the department has identified the basin as being subject to critical conditions of overdraft pursuant to Section 12924; and (ii) If a groundwater sustainability agency has adopted a groundwater sustainability plan or has an approved alternative, a copy of that alternative or plan. (D) For a basin that has not been adjudicated that is a basin designated as low- or very-low priority pursuant to Section 10722.4, information as to whether the department has identified the basin or basins as overdrafted or has projected that the basin will become overdrafted if present management conditions continue, in the most current bulletin of the department that characterizes the condition of the groundwater basin, and a detailed description by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), of the efforts being undertaken in the basin or basins to eliminate the long-term overdraft condition.

(3) A detailed description and analysis of the amount and location of groundwater pumped by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), for the past five years from any groundwater basin from which the proposed project will be supplied. The description and analysis shall be based on information that is reasonably available, including, but not limited to, historic use records.

(4) A detailed description and analysis of the amount and location of groundwater that is projected to be pumped by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), from any basin from which the proposed project will be supplied. The description and analysis shall be based on information that is reasonably available, including, but not limited to, historic use records.

(5) An analysis of the sufficiency of the groundwater from the basin or basins from which the proposed project will be supplied to meet the projected water demand associated with the proposed project. A water assessment shall not be required to include the information required by this paragraph if the public water system determines, as part of the review required by paragraph (1), that the sufficiency of groundwater necessary to meet the initial and projected water demand associated with the project was addressed in the description and analysis required by paragraph (4) of subdivision (b) of Section 10631.

Paragraphs 1 through 4, above, are addressed in Section 4.0, below, including a description of the groundwater basin, groundwater conditions, and available supply. Section 5.0 presents available information regarding water demand for the Project.

The Paragraph 5 requirement to provide an analysis of the sufficiency of the groundwater basin to meet the projected water demand associated with the proposed project is addressed in Section 6.0, below.

PC ORIGINAL PKG

3.6 Are There Sufficient Supplies to Serve the Project Over the Next Twenty Years?

Water Code Section 10910(c)(4) requires the WSA to "*include a discussion with regard to whether the total projected water supplies, determined to be available by the city or county for the project during normal, single dry, and multiple dry water years during a 20-year projection, will meet the projected water demand associated with the proposed project, in addition to existing and future planned uses, including agricultural and manufacturing uses.*"

The sufficiency of water supply for the proposed Project is addressed in Sections 6.0 and 7.0, below.

4.0 PROJECT WATER SUPPLY

As stated in Section 3.3, above, water for the Project will be provided by new wells to be drilled at the proposed locations shown on Figure 3. As such, groundwater will be the sole water supply for both the construction and operational water needs. Because there are no public water systems or other significant users of groundwater in the groundwater basin, there are no Urban Water Management Plans or other planning documents available. Thus, limited information is available regarding groundwater conditions in the Project vicinity.

Overall conditions within the groundwater basin are described in Section 4.1. Groundwater recharge and available supply are discussed in Section 4.2. Groundwater level trends and the status of the basin relative to the Sustainable Groundwater Management Act of 2014 (SGMA) is provided in Section 4.3, as required by SB 1262.

4.1 Groundwater Basin

The Project is located within the western part of the East Salton Sea Groundwater Basin (Basin), designated as basin number 7-033, as defined by DWR (2022a). The Basin is bounded on the northeast by the Chocolate Mountains and on the southwest by the San Andreas and Banning Mission Creek fault zones (DWR, 2003). The northwest and southeast edges of the groundwater basin are approximately defined by transitions between major surface drainages coming off of the Chocolate Mountains. The groundwater basin has an area of approximately 196,000 acres, or 306 square miles (DWR, 2003). The Basin has not been adjudicated (DWR, 2022b). Figure 4 shows the groundwater basin boundary and the approximate location of the Project.

Groundwater occurs within unconsolidated to semi-consolidated coarse sediment eroded from the Chocolate Mountains (DWR, 2003). The sediment generally occurs within large alluvial fans that originate at drainages and canyons within the bedrock

PC ORIGINAL PKG

formations in the mountains and spread out as they decrease in elevation toward the floor of the Imperial Valley or the Salton Sea. The alluvial fan sediments range in age from Tertiary to Quaternary. DWR (2003) reports that the alluvium is at least 400 feet thick.

4.2 Groundwater Supply and Recharge

DWR (2022c) reports that the population in the East Salton Sea Groundwater Basin in 2010 was approximately 1,093 persons and that the population is expected to decrease 10 percent by 2030. There are no public water supply wells in the Basin and 11 total wells present. Only 4,906 acres of the 196,000-acre Basin, or 2.54 percent, are irrigated (DWR, 2022c). The total groundwater storage capacity of the groundwater basin is estimated to be 360,000 acre-feet (DWR, 2003).

The average annual rainfall is very low, as discussed further in Section 6.0 below, and typically does not provide a sufficient quantity of moisture to percolate deep into the alluvial sediments. As a result, recharge of groundwater occurs primarily due to runoff from the Chocolate Mountains during major storm events, which may not occur every year. The average annual recharge is estimated to be 200 acre-feet per year (DWR, 2003). That estimate is from a 1975 version of DWR Bulletin 118. No changes to basin conditions are reported in the most recent updates to DWR Bulletin 118 (DWR, 2021 and 2022a).

DWR's California Data Exchange Center website (https://cdec.water.ca.gov) and the U.S. Geological Survey's (USGS's) National Water Information System mapping application (https://maps.waterdata.usgs.gov/mapper/index.html) show only one active groundwater monitoring location within the Basin at the time this report was prepared. That well is located approximately 3,600 feet southeast of the southeast corner of the Project site and 950 feet northeast of the Coachella Canal. The well has USGS identification number 331144115231501, which identifies the latitude and longitude of the well (i.e., 33°11'44" latitude, -115°23'15" longitude), and California state well number 011S015E23M001, which indicates the township, range, and quarter-quarter section (i.e., northwest quarter or the southwest quarter of township 11S, range 15E, San Bernardino Base and Meridian). The ground surface elevation at the well location is reported to be 120 feet above mean sea level (ft msl) while the borehole in which the well was installed is reported to have been drilled to a depth of 550 feet below ground surface (ft bgs) (USGS, 2022).

PC ORIGINAL PKG

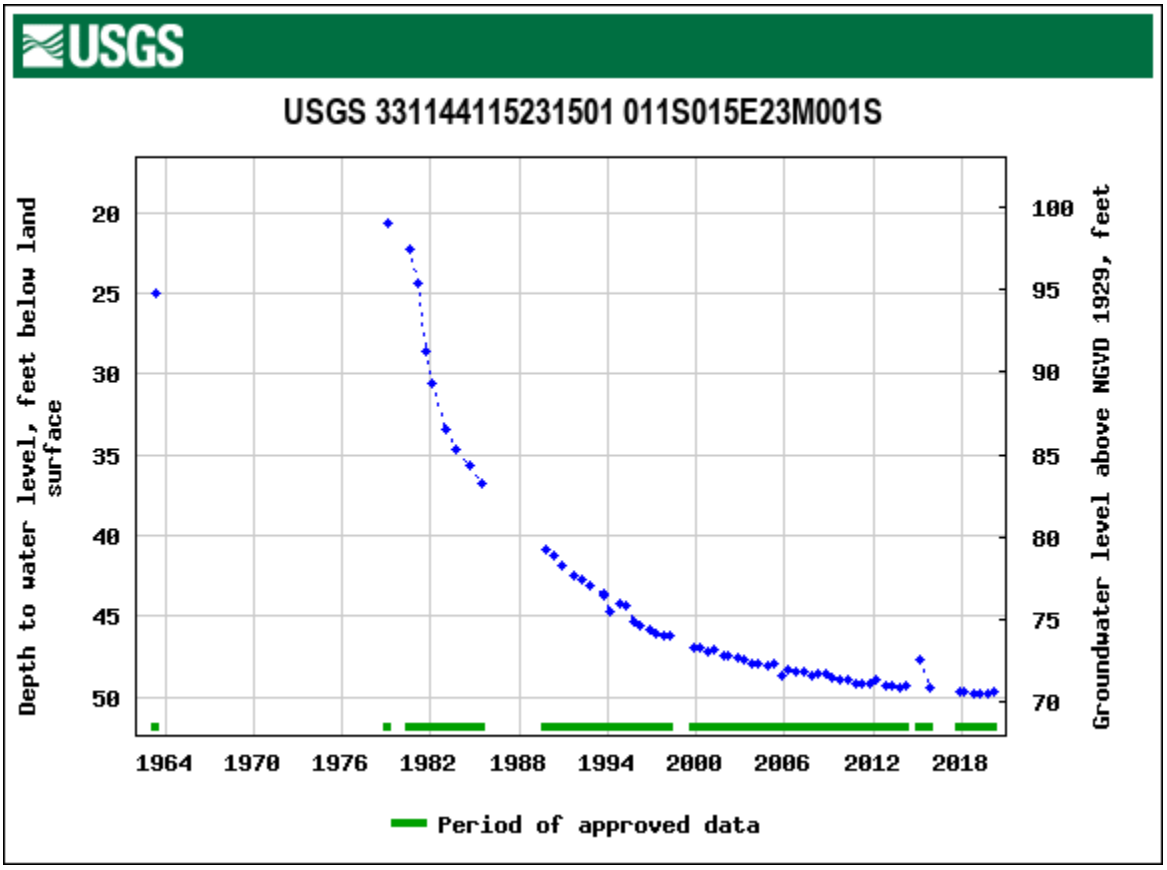
FIGURE 4. East Salton Sea Groundwater Basin

(Source: DWR, 2022b)

PC ORIGINAL PKG

Figure 5 is a hydrograph from USGS (2022) showing the groundwater level and groundwater elevation measured since 1963 in the sole active monitoring well in the Basin. As indicated on Figure 5, the groundwater level decreased at a relatively rapid rate from 1979 to approximately 2000, with the depth to water dropping from approximately 21 ft bgs to approximately 47 ft bgs over that period. Since 2000, the groundwater level has continued to decrease, but at a slower rate, with the level in March 2020 (the last date with a reported measurement by USGS) being approximately 50 ft bgs. While the groundwater level has decreased by almost 30 feet since 1979, it has changed by less than one foot over the past decade. Based on the depth to groundwater and the borehole depth for the monitoring well, the potential loss of aquifer volume since 1979 is only six percent of the total available storage reported by DWR (2003).

FIGURE 5. USGS Groundwater Level Hydrograph



Water quality samples were collected and analyzed from the monitoring well within the Basin in June and September 1963 (USGS, 2022). Table 1 shows the water quality results from June 1963. The September results were comparable. The groundwater sampled from the monitoring well has a normal pH but the levels of sodium, chloride, and sulfate are elevated compared to what would be expected from percolation of locak

PC ORIGINAL PKG

rainfall. The dissolved soids concentration of 2,190 milligrams per liter (mg/L) is more than twice the value of the high end of the range of the secondary maximum contaminant level (MCL) for drinking water of 1,000 mg/L. The high dissolved solids concentration renders the water unsuitable for potable or agricultural uses without treatment. The existing water quality is suitable for use for construction and maintenance purposes, though.

TABLE 1. USGS Water Quality Data (June 13, 1963)

Parameter	Units	Result
Temperature	Degrees Celsius (° C)	26.9
Specific Conductance	MicroSiemens per centimeter at 25° C	3630
pH	Standard units	7.4
Carbon Dioxide	Milligrams per liter (mg/L)	14
Acid Neutralizing Capacity	mg/L as calcium carbonate ($CaCO_3$)	174
Bicarbonate	mg/L	212
Carbonate	mg/L	0.0
Hardness	mg/L as $CaCO_3$	700
Non-carbonate hardness	mg/L as $CaCO_3$	530
Calcium	mg/L	106
Magnesium	mg/L	107
Sodium + Potassium	mg/L	500
Chloride	mg/L	635
Sulfate	mg/L	700
Fluoride	mg/L	1.6
Silica	mg/L as silica dioxide (SiO_2)	33
Dissolved Solids	mg/L	2190

PC ORIGINAL PKG

4.3 Groundwater Sustainability

A series of three bills passed by the California legislature and were signed by Governor Brown on September 16, 2014. These three bills, Assembly Bill (AB) 1739, SB 1168, and SB 1319, together comprise the Sustainable Groundwater Management Act of 2014 (SGMA). SGMA provides a structure under which local agencies are to develop a sustainable groundwater management program. SGMA focuses on basins or subbasins designated by DWR as high or medium priority basins, and those with critical conditions of overdraft.

According to DWR (2022b), the Basin is a very low priority basin. DWR has not identified the Basin as overdrafted nor has it projected that the basin will become overdrafted if present management conditions continue (DWR, 2021 and 2022c). Thus, the Basin is not subject to the current requirements of SGMA, including the formation of a groundwater sustainability agency (GSA) and preparation of a groundwater sustainability plan (GSP).

5.0 PROJECT WATER DEMAND

Water demand varies depending on the Project phase. During construction, water will be needed for dust control and soil conditioning during installation of the photovoltaic panels, battery storage units, and related infrastructure. During the operational phase of the project, water will be needed for routine maintenance activities, which primarily consists of washing the photovoltaic panels to maintain generation efficiency.

Table 2. Project Water Demand

Site	Area (acres)	Output (megawatts)	Construction Water (acre-feet)	Operational Water (acre-feet per year)
Vega SES 2	1323	240	630 (total combined)	10
Vega SES 3	230	60		2

Table 2 provides a summary of Project parameters that affect water demand and the estimated water needs for construction and operation. The construction water demand is primarily for dust control. Thus, the water needs are proportional to the size of the disturbed area and the local climate. Construction of the Vega SES 2 and Vega SES 3 sites is expected to occur simultaneously and the combined construction water demand is approximately 630 acre-feet. Construction is anticipated to require 12 to 18 months to complete. Thus, the monthly water demand during that period may range from 35 acre-feet to 52.5 acre-feet, on average.

PC ORIGINAL PKG

The operational water demand for panel washing and other maintenance needs is based primarily on the number of panels, which relates to the energy production or output, in megawatts. The operational water demand is anticipated to range from 10 acre-feet per year for Vega SES 2 to two acre-feet per year for Vega SES 3. The maintenance activities for each system are anticipated to be conducted up to twice a year over a one-to-two-week period each event, so the maintenance water demand is intermittent and not spread throughout the year. The operational water demand will occur throughout the life of the Project.

6.0 DRY YEAR SUPPLY

The volume and sustainability of dry-year water supply for the Project is addressed by comparing annual rainfall with changes in groundwater levels in the Basin. This comparison is made for a normal or average water year[1], for single dry year, and for multiple dry water years. Local rainfall data were obtained from the Western Region Climate Center (WRCC, 2022) for Niland, California, located approximately four miles northwest of the Project location (see Figure 1).

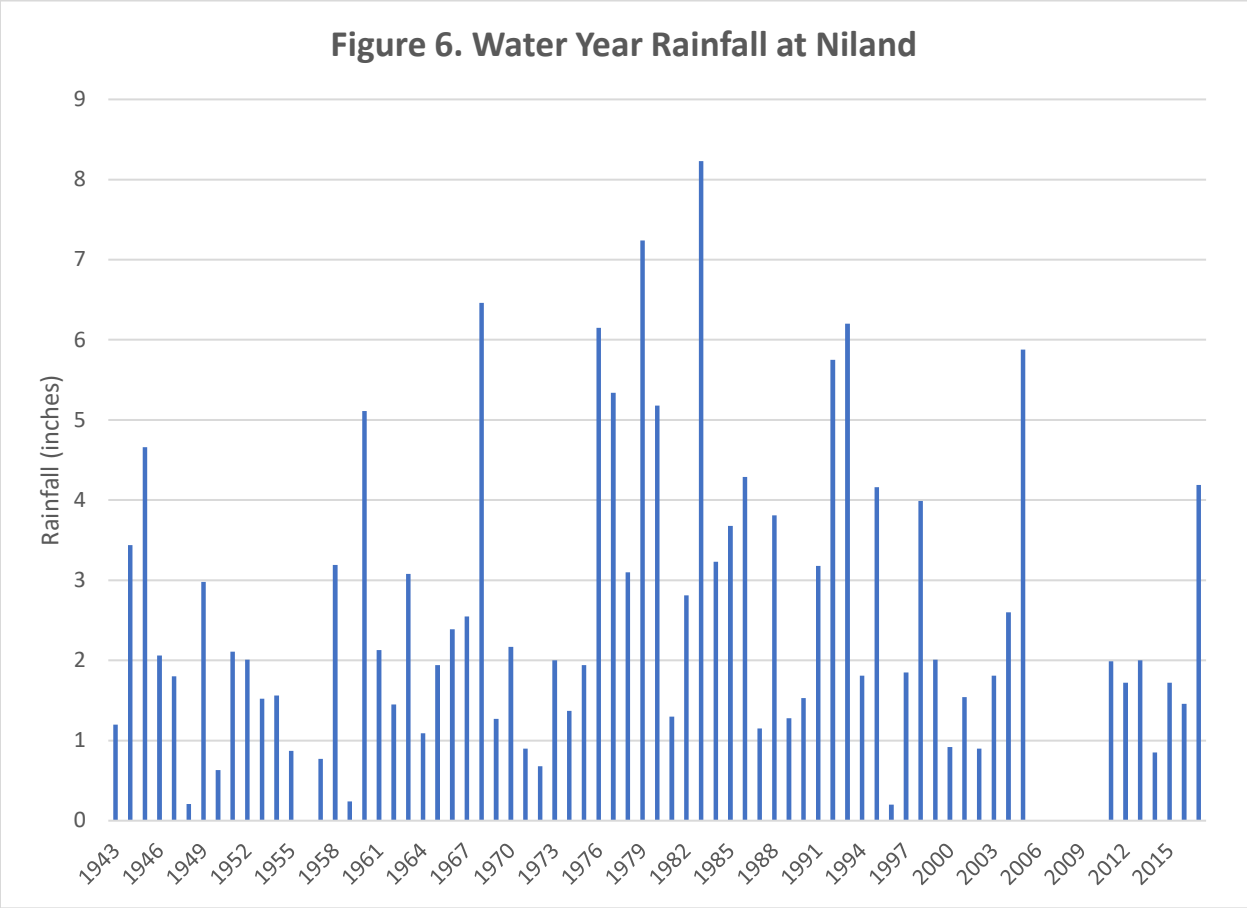
Figure 6 shows the annual water year rainfall for Niland, California from 1943 through 2017. The average water year rainfall during this period is 2.58 inches. The driest year was 1956, when no precipitation was recorded. The driest year during the period of available groundwater elevation data (see Figure 5) was 1996, with only 0.2 inch of rainfall reported. The wettest year was 1983, when 8.23 inches of rain was measured. As indicated on Figure 6, a relatively wet period occurred from 1976 to 1986, with 10 of 11 water years exceeding the average annual rainfall. In comparison, the period from 1996 to 2016 was relatively dry, with 18 of 21 water years having below normal rainfall.

The historic rainfall data on Figure 6 can be compared with the groundwater levels shown on Figure 5 to assess the effects of wet and dry periods on groundwater supply in the Basin. The wettest year recorded, 1983, and the relatively wet period from 1976 to 1986, correspond to a period when groundwater levels were dropping rapidly. In contrast, the dry period from 1996 to 2016 corresponds to a period when the rate of decline of the groundwater elevation was attenuating rapidly and beginning to stabilize. Thus, the available groundwater level and rainfall data do not indicate any relationship between wet, normal, single dry year, or multiple dry years and available groundwater supply. As

[1] In California, a water year is defined as the period from October 1 of a calendar year through September 30 of the subsequent calendar year. A water year is designated by the year in which it ends. For example, the period from October 1, 2006 through September 30, 2007 is referred to as the 2007 water year. Due to the nature of weather patterns in the state, a water year better represents hydrologic conditions related to wet and dry periods than does a calendar year.

PC ORIGINAL PKG

noted above in Section 4.2, recharge of groundwater occurs primarily due to runoff from the mountains during individual major storm events (DWR, 2003). Such storm events typically occur infrequently and there may be many years between events that produce enough runoff to provide appreciable recharge.



The total groundwater storage capacity of the Basin is estimated to be 360,000 acre-feet (DWR, 2003) and the groundwater level decline from 1979 to 2018 decreased groundwater storage by approximately six percent (see Section 4.2). Thus, the current storage in the Basin may be in the range of 335,000 to 340,000 acre-feet. The single year combined construction water demand of 630 acre-feet and the annual combined operational water needs of 12 acre-feet are miniscule (0.2 percent and 0.004 percent, respectively) compared to the available groundwater in storage. Furthermore, the long term annual operational water needs are much less than the estimated annual recharge of 200 acre-feet per year. Overall, there is adequate water available to supply the Project water needs during single dry, and multiple dry year periods.

PC ORIGINAL PKG

7.0 FINDINGS and DISCUSSION

This WSA has been prepared in accordance with SB 610 and SB 1262 to support the CEQA environmental review for the proposed Project and provides an assessment of water supply adequacy for the Project in accordance with Water Code Sections 10910 through 10915. As stated in Section 1.0, the purpose of the assessment is to determine if available water supplies are sufficient to serve the demand generated by the Project, as well as the reasonably foreseeable demand in the region over the next 20 years under average normal year, single dry year, and multiple dry year conditions. As noted in Section 4.2, above, while groundwater levels in the Basin had been declining during the period from the late 1970s to the early 2000s, over the past decade they have stabilized, indicating that current water demands are in balance with recharge and replenishment. The population, and presumably the related water demand, are anticipated to decrease over the next decade. Therefore, the Basin has adequate resources for current and anticipated future existing water needs.

The water demand for the proposed Project will consist of water needed during construction and water needed for maintenance once the Project is operational. The construction water demand is anticipated to be a combined total of 630 acre-feet over 12 to 18 months, primarily for dust control. The operational demand is anticipated to be a combined total of 12 acre-feet per year for panel washing and other maintenance activities. The operational demand will exist for the life of the Project, which is anticipated to be 25 to 30 years.

The construction water demand exceeds the reported average annual recharge to the Basin of 200 acre-feet per year (DWR, 2003). However, the construction water needs are short-term and temporary. This temporary water use is not anticipated to cause persistent and long-term lowering of groundwater levels. Therefore, the construction water demand will not cause or contribute to overdraft, exhaustion of water supplies, lowering of groundwater levels to depths that would be uneconomic for pumping, land subsidence, or significant alteration of groundwater quality.

The annual operational water needs are equivalent to six percent of the average annual recharge and 0.004 percent of the estimated current storage volume of the Basin. Therefore, the long-term operation and maintenance of the Project would not have any measurable effect or impact on groundwater resources in the Basin.

Based on the analysis presented in this WSA, there will be sufficient water available for existing water uses in the Basin and the Project water demand during normal, single dry year, and multiple dry year periods for the anticipated life of the Project, which is anticipated to be greater than 20 years.

Water Supply Assessment
For the ZGlobal
Vega SES 5, LLC
Solar Energy Project
Imperial County, California

1.0 INTRODUCTION

EMKO Environmental, Inc. (EMKO) has prepared this Water Supply Assessment (WSA) as a subconsultant to ECORP Consulting, Inc. for the proposed ZGlobal Vega SES 5, LLC Solar Energy Project (Project) in Imperial County, California at the location indicated on Figure 1. Project water use includes dust control and soil conditioning requirements during construction and routine maintenance, primarily panel washing, during operation.

Water Code Sections 10910 through 10915 were amended by Senate Bill 610 (SB 610) in 2002. SB 610 requires that under specific circumstances, as detailed below, an assessment of available water supplies must be conducted. The purpose of the assessment is to determine if available water supplies are sufficient to serve the demand generated by the Project, as well as the reasonably foreseeable demand in the region over the next 20 years under average normal year, single dry year, and multiple dry year conditions. Water Code Section 10910 was further amended by SB 1262 on September 24, 2016 to require a Water Supply Assessment to include additional information regarding the groundwater basin designation and adjacent water systems. This report provides the information required for a Water Supply Assessment (WSA), as described in the October 2003 *Guidebook for Implementation of Senate Bill 610 and Senate Bill 221 of 2001 to Assist Water Suppliers, Cities, and Counties in Integrating Water and Land Use Planning*, published by the California Department of Water Resources (DWR Guidebook) along with the additional information required by SB 1262.

2.0 PROJECT DESCRIPTION

Vega SES 5, LLC is proposing to construct and operate solar energy generation and storage facilities on private lands in the Imperial Valley in Imperial County. The Project site is located approximately four miles southeast of the community of Niland and 16 miles northeast of the City of Brawley (see Figure 1).

Vega SES 5 would cover approximately 410 acres in Sections 17 and 19 of Township 11 South, Range 15 East of the San Bernardino Base and Meridian (SBB&M) within the "Iris" 7.5-minute U.S. Geologic Survey (USGS) quadrangle. The Project site includes all or part of Imperial County Assessor's Parcel Numbers (APNs) 025-260-011

PC ORIGINAL PKG

(approximately 160 acres), APN 025-260-019 (approximately 90 acres) and APN 025-260-022 (approximately 160 acres). The East Highline Canal runs diagonally through APN 025-260-022 (see Figure 2). The other two parcels are located east of the East Highline Canal. Vega SES 5 would include a 50-megawatt solar photovoltaic system and integrated 100-megawatt battery energy storage system along with related substations and transmission lines. Figure 3 is a Site Plan showing the Project layout and ancillary facilities.

All parcels are located within the Imperial County Renewable Energy Overlay Zone, requiring projects to be permitted through the issuance of a Conditional Use Permit (CUP), which is a discretionary action by the County requiring compliance with the California Environmental Quality Act (CEQA). This Water Supply Assessment is intended to support and be a part of the CEQA analysis.

Domestic water and sanitation facilities would be required during construction. These would be provided through bottled water and portable facilities. A domestic/potable water connection would not be required.

Construction is anticipated to require 12 months to complete. Anticipated operational Project life is 25 to 30 years.

3.0 WATER SUPPLY PLANNING UNDER SB 610 and SB 1262

SB 610, effective January 1, 2002, amends Sections 10910 through 10915 of the Water Code by requiring preparation of a WSA for development projects subject to CEQA and other criteria, as discussed below. SB 610 also amends Section 10631 of the Water Code, which relates to Urban Water Management Plans (UWMPs). The WSA process under SB 610 is designed to rely on the information typically contained in UWMPs, where available.

On September 24, 2016, SB 1262 further amended Section 10910 of the Water Code to require additional information related to adjacent public water systems and the status of the groundwater basin. These amendments provide additional consistency with the Sustainable Groundwater Management Act of 2014, as discussed further in Section 4.4.

The first steps in the WSA process are to determine whether SB 610 applies to the proposed Project. If so, then documentation of available water supplies, anticipated Project demand, and the sufficiency of supplies must be conducted. These issues are summarized by the following questions, as outlined in the DWR Guidebook:

1. Is the proposed Project subject to CEQA?
2. Is the proposed Project a "Project" under SB 610?
3. Is there a public water system that will service the proposed Project?
4. Is there a current UWMP that accounts for the project demand?
5. Is groundwater a component of the supplies for the Project?
6. Are there sufficient supplies to serve the Project over the next twenty years?

Each of these issues are discussed in the following sections as they relate to the proposed Project.

3.1 Is the Proposed Project Subject to CEQA?

The first step in the SB 610 process is to determine whether the proposed project is subject to CEQA. Water Code Section 10910(a) states that any city or county that determines that an application meets the definition of "project", per Water Code Section 10912 (see Section 3.2, below), and is subject to CEQA, shall prepare a water supply assessment for the project. CEQA applies to projects requiring issuance of a discretionary permit by a public agency, projects undertaken by a public agency, or projects funded by a public agency. As noted in Section 2.0, the proposed Project is within the Imperial County Renewable Energy Overlay Zone, which requires discretionary approval of a CUP by Imperial County, a public agency. Therefore, the Project is subject

PC ORIGINAL PKG

to CEQA. This WSA has been prepared to support the environmental review that will be conducted by Imperial County under CEQA.

3.2 Is the Proposed Project a "Project" Under SB 610?

The second step in the SB 610 process is to determine if the proposed Project meets the definition of "project" under Water Code Section 10912(a). Under Section 10912(a) a "project" is defined as meeting any of the following criteria:

1. a proposed residential development of more than 500 dwelling units;
2. a proposed shopping center or business establishment employing more than 1,000 persons or having more than 500,000 square feet of floor space;
3. a proposed commercial office building employing more than 1,000 persons or having more than 250,000 square feet of floor space;
4. a proposed hotel or motel, or both, having more than 500 rooms;
5. a proposed industrial, manufacturing, or processing plant, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area;
6. a mixed-use project that includes one or more of the projects defined above; or
7. a project that would demand an amount of water equivalent to, or greater than, the amount of water required by a 500 dwelling unit project.

The Project encompasses 410 acres. As a result, the Project will include an industrial site that is larger than 40 acres and thus this WSA is being prepared in accordance with criterion 5, above.

3.3 Is There a Public Water System That Will Service the Proposed Project?

Section 10912(c) of the Water Code identifies a public water system as a system for the provision of piped water to the public for human consumption that has 3,000 or more service connections. The Project site is approximately four miles southeast of the community of Niland and 16 miles northeast of the City of Brawley. APN 025-260-011, APN 025-260-019, and the area of APN 025-260-022 east of the East Highline Canal are located within Imperial Irrigation District's (IID's) East Mesa Unit, while 114.4 acres of the area of APN 025-260-022 west of the East Highline Canal is within IID's Imperial Unit (IID, 2022). The Project parcel areas in the East Mesa Unit do not currently have water service from IID. Although water service from IID is currently available for the area of APN 025-260-022 within the Imperial Unit, Vega SES 5, LLC does not plan to use surface water from IID to supply any area of the Project. Thus, there are no public water systems that will serve the Project. The water supply will be provided by new onsite groundwater supply wells to be drilled and installed as part of the Project.

PC ORIGINAL PKG

3.4 Is There a Current Urban Water Management Plan That Accounts for the Project Demand?

The Water Code requires that all public water systems providing water for municipal purposes to more than 3,000 customers, or supplying more than 3,000 acre-feet per year, must prepare an UWMP. The DWR Guidebook (page iii) states that SB 610 repeatedly refers to the UWMP as a planning document that can be used to meet the standards set forth in the statute, and that UWMPs act as a foundation to fulfill the requirements of the statute. As noted in Section 3.3, above, there are no public water systems that will serve the Project and, therefore, there is not an UWMP that addresses the Project area or Project demand. Since there is not an UWMP that accounts for the Project demand, this WSA is based upon available and relevant information from DWR, the USGS, and other publicly available data. As this WSA has been prepared for use by the CEQA lead agency, this document includes an evaluation of whether the total projected water supplies, determined to be available during normal, single dry, and multiple dry water years during a 20-year projection, will meet the projected water demand associated with the proposed Project, in addition to existing and planned future uses, including agricultural and manufacturing uses, in accordance with Water Code § 10910(c)(4).

3.5 Is Groundwater a Component of the Supplies for the Project?

Water Code Section 10910(f), paragraphs 1 through 5, must be addressed if groundwater is a source of supply for the proposed Project. As described in Section 3.3, the water supply will be provided by new groundwater supply wells that will be drilled and installed as part of the Project. One groundwater supply well is proposed to be drilled on APN 025-260-022. Additional water may be supplied from two wells to be installed as part of the ZGlobal Vega SES 2, LLC and Vega SES 3, LLC projects, located to the northeast of the Vega SES 5, LLC project area. Evaluation of available water supply from those two wells to the northeast has been conducted as part of a separate WSA for the adjacent Vega SES projects (EMKO, 2022). However, a separate assessment of groundwater conditions and availability for the Vega SES 5, LLC project is included in this document.

Water Code Section 10910(f) paragraphs 1 through 5, as modified by SB 1262, state:

(f) If a water supply for a proposed project includes groundwater, the following additional information shall be included in the water supply assessment:

> (1) A review of any information contained in the urban water management plan relevant to the identified water supply for the proposed project.
>
> (2) (A) A description of any groundwater basin or basins from which the proposed project will be supplied. (B) For those basins for which a court or the board has adjudicated the rights to pump groundwater, a copy of the order or decree adopted by the court or the board and a description of the amount of groundwater the public water system, or the city or county if either is required to

PC ORIGINAL PKG

comply with this part pursuant to subdivision (b), has the legal right to pump under the order or decree. (C) For a basin that has not been adjudicated that is a basin designated as high- or medium priority pursuant to Section 10722.4, information regarding the following: (i) Whether the department has identified the basin as being subject to critical conditions of overdraft pursuant to Section 12924; and (ii) If a groundwater sustainability agency has adopted a groundwater sustainability plan or has an approved alternative, a copy of that alternative or plan. (D) For a basin that has not been adjudicated that is a basin designated as low- or very-low priority pursuant to Section 10722.4, information as to whether the department has identified the basin or basins as overdrafted or has projected that the basin will become overdrafted if present management conditions continue, in the most current bulletin of the department that characterizes the condition of the groundwater basin, and a detailed description by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), of the efforts being undertaken in the basin or basins to eliminate the long-term overdraft condition.

(3) A detailed description and analysis of the amount and location of groundwater pumped by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), for the past five years from any groundwater basin from which the proposed project will be supplied. The description and analysis shall be based on information that is reasonably available, including, but not limited to, historic use records.

(4) A detailed description and analysis of the amount and location of groundwater that is projected to be pumped by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), from any basin from which the proposed project will be supplied. The description and analysis shall be based on information that is reasonably available, including, but not limited to, historic use records.

(5) An analysis of the sufficiency of the groundwater from the basin or basins from which the proposed project will be supplied to meet the projected water demand associated with the proposed project. A water assessment shall not be required to include the information required by this paragraph if the public water system determines, as part of the review required by paragraph (1), that the sufficiency of groundwater necessary to meet the initial and projected water demand associated with the project was addressed in the description and analysis required by paragraph (4) of subdivision (b) of Section 10631.

Paragraphs 1 through 4, above, are addressed in Section 4.0, below, including a description of the groundwater basin, groundwater conditions, and available supply. Section 5.0 presents available information regarding water demand for the Project.

The Paragraph 5 requirement to provide an analysis of the sufficiency of the groundwater basin to meet the projected water demand associated with the proposed project is addressed in Section 6.0, below.

PC ORIGINAL PKG

3.6 Are There Sufficient Supplies to Serve the Project Over the Next Twenty Years?

Water Code Section 10910(c)(4) requires the WSA to "*include a discussion with regard to whether the total projected water supplies, determined to be available by the city or county for the project during normal, single dry, and multiple dry water years during a 20-year projection, will meet the projected water demand associated with the proposed project, in addition to existing and future planned uses, including agricultural and manufacturing uses.*"

The sufficiency of water supply for the proposed Project is addressed in Sections 6.0 and 7.0, below.

4.0 PROJECT WATER SUPPLY

As stated in Section 3.3, above, water for the Project will be provided by new wells to be drilled for this and adjacent solar energy projects. As such, groundwater will be the sole water supply for both the construction and operational water needs. Because there are no public water systems or other significant users of groundwater in the groundwater basin, there are no Urban Water Management Plans or other planning documents that can be relied upon for this WSA. Thus, limited information is available regarding groundwater conditions in the Project vicinity.

Overall conditions within the groundwater basin are described in Section 4.1. Groundwater recharge and available supply are discussed in Section 4.2. Groundwater level trends and the status of the basin relative to the Sustainable Groundwater Management Act of 2014 (SGMA) is provided in Section 4.3, as required by SB 1262.

4.1 Groundwater Basin

Most of the Project is located within the western part of the East Salton Sea Groundwater Basin, designated as basin number 7-033, as defined by DWR (2022a) (see Figure 4). However, approximately 20 acres in the southwest corner of APN 025-260-022 overlies the adjacent Imperial Valley Groundwater Basin, designated as basin number 7-030 (DWR, 2022a). The inset on the left side of Figure 4 shows the area of the Project within the Imperial Valley Groundwater Basin. As discussed further below, all groundwater for the Project will be sourced from the East Salton Sea Groundwater Basin (Basin). Therefore, except for additional limited information provided in Section 4.3, below, the Imperial Valley Groundwater Basin is not addressed further in this WSA.

The Basin is bounded on the northeast by the Chocolate Mountains and on the southwest by the San Andreas and Banning Mission Creek fault zones (DWR, 2003). DWR (2003) reports that these faults zones may act as barriers to groundwater movement between basins. The northwest and southeast edges of the groundwater

PC ORIGINAL PKG

basin are approximately defined by transitions between major surface drainages coming off of the Chocolate Mountains. The groundwater basin has an area of approximately 196,000 acres, or 306 square miles (DWR, 2003). The Basin has not been adjudicated (DWR, 2022b). Figure 4 shows the groundwater basin boundary and the approximate location of the Project.

Groundwater occurs within unconsolidated to semi-consolidated coarse sediment eroded from the Chocolate Mountains (DWR, 2003). The sediment generally occurs within large alluvial fans that originate at drainages and canyons within the bedrock formations in the mountains and spread out as they decrease in elevation toward the floor of the Imperial Valley or the Salton Sea. The alluvial fan sediments range in age from Tertiary to Quaternary. DWR (2003) reports that the alluvium is at least 400 feet thick.

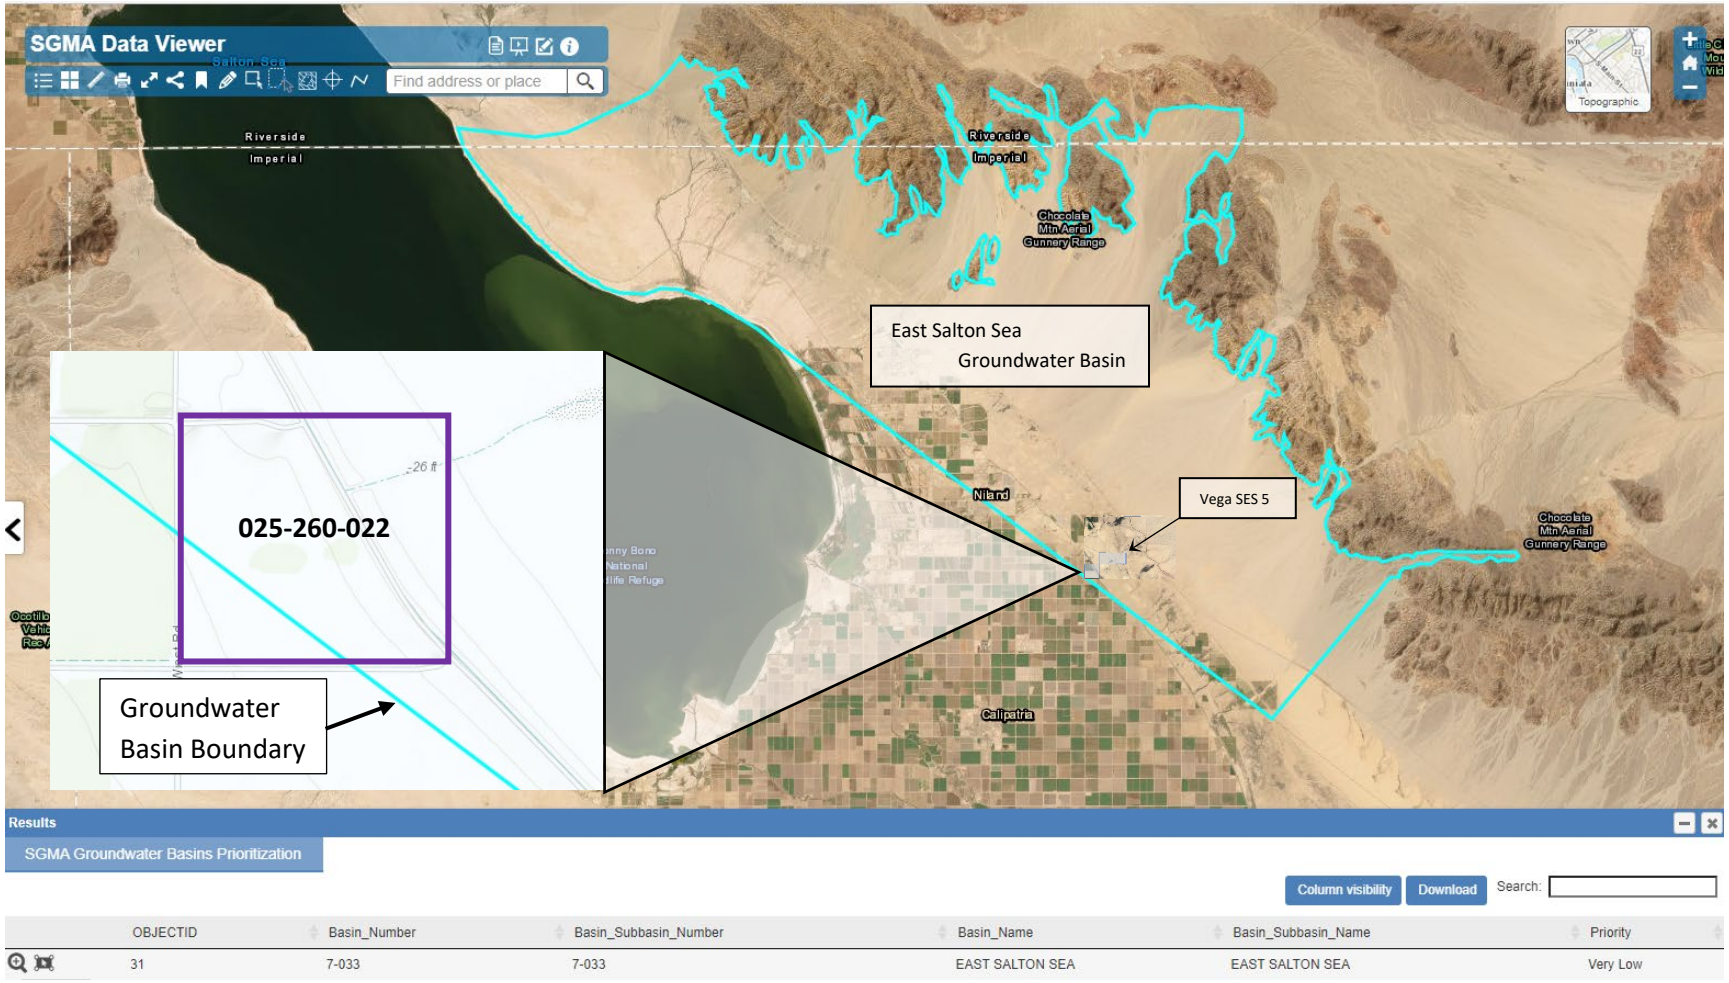
4.2 Groundwater Supply and Recharge

DWR (2022c) reports that the population in the Basin in 2010 was approximately 1,093 persons and that the population is expected to decrease 10 percent by 2030. There are no public water supply wells in the Basin and 11 total wells present. Only 4,906 acres of the 196,000-acre Basin, or 2.54 percent, are irrigated (DWR, 2022c). The total groundwater storage capacity of the groundwater basin is estimated to be 360,000 acre-feet (DWR, 2003).

The average annual rainfall is very low, as discussed further in Section 6.0 below, and typically does not provide a sufficient quantity of moisture to percolate deep into the alluvial sediments. As a result, recharge of groundwater occurs primarily due to runoff from the Chocolate Mountains during major storm events, which may not occur every year. The average annual recharge is estimated to be 200 acre-feet per year (DWR, 2003). That estimate is from a 1975 version of DWR Bulletin 118. No changes to basin conditions are reported in the most recent updates to DWR Bulletin 118 (DWR, 2021 and 2022a).

PC ORIGINAL PKG

FIGURE 4. East Salton Sea Groundwater Basin



PC ORIGINAL PKG

DWR's California Data Exchange Center website (https://cdec.water.ca.gov) and the USGS's National Water Information System mapping application (https://maps.waterdata.usgs.gov/mapper/index.html) show only one active groundwater monitoring location within the Basin at the time this report was prepared. That well is located approximately 3,600 feet southeast of the southeast corner of the Project site and 950 feet northeast of the Coachella Canal. The well has USGS identification number 331144115231501, which identifies the latitude and longitude of the well (i.e., 33°11'44" latitude, -115°23'15" longitude), and California state well number 011S015E23M001, which indicates the township, range, and quarter-quarter section (i.e., northwest quarter or the southwest quarter of township 11S, range 15E, San Bernardino Base and Meridian). The ground surface elevation at the well location is reported to be 120 feet above mean sea level (ft msl) while the borehole in which the well was installed is reported to have been drilled to a depth of 550 feet below ground surface (ft bgs) (USGS, 2022).

FIGURE 5. USGS Groundwater Level Hydrograph

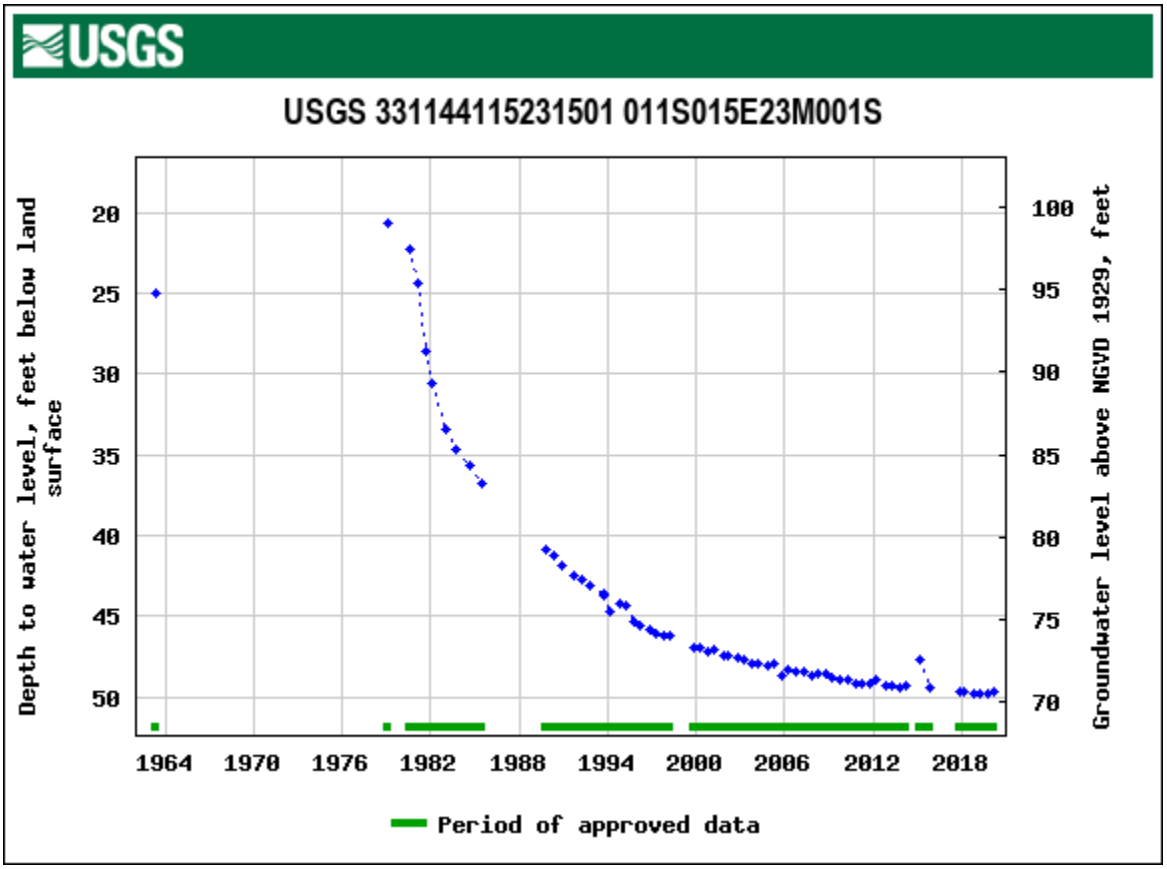


Figure 5 is a hydrograph from USGS (2022) showing the groundwater level and groundwater elevation measured since 1963 in the sole active monitoring well in the Basin. As indicated on Figure 5, the groundwater level decreased at a relatively rapid

PC ORIGINAL PKG

rate from 1979 to approximately 2000, with the depth to water dropping from approximately 21 ft bgs to approximately 47 ft bgs over that period. Since 2000, the groundwater level has continued to decrease, but at a slower rate, with the level in March 2020 (the last date with a reported measurement by USGS) being approximately 50 ft bgs. While the groundwater level has decreased by almost 30 feet since 1979, it has changed by less than one foot over the past decade. Based on the depth to groundwater and the borehole depth for the monitoring well, the potential loss of aquifer volume since 1979 is only six percent of the total available storage reported by DWR (2003).

TABLE 1. USGS Water Quality Data (June 13, 1963)

Parameter	Units	Result
Temperature	Degrees Celsius (° C)	26.9
Specific Conductance	MicroSiemens per centimeter at 25° C	3630
pH	Standard units	7.4
Carbon Dioxide	Milligrams per liter (mg/L)	14
Acid Neutralizing Capacity	mg/L as calcium carbonate ($CaCO_3$)	174
Bicarbonate	mg/L	212
Carbonate	mg/L	0.0
Hardness	mg/L as $CaCO_3$	700
Non-carbonate hardness	mg/L as $CaCO_3$	530
Calcium	mg/L	106
Magnesium	mg/L	107
Sodium + Potassium	mg/L	500
Chloride	mg/L	635
Sulfate	mg/L	700
Fluoride	mg/L	1.6
Silica	mg/L as silica dioxide (SiO_2)	33
Dissolved Solids	mg/L	2190

PC ORIGINAL PKG

Water quality samples were collected and analyzed from the monitoring well within the Basin in June and September 1963 (USGS, 2022). Table 1 shows the water quality results from June 1963. The September results were comparable. The groundwater sampled from the monitoring well has a normal pH but the levels of sodium, chloride, and sulfate are elevated compared to what would be expected from percolation of local rainfall. The dissolved solids concentration of 2,190 milligrams per liter (mg/L) is more than twice the value of the high end of the range of the secondary maximum contaminant level (MCL) for drinking water of 1,000 mg/L. The high dissolved solids concentration renders the water unsuitable for potable or agricultural uses without treatment. The existing water quality is suitable for use for construction and maintenance purposes, though.

4.3 Groundwater Sustainability

A series of three bills passed by the California legislature and were signed by Governor Brown on September 16, 2014. These three bills, Assembly Bill (AB) 1739, SB 1168, and SB 1319, together comprise the Sustainable Groundwater Management Act of 2014 (SGMA). SGMA provides a structure under which local agencies are to develop a sustainable groundwater management program. SGMA focuses on basins or subbasins designated by DWR as high or medium priority basins, and those with critical conditions of overdraft.

According to DWR (2022b), the both the East Salton Sea Groundwater Basin and the Imperial Valley Groundwater Basin are very low priority basins. DWR has not identified these two basins as being overdrafted nor has it projected that these basins will become overdrafted if present management conditions continue (DWR, 2021 and 2022c). Thus, neither groundwater basin is subject to the current requirements of SGMA, including the formation of a groundwater sustainability agency (GSA) and preparation of a groundwater sustainability plan (GSP).

5.0 PROJECT WATER DEMAND

Water demand varies depending on the Project phase. During construction, water will be needed for dust control and soil conditioning during installation of the photovoltaic panels, battery storage units, and related infrastructure. During the operational phase of the project, water will be needed for routine maintenance activities, which primarily consists of washing the photovoltaic panels to maintain generation efficiency.

Table 2 provides a summary of Project parameters that affect water demand and the estimated water needs for construction and operation. The construction water demand is primarily for dust control. Thus, the water needs are proportional to the size of the disturbed area and the local climate. Construction water demand is approximately 365

PC ORIGINAL PKG

acre-feet. Construction is anticipated to require 12 months to complete. Thus, the monthly water demand during that period will average about 30 acre-feet.

Table 2. Project Water Demand

Site	Area (acres)	Output (megawatts)	Construction Water (acre-feet)	Operational Water (acre-feet per year)
Vega SES 5	410	50	365	20

The operational water demand for panel washing and other maintenance needs is based primarily on the number of panels, which relates to the energy production or output, in megawatts. The operational water demand is anticipated to be 20 acre-feet per year. The maintenance activities are anticipated to be conducted up to twice a year over a one-to-two-week period each event, so the maintenance water demand is intermittent and not spread throughout the year. The operational water demand will occur throughout the life of the Project.

For the purpose of evaluating cumulative impacts, it should be noted that the evaluations in this WSA assume that Project construction will not occur simultaneously with construction of the adjacent Vega SES 2, LLC and Vega SES 3, LLC solar energy projects. However, operational water use for all three projects will occur over the same approximate timeframe during the next 25 to 30 years.

6.0 DRY YEAR SUPPLY

The volume and sustainability of dry-year water supply for the Project is addressed by comparing annual rainfall with changes in groundwater levels in the Basin. This comparison is made for a normal or average water year[1], for single dry year, and for multiple dry water years. Local rainfall data were obtained from the Western Region Climate Center (WRCC, 2022) for Niland, California, located approximately four miles northwest of the Project location (see Figure 1).

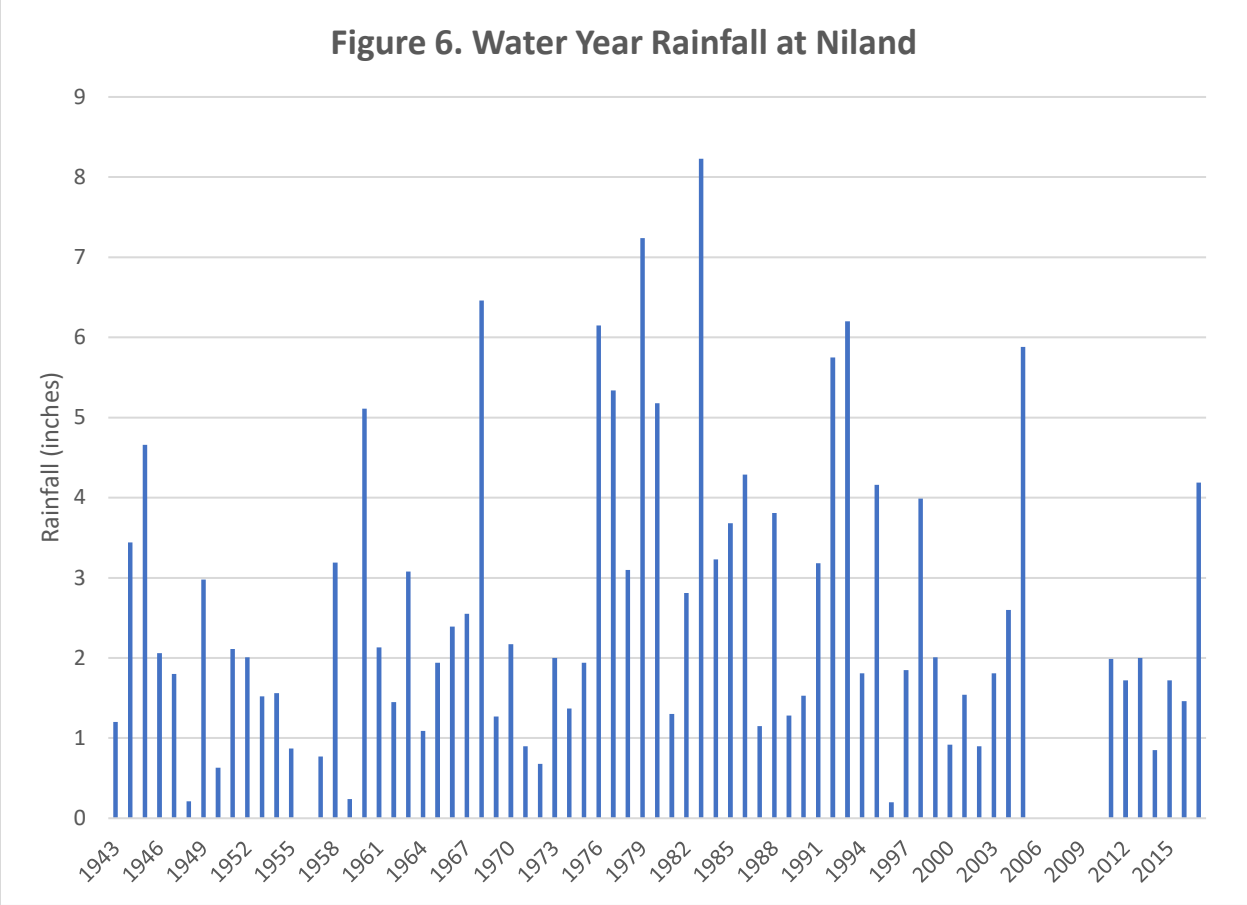
Figure 6 shows the annual water year rainfall for Niland, California from 1943 through 2017. The average water year rainfall during this period is 2.58 inches. The driest year was 1956, when no precipitation was recorded. The driest year during the period of available groundwater elevation data (see Figure 5) was 1996, with only 0.2 inch of rainfall

[1] In California, a water year is defined as the period from October 1 of a calendar year through September 30 of the subsequent calendar year. A water year is designated by the year in which it ends. For example, the period from October 1, 2006 through September 30, 2007 is referred to as the 2007 water year. Due to the nature of weather patterns in the state, a water year better represents hydrologic conditions related to wet and dry periods than does a calendar year.

PC ORIGINAL PKG

reported. The wettest year was 1983, when 8.23 inches of rain was measured. As indicated on Figure 6, a relatively wet period occurred from 1976 to 1986, with 10 of 11 water years exceeding the average annual rainfall. In comparison, the period from 1996 to 2016 was relatively dry, with 18 of 21 water years having below normal rainfall.

The historic rainfall data on Figure 6 can be compared with the groundwater levels shown on Figure 5 to assess the effects of wet and dry periods on groundwater supply in the Basin. The wettest year recorded, 1983, and the relatively wet period from 1976 to 1986, correspond to a period when groundwater levels were dropping rapidly. In contrast, the dry period from 1996 to 2016 corresponds to a period when the rate of decline of the groundwater elevation was attenuating rapidly and beginning to stabilize. Thus, the available groundwater level and rainfall data do not indicate any relationship between wet, normal, single dry year, or multiple dry years and available groundwater supply. As noted above in Section 4.2, recharge of groundwater occurs primarily due to runoff from the mountains during individual major storm events (DWR, 2003). Such storm events typically occur infrequently and there may be many years between events that produce enough runoff to provide appreciable recharge.



PC ORIGINAL PKG

The total groundwater storage capacity of the Basin is estimated to be 360,000 acre-feet (DWR, 2003) and the groundwater level decline from 1979 to 2018 decreased groundwater storage by approximately six percent (see Section 4.2). Thus, the current storage in the Basin may be in the range of 335,000 to 340,000 acre-feet. The single year construction water demand of 365 acre-feet and the annual combined operational water needs of 20 acre-feet are miniscule (0.1 percent and 0.006 percent, respectively) compared to the available groundwater in storage. Furthermore, the long term annual operational water needs are much less than the estimated annual recharge of 200 acre-feet per year. Overall, there is adequate water available to supply the Project water needs during single dry, and multiple dry year periods.

On a cumulative basis, the construction water demand for the Project and the adjacent Vega SES 2, LLC and Vega SES 3, LLC solar energy projects is equivalent to 0.3 percent of the available groundwater in storage. The annual cumulative operational water needs for all three solar energy projects is equivalent to 0.01 percent of the available groundwater in storage in the Basin. Thus, the cumulative effect on groundwater availability in the Basin would also be miniscule such that there would be adequate water available to supply the water needs of all three solar projects during single dry, and multiple dry year periods.

7.0 FINDINGS and DISCUSSION

This WSA has been prepared in accordance with SB 610 and SB 1262 to support the CEQA environmental review for the proposed Project and provides an assessment of water supply adequacy for the Project in accordance with Water Code Sections 10910 through 10915. As stated in Section 1.0, the purpose of the assessment is to determine if available water supplies are sufficient to serve the demand generated by the Project, as well as the reasonably foreseeable demand in the region over the next 20 years under average normal year, single dry year, and multiple dry year conditions. As noted in Section 4.2, above, while groundwater levels in the Basin had been declining during the period from the late 1970s to the early 2000s, over the past decade they have stabilized, indicating that current water demands are in balance with recharge and replenishment. The population, and presumably the related water demand, are anticipated to decrease over the next decade. Therefore, the Basin has adequate resources for current and anticipated future existing water needs.

The water demand for the proposed Project will consist of water needed during construction and water needed for maintenance once the Project is operational. The construction water demand is anticipated to be a combined total of 365 acre-feet over 12 months, primarily for dust control. The operational demand is anticipated to be 20 acre-

PC ORIGINAL PKG

feet per year for panel washing and other maintenance activities. The operational demand will exist for the life of the Project, which is anticipated to be 25 to 30 years.

The construction water demand exceeds the reported average annual recharge to the Basin of 200 acre-feet per year (DWR, 2003). However, the construction water needs are short-term and temporary. This temporary water use is not anticipated to cause persistent and long-term lowering of groundwater levels. Therefore, the construction water demand will not cause or contribute to overdraft, exhaustion of water supplies, lowering of groundwater levels to depths that would be uneconomic for pumping, land subsidence, or significant alteration of groundwater quality. As discussed in Section 6.0, above, cumulative construction water demand from the Project and the adjacent Vega SES 2, LLC and Vegs SES 3, LLC solar energy projects would also not cause persistent and long-term lowering of groundwater levels.

The annual operational water needs are equivalent to 10 percent of the average annual recharge and 0.006 percent of the estimated current storage volume of the Basin. Therefore, the long-term operation and maintenance of the Project would not have any measurable effect or impact on groundwater resources in the Basin. As discussed in Section 6.0, above, cumulative operational water demand from the Project and the adjacent Vega SES 2, LLC and Vegs SES 3, LLC solar energy projects would also not cause any measurable effect or impact on groundwater resources in the Basin.

Based on the analysis presented in this WSA, there will be sufficient water available for existing water uses in the Basin, along with the Project water demand and the water demands for the adjacent solar energy projects during normal, single dry year, and multiple dry year periods for the anticipated life of the Project, which is anticipated to be greater than 20 years.

1.0 INTRODUCTION

This report documents the results of an Energy Impact Assessment completed for the Vega SES Complex Solar Energy Storage Project (Project), which includes the construction of up to a nominal 240-megawatt (MW) alternating current solar photovoltaic (PV) energy generation system with an integrated 240 MW battery storage system (known as Vega 2), a nominal 60 MW alternating current PV energy generation system with an integrated 60 MW battery storage system (known as Vega 3), and a nominal 50 MW alternating current solar PV energy generation system with an integrated 50 MW battery storage system (known as Vega 5), all spanning approximately 1,962.76 acres of land in the County of Imperial, California. This report was prepared to analyze the potential direct and indirect environmental impacts associated with the Project energy consumption, including the depletion of nonrenewable resources (oil, natural gas, coal, etc.) during the construction and operational phases. The impact analysis focuses on the four sources of energy that are relevant to the proposed Project: electricity, natural gas, the equipment-fuel necessary for Project construction, and the automotive fuel necessary for Project operations.

1.1 Project Overview

The Project proposes to construct a cluster of alternating current solar PV energy generation systems totaling 350 Megawatts (MWs) with accompanying battery storage. The Project consists of three individual site locations which make up the Vega SES Complex. Vega 2 is located on three non-contiguous parcels totaling 1,323 acres, Vega 3 is located on a 640-acre parcel but only compromising 230 acres, and Vague 5 is located on three parcels totaling 410 acres. It is proposed that Vega 2 & 3 will be constructed together beginning in early 2023 with Vega 5 being constructed in 2024.

All systems would be utilizing either thin film or crystalline solar PV technology modules mounted either on fixed frames or horizontal single-axis tracker (HSAT) systems. The fixed frame PV module arrays would be mounted on racks that would be supported by driven piles. The individual PV systems would be arranged in large arrays by placing them in columns spaced approximately ten feet apart to maximize operational performance and to allow access for panel cleaning and maintenance.

1.2 Project Location and Description

The total combined Project Site area spans approximately 1,963 acres and is located 5.67 miles southeast of the unincorporated community of Niland between the unincorporated communities of Iris and Slab City (see Figure 1. Project Vicinity). The Site is transected by the Coachella and East Highline Canals and the Union Pacific Railway in northcentral Imperial County, California.

1.3 Applicable Land Use Regulations

All Project parcels for Vega 2 & 3 parcels are designated as "Recreation/Open Space" in the Imperial County General Plan and are zoned S-2-RE (Open Space/Preservation with a Renewable Energy overlay). Pursuant to Section 91703.02 (*Conditional Use Permits*), Renewable Energy Projects must be located within the Renewable Energy Overlay Zone and may be permitted only through the issuance of a Conditional Use Permit (CUP) as approved by the Approving Authority unless otherwise allowed by applicable law. All Project parcels in Vega 5 are designated as "Recreation/Open Space" in the Imperial County General Plan.

PC ORIGINAL PKG

Two of the Vega 5 properties are zoned S-2-RE (areas with intent to preserve the cultural, biological, and open spaces that are rich and natural as well as cultural resources). The third Vega 5 property is zoned A-2-RE (areas that are suitable and intended primarily for agricultural uses [limited] and agricultural related compatible uses), A-3-RE (areas that are suitable for agricultural land uses; to prevent the encroachment of incompatible uses onto and within agricultural lands; and to prohibit the premature conversion of such lands to non-agricultural uses) and S-2-RE (see above). At present, all portions of the proposed Project (Vega 2 & 3, and 5) are located within the Renewable Energy Zone.

1.4 Project Site Access

The Project Area would be accessible from McDonald Road, a paved road off State Route 111. The Vega 5 Project Site is located at the eastern end of McDonald Road. Access to the Vega 2 and 3 Project Site would require an additional 1.65 miles of travel on Wiest Road and Flowing Wells Road. Both of which are unpaved.

1.5 Project Construction

Construction activities would involve demolition and grubbing, grading of the Project Site to establish access roads and pads for electrical equipment (inverters and step–up transformers), trenching for underground electrical collection lines, and the installation of solar equipment and security fencing. The construction of each Project component (Vega 2 & 3 and Vega 5) is estimated to take 12-18 months each and would begin in early 2023. A temporary, portable construction supply container would be located at the Project Site at the beginning of construction and removed at the end of construction. The number of on–site construction workers for Vega 2 and 3 solar facility is not expected to exceed 150 workers at any one time. The number of on-site construction workers for the Vega 2 and 3 battery storage facility and substations is not expected to exceed 100 workers at any one time. The number of on–site construction workers for the Vega 5 solar facility is not expected to exceed 75 workers at any one time. The number of on-site construction workers for the Vega 5 battery storage facility and substation is not expected to exceed 50 workers at any one time. Onsite parking would be provided for all construction workers.

2.0 ENERGY CONSUMPTION

2.1 Energy Types and Sources

California relies on a regional power system comprised of a diverse mix of natural gas, renewable, hydroelectric, and nuclear generation resources. Natural gas provides California with a majority of its electricity followed by renewables, large hydroelectric and nuclear (California Energy Commission [CEC] 2020). Imperial Irrigation District (IID), the sixth largest electrical utility in California serving more than 150,000 customers in the Imperial Valley and parts of Riverside and San Diego counties, provides electrical services to the Project area. IID controls more than 1,100 megawatts of energy derived from a diverse resource portfolio that includes its own generation, and long- and short-term power purchases. Located in a region with abundant sunshine, enviable geothermal capacity, wind and other renewable potential, IID has met or exceeded all Renewable Portfolio Standard requirements to date, procuring renewable energy from diverse sources, including biomass, biowaste, geothermal, hydroelectric, solar and wind.

The Southern California Gas Company provides natural gas services to Imperial County. As the nation's largest natural gas distribution utility, the Southern California Gas Company delivers natural gas energy to 21.8 million consumers through 5.9 million meters in more than 500 communities. The Southern California Gas Company's service territory encompasses approximately 24,000 square miles throughout Central and Southern California, from Visalia to the Mexican border.

2.1.1 Energy Consumption

Electricity use is measured in kilowatt-hours (kWh), and natural gas use is measured in therms. Vehicle fuel use is typically measured in gallons (e.g. of gasoline or diesel fuel), although energy use for electric vehicles is measured in kWh.

The non-residential electricity consumption associated with all uses in Imperial County from 2017 to 2021 is shown in Table 2-1. As indicated, the demand has increased since 2017.

Table 2-1. Non-Residential Electricity Consumption in Imperial County 2017-2021

Year	Electricity Consumption (kilowatt hours)
2021	841,302,847
2020	834,483,019
2019	839,095,659
2018	831,318,925
2017	817,450,656

Source: CEC 2022

The non-residential natural gas consumption associated with all uses in Imperial County from 2017 to 2021 is shown in Table 2-2. As indicated, the demand has remained relatively constant since 2017.

2.2 Regulatory Framework

2.2.1 State

Executive Order B-55-18

In September 2018 Governor Jerry Brown Signed Executive Order (EO) B-55-18, which establishing a new statewide goal "to achieve carbon neutrality as soon as possible, and no later than 2045, and achieve and maintain net negative emissions thereafter." Carbon neutrality refers to achieving a net zero carbon dioxide emissions. This can be achieved by reducing or eliminating carbon emissions, balancing carbon emissions with carbon removal, or a combination of the two. This goal is in addition to existing statewide targets for GHG emission reduction. EO B-55-18 requires the California Air Resource Board (CARB) to "work with relevant state agencies to ensure future Scoping Plans identify and recommend measures to achieve the carbon neutrality goal.

Senate Bill 1368

On September 29, 2006, Governor Arnold Schwarzenegger signed into law Senate Bill (SB) 1368 (Perata, Chapter 598, Statutes of 2006). The law limits long-term investments in baseload generation by the state's

PC ORIGINAL PKG

utilities to those power plants that meet an emissions performance standard jointly established by the CEC and the California Public Utilities Commission (CPUC).

The CEC has designed regulations that:

- Establish a standard for baseload generation owned by, or under long-term contract to, publicly owned utilities, of 1,100 pounds carbon dioxide per megawatt hour (mWh). This would encourage the development of power plants that meet California's growing energy needs while minimizing their emissions of greenhouse gas.
- Require posting of notices of public deliberations by publicly owned utilities on long-term investments on the CEC website. This would facilitate public awareness of utility efforts to meet customer needs for energy over the long term while meeting the State's standards for environmental impact.
- Establish a public process for determining the compliance of proposed investments with the emissions performance standard (EPS) (Perata, Chapter 598, Statutes of 2006).

2.2.2 Renewable Energy Sources (Renewable Portfolio Standards)

Established in 2002 under SB 1078, and accelerated by SB 107 (2006) and SB 2 (2011), California's Renewables Portfolio Standard (RPS) obligates investor-owned utilities, energy service providers, and community choice aggregators to procure 33 percent of their electricity from renewable energy sources by 2020. Eligible renewable resources are defined in the 2013 RPS to include biodiesel; biomass; hydroelectric and small hydro (30 megawatts or less); Los Angeles Aqueduct hydro power plants; digester gas; fuel cells; geothermal; landfill gas; municipal solid waste; ocean thermal, ocean wave, and tidal current technologies; renewable derived biogas; multi-fuel facilities using renewable fuels; solar photovoltaic; solar thermal electric; wind; and other renewables that may be defined later. Governor Jerry Brown signed SB 350 on October 7, 2015, which expands the RPS by establishing a goal of 60 percent of the total electricity sold to retail customers in California per year by December 31, 2030. In addition, SB 350 includes the goal to double the energy efficiency savings in electricity and natural gas final end uses (such as heating, cooling, lighting, or class of energy uses upon which an energy efficiency program is focused) of retail customers through energy conservation and efficiency. The bill also requires the CPUC, in consultation with the CEC, establish efficiency targets for electrical and gas corporations consistent with this goal. SB 350 also provides for the transformation of the California Independent System Operator (CAISO) into a regional organization to promote the development of regional electricity transmission markets in the western states and to improve the access of consumers served by the CAISO to those markets, pursuant to a specified process. In 2018, SB 100 was signed by Governor Brown, codifying a goal of 60 percent renewable procurement by 2030 and 100 percent by 2045 Renewables Portfolio Standard.

PC ORIGINAL PKG

2.3 Energy Consumption Impact Assessment

2.3.1 Thresholds of Significance

The impact analysis provided below is based on the following CEQA Guidelines Appendix G thresholds of significance. The Project would result in a significant impact to energy if it would do any of the following:

1) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation.

2) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency.

The impact analysis focuses on the four sources of energy that are relevant to the proposed Project: electricity, natural gas, the equipment fuel necessary for Project construction, and the automotive fuel necessary for Project operations. Addressing energy impacts requires an agency to make a determination as to what constitutes a significant impact. There are no established thresholds of significance, statewide or locally, for what constitutes a wasteful, inefficient, and unnecessary consumption of energy for a proposed land use. For the purposes of this analysis, the amount of electricity and natural gas estimated to be consumed by the Project are quantified and compared to that consumed by all land uses in Imperial County. Similarly, the amount of fuel necessary for Project construction and operations is calculated and compared to that consumed in Imperial County.

2.3.2 Methodology

Levels of construction and operational related energy consumption estimated to be consumed by the Project include the number of kWh of electricity, therms of natural gas and gallons of gasoline. Modeling was based on Project specific information such as construction timing and equipment as well as site operations. Energy consumption estimates were calculated using the California Emissions Estimator Model (CalEEMod), version 2020.4.0. CalEEMod is a statewide land use computer model designed to quantify resources associated with both construction and operations from a variety of land use projects.

2.3.3 Impact Analysis

Energy Consumption

The Project proposes to construct a cluster of alternating current solar PV energy generation systems totaling 350 MWs with accompanying battery storage on approximately 1,962.76 acres of land. Operations of the proposed Project would not result in the consumption of electricity or natural gas and thus, would not contribute to the County wide usage. Instead, the Project would directly support the RPS goal of increasing the percentage of electricity procured from renewable sources.

Therefore, this impact analysis focuses on the two sources of energy that are most relevant to the Project: the equipment fuel necessary for construction and the automotive fuel necessary for ongoing maintenance activities. The amount of total construction-related fuel use was estimated using ratios provided in the Climate Registry's General Reporting Protocol for the Voluntary Reporting Program,

PC ORIGINAL PKG

Version 2.1. The amount of operational fuel use was estimated using CARB's EMFAC2021 computer program, which provides projections for typical daily fuel usage in Imperial County. This analysis conservatively assumes that all of the automobile trips projected to arrive at the Project during operations would be new to Imperial County.

Energy consumption associated with the proposed Project is summarized in Table 2-4. Project increases in automotive fuel consumption are compared with the countywide fuel consumption in 2021, the most recent full year of data.

Table 2-4. Proposed Project Energy and Fuel Consumption

Energy Type	Annual Energy Consumption	Percentage Increase Countywide
Electricity Consumption[1]	0 kilowatt-hours	0.00000 percent
Natural Gas[1]	0 therms	0.00000 percent
Automotive Fuel Consumption		
Vega 2 and Vega 3		
Construction	94,680 gallons	0.0435 percent
Vega 5		
Construction	77,635 gallons	0.0357 percent
Vega Complex (2,3,5 combined)		
Construction	172,315 gallons	0.0792 percent
Project Operations[3]	225.5 gallons	0.0001 percent

Source: [1]CalEEMod; [2]Climate Registry 2016; [3]EMFAC2021 (CARB 2021)

Notes: The Project increases in electricity and natural gas consumption are compared with all uses in Imperial County in 2021, the latest data available. The Project increases in automotive fuel consumption are compared with the countywide fuel consumption in 2021, the most recent full year of data.

Fuel necessary for Project construction would be required for the operation and maintenance of construction equipment and the transportation of materials to the Project site. The fuel expenditure necessary to construct the solar facility and infrastructure would be temporary, lasting only as long as Project construction. As indicated in Table 2-4, the Project's gasoline fuel consumption during the Vega 2 and Vega 3 construction period is estimated to be 94,680 gallons, which would increase the annual countywide gasoline fuel usage by 0.0435 percent. The gasoline fuel consumption in Project's Vega 5 construction period is estimated to be 77,635 gallons, which would increase the annual countywide gasoline fuel usage by 0.0357 percent. Additionally, the construction during the Vega Complex, which adds Vega 2, 3, and 5 together, has an estimate gasoline usage of 172,315 gallons, which would increase the annual countywide gasoline fuel usage by 0.0792 percent. As such, all of the Project's construction options would have a nominal effect on local and regional energy supplies. No unusual Project characteristics would necessitate the use of construction equipment that would be less energy efficient than at comparable construction sites in the region or the state. Construction contractors would purchase

PC ORIGINAL PKG

their own gasoline and diesel fuel from local suppliers and would judiciously use fuel supplies to minimize costs due to waste and subsequently maximize profits. Additionally, construction equipment fleet turnover and increasingly stringent state and federal regulations on engine efficiency combined with state regulations limiting engine idling times and requiring recycling of construction debris, would further reduce the amount of transportation fuel demand during Project construction. For these reasons, it is expected that construction fuel consumption associated with the Project would not be any more inefficient, wasteful, or unnecessary than other similar development projects of this nature.

Once construction is completed the Project would be remotely controlled. No employees would be based at the Project sites. The only operational emissions associated with the Project would be associated with motor vehicle use for routine maintenance work and site security as well as panel upkeep and cleaning. A conservative estimate of two vehicle trips per day was assumed. This is a conservative estimate as most days would require no operational related vehicle trips. As indicated in Table 2-4, this would estimate to a consumption of approximately 225.5 gallons of automotive fuel per year, which would increase the annual countywide automotive fuel consumption by 0.0001 percent. Fuel consumption associated with both the construction equipment needed to construct the Project and the vehicle trips generated by the Project during ongoing maintenance activities would not be considered inefficient, wasteful, or unnecessary in comparison to other similar developments in the region.

State and Local Plans for Renewable Energy/Energy Efficiency

The purpose of the proposed Project is the construction of a renewable energy and storage facility in Imperial County. Once in operation, it will decrease the need for energy from fossil fuel–based power plants in the state. The result would be a net increase in electricity resources available to the regional grid, generated from a renewable source. Therefore, the Project would directly support the RPS goal of increasing the percentage of electricity procured from renewable sources. Additionally, the Project would also be consistent with the County's General Plan Conservation and Open Space Element, Objective 9.2 which encourages renewable energy developments. Therefore, the Project would directly support state and local plans for renewable energy development.

MMRP Resolution

PC ORIGINAL PKG

RESOLUTION NO.

A RESOLUTION OF THE PLANNING COMMISSION OF THE COUNTY OF IMPERIAL, CALIFORNIA, RECOMMENDATING APPROVAL OF THE MITIGATION MONTORING AND REPORTING PROGRAM FOR THE VEGA SES 2, 3, & 5 SOLAR ENERGY STORAGE PROJECTS.

WHEREAS, a Mitigation Monitoring and Reporting Program has been prepared in accordance with the requirements of the California Environmental Quality Act, the State CEQA Guidelines, and the County's Rules to Implement CEQA as amended; and

WHEREAS, the Planning Commission of the County of Imperial has been delegated with the responsibility of the consideration for recommending to the Board of Supervisors the approval of the Mitigation Monitoring and Reporting Program; and

WHEREAS, public notice of said application has been given, and Planning Commission has considered evidence presented by the Imperial County Planning & Development Services Department, and other interested parties at a public hearing held with respect to this item on August 23, 2023; and,

NOW THEREFORE, the Planning Commission of the County of Imperial **DOES HEREBY RESOLVE** as follows:

SECTION 1. The Planning Commission has considered the proposed Mitigation Monitoring and Reporting Program (MM&RP) prior to making a decision to recommend the adoption of the proposed MM&RP. The Planning Commission finds and determines that the Environmental Impact Report is adequate and prepared in accordance with the requirements of the California Environmental Quality Act (CEQA), which analyzes environmental effects, based upon the following findings and determinations.

SECTION 2. That in accordance with CEQA, State Planning and Zoning law, Imperial County Land Use Ordinance and the County of Imperial General Plan, the following findings for recommending the approval of the MM&RP as follows:

1. That the Final Project EIR **SCH #2021050013**, Candidate CEQA Findings for the Vega SES 2, 3 & 5 Solar Energy Storage Projects ("Project") have been prepared in accordance with the requirements of the California Environmental Quality Act, the State CEQA Guidelines, and the County's "Rules and Regulations to Implement CEQA as amended".

2. That the County has reviewed, analyzed, and considered Final Project EIR, the environmental impacts therein identified for this Project, the Candidate CEQA Findings, and the Mitigation Monitoring and Reporting Program, and the entire Record of Proceedings prior to approving this project.

PC ORIGINAL PKG

3. That the Mitigation Monitoring and Reporting Program is designed to ensure that during project implementation, the Developer and any other responsible parties implement the Project components and comply with feasible mitigation measures identified in the CEQA Findings, the Project entitlements, and the Mitigation Monitoring and Reporting Program and that these measures are fully enforceable through permit conditions, agreements, and/or other measures, such as their inclusion in the Mitigation Monitoring and Reporting Program.

4. That the Project will not individually or cumulative have an unmitigated adverse effect on fish and wildlife resources, as defined in Section 711.2 of the Fish and Game Code.

5. That the Record of Proceedings consists of the Final Project EIR (and all its technical reports and addendums thereto); the County staff reports; the CEQA Findings; the Mitigation Monitoring and Reporting Program; the various Project entitlements and documents referenced therein; all final reports, applications, memoranda, maps, letters, and other planning documents prepared by the EIR planning/environmental consultant; all final reports, memoranda, maps, letters, and other planning documents prepared by the County staff; all documents submitted by members of the public and public agencies in connection with the Final Project EIR; minutes and transcripts of all public meetings and public hearings; all written and verbal public testimony presented during a noticed public hearing for the proposed project which such testimony was taken and any and all other materials which constitute the record of proceeding pursuant to Public Resources Code section 21167.6(e); and matters of common knowledge to the County staff, Planning Commission, including, but not limited to the County General Plan, the County Zoning Ordinance, County policies, which may be found at the Clerk's Office located at 940 Main Street, Suite 209, El Centro, CA, 92243 during regular business hours, and the Imperial County Planning & Development Services Department at 801 Main Street, El Centro, CA 92243.

6. That the County Planning Commission does hereby recommend to the Board of Supervisors to approve of the Mitigation Monitoring and Reporting Program.

NOW, THEREFORE, based on the above findings, the **IMPERIAL COUNTY PLANNING COMMISSION DOES HEREBY RECOMMEND TO THE BOARD OF SUPERVISORS TO APPROVE OF** the Mitigation Monitoring Reporting Program (MMRP) for the VEGA SES 2, 3, & 5 solar and battery storage projects.

	• Soil stabilization and erosion control practices (e.g., hydroseeding, erosion control blankets, mulching) • Sediment control practices (e.g., temporary sediment basins, fiber rolls) • Temporary and post-construction on- and off-site runoff controls • Special considerations and BMPs for water crossings and drainages • Monitoring protocols for discharge(s) and receiving waters, with emphasis place on the following water quality objectives: dissolved oxygen, floating material, oil and grease, potential of hydrogen (pH), and turbidity • Waste management, handling, and disposal control practices • Corrective action and spill contingency measures • Agency and responsible party contact information • Training procedures that shall be used to ensure that workers are aware of permit requirements and proper installation methods for BMPs specified in the SWPPP The SWPPP shall be prepared by a Qualified SWPPP Practitioner and/or Qualified SWPPP Developer with BMPs selected to achieve maximum pollutant removal and that represent the best available technology that is economically achievable. Emphasis for BMPs shall be placed on controlling discharges of oxygen-depleting substances, floating material, oil and grease, acidic or caustic substances or compounds, and turbidity. BMPs for soil stabilization and erosion control practices and sediment control practices will also be required. Performance and effectiveness of these BMPs shall be determined either by visual means where applicable (i.e., observation of above-normal sediment release), or by actual water sampling in cases where verification of contaminant reduction or elimination, (inadvertent petroleum release) is required to determine adequacy of the measure.							
HYD-2	**Incorporate Post-Construction Runoff BMPs into Project Drainage Plan.** The project Drainage Plan	Post construction for the project site, the applicant	Department of Planning and Development Services	Post construction	Department of Planning and Development

Agricultural Resources								
AG-1	Prior to the issuance of a grading permit or building permit (whichever occurs first), a Pest Management Plan shall be developed by the project applicant and approved by the County of Imperial Agricultural Commissioner. The project applicant shall maintain a Pest Management Plan until reclamation is complete. The plan shall provide the following: 1. Monitoring, preventative, and management strategies for weed and pest control during construction activities at any portion of the project (e.g., transmission line); 2. Control and management of weeds and pests in areas temporarily disturbed during construction where native seed will aid in site revegetation as follows: • Monitor for all pests including insects, vertebrates, weeds, and pathogens. Promptly control or eradicate pests when found, or when notified by the Agricultural Commissioner's office that a pest problem is present on the project site. The assistance of a licensed pest control advisor is recommended. All treatments must be performed by a qualified applicator or a licensed pest control business. • All treatments must be performed by a qualified applicator or a licensed pest control operator. • "Control" means to reduce the population of common pests below economically damaging levels, and includes attempts to exclude pests before infestation, and effective control methods after infestation. Effective control methods may include physical/mechanical removal, bio control, cultural control, or chemical treatments. • Use of "permanent" soil sterilants to control weeds or other pests is prohibited because this would interfere with reclamation.	The Department of Planning and Development Services shall verify that a Pest Management P an has been reviewed and approved by the Imperial County AgriculTural Commissioner.	Department of Planning and Development Services and Imperial County Agricultural Commissioner	Prior to the issuance of a grading permit or building permit, during construction	Department of Planning and Development Services and Imperial County Agricultural Commissioner

	• Notify the Agricultural Commissioner's office immediately regarding any suspected exotic/invasive pest species as defined by the California Department of Food Agriculture and the U.S. Department of Agriculture. Request a sample be taken by the Agricultural Commissioner's Office of a suspected invasive species. Eradication of exotic pests shall be done under the direction of the Agricultural Commissioner's Office and/or California Department of Food and Agriculture. • Obey all pesticide use laws, regulations, and permit conditions. • Allow access by Agricultural Commissioner staff for routine visual and trap pest surveys, compliance inspections, eradication of exotic pests, and other official duties. • Ensure all project employees that handle pest control issues are appropriately trained and certified, all required records are maintained and made available for inspection, and all required permits and other required legal documents are current. • Maintain records of pests found and treatments or pest management methods used. Records should include the date, location/block, project name (current and previous if changed), and methods used. For pesticides include the chemical(s) used, EPA Registration numbers, application rates, etc. A pesticide use report may be used for this.

Table 0.4-1. Mitigation Measures

MM No.	Mitigation Measure	Monitoring Method	Responsible Monitoring Party	Monitoring Phase	Verification/Approval Party	Date Mitigation Measure Verified or Implemented	Location of Documents (Monitoring Record)	Completion Requirement
	• Submit a report of monitoring, pest finds, and treatments, or other pest management methods to the Agricultural Commissioner quarterly within 15 days after the end of the previous quarter, and upon request. The report is required even if no pests were found or treatment occurred. It may consist of a copy of all records for the previous quarter, or may be a summary letter/report as long as the original detailed records are available upon request. 3. A long-term strategy for weed and pest control and management during the operation of the proposed project. Such strategies may include, but are not limited to: • Use of specific types of herbicides and pesticides on a scheduled basis. 4. Maintenance and management of project site conditions to reduce the potential for a significant increase in pest-related nuisance conditions on surrounding agricultural lands. 5. The project shall reimburse the Agricultural Commissioner's office for the actual cost of investigations, inspections, or other required non-routine responses to the site that are not funded by other sources.							
Air Quality								
AQ-1	**Fugitive Dust Control.** During construction activities, the constructor contractor shall employ the following PM_{10} reducing measures: • All unpaved roads associated with construction shall be effectively stabilized of dust emissions using Imperial County Air Pollution Control District-approved chemical stabilizers/suppressant before the commencement of construction, and every 30 days thereafter until the end of all construction activities. Unpaved roads associated with construction include: • The 1.65 miles of unpaved road on Weist Road and Flowing Wells Road to the VEGA SES 2 and	Prior to construction, a dust control plan shall be prepared and approved by ICAPCD and ICPDS.	Department of Planning and Development Services and ICAPCD	Prior to and during construction	Department of Planning and Development Services and ICAPCD

	3 project sites. Monthly application of Imperial County Air Pollution Control District-approved chemical stabilizers/suppressant shall be applied at a rate of 0.1 gallon/square yard of chemical dust suppressant. • Prior to any earthmoving activity, the applicant shall submit a construction dust control plan and obtain Imperial County Air Pollution Control District and Imperial County Planning and Development Services Department (ICPDS) approval. • Pursuant to ICAPCD, all construction sites, regardless of size, must comply with the requirements contained within Regulation VIII – Fugitive Dust Control Measures. Whereas these Regulation VIII measures are mandatory and are not considered project environmental mitigation measures, the ICAPCD CEQA Handbook's required additional standard and enhanced mitigation measures listed below shall be implemented prior to and during construction. ICAPCD will verify implementation and compliance with these measures as part of the grading permit review/approval process. ***ICAPCD Standard Measures for Fugitive Dust (PM_{10}) Control*** • All disturbed areas, including bulk material storage, which is not being actively utilized, shall be effectively stabilized and visible emissions shall be limited to no greater than 20 percent opacity for dust emissions by using water, chemical stabilizers, dust suppressants, tarps, or other suitable material, such as vegetative ground cover. • All on-site and offsite unpaved roads will be effectively stabilized and visible emissions shall be limited to no greater than 20 percent opacity for dust emissions by paving, chemical stabilizers, dust suppressants, and/or watering. • All unpaved traffic areas 1 acre or more with 75 or more average vehicle trips per day will be effectively stabilized and visible emissions shall be limited to no greater than 20 percent opacity							

PC ORIGINAL PKG

Table 0.4-1. Mitigation Measures

MM No.	Mitigation Measure	Monitoring Method	Responsible Monitoring Party	Monitoring Phase	Verification/Approval Party	Date Mitigation Measure Verified or Implemented	Location of Documents (Monitoring Record)	Completion Requirement
	for dust emissions by paving, chemical stabilizers, dust suppressants, and/or watering. • The transport of bulk materials shall be completely covered unless 6 inches of freeboard space from the top of the container is maintained with no spillage and loss of bulk material. In addition, the cargo compartment of all haul trucks is to be cleaned and/or washed at delivery site after removal of bulk material. • All track-out or carry-out will be cleaned at the end of each workday or immediately when mud or dirt extends a cumulative distance of 50 linear feet or more onto a paved road within an urban area. • Movement of bulk material handling or transfer shall be stabilized prior to handling or at points of transfer with application of sufficient water, chemical stabilizers, or by sheltering or enclosing the operation and transfer line. • The construction of any new unpaved road is prohibited within any area with a population of 500 or more unless the road meets the definition of a temporary unpaved road. Any temporary unpaved road shall be effectively stabilized and visible emissions shall be limited to no greater than 20 percent opacity for dust emission by paving, chemical stabilizers, dust suppressants, and/or watering. ***ICAPCD "Discretionary" Measures for Fugitive Dust (PM_{10}) Control*** • Water exposed soil only in those areas where active grading and vehicle movement occurs with adequate frequency to control dust. • Replace ground cover in disturbed areas as quickly as possible. • Automatic sprinkler system installed on all soil piles. • Vehicle speed for all construction vehicles shall not exceed 15 miles per hour on any unpaved surface at the construction site. • Develop a trip reduction plan to achieve a 1.5 average vehicle ridership for construction employees.							

PC ORIGINAL PKG

Table 0.4-1. Mitigation Measures

MM No.	Mitigation Measure	Monitoring Method	Responsible Monitoring Party	Monitoring Phase	Verification/Approval Party	Date Mitigation Measure Verified or Implemented	Location of Documents (Monitoring Record)	Completion Requirement
	• Implement a shuttle service to and from retail services and food establishments during lunch hours. ***Standard Mitigation Measures for Construction Combustion Equipment*** • Use of alternative fueled or catalyst equipped diesel construction equipment, including all off-road and portable diesel-powered equipment. • Minimize idling time either by shutting equipment off when not in use or reducing the time of idling to 5 minutes as a maximum. • Limit, to the extent feasible, the hours of operation of heavy-duty equipment and/or the amount of equipment in use. • Replace fossil fueled equipment with electrically driven equivalents (provided they are not run via a portable generator set). ***Enhanced Mitigation Measures for Construction Equipment*** To help provide a greater degree of reduction of PM emissions from construction combustion equipment, ICAPCD recommends the following enhanced measures. • Curtail construction during periods of high ambient pollutant concentrations; this may include ceasing of construction activity during the peak hour of vehicular traffic on adjacent roadways. • Implement activity management (e.g., rescheduling activities to reduce short-term impacts).

AQ-2	**Construction Equipment.** Construction equipment shall be equipped with an engine designation of EPA Tier 2 or better (Tier 2+). A list of the construction equipment, including all off-road equipment utilized at the project sites by make, model, year, horsepower and expected/actual hours of use, and the associated EPA Tier shall be submitted to the County Planning and Development Services Department and ICAPCD prior to the issuance of a grading permit. The equipment list shall be submitted periodically to ICAPCD to perform a NO_x analysis. ICAPCD shall utilize this list to calculate air emissions to verify that equipment use does not exceed significance thresholds. The Planning and Development Services Department and ICAPCD shall verify implementation of this measure.	Prior to the issuance of a grading permit, ICAPCD shall verify that construction equipment are equipped with an engine designation of EPA Tier 2 or better. The equipment list shall be submitted periodically to ICAPCD to perform a NOx analysis.	Department of Planning and Development Services and ICAPCD	Prior to the issuance of a grading permit and during construction	Department of Planning and Development Services and ICAPCD			
AQ-3	**Dust Suppression.** The project applicant shall employ a method of dust suppression (such as water or chemical stabilization) approved by ICAPCD. The project applicant shall apply chemical stabilization as directed by the product manufacturer to control dust between the panels as approved by ICAPCD, and other non-used areas (exceptions will be the paved entrance and parking area, and Fire Department access/emergency entry/exit points as approved by Fire/ Office of Emergency Services [OES] Department). All chemicals used for stabilization of Flowing Wells Road must be approved by BLM.	During construction, the Department of Planning and Development Services shall verify that the project applicant is employing a method of dust suppression approved by ICAPCD.	Department of Planning and Development Services	During construction	Department of Planning and Development Services

APM AQ-4	**Operational Dust Control Plan.** Prior to issuance of a Certificate of Occupancy, the applicant shall submit an operations dust control plan and obtain ICAPCD and ICPDS approval. ICAPCD Rule 301 Operational Fees apply to any project applying for a building permit. At the time that building permits are submitted for the proposed project, the ICAPCD shall review the project to determine if Rule 310 fees are applicable to the project.	Prior to the issuance of a Certificate of Occupancy, the applicant shall submit an operations dust control plan and obtain ICAPCD and ICPDS approval.	Department of Planning and Development Services	Prior to the issuance of a Certificate of Occupancy	Department of Planning and Development Services and ICAPCD			
Biological Resources								
BIO-1a	**Rare Plant Surveys.** Prior to initiating ground disturbance, rare plant surveys shall be conducted within suitable habitat on the VEGA SES 2 and 3 project sites during the appropriate blooming period for gravel milk-vetch, Wiggins' croton, glandular ditaxis, sand food, and Munz's cholla. The surveys shall be conducted by a botanist or qualified biologist in accordance with the USFWS Guidelines for Conducting and Reporting Botanical Inventories for Federally Listed, Proposed, and Candidate Plants (USFWS 1996); the CDFW Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities (CDFW 2018); and the CNPS Botanical Survey Guidelines (CNPS 2001). If any special-status species are observed during the rare plant surveys, the location of the individual plant or population will be recorded with a submeter GPS device for mapping purposes. If project-related impacts to rare plants on the project sites are unavoidable, then consultation with CDFW may be required to develop a mitigation plan or additional avoidance and minimization measures. Mitigation measures that may be implemented if the species is observed include establishing a no-disturbance buffer around locations of individuals or a population and additional monitoring requirements.	Prior to initiating ground disturbance, rare plant surveys shall be conducted.	Department of Planning and Development Services	Prior to construction, during construction, and post-construction	Department of Planning and Development Services

BIO-1b	**Rare Plant Surveys.** Prior to initiating ground disturbance, rare plant surveys shall be conducted within suitable habitat on the VEGA SES 5 project site during the appropriate blooming period for Salton milk-vetch, Borrego milk-vetch, gravel milk-vetch, spiny abrojo, glandular ditaxis, Abram's spurge, ribbed cryptantha, slender-spined all thorn, slender cottonheads, sand food, and Mecca-aster. The surveys shall be conducted by a botanist or qualified biologist in accordance with the USFWS Guidelines for Conducting and Reporting Botanical Inventories for Federally Listed, Proposed, and Candidate Plants (USFWS 1996); the CDFW Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities (CDFW 2018); and the CNPS Botanical Survey Guidelines (CNPS 2001). If any special-status species are observed during the rare plant surveys, the location of the individual plant or population will be recorded with a submeter GPS device for mapping purposes. If project-related impacts to rare plants on the project sites are unavoidable, then consultation with CDFW may be required to develop a mitigation plan or additional avoidance and minimization measures. Mitigation measures that may be implemented if the species is observed include establishing a no-disturbance buffer around locations of individuals or a population and additional monitoring requirements.	Prior to initiating ground disturbance, rare plant surveys shall be conducted.	Department of Planning and Development Services	Prior to construction, during construction, and post-construction	Department of Planning and Development Services			
BIO-2	**pact Avoidance and Minimization Measures.** The following measures will be applicable throughout the life of the projects: • To reduce the potential indirect impact on migratory birds, bats and raptors, the project shall comply with the APLIC 2012 Guidelines for overhead utilities, as appropriate, to minimize avian collisions with transmission facilities (APLIC 2012) • All electrical components on the project sites shall be either undergrounded or protected so that there will be no exposure to wildlife and therefore no potential for electrocution.	Prior to and during construction a Project Biologist shall be designated and responsible for overseeing compliance with avoidance and minimization measures	Department of Planning and Development Services	Prior to construction, during construction	Department of Planning and Development Services			

Table 0.4-1. Mitigation Measures

MM No.	Mitigation Measure	Monitoring Method	Responsible Monitoring Party	Monitoring Phase	Verification/Approval Party	Date Mitigation Measure Verified or Implemented	Location of Documents (Monitoring Record)	Completion Requirement
	• The project proponent shall designate a Project Biologist who shall be responsible for overseeing compliance with protective measures for biological resources during vegetation clearing and work activities within and adjacent to areas of native habitat. The Project Biologist shall be familiar with the local habitats, plants, and wildlife. The Project Biologist shall also maintain communications with the Contractor to ensure that issues relating to biological resources are appropriately and lawfully managed and shall monitor construction. The Project Biologist shall monitor activities within construction areas during nesting bird season (generally February 1 to September 15), such as vegetation removal, the implementation of Best Management Practices (BMPs), and installation of security fencing to protect native species. The Project Biologist shall ensure that all wildlife and regulatory agency permit requirements, conservation measures, and general avoidance and minimization measures are properly implemented and followed. • The boundaries of all areas to be newly disturbed (including solar facility areas, staging areas, access roads, and sites for temporary placement of construction materials and spoils) shall be delineated with stakes and flagging prior to disturbance. All disturbances, vehicles, and equipment shall be confined to the flagged areas. • No potential wildlife entrapments (e.g., trenches, bores) shall be left uncovered overnight. Any uncovered pitfalls will be excavated to 3:1 slopes at the ends to provide wildlife escape ramps. Alternatively, man-made ramps may be installed. Covered pitfalls will be covered completely to prevent access by small mammals or reptiles. • To avoid wildlife entrapment (including birds), all pipes or other construction materials or supplies shall be covered or capped in storage or laydown areas, and at the end of each work day in construction, quarrying and

	processing/handling areas. No pipes or tubing of sizes or inside diameters ranging from 1 to 10 inches shall be left open either temporarily or permanently. • No anticoagulant rodenticides, such as Warfarin and related compounds (indandiones and hydroxycoumarins), shall be used within the project sites, on off-site project facilities and activities, or in support of any other project activities. • Avoid wildlife attractants. All trash and food-related waste shall be placed in self-closing containers and removed regularly from the sites to prevent overflow. Workers shall not feed wildlife. Water applied to dirt roads and construction areas for dust abatement shall use the minimal amount needed to meet safety and air quality standards to prevent the formation of puddles, which could attract wildlife. Pooled rainwater or floodwater within retention basins shall be removed to avoid attracting wildlife to the active work areas. • To minimize the likelihood for vehicle strikes on wildlife, speed limits shall not exceed 15 miles per hour when driving on access roads. All vehicles required for O&M must remain on designated access/maintenance roads. • Avoid nighttime construction lighting or if nighttime construction cannot be avoided, use shielded directional lighting pointed downward and towards the interior of the project sites, thereby avoiding illumination of adjacent natural areas and the night sky. • All construction equipment used for the projects shall be equipped with properly operating and maintained mufflers. • Hazardous materials and equipment stored overnight, including small amounts of fuel to refuel hand-held equipment, shall be stored within secondary containment when within 50 feet of open water to the fullest extent practicable. Secondary containment shall consist of a ring of sand bags around each piece of stored equipment/structure. A plastic

Table 0.4-1. Mitigation Measures

MM No.	Mitigation Measure	Monitoring Method	Responsible Monitoring Party	Monitoring Phase	Verification/Approval Party	Date Mitigation Measure Verified or Implemented	Location of Documents (Monitoring Record)	Completion Requirement
	tarp/visqueen lining with no seams shall be placed under the equipment and over the edges of the sandbags, or a plastic hazardous materials secondary containment unit shall be utilized by the Contractor. • The Contractor will be required to conduct vehicle refueling in upland areas where fuel cannot enter waters of the U.S. and in areas that do not have potential to support federally threatened or endangered species. Any fuel containers, repair materials, including creosote-treated wood, and/or stockpiled material that is left on site overnight, shall be secured in secondary containment within the work area and staging/assembly area and covered with plastic at the end of each work day. • In the event that no activity is to occur in the work area for the weekend and/or a period of time greater than 48 hours, the Contractor shall ensure that all portable fuel containers are removed from the project sites. • All equipment shall be maintained in accordance with manufacturer's recommendations and requirements. • Equipment and containers shall be inspected daily for leaks. Should a leak occur, contaminated soils and surfaces will be cleaned up and disposed of following the guidelines identified in the Stormwater Pollution Prevention Plan or equivalent, Materials Safety Data Sheets, and any specifications required by other permits issued for the projects. • The Contractor shall utilize off-site maintenance and repair shops as much as possible for maintenance and repair of equipment. • If maintenance of equipment must occur onsite, fuel/oil pans, absorbent pads, or appropriate containment will be used to capture spills/leaks within all areas. Where feasible, maintenance of equipment shall occur in upland areas where fuel cannot enter waters of the U.S. and in areas that do not

MM No.	Mitigation Measure	Monitoring Method	Responsible Monitoring Party	Monitoring Phase	Verification/Approval Party	Date Mitigation Measure Verified or Implemented	Location of Documents (Monitoring Record)	Completion Requirement
	have potential to support federally threatened or endangered species. • Appropriate BMPs shall be used by the Contractor to control erosion and sedimentation and to capture debris and contaminants from construction to prevent their deposition in waterways. • Erosion and sediment control devices used for the proposed projects, including fiber rolls and bonded fiber matrix, shall be made from biodegradable materials such as jute, with no plastic mesh, to avoid creating a wildlife entanglement hazard. • Firearms, open fires, and pets shall be prohibited at all work locations and access roads. Smoking shall be prohibited along the project alignment. • Cross-country vehicle and equipment use outside of approved designated work areas and access roads shall be prohibited to prevent unnecessary ground and vegetation disturbance. • Any injured or dead wildlife encountered during project-related activities shall be reported to the project biologist, biological monitor, CDFW, or a CDFW-approved veterinary facility as soon as possible to report the observation and determine the best course of action. For special-status species, the Project Biologist shall notify the County, USFWS, and/or CDFW, as appropriate, within 24 hours of the discovery. • Stockpiling of material shall only be allowed within established work areas. • The Contractor shall actively manage the spread of noxious weeds by implementing weed control activities. The introduction of exotic, nonnative, weed, and/or invasive plant species will be avoided and controlled wherever possible, and may be achieved through physical or chemical removal and prevention, limiting the size of any vegetation and/or ground disturbance to the absolute minimum, and limiting ingress and egress to

	defined routes. Preventing exotic plants from entering the sites via vehicular sources will include measures such as cleaning vehicles coming into and going from the sites. All equipment will be cleaned and inspected prior to transport to the sites. • The ground beneath all parked equipment and vehicles shall be inspected for wildlife before moving.							
BIO-3	**Worker Environmental Awareness Program.** Prior to project construction, a Worker Environmental Awareness Program shall be developed and implemented by a qualified biologist and shall be available in both English and Spanish. Handouts summarizing potential impacts on special-status biological resources and the potential penalties for impacts on these resources shall be provided to all construction personnel. At a minimum, the education program shall including the following: • the purpose for resource protection; • a description of special-status species including representative photographs and general ecology; • occurrences of USACE, RWQCB, and CDFW regulated features in the project study area; • regulatory framework for biological resource protection and consequences if violated • sensitivity of the species to human activities; • avoidance and minimization measures designed to reduce the impacts on special-status biological resources • environmentally responsible construction practices; • reporting requirements; • the protocol to resolve conflicts that may arise at any time during the construction process; and • workers sign acknowledgement form indicating that the Environmental Awareness Training and Education	Prior to construction, the Department of Planning and Development Services shall verify that a Worker Environmental Awareness Program has been implemented by a qualified biologist. The Department of Planning and Development Services shall verify the completion of the Worker Environmental Awareness Program by obtaining signed acknowledgements forms from workers.	Department of Planning and Development Services	Prior to construction	Department of Planning and Development Services

	Program that has been completed, which shall be kept on record.							
BIO-4	**Burrowing Owl Avoidance and Minimization.** Take avoidance (pre-construction) surveys for burrowing owl shall be completed prior to project construction. Surveys shall be conducted as detailed within Appendix D of the Staff Report on Burrowing Owl Mitigation (California Department of Fish and Game [CDFG] 2012). If burrowing owl is not detected, construction may proceed. • If burrowing owl is identified during the non-breeding season (September 1 through January 31), then a 50-meter buffer will be established by the biological monitor. Construction within the buffer will be avoided until a qualified biologist determines that burrowing owl is no longer present or until a CDFW-approved exclusion plan has been implemented. The buffer distance may be reduced if noise attenuation buffers such as hay bales are placed between the occupied burrow and construction activities. • If burrowing owl is identified during the breeding season (February 1 through August 31), then an appropriate buffer will be established by the biological monitor in accordance with the Staff Report on Burrowing Owl Mitigation (CDFG 2012). Construction within the buffer will be avoided until a qualified biologist determines that burrowing owl is no longer present or until young have fledged. The buffer distance may be reduced in consultation with CDFW if noise attenuation buffers such as hay bales are placed between the occupied burrow and construction activities.	Prior to construction, the Department of Planning and Development Services shall verify that pre-construction surveys for burrowing owl were conducted. If burrowing owl are present, the measures as listed in Mitigation Measure BIO-4 shall be implemented.	Department of Planning and Development Services	During construction	Department of Planning and Development Services

BIO-5	**Pre-Construction Nesting Bird Survey.** If construction or other project activities are scheduled to occur during the bird breeding season (typically February 1 through August 31 for raptors and February 15 through August 31 for the majority of migratory bird species), a pre-construction nesting-bird survey shall be conducted by a qualified avian biologist to ensure that active bird nests, including those for loggerhead shrike, black-tailed gnatcatcher, and burrowing owl, will not be disturbed or destroyed. The survey shall be completed no more than three days prior to initial ground disturbance. The nesting-bird survey shall include the project site and adjacent areas where project activities have the potential to affect active nests, either directly or indirectly, due to construction activity or noise. If an active nest is identified, the biologist shall establish an appropriately sized disturbance limit buffer around the nest using flagging or staking. Construction activities shall not occur within any disturbance limit buffer zones until the nest is deemed inactive by the qualified biologist. If construction activities cease for a period of greater than three days during the bird breeding season, a pre-construction nesting bird survey shall be conducted prior to the commencement of activities. Final construction buffers or setback distances shall be determined by the qualified biologist in coordination with USFWS and CDFW on a case-by-case basis, depending on the species, season in which disturbance shall occur, the type of disturbance, and other factors that could influence susceptibility to disturbance (e.g., topography, vegetation, existing disturbance levels, etc.).	Prior to construction, the Department of Planning and Development Services shall verify that a pre-construction nesting bird survey was conducted. If nesting birds are present, the measures as listed in Mitigation Measure BIO-5 shall be implemented.	Department of Planning and Development Services	Prior to construction	Department of Planning and Development Services

BIO-6a	**Pre-Construction Survey for Special-Status Species.** A pre-construction survey shall be conducted for special-status wildlife species within all areas of potential permanent and temporary disturbance. The pre-construction survey shall take place no more than 14 days prior to the start of ground-disturbing activities. The pre-construction surveys shall take place regardless of breeding season timing and shall focus on identifying the presence of special-status wildlife species present on the VEGA SES 2 and 3 project sites or that were identified as having a high potential to occur on the sites. These species include, but are not limited to, burrowing owl, loggerhead shrike, California black rail, and black-tailed gnatcatcher. Should any special-status species be identified during the pre-construction survey, consultation to develop suitable avoidance and minimization measures with the appropriate agency (USFWS, CDFW) may need to be undertaken.	Prior to construction, the Department of Planning and Development Services shall verify that a pre-construction survey for special-status species was conducted. If special status species are present, the measures as listed in Mitigation Measure BIO-6a shall be implemented.	Department of Planning and Development Services	Prior to construction	Department of Planning and Development Services			
BIO-6b	**Pre-Construction Survey for Special-Status Species.** A pre-construction survey shall be conducted for special-status wildlife species within all areas of potential permanent and temporary disturbance. The pre-construction survey shall take place no more than 14 days prior to the start of ground-disturbing activities. The pre-construction surveys shall take place regardless of breeding season timing and shall focus on identifying the presence of special-status wildlife species present on the VEGA SES 5 project site or that were identified as having a high potential to occur on the site. These species include, but are not limited to, mountain plover, California black rail, merlin, Yuma hispid cotton rat, burrowing owl, black-tailed gnatcatcher, and loggerhead strike. Should any special-status species be identified during the pre-construction survey, consultation to develop suitable avoidance and minimization measures with the appropriate agency (USFWS, CDFW) may need to be undertaken.	Prior to construction, the Department of Planning and Development Services shall verify that a pre-construction survey for special-status species was conducted. If special status species are present, the measures as listed in Mitigation Measure BIO-6b shall be implemented.	Department of Planning and Development Services	Prior to construction	Department of Planning and Development Services

BIO-7a	**Sensitive Habitat Avoidance.** To the greatest extent possible, plans should avoid impacts on blue palo verde-ironwood woodland, bush seepweed scrub, and tamarisk thickets habitats within the VEGA SES 2 and 3 project sites to minimize potential impacts on special-status species. Excluding these habitats from the projects should also minimize mitigation and permitting requirements to meet the less-than-significance threshold.	Prior to construction as part of final engineering plans	Department of Planning and Development Services	Prior to construction	Department of Planning and Development Services			
BIO-7b	**Sensitive Habitat Avoidance.** To the greatest extent possible, plans should avoid impacts on bush seepweed scrub and tamarisk thicket habitats within the VEGA SES 5 project site to minimize potential impacts to special-status species. Excluding these habitats from the project should also minimize mitigation and permitting requirements to meet the less-than-significance threshold.	Prior to construction as part of final engineering plans	Department of Planning and Development Services	Prior to construction	Department of Planning and Development Services

Table 0.4-1. Mitigation Measures

MM No.	Mitigation Measure	Monitoring Method	Responsible Monitoring Party	Monitoring Phase	Verification/Approval Party	Date Mitigation Measure Verified or Implemented	Location of Documents (Monitoring Record)	Completion Requirement
BIO-8	**Aquatic Resources Regulatory Permitting.** If project-related impacts occur to the riparian areas that may also fall under the jurisdiction of the USACE, CDFW, or RWQCB a regulatory permit with those agencies will be needed prior to the impact occurring. Refer to the ECORP Jurisdiction Delineation Report (2022) for preliminary determination of regulatory limits of areas that may be regulated by the USACE, CDFW, or RWRCB. Permitting includes preparation and submittal of a Pre-Construction Notification under Section 404 of the federal CWA, an Application for Water Quality Certification under Section 401 of the federal CWA, and a Notification of Lake or Streambed Alteration under Section 1600 of the California Fish and Game Code. A completed CEQA document, and Notice of Determination, will be necessary to submit along with the applications. Other items such as finalized project plans, quantities of fill material, supporting technical studies, etc., are also submitted along with the applications. As a part of this process, the projects must also identify and approve mitigation through the respective agencies. Mitigation can include onsite or offsite options or could include purchase of credits from an existing mitigation or conservation bank or payment of an in-lieu fee to a conservation organization. Types of mitigation can include restoration, creation, rehabilitation, enhancement, or other types of habitat improvement. Typically, the type of mitigation and acreage of mitigation is negotiated with the regulatory agencies during the permitting process.	Prior to construction	Department of Planning and Development Services, USACE, CDFW, RWQCB (as applicable)	Prior to construction	Department of Planning and Development Services, USACE, CDFW, RWQCB (as applicable)			
BIO-9	**Minimization of Impacts to Wetland/Riparian Habitat.** Solar panels, structures, and new access roads should not be placed within 50 feet of wetland and riparian habitat boundaries. A construction buffer of 300 feet shall be established around the wetlands and riparian habitat during the bird breading season (February 1 – August 31). Prior to construction, fencing should be installed approximately 10 feet from the wetland and riparian habitat boundaries within 50 feet of the projects. Fencing should be easily visible to construction. The extensive alluvial fan systems should not be used as access roads between the projects.	Prior to construction as part of final engineering plans	Department of Planning and Development Services	Prior to construction	Department of Planning and Development Services

MM No.	Mitigation Measure	Monitoring Method	Responsible Monitoring Party	Monitoring Phase	Verification/Approval Party	Date Mitigation Measure Verified or Implemented	Location of Documents (Monitoring Record)	Completion Requirement
Cultural Resources								
CR-1	**Cultural Resources Management Plan.** Project proponent will develop a cultural resources management plan (CRMP) to outline the process for compliance with applicable cultural resources laws, management of resources during operation, and consideration of the effect of decommissioning. The CRMP shall include the following: identification of California Native American tribes, identification of long and short term management goals for cultural resources within the project area, evaluation of eligibility for the CRHR and NRHP for all resources within the project area as identified on EIR Tables 3.6-3, 3.6-4 and 3.6-5, recommendations for eligibility for the CRHR and NRHP, description of measures to avoid, minimize, and reduce significant impacts to cultural resources (including both historical and archaeological resources), unanticipated discovery procedures, monitoring needs, data recovery of significant cultural resources where avoidance is not possible, curation procedures for recovered artifacts, anticipated personnel requirements and qualifications. The CRMP shall specifically address pre-contact fishing village site Resource P-13-147 and all resources identified in EIR Tables 3.6-3, 3.6-4 and 3.6-5. The draft CRMP shall be prepared by a registered professional archaeologist and reviewed and approved by the County of Imperial Planning and Development Services Department.	Prior to construction, approval of the CRMP by the Department of Planning and Development Services.	Department of Planning and Development Services	Prior to construction	Department of Planning and Development Services			
CR-2	**Cultural Resources Training.** Project proponent will provide cultural resources training for all project personnel regarding the laws protecting cultural resources, appropriate conduct in the field, and other project-specific issues identified in the CRMP prepared for each site as required by Mitigation Measure CR-1.	Prior to grading and during any ground-disturbing phases of the project	Department of Planning and Development Services	Prior to grading and during ground-disturbing phases of the project	Department of Planning and Development Services			

Table 0.4-1. Mitigation Measures

MM No.	Mitigation Measure	Monitoring Method	Responsible Monitoring Party	Monitoring Phase	Verification/Approval Party	Date Mitigation Measure Verified or Implemented	Location of Documents (Monitoring Record)	Completion Requirement
CR-3	**Construction Monitoring.** A qualified Archaeologist shall be present on site for ground disturbing activities within 100-feet of all unevaluated or sites eligible for inclusion to the NRHP or CRHR. Ground disturbing activities include grubbing, trenching, and grading. Monitoring will be limited to natural surfaces and undisturbed sediments. Monitoring is not required for previously disturbed areas or fill. Monitors will complete daily monitoring reports documenting activities and results of the day. After construction activities have finished a comprehensive monitoring report shall be prepared.	During ground disturbing activities including grubbing, trenching, and grading.	Ground disturbing activities include grubbing, trenching, and grading.	During ground disturbing activities including grubbing, trenching, and grading.	Department of Planning and Development Services			
CR-4	**Unanticipated Discovery Procedures.** In the event of the discovery of previously unidentified archaeological materials, the contractor shall immediately cease all work activities within approximately 100 feet of the discovery. After cessation of excavation, the contractor shall immediately contact the Imperial County Department of Planning and Development Services. Except in the case of cultural items that fall within the scope of the Native American Grave Protection and Repatriation Act, the discovery of any cultural resource within the project area shall not be grounds for a "stop work" notice or otherwise interfere with the project's continuation except as set forth in this paragraph. In the event of an unanticipated discovery of archaeological materials during construction, the applicant shall retain the services of a qualified professional archaeologist, meeting the Secretary of the Interior's Standards for a Qualified Archaeologist, to evaluate the significance of the materials prior to resuming any construction related activities in the vicinity of the find. If the qualified archaeologist determines that the discovery constitutes a significant resource under CEQA and it cannot be avoided, the applicant shall implement an archaeological data recovery program.	During grading and construction, discovery of human remains shall result in work stoppage in that area until the coroner and the Native American Heritage Commission are contacted.	Department of Planning and Development Services	During grading and construction	Department of Planning and Development Services			

PC ORIGINAL PKG

CR-5	**Discovery of Human Remains.** If subsurface deposits believed to be human in origin are discovered during construction, all work must halt within a 100-foot radius of the discovery. A qualified professional archaeologist who meets the Secretary of the Interior's Standards for prehistoric and historic archaeology and is familiar with the resources of the region, shall be retained to evaluate the significance of the find, and shall have the authority to modify the no work radius as appropriate, using professional judgment. The following notifications shall apply, depending on the nature of the find: • If the find includes human remains, or remains that are potentially human, the professional archaeologist shall ensure reasonable protection measures are taken to protect the discovery from disturbance (AB 2641). The archaeologist shall notify the Imperial County Coroner (per § 7050.5 of the Health and Safety Code). The provisions of § 7050.5 of the California Health and Safety Code, § 5097.98 of the California PRC, and AB 2641 will be implemented. • If the Coroner determines the remains are Native American and not the result of a crime scene, the Coroner will notify the NAHC, which then will designate a Native American Most Likely Descendant (MLD) for the project (§ 5097.98 of the PRC). The designated MLD will have 48 hours from the time access to the property is granted to make recommendations concerning treatment of the remains. If the landowner does not agree with the recommendations of the MLD, the NAHC may mediate (§ 5097.94 of the PRC). If no agreement is reached, the landowner must rebury the remains where they will not be further disturbed (§ 5097.98 of the PRC). This will also include either recording the site with the NAHC or the appropriate Information Center; using an open space or conservation zoning designation or easement; or recording a reinterment document with the county in which the property is located (AB 2641). Work may not resume within the no-work radius until the Imperial County Planning and Development Services Department, through consultation as appropriate, determine that the treatment measures have been completed to their satisfaction.	During ground disturbing activities	Department of Planning and Development Services, through consultation as appropriate, determine that the treatment measures have been completed to their satisfaction.	During ground disturbing activities	Department of Planning and Development Services. County Coroner	
Geology and Soils

GEO-1	**Prepare Geotechnical Report(s) as Part of Final Engineering for the Project and Implement Required Measures.** Facility design for all project components shall comply with the site-specific design recommendations as provided by a licensed geotechnical or civil engineer to be retained by the project applicant. The final geotechnical and/or civil engineering report shall address and make recommendations on the following: • Site preparation • Soil bearing capacity • Appropriate sources and types of fill • Potential need for soil amendments • Structural foundations • Grading practices • Soil corrosion of concrete and steel • Erosion/winterization • Seismic ground shaking • Liquefaction • Expansive/unstable soils In addition to the recommendations for the conditions listed above, the geotechnical investigation shall include subsurface testing of soil and groundwater conditions, and shall determine appropriate foundation designs that are consistent with the version of the CBC that is applicable at the time building and grading permits are applied for. All recommendations contained in the final geotechnical engineering report shall be implemented by the project applicant. The final geotechnical and/or civil engineering report shall be submitted to Imperial County Public Works Department, Engineering Division for review and approval prior to issuance of building permits.	Prior to the issuance of a grading permit, the Imperial County Public Works Department, Engineering Division shall review and approve a Final Geotechnical Report and/or Civil Engineering Report.	Department of Planning and Development Services and Imperial County Public Works Department, Engineering Division	Prior to issuance of a grading permit	Department of Planning and Development Services and Imperial County Public Works Department, Engineering Division

GEO-2	**Paleontological Resources.** In the event that unanticipated paleontological resources or unique geologic resources are encountered during ground-disturbing activities, work must cease within 50 feet of the discovery and a paleontologist shall be hired to assess the scientific significance of the find. The consulting paleontologist shall have knowledge of local paleontology and the minimum levels of experience and expertise as defined by the Society of Vertebrate Paleontology's Standard Procedures (2010) for the Assessment and Mitigation of Adverse Impacts to Paleontological Resources. If any paleontological resources or unique geologic features are found within the project sites, the consulting paleontologist shall prepare a paleontological Treatment and Monitoring Plan to include the methods that will be used to protect paleontological resources that may exist within the project sites, as well as procedures for monitoring, fossil preparation and identification, curation of specimens into an accredited repository, and preparation of a report at the conclusion of the monitoring program.	If paleontological monitoring is warranted, a mitigation and monitoring report shall be prepared and submitted to the Department of Planning and Development Services for review and approval.	Department of Planning and Development Services	Prior to grading	Department of Planning and Development Services			
Hydrology/Water Quality								
HYD-1	**Prepare SWPPP and Implement BMPs Prior to Construction and Site Restoration.** The project applicant or its contractor shall prepare a SWPPP specific to the project and be responsible for securing coverage under SWRCB's NPDES stormwater permit for general construction activity (Order 2009-0009-DWQ). The SWPPP shall identify specific actions and BMPs relating to the prevention of stormwater pollution from project-related construction sources by identifying a practical sequence for site restoration, BMP implementation, contingency measures, responsible parties, and agency contacts. The SWPPP shall reflect localized surface hydrological conditions and shall be reviewed and approved by the appropriate agency, including the County of Imperial Department of Public Works and the Coachella Valley Water District, prior to commencement of work and shall be made conditions of the contract with the contractor selected to build and decommission the project. The SWPPP shall incorporate control measures in the following categories:	Prior to construction and site restoration, the project applicant or its contractor shall prepare a SWPPP with incorporated control measures outlined in Mitigation Measure HYD-1; and implement BMPs. Department of Planning and Development Services to verify.	Department of Planning and Development Services	Prior to issuance of a grading permit and site restoration	Department of Planning and Development Services, Coachella Valley Water District

Resolutions CUP's #20-0021, # 20-0022, & #20-0023

PC ORIGINAL PKG

RESOLUTION NO.

A RESOLUTION OF THE PLANNING COMMISSION OF THE COUNTY OF IMPERIAL, CALIFORNIA, RECOMMENDING APPROVAL TO THE BOARD OF SUPERVISORS FOR " VEGA SES 2 SOLAR ENERGY STORAGE PROJECT" FOR CONDITIONAL USE PERMIT #20-0021"

WHEREAS, APEX ENERGY SOLUTIONS, LLC has submitted an application for Conditional Use Permit (CUP) #20-0021 to develop a nominal 240-megawatt (MW) solar photovoltaic (PV) energy generation project with an integrated battery storage system not to exceed 480 MW. The project includes solar energy generation facility, battery storage system, switching station and gen-tie line. The project is to be located on approximately 1,483 acres.

WHEREAS, an Environmental Impact Report and CEQA Findings have been prepared in accordance with the requirements of the California Environmental Quality Act, the State Guidelines, and the County's "Rules and Regulations to Implement CEQA," as Amended;

WHEREAS, the Planning Commission of the County of Imperial has been delegated with the responsibility of approvals, certifications and making recommendations to the Imperial County Board of Supervisors for approvals of conditional use permits;

WHEREAS, public notice of said application has been given, and the Planning Commission has heard, received and considered all oral and written protests, objections and evidence presented by interested parties at a public hearing held with respect to this item on August 23, 2023, and

WHEREAS, the Draft EIR was received by the State Clearinghouse on December 14, 2022 and circulated for a period of 50 days (**SCH #2021050013**) with the commenting period ending February 2, 2023.

NOW, THEREFORE, the Planning Commission of the County of Imperial **DOES HEREBY RESOLVE** as follows:

SECTION 1. The Planning Commission has considered the proposed Conditional Use Permit #20-0021 prior to recommending approval and the County's consideration of the Project has been noticed in compliance with law.

PC ORIGINAL PKG

SECTION 2. That the Project complies with the requirements of the Imperial County Code and is in accordance with State Planning and Zoning law therefore, the following findings are made pursuant to Imperial County Code § 90203.09 as follows:

A. The proposed use is consistent with goals and policies of the adopted County General Plan. (Imperial County Code § 90203.09.A)

The current General Plan land use designations of the project site and proposed parcels are "Recreation/Open Space" and proposed project parcels are within the Renewable Energy Overlay (RE). Therefore, the proposed uses could be found consistent with the General Plan.

B. The proposed use is consistent with the purpose of the zone or sub-zone within which the use will be used. (Imperial County Code § 90203.09.B)

The proposed project parcels are zoned S-2-RE. (Open Space Preservation) with Renewable Energy Overlay). The proposed uses are consistent with the zone since they are listed as allowed uses under the S-2 RE zone with requirements for an approved Conditional Use Permit.

C. The proposed use is listed as a use within the zone or sub-zone or is found to be similar to a listed conditional use according to the procedures of Section 90203.00. (Imperial County Code § 90203.09.C)

The proposed use is consistent with the zone: S-2-RE (General Agriculture with Renewable Energy Overlay).

D. The proposed use meets the minimum requirements of this Title applicable to the use and complies with all applicable laws, ordinances and regulation of the County of Imperial and the State of California. (Imperial County Code § 90203.09.D)

The Project complies with the minimum requirements of this Title by, among other things, obtaining a CUP, complying with the California Environmental Quality Act, and participating in the public review and hearing process. Development standards have been established for the Project pursuant to these processes, and will be enforced via imposition and enforcement of the Mitigation Monitoring and Reporting Program recommended for approval by separate Resolution, as well as the conditions of approval imposed on this CUP. The Conditions of Approval will further insure that the project complies with all applicable regulations of the County

PC ORIGINAL PKG

of Imperial and the State of California. Therefore, the proposed project meets the minimum requirements of the Land Use Ordinance, Section 90203.00.

E. The proposed use will not be detrimental to the health, safety, and welfare of the public or to the property and residents in the vicinity. (Imperial County Code § 90203.09.E)

The Environmental Impact Report (EIR) prepared for the Project analyzed the Project's potential effects on the health, safety, and welfare of the public and property and found that, with mitigation, the Project would have less than significant effects and impacts in all resources areas.

In addition, the project site is not near a residential community and is mostly surrounded by farmland and or open space/recreational land.

F. The proposed use does not violate any other law or ordinance. (Imperial County Code § 90203.09.F)

The proposed project will be subject to the Conditional Use Permit and current Federal, State and Local regulations. State Planning and Zoning Law (Cal. Govt. Code §§ 65000-66035) establishes minimum statewide standards for the regulation of local land use through planning and zoning. The County regulates local land use via Title 9 of the Imperial County Code. As found above, the proposed project is conditioned to be consistent with Imperial County, Title 9, Land Use Ordinance and CEQA mitigation measures and therefore complies with both State and local laws and ordinance.

Pursuant to CEQA, the County has prepared an EIR for the Project, which analyzes the proposed Project's compliance and consistency with other federal, state, and local laws and ordinances regulating the environment. Substantial evidence supports the conclusions in the EIR that the Project complies with said environmental laws, and thus the finds that the proposed use does not violate any other law or ordinance.

G. The proposed use is not granting a special privilege. (Imperial County Code § 90203.09.G)

The proposed solar generating and storage facility is a permitted use subject to approval of the proposed Conditional Use Permit. No special privileges are being offered or will be granted.

PC ORIGINAL PKG

SECTION 3. Approval of the Project is conditioned upon the terms and conditions set forth in the Agreement for Conditional Use Permit #20-0021 attached hereto and incorporated herein by this reference.

NOW, THEREFORE, based on the above findings, the Imperial County Planning Commission **DOES HEREBY RECOMMEND APPROVAL** of Conditional Use Permit #20-0021 to the Board of Supervisors, subject to the attached Conditions of Approval.

RESOLUTION NO.

A RESOLUTION OF THE PLANNING COMMISSION OF THE COUNTY OF IMPERIAL, CALIFORNIA, RECOMMENDING APPROVAL TO THE BOARD OF SUPERVISORS FOR " VEGA SES 3 SOLAR ENERGY STORAGE PROJECT" FOR CONDITIONAL USE PERMIT #20-0022"

WHEREAS, APEX ENERGY SOLUTIONS, LLC has submitted an application for Conditional Use Permit (CUP) #20-0022 to develop a nominal 60-megawatt (MW) solar photovoltaic (PV) energy generation project with an integrated battery storage system not to exceed 120 MW. The project includes solar energy generation facility, battery storage system, switching station and gen-tie line. The project is to be located on approximately 230 acres.

WHEREAS, an Environmental Impact Report and CEQA Findings have been prepared in accordance with the requirements of the California Environmental Quality Act, the State Guidelines, and the County's "Rules and Regulations to Implement CEQA," as Amended;

WHEREAS, the Planning Commission of the County of Imperial has been delegated with the responsibility of approvals, certifications and making recommendations to the Imperial County Board of Supervisors for approvals of conditional use permits;

WHEREAS, public notice of said application has been given, and the Planning Commission has heard, received and considered all oral and written protests, objections and evidence presented by interested parties at a public hearing held with respect to this item on August 23, 2023, and

WHEREAS, the Draft EIR was received by the State Clearinghouse on December 14, 2022 and circulated for a period of 50 days (**SCH #2021050013**) with the commenting period ending February 2, 2023.

NOW, THEREFORE, the Planning Commission of the County of Imperial **DOES HEREBY RESOLVE** as follows:

SECTION 1. The Planning Commission has considered the proposed Conditional Use Permit #20-0022 prior to recommending approval and the County's consideration of the Project has been noticed in compliance with law.

PC ORIGINAL PKG

SECTION 2. That the Project complies with the requirements of the Imperial County Code and is in accordance with State Planning and Zoning law therefore, the following findings are made pursuant to Imperial County Code § 90203.09 as follows:

A. The proposed use is consistent with goals and policies of the adopted County General Plan. (Imperial County Code § 90203.09.A)

The current General Plan land use designations of the project site and proposed parcels are "Recreation/Open Space" and proposed project parcels are within the Renewable Energy Overlay (RE). Therefore, the proposed uses could be found consistent with the General Plan.

B. The proposed use is consistent with the purpose of the zone or sub-zone within which the use will be used. (Imperial County Code § 90203.09.B)

The proposed project parcels are zoned S-2-RE. (Open Space Preservation) with Renewable Energy Overlay). The proposed uses are consistent with the zone since they are listed as allowed uses under the S-2 RE zone with requirements for an approved Conditional Use Permit.

C. The proposed use is listed as a use within the zone or sub-zone or is found to be similar to a listed conditional use according to the procedures of Section 90203.00. (Imperial County Code § 90203.09.C)

The proposed use is consistent with the zone: S-2-RE (General Agriculture with Renewable Energy Overlay).

D. The proposed use meets the minimum requirements of this Title applicable to the use and complies with all applicable laws, ordinances and regulation of the County of Imperial and the State of California. (Imperial County Code § 90203.09.D)

The Project complies with the minimum requirements of this Title by, among other things, obtaining a CUP, complying with the California Environmental Quality Act, and participating in the public review and hearing process. Development standards have been established for the Project pursuant to these processes, and will be enforced via imposition and enforcement of the Mitigation Monitoring and Reporting Program recommended for approval by separate Resolution, as well as the conditions of approval imposed on this CUP. The Conditions of Approval will further insure that the project complies with all applicable regulations of the County

PC ORIGINAL PKG

of Imperial and the State of California. Therefore, the proposed project meets the minimum requirements of the Land Use Ordinance, Section 90203.00.

E. The proposed use will not be detrimental to the health, safety, and welfare of the public or to the property and residents in the vicinity. (Imperial County Code § 90203.09.E)

The Environmental Impact Report (EIR) prepared for the Project analyzed the Project's potential effects on the health, safety, and welfare of the public and property and found that, with mitigation, the Project would have less than significant effects and impacts in all resources areas.

In addition, the project site is not near a residential community and is mostly surrounded by farmland and or open space/recreational land.

F. The proposed use does not violate any other law or ordinance. (Imperial County Code § 90203.09.F)

The proposed project will be subject to the Conditional Use Permit and current Federal, State and Local regulations. State Planning and Zoning Law (Cal. Govt. Code §§ 65000-66035) establishes minimum statewide standards for the regulation of local land use through planning and zoning. The County regulates local land use via Title 9 of the Imperial County Code. As found above, the proposed project is conditioned to be consistent with Imperial County, Title 9, Land Use Ordinance and CEQA mitigation measures and therefore complies with both State and local laws and ordinance.

Pursuant to CEQA, the County has prepared an EIR for the Project, which analyzes the proposed Project's compliance and consistency with other federal, state, and local laws and ordinances regulating the environment. Substantial evidence supports the conclusions in the EIR that the Project complies with said environmental laws, and thus the finds that the proposed use does not violate any other law or ordinance.

G. The proposed use is not granting a special privilege. (Imperial County Code § 90203.09.G)

The proposed solar generating and storage facility is a permitted use subject to approval of the proposed Conditional Use Permit. No special privileges are being offered or will be granted.

PC ORIGINAL PKG

SECTION 3. Approval of the Project is conditioned upon the terms and conditions set forth in the Agreement for Conditional Use Permit #20-0022 attached hereto and incorporated herein by this reference.

NOW, THEREFORE, based on the above findings, the Imperial County Planning Commission **DOES HEREBY RECOMMEND APPROVAL** of Conditional Use Permit #20-0022 to the Board of Supervisors, subject to the attached Conditions of Approval.

RESOLUTION NO.

A RESOLUTION OF THE PLANNING COMMISSION OF THE COUNTY OF IMPERIAL, CALIFORNIA, RECOMMENDING APPROVAL TO THE BOARD OF SUPERVISORS FOR " VEGA SES 5 SOLAR ENERGY STORAGE PROJECT" FOR CONDITIONAL USE PERMIT #20-0023"

WHEREAS, APEX ENERGY SOLUTIONS, LLC has submitted an application for Conditional Use Permit (CUP) #20-0023 to develop a nominal 50-megawatt (MW) solar photovoltaic (PV) energy generation project with an integrated battery storage system not to exceed 100 MW. The project includes solar energy generation facility, battery storage system, switching station and gen-tie line. The project is to be located on approximately 250 acres.

WHEREAS, an Environmental Impact Report and CEQA Findings have been prepared in accordance with the requirements of the California Environmental Quality Act, the State Guidelines, and the County's "Rules and Regulations to Implement CEQA," as Amended;

WHEREAS, the Planning Commission of the County of Imperial has been delegated with the responsibility of approvals, certifications and making recommendations to the Imperial County Board of Supervisors for approvals of conditional use permits;

WHEREAS, public notice of said application has been given, and the Planning Commission has heard, received and considered all oral and written protests, objections and evidence presented by interested parties at a public hearing held with respect to this item on August 23, 2023, and

WHEREAS, the Draft EIR was received by the State Clearinghouse on December 14, 2022 and circulated for a period of 50 days (**SCH #2021050013**) with the commenting period ending February 2, 2023.

NOW, THEREFORE, the Planning Commission of the County of Imperial **DOES HEREBY RESOLVE** as follows:

SECTION 1. The Planning Commission has considered the proposed Conditional Use Permit #20-0023 prior to recommending approval and the County's consideration of the Project has been noticed in compliance with law.

PC ORIGINAL PKG

SECTION 2. That the Project complies with the requirements of the Imperial County Code and is in accordance with State Planning and Zoning law therefore, the following findings are made pursuant to Imperial County Code § 90203.09 as follows:

A. The proposed use is consistent with goals and policies of the adopted County General Plan. (Imperial County Code § 90203.09.A)

The current General Plan land use designations of the project site and proposed parcels are "Recreation/Open Space" and proposed project parcels are within the Renewable Energy Overlay (RE). Therefore, the proposed uses could be found consistent with the General Plan.

B. The proposed use is consistent with the purpose of the zone or sub-zone within which the use will be used. (Imperial County Code § 90203.09.B)

The proposed project parcels are zoned S-2-RE, A-2 & A-3 RE. (Open Space Preservation & General and Heavy Agriculture) with Renewable Energy Overlay). The proposed uses are consistent with the zone since they are listed as allowed uses under the S-2, A-2 & A-3 RE zones with requirements for an approved Conditional Use Permit.

C. The proposed use is listed as a use within the zone or sub-zone or is found to be similar to a listed conditional use according to the procedures of Section 90203.00. (Imperial County Code § 90203.09.C)

The proposed use is consistent with the zone: S-2-RE Open Space Preservation with Renewable Energy Overlay).

D. The proposed use meets the minimum requirements of this Title applicable to the use and complies with all applicable laws, ordinances and regulation of the County of Imperial and the State of California. (Imperial County Code § 90203.09.D)

The Project complies with the minimum requirements of this Title by, among other things, obtaining a CUP, complying with the California Environmental Quality Act, and participating in the public review and hearing process. Development standards have been established for the Project pursuant to these processes, and will be enforced via imposition and enforcement of the Mitigation Monitoring and Reporting Program recommended for approval by separate Resolution, as well as the conditions of approval imposed on this CUP. The Conditions of Approval will

PC ORIGINAL PKG

further insure that the project complies with all applicable regulations of the County of Imperial and the State of California. Therefore, the proposed project meets the minimum requirements of the Land Use Ordinance, Section 90203.00.

E. The proposed use will not be detrimental to the health, safety, and welfare of the public or to the property and residents in the vicinity. (Imperial County Code § 90203.09.E)

The Environmental Impact Report (EIR) prepared for the Project analyzed the Project's potential effects on the health, safety, and welfare of the public and property and found that, with mitigation, the Project would have less than significant effects and impacts in all resources areas.

In addition, the project site is not near a residential community and is mostly surrounded by farmland and or open space/recreational land.

F. The proposed use does not violate any other law or ordinance. (Imperial County Code § 90203.09.F)

The proposed project will be subject to the Conditional Use Permit and current Federal, State and Local regulations. State Planning and Zoning Law (Cal. Govt. Code §§ 65000-66035) establishes minimum statewide standards for the regulation of local land use through planning and zoning. The County regulates local land use via Title 9 of the Imperial County Code. As found above, the proposed project is conditioned to be consistent with Imperial County, Title 9, Land Use Ordinance and CEQA mitigation measures and therefore complies with both State and local laws and ordinance.

Pursuant to CEQA, the County has prepared an EIR for the Project, which analyzes the proposed Project's compliance and consistency with other federal, state, and local laws and ordinances regulating the environment. Substantial evidence supports the conclusions in the EIR that the Project complies with said environmental laws, and thus the finds that the proposed use does not violate any other law or ordinance.

G. The proposed use is not granting a special privilege. (Imperial County Code § 90203.09.G)

PC ORIGINAL PKG

The proposed solar generating and storage facility is a permitted use subject to approval of the proposed Conditional Use Permit. No special privileges are being offered or will be granted.

SECTION 3. Approval of the Project is conditioned upon the terms and conditions set forth in the Agreement for Conditional Use Permit #20-0023 attached hereto and incorporated herein by this reference.

NOW, THEREFORE, based on the above findings, the Imperial County Planning Commission **DOES HEREBY RECOMMEND APPROVAL** of Conditional Use Permit #20-0023 to the Board of Supervisors, subject to the attached Conditions of Approval.

_____

Rudy Schaffner, Chairperson
Imperial County Planning Commission

El Centro, California 92243

AGREEMENT FOR CONDITIONAL USE PERMIT #20-0021
VEGA SES 2 SOLAR ENERGY STORAGE PROJECT
APN's 025-010-006-000, 025-260-011, 025-270-023-000

This Agreement is made and entered into on this ___day of _____, 2023, by and between APEX ENERGY SOLUTIONS, LLC hereinafter referred to as the Permittee (Permittee), and the COUNTY OF IMPERIAL, a political subdivision of the State of California (County or Imperial County), related to the VEGA SES 2 SOLAR ENERGY STORAGE PROJECT (CUP #20-0021) project area.

RECITALS

WHEREAS, Permittee is the lessee or successor-in-interest of certain land in Imperial County to be improved with the proposed utility-scale solar and battery storage facility. The project, Conditional Use Permit (CUP or Permit) #20-0021, consists of a proposed 240-megawatt (MW) photovoltaic solar energy facility, energy (battery) storage facility (up to 480 MW and not to exceed a 2 to 1 solar/battery ratio) and associated infrastructure, including but not limited to, electrical switch station, substation, on-site operations and maintenance (O&M), a gen-tie line and internal solar development transmission lines, on approximately 1,472 acres within Imperial County (the "Project"). The proposed facility is located approximately 5.67 miles southeast of the unincorporated community of Niland between the unincorporated communities of Iris and Slab City. The Coachella and East Highline Canals and the Union Pacific Railway transect the project area. The project area is located entirely within the County's Renewable Energy Overlay Zone. .

WHEREAS, Permittee has applied to the County of Imperial for CUP #20-0021 for constructing and operating a new 240 MW solar energy facility, energy (battery) storage facility (up to 480 MW and not to exceed a 2 to 1 solar/battery ratio) with ancillary support facilities, including electrical interconnections. The Project will connect to the existing IID "P" line located immediately north of the project site north of the All American Canal.

WHEREAS, the Project is located on portion of APN 025-010-006, 025-260-011, 025-270-023. Additionally, the legal description includes SEC 9, 15, and 17, Township 11

PC ORIGINAL PKG

South, Range 15 East on a portion of 1,472 acres. The project site is located entirely within the Imperial County Renewable Energy Overlay zone.

WHERAS, The Permittee for the VEGA SES 2 Solar Energy Project (CUP #20-0021) shall fully comply with all of the terms and conditions of the Project as specified hereinafter within this CUP.

The rest of this page is intentionally left blank.

PC ORIGINAL PKG

GENERAL CONDITIONS:

The "GENERAL CONDITIONS" are shown by the letter "G". These conditions are conditions that are either routinely and commonly included in all Conditional Use Permits as "standardized conditions" and/or are conditions that the Imperial County Planning Commission has established as a requirement on all CUP's for consistent application and enforcement. The Permittee is hereby advised that the General Conditions are as applicable as the SITE SPECIFIC conditions. The General Conditions are in addition to the MMRP and any and all other requirements for the project.

G-1 GENERAL LAWS:

The Permittee shall obtain, comply with and maintain all applicable County, State, and federal laws, rules, regulations, ordinances, and/or standards as they may pertain to this project whether specified herein or not.

G-2 EFFECTIVE DATE:

The approved Conditional Use Permit shall not become effective until ten (10) calendar days after the decision of the Planning Director or Commission. Further the Conditional Use Permit shall not be effective until applicable conditions have been met, and the Conditional Use Permit is recorded with the County Recorder, with payment of recording fees being paid by applicant. In the case of a decision by the Board of Supervisors there is no 10-day appeal.

G-3 RECORDATION:

CUP #20-0021 shall **not be effective** until it is recorded at the Imperial County Recorder's Office and if no appeal has been made after approval from the hearing body. Payment of the recordation fee shall be the responsibility of the Permittee. If this CUP is not recorded within one hundred eighty (180) days from the date of approval the CUP shall be deemed null and void, without notice having to be provided to Permittee. Permittee may submit a written request for a recordation extension for this CUP by filing such a request with the Planning Director at least sixty (60) days prior to the one hundred eighty 180-day expiration. The Director may approve one (1) extension for a period not to exceed one hundred eighty (180) days. An extension may not be granted if the request for an extension is filed after the expiration date. Failure to record this CUP within one (1) year including the granted extension period shall deem this CUP null and void.

G-4 COMMENCEMENT OF WORK:

If the project for which a CUP has been approved has not commenced, or permits for said project have not been issued, within one (1) year from effective date, the CUP shall be null and void. If an applicant cannot initiate or obtain permits for the approved use during the one (1) year, applicant may request a one (1) year extension from the Department. The request for an extension shall be in writing and be submitted with explanation to the Planning & Development Services Department at least sixty days prior to the end of the extended one (1) year period. The Director shall have the authority to extend the initial start-up period, or commencement of work, of a CUP up to two (2) times for a maximum of two (2) years. Should the

PC ORIGINAL PKG

Permittee desire to continue with the project, a new application shall be submitted and the entire process would have to begin anew.

G-5 TIME LIMIT:

Unless otherwise specified within the Site Specific Conditions, this Permit shall be limited to a maximum of thirty (30) years from the recordation of the CUP. The CUP may be extended for an additional ten (10) year period by the appropriate County entity (either the Planning Director, the Planning Commission or the Board of Supervisors as set forth in the applicable Imperial County Ordinances) upon a finding that the Project is in compliance with all conditions of the CUP as stated herein and any applicable Land Use regulation of the County of Imperial. In order to obtain an extension, the Permittee shall file a written extension request with the Planning Director at least sixty (60) days prior to the expiration date of the permit. Such an extension request shall include the appropriate extension fee. Nothing stated or implied within this Permit shall constitute a guarantee that an extension will be granted. An extension may or may not be granted if the Project is in violation of any one or all of the conditions or if there is a history of non-compliance with the Permit conditions.

G-6 ABANDONMENT:

If a CUP has been unused, abandoned, discontinued, or ceased for one (1) year, the CUP shall be null and void, and be of no effect. Notice to applicant/permittee under this division will not be required or provided by Department.

G-7 PERMIT/LICENSE:

Permittee shall obtain and comply with any and all required permits, licenses, and/or approvals, for the construction and/or operation of this project. This shall include, but shall NOT be limited to, permits from the County Division of Environmental Health Services (EHS), Planning & Development Services Department, Office of Emergency Services (OES), Imperial County Air Pollution Control District (ICAPCD) and Public Works Department. Permittee shall likewise comply with all such permit requirements for the life of the project. **Additionally, Permittee shall submit a copy of such additional permit(s) and/or license(s) to the Planning & Development Services Department within 60-days of receipt, including amendments or alternatives thereto.**

G-8 APPROVALS AND CONDITIONS SUBSEQUENT TO GRANTING PERMIT:

Permittee acceptance of this CUP shall be deemed to constitute agreement with the terms and conditions contained herein. Where a requirement is imposed in this CUP that Permittee conduct a monitoring program, and where the County has reserved the right to impose or modify conditions with which the Permittee must comply based on data obtained therefrom, or where the Permittee is required to prepare specific plans for County approval and disagreement arises, the Permittee, operator and/or agent, the Planning and Development Services Director or other affected party, to be determined by the Planning and Development Services

PC ORIGINAL PKG

Director, may request that a hearing be conducted before the Imperial County Planning Commission whereby they may state the requirements which will implement the applicable conditions as intended herein. Upon receipt of a request, the Planning Commission shall conduct a hearing and make a written determination. The Planning Commission may request support and advice from a technical advisory committee. Failure to take any action shall constitute endorsement of staff's determination with respect to implementation.

G-9 CONDITION PRIORITY:

This project shall be constructed/operated as described in the CUP application, the environmental documents, the project description, and as specified in these conditions. Where a conflict occurs, the CUP conditions shall govern.

G-10 INDEMNIFICATION:

As part of this application, applicant and real party in interest, if different, agree to defend, indemnify, hold harmless, and release the County of Imperial ("County"), its agents, officers, attorneys, and employees (including consultants) from any claim, action, or proceeding brought against any of them, the purpose of which is to attack, set aside, void, or annul the approval of this application or adoption of the environmental document which accompanies it. This indemnification obligation shall include, but not be limited to, damages, costs, expenses, attorney fees, or expert witness fees that may be asserted by any person or entity, including the applicant, arising out of or in connection with the approval of this application, whether or not there is concurrent negligence on the part of the County, its agents, officers, attorneys, or employees (including consultants).

If any claim, action, or proceeding is brought against the County, its agents, officers, attorneys, or employees (including consultants), to attack, set aside, void, or annul the approval of the application or adoption of the environmental document which accompanies it, then the following procedures shall apply: The Planning Director shall promptly notify the County Board of Supervisors of any claim, action or proceeding brought by an applicant challenging the County's action. The County, its agents, attorneys and employees (including consultants) shall fully cooperate in the defense of that action. The County shall have the final determination on how to best defend the case and will consult with applicant regularly regarding status and the plan for defense. The County will also consult and discuss with applicant the counsel to be used by County to defend it, either with in-house counsel, or by retaining outside counsel provided that the County shall have the final decision on the counsel retained to defend it. Applicant shall be fully responsible for all costs incurred. Applicant shell be entitled to provide his or her own counsel to defend the case, and said independent counsel shall work with County Counsel to provide a joint defense.

G-11 INSURANCE:

The Permittee shall take out and maintain workers compensation insurance as required by the State of California. The Permittee shall also secure liability

PC ORIGINAL PKG

insurance and such other insurance as required by state and/or federal law. A Certificate of Insurance is to be provided to the Planning and Development Services Department by the insurance carrier, and said insurance and certificate shall be kept current for the life of the project. Certificates of Insurance shall be sent directly to the Planning and Development Services Department by the insurance carrier and shall name the Department as a recipient of both renewal and cancellation notices.

G-12 RIGHT OF ENTRY:

The County reserves the right to enter the premises at any time, announced or unannounced, in order to make the appropriate inspection(s) and to determine if the condition(s) of this CUP are complied with. Access by authorized enforcement agency personnel shall not be denied.

G-13 SEVERABILITY:

Should any condition(s) of this CUP be determined by a Court or other agency with proper jurisdiction to be invalid for any reason, such determination shall not invalidate the remaining provision(s) of this CUP.

G-14 PROVISION TO RUN WITH LAND:

The provisions of this CUP are to run with the land/project and shall bind the current and future owner(s) successor(s) of interest; assignee(s) and/or transferee(s) of said CUP. **Permittee shall not without prior notification to the Planning & Development Services Department assign, sell, or transfer, or grant control of CUP or any right or privilege therein.** The Permittee shall provide a minimum of 60 days written notice prior to such proposed transfer becoming effective. The permitted use identified herein is limited for use upon this parcel described herein and may not be transferred to another parcel.

G-15 COMPLIANCE/REVOCATION:

Upon the determination by the Planning & Development Services Department that the project is or may not be in full compliance with any one or all of the conditions of this CUP, or upon the finding that the project is creating a nuisance as defined by law, the issue shall be brought immediately to the appropriate enforcement agency or to the Planning Commission for hearing to consider appropriate response including but not limited to the revocation of the CUP or to consider possible amendments to the CUP. The hearing shall be held upon due notice having been provided to the Permittee and to the public in accordance with established ordinance/policy.

G-16 NON-COMPLIANCE (ENFORCEMENT & TERMINATION):

Should the Permittee violate any condition herein, the County shall give written notice of such violation and actions required of Permittee to correct such violation. If Permittee does not act to correct the identified violation within forty-five (45) days

PC ORIGINAL PKG

after written notice, County may revoke the CUP. If Permittee pursues correction of such violation with reasonable diligence, the County may extend the cure period. Upon such revocation, County may, at its sole discretion, cease processing, defending any lawsuit or paying for costs associated with the Project.

G-17 COSTS:

Permittee shall pay any and all amounts determined by the County to defray any and all cost(s) for the review of reports, field investigations, monitoring, and other activities directly related to the enforcement/monitoring for compliance of this CUP, County Ordinance or any other applicable law. Any billing against this project, now or in the future, by the Planning & Development Services Department or any County Department for costs incurred as a result of this CUP, shall be billed through the Planning & Development Services Department.

G-18 REPORT(S)

Permittee shall file an annual report with the Planning and Development Services Department to show that Permittee is in full compliance with this CUP. The report shall be filed at least fifteen (15) days prior to the anniversary (recordation date) of this CUP. It shall be the responsibility of the Permittee to provide all reports and to include the information about other users. The County may request information at any time from the Permittee or other users if applicable; however, it shall be the responsibility of the Permittee to assure that the County receives such information in a timely manner.

G-19 RESPONSIBLE AGENT

Permittee shall maintain on file with the Planning and Development Services Department the name and phone number of the responsible agent for the site. A back-up name shall also be provided, and a phone number for twenty-four (24) hour emergency contact shall also be on file. If there are other users, the same information (as applicable) required from the Permittee shall also be made available to the County from such other users.

G-20 WATER AND SEWER:

Permittee shall provide water and sewer to Federal, State and County standards. Water and sewer systems shall be approved by the Environmental Health Services and the Planning & Development Services Department. Permittee shall hook up to a public water system or supplier if and when available.

G-21 DEFINITIONS:

In the event of a dispute, the meaning(s) or the intent of any word(s) phrase(s) and/or conditions or sections herein shall be determined by the Planning Commission of the County of Imperial. Their determination shall be final unless an appeal is made to the Board of Supervisors ten (10) days from the date of their decision.

PC ORIGINAL PKG

G-22 SPECIFICITY:

The issuance of this CUP does not authorize the Permittee to construct or operate this project in violation of any state, federal, local law nor beyond the specified boundaries of the project as shown in the application/project description/ CUP, nor shall this CUP allow any accessory or ancillary use not specified herein. This CUP does not provide any prescriptive right or use to the Permittee for future addition and/or modification to this project.

G-23 HEALTH HAZARD:

If the County Health Officer determines that a significant health hazard exists to the public, the County Health Officer may require appropriate measures and the Permittee shall implement such measures to mitigate the health hazard. If the hazard to the public is determined to be imminent, such measures may be imposed immediately and may include temporary suspension of the subject operations. However, within forty five (45) days of any such suspension of operations, the measures imposed by the County Health Officer must be submitted to the Planning Commission for review and approval. Nothing shall prohibit Permittee from requesting a special Planning Commission meeting provided Permittee bears all costs.

G-24 CHANGE OF OWNER/OPERATOR:

In the event the ownership of the site or the operation of the site transfers from the current Permittee to a new successor Permittee, the successor Permittee shall be bound by all terms and conditions of this CUP as if said successor was the original Permittee. Current Permittee shall inform the County Planning & Development Services Department in writing at least sixty (60) days prior to any such transfer. Failure of a notice of change of ownership or change of operator shall be grounds for the immediate revocation of the CUP. In the event of a change, the new Owner/Operator shall file with the Department, via certified mail, a letter stating that they are fully aware of all conditions and acknowledge that they will adhere to all.

G-25 PERMITS OF OTHER AGENCIES INCORPORATED:

Permits granted by other governmental agencies in connection with the Project are incorporated herein by reference. The County reserves the right to apply conditions of those permits, as the County deems appropriate; provided, however, that enforcement of a permit granted by another governmental agency shall require concurrence by the respective agency. Permittee shall provide to the County, upon request, copies and amendments of all such permits.

G-26 MINOR AMENDMENTS:

The Planning Director may approve minor changes or administrative extensions, as requested in writing by the Permittee, provided it does not result in additional

PC ORIGINAL PKG

environmental impacts and/or are generally procedural or technical and/or which may be necessary to comply with other government permit compliance requirements.

(TOTAL "G" CONDITIONS are 26)

SITE SPECIFIC CONDITIONS:

S-1 AUTHORIZED SCOPE OF ACTIVITIES:

(A) Permittee shall be responsible as for all improvements, septic, sewer, approved potable water system(s), pipelines, roads and other improvements discussed in the CUP Application and Conditions of Approval, FEIR, and MMRP. If Permittee sells all or part of this Project, an approved agreement shall be in place for new Project owner to build and maintain as agreed to by the conditions set forth in this CUP. Additionally, the County Assessor's Office shall be notified of any ownership change.

(B) Permittee shall develop this Project per approved CUP as a separate solar energy and energy (battery) storage facility. Any development with a combination of parcels will require the owner(s) to have a recorded deed restriction to "hold the parcel as one parcel" that runs with the land, or at Permittee's option merge the parcels. This deed restriction shall be for a minimum of thirty (30) years and shall only be released upon the expiration of the thirty (30) years, the expiration or termination of the CUP, or upon approval of the Imperial County Planning and Development Director that the restriction is no longer needed based on a change in the development or regulation.

(C) The Permittee shall construct and operate the solar energy and energy (battery) storage facility in compliance with the CUP, the County's General Plan's Land Use Element, Land Use Ordinance and all other applicable local, state, and federal LORS, to include any other permits which are incorporated herein by reference.

(D) Construction, operation, maintenance, replacement and removal of a solar energy facility & energy (battery) storage system shall be as described in Permittee's CUP Application and previously approved FEIR for the Vega SES 2 Solar Energy project (CUP #20-0021), to include photovoltaic (PV) modules, mounting structures, electrical wiring, inverters, transformers and alternating current (AC) electric collector system, project electric substation and ancillary facilities. Ancillary facilities include safety and security equipment, retention basins, perimeter fencing, access gates, lighting systems, access roads, and may include temporary construction trailers, equipment

PC ORIGINAL PKG

enclosures, water treatment system and building, septic system, parking, and fire protection. The Project's PV arrays shall be comprised of solar PV panels organized into electrical groups referred to as "blocks." The panels shall be oriented from east to west for maximum sun exposure and the foundation shall be designed based on soil conditions. The PV panels are made of a poly-crystalline silicon semiconductor material encapsulated in glass. Installation of the PV arrays includes installation of mounting posts, module rail assemblies, PV modules, inverters, transformers and buried electrical conductors. Concrete is required for the footings, foundations and pads for the transformers and substation work. Tracker foundations shall be comprised of either driven or vibrated steel posts/pipes, and/or concrete in some places (depending on soil and underground conditions).

(E) The Project's energy (battery) storage (BESS) component will be located on a concrete pad at the northeastern edge of the project site, unless final engineering design and/or IID requirements require a different location.

The BESS will consist of banks of batteries and will be supported by a DC Combiner, control panel, and inverter/transformer skid. Each enclosure will include built-in fire suppression systems. The batteries will be lithium-ion based and capable of storing up to 480 MW in total (not to exceed 480 MW. These racks would be integrated into containers or be self-contained in engineered systems such as for example the Tesla Mega Pack. The Project design would meet minimum spacing required by code and manufacturers specifications.

S-2 AESTHETICS:

(A) The Permittee shall design and maintain all buildings and equipment enclosures to have exterior surfaces with neutral, non-reflective colors.

(B) The Permittee shall design and install lighting at construction storage yards and staging areas, such that light bulbs and reflectors are not visible from public viewing areas; lighting does not create reflected glare; and illumination of the Project facilities, vicinity, and nighttime sky is minimized.

(C) Lighting shall be designed so exterior light fixtures are hooded, with lights directed downward or toward the area to be illuminated and so that backscatter to the nighttime sky is minimized. The design of the lighting shall be such that the luminescence or light source is shielded to minimize light trespass outside the Project boundary.

(D) All lighting shall be of minimum necessary brightness consistent with worker safety and OSHA requirements.

PC ORIGINAL PKG

(E) High illumination areas not occupied on a continuous basis shall have switches or motion detectors to light the area only when occupied.

S-3 AGRICULTURE:

MITIGATION FOR THE TEMPORARY CONVERSION OF PRIME FARMLAND, FARMLAND OF STATEWIDE IMPORTANCE AND LOCAL IMPORTANCE

Developer shall implement a Mitigation Measure for the loss of Farmland.

One of the following options included below shall be implemented prior to the issuance of a grading permit or building permit (whichever is issued first) for the proposed Project:

For Prime Farmland:

Option 1: The Permittee shall procure Agricultural Conservation Easements on a "2 to 1" basis on land of equal size, of equal quality farmland, outside of the path of development. The Conservation Easements shall meet the State Department of Conservation's regulations and shall be recorded prior to issuance of any grading or building permits; or

Option 2: The Permittee shall pay an "Agricultural In-Lieu Mitigation Fee" in the amount of 30 percent of the fair market value per acre for the total acres of the proposed site based on five comparable sales of land used for agricultural purposes as of the effective date of the permit, including program costs on a cost recovery/time and material basis. The Agricultural In-Lieu Mitigation Fee, will be placed in a trust account administered by the Imperial County Agricultural Commissioner's office and will be used for such purposes as the acquisition, stewardship, preservation and enhancement of agricultural lands within Imperial County; or

Option 3: The Permittee and the County voluntarily enter into an enforceable Public Service Agreement that includes a Agricultural Mitigation payment that is consistent with Board Resolution 2012-05; or

Option 4: The Permittee shall revise their CUP Application/Site Plan to avoid Prime Farmland.

PC ORIGINAL PKG

For Non-Prime Farmland:

Option 1: The Permittee shall procure Agricultural Conservation Easements on a 1 to 1 basis on land of equal size, of equal quality of farmland, outside the path of development. The Conservation Easement shall meet the State Department of Conservation's regulations and shall be recorded prior to issuance of any grading or building permits; or

Option 2: The Permittee shall pay an "Agricultural In-Lieu Mitigation Fee" in the amount of 20% of the fair market value per acre for the total acres of proposed site based on five comparable sales of land used for agricultural purposes as of the effective date of the permit, including program costs on a cost recovery/time and material basis. The Agricultural In-Lieu Mitigation Fee, will be placed in a trust account administered by the Imperial County Agricultural Commissioner's office and will be used for such purposes as the acquisition, stewardship, preservation and enhancement of agricultural lands within Imperial County; or

Option 3: The Permittee and the County voluntarily enter into an enforceable Public Service Agreement that includes a Agricultural Mitigation payment that is consistent with Board Resolution 2012-05; or

Option 4: The Permittee shall revise their CUP Application/Site Plan to avoid Non-Prime Farmland.

For Local Importance Farmland:

Option 1: The Permittee shall procure Agricultural Conservation Easements on a 1 to 1 basis on land of equal size, of equal quality of farmland, outside the path of development. The Conservation Easement shall meet the State Department of Conservation's regulations and shall be recorded prior to issuance of any grading or building permits; or

Option 2: The Permittee shall pay an "Agricultural In-Lieu Mitigation Fee" in the amount of 10% of the fair market value per acre for the total acres of proposed site based on five comparable sales of land used for agricultural purposes as of the effective date of the permit, including program costs on a cost recovery/time and material basis. The Agricultural In-Lieu Mitigation Fee, will be placed in a trust

PC ORIGINAL PKG

account administered by the Imperial County Agricultural Commissioner's office and will be used for such purposes as the acquisition, stewardship, preservation and enhancement of agricultural lands within Imperial County; or

Option 3: The Permittee and the County voluntarily enter into an enforceable Public Service Agreement that includes a Agricultural Mitigation payment that is consistent with Board Resolution 2012-05; or

Option 4: The Permittee shall revise their CUP Application/Site Plan to avoid Local Importance Farmland.

(A) Permittee shall minimize paving and ground disturbing activities to the maximum extent practical within agricultural fields to retain soil characteristics.

(B) Pest Management Plan. Prior to the issuance of a grading permit or building permit (whichever occurs first), a Pest Management Plan shall be developed by the Permittee and approved by the County of Imperial Agriculture Commissioner. The Permittee shall maintain a Pest Management Plan until reclamation is complete. The Plan shall provide the following:

1. Monitoring, preventative, and management strategies for weed and pest control during construction activities at any portion of the project (e.g., transmission line);
2. Control and management of weeds and pests in areas temporarily disturbed during construction where native seed will aid in site revegetation as follows:

- Monitor for all pests including insects, vertebrates, weeds, and pathogens. Promptly control or eradicate pests when found, or when notified by the Agricultural Commissioner's office that a pest problem is present on the project site. The assistance of a licensed pest control advisor is recommended.
- All treatments must be performed by a qualified applicator or a licensed pest control operator;
- "Control" means to reduce the population of common pests below economically damaging levels, and includes attempts to exclude pests before infestation, and effective control methods after infestation. Effective control methods may include physical/mechanical removal, bio control, cultural control, or chemical treatments;
- Use of "permanent" soil sterilants to control weeds or other pests is prohibited because this would interfere with reclamation;
- Notify the Agricultural Commissioner's office immediately regarding any suspected exotic/invasive pest species as defined by the California Department of Food Agriculture and the U.S. Department of Agriculture. Request a sample be taken by the Agricultural Commissioner's Office of a suspected invasive species. Eradication of exotic pests shall be done under

PC ORIGINAL PKG

the direction of the Agricultural Commissioner's Office and/or California Department of Food and Agriculture.

S-4 AIR QUALITY:

(A) The Permittee shall comply at all times with the ICAPCD Regulation VIII, Fugitive Dust Control. Please use MMRP for guidance.

(B) Prior to commencing construction, the Permittee shall submit a Dust Control Plan to the ICAPCD for approval identifying all sources of PM_{10} emissions and associated mitigation measures during the construction and operational phases of the Project. The Project Proponent shall submit a "Construction Notification Form" to the ICAPCD ten (10) days prior to the commencement of any earthmoving activity. The Dust Control Plan submitted to the ICAPCD shall meet all applicable requirements for control of fugitive dust emissions, including the following measures designed to achieve the no greater than 20% opacity performance standard for dust control:

(1) All on-site and off-site unpaved roads shall be effectively stabilized, and visible emissions shall be limited to no greater than 20% opacity for dust emissions by paving, chemical stabilizers, dust suppressants, and/or watering.

(2) All unpaved traffic areas one acre or more in size with seventy-five (75) or more average vehicle trips per day, shall be effectively stabilized, and visible emissions shall be limited to no greater than 20% opacity for dust emissions by paving, chemical stabilizers, dust suppressants and/or watering.

(3) The transport of bulk materials shall be completely covered, unless six inches of freeboard space from the top of the container is maintained with no spillage and loss of bulk material. In addition, the cargo compartment of all haul trucks shall be cleaned and/or washed at the delivery site after removal of bulk material.

(4) All track-out or carry-out, which includes bulk materials that adhere to the exterior surfaces of motor vehicles and/or equipment (including tires) that may then fall onto the pavement, shall be cleaned at the end of each workday, or immediately when mud or dirt extends a cumulative distance of fifty (50) linear feet or more onto a paved road within an urban area.

(5) Movement of bulk material handling or transfer shall be stabilized prior to handling, or at points of transfer with application of sufficient water, chemical stabilizers, or by sheltering or enclosing the operation and transfer line.

PC ORIGINAL PKG

(6) The construction of new unpaved roads is prohibited within any area with a population of five hundred (500) or more, unless the road meets ICAPCD's definition of a "temporary unpaved road." Any temporary unpaved road shall be effectively stabilized and visible emissions shall be limited to no greater than 20% opacity for dust emission by paving, chemical stabilizers, dust suppressants and/or watering.

(7) Shall comply with the MMRP's and its applicable mitigations.

(C) The Permittee shall implement all applicable standard mitigation measures for construction combustion equipment for the reduction of excess NOx emissions as contained in the Imperial County CEQA Air Quality Handbook and associated regulations. These measures include:

(1) Use of alternative fueled or catalyst equipped diesel construction equipment, including all off-road and portable diesel-powered equipment.

(2) Minimize idling time, either by shutting equipment off when not in use or reducing the time of idling to five minutes at a maximum.

(3) Limit the hours of operation of heavy-duty equipment and/or the amount of equipment in use.

(4) Replace fossil-fueled equipment with electrically driven equivalents (assuming powered by a portable generator set and are available, cost effective, and capable of performing the task in an effective, timely manner).

(5) Curtail construction during periods of high ambient pollutant concentrations; this may include ceasing construction activity during the peak hour of vehicular traffic on adjacent roadways.

(6) Implement activity management (e.g. rescheduling activities to avoid overlap of construction phases, which would reduce short-term impacts).

S-5 GEOLOGY/SOILS and MINERAL RESOURCES:

(A) Prior to approval of final engineering and grading plans for the Project, the County shall verify that all recommendations contained in the Geotechnical Report for this Solar Facility and have been incorporated into all final engineering and grading plans. The County's soil engineer and engineering geologist shall review grading plans prior to finalization to verify compliance with the recommendations of the report.

S-6 CULTURAL RESOURCES:

PC ORIGINAL PKG

(A) Compliance and Monitors shall insure all mitigations set forth in the MMRP are followed.

S-7 HEALTH, SAFETY AND HAZARDOUS MATERIAL/FIRE AND FUELS MANAGEMENT:

(A) All trash and debris within the Project site shall be disposed of off-site, in accordance with current, local, state, and federal disposal regulations. Compliance with this measure shall be verified by the Planning and Development Services Department.

(B) If it is determined that hazardous wastes are, or will be generated by the proposed operations, the wastes must be managed in accordance with the California Hazardous Waste Control Law (California Health and Safety Code, Division 20, Chapter 6.5) and the Hazardous Waste Control Regulations (California Code of Regulations, Title 22, Division 4.5).

(C) If it is determined that hazardous wastes will be generated, the Permittee should also obtain a United States Environmental Protection Agency, Identification Number by contacting (800) 618-6942. Certain hazardous waste treatment processes or hazardous material, handling, storage or uses may require authorization from the local Certified Unified Program Agency (CUPA). Information about the requirement for authorization can be obtained by contacting the local CUPA.

(D) Firearms shall be prohibited in all Project areas except for those used by licensed security personnel.

(E) The recognized environmental concerns shall be cleaned up and properly disposed of in accordance with all federal, state and local regulations.

(F) Any hazardous materials storage areas shall be designed with curbs or other containment measures, e.g., double-walled storage tanks, to contain spills and leaks. If on-site hazardous materials exceed fifty-five (55) gallons, a "Hazardous Material Management Plan" shall be prepared and approved by the County Local Enforcement Agency (LEA) and the Imperial County CUPA. A copy of the approved plan shall be submitted to ICPDSD prior to the issuance of the grading/building permit (Source: Imperial County Renewable Energy Ordinance, Title 9, Division 17, § 91702.00).

(G) The Permittee shall present to the Department an Emergency Response/Action Plan that has been approved by the ICFD/OES Department, and the LEA and any other agencies with jurisdiction (Source: Imperial County Renewable Energy Ordinance, Title 9, Division 17, § 91702.00).

PC ORIGINAL PKG

The Emergency Response/Action Plan shall cover all possible foreseeable emergencies, e.g., major fluid spills, earthquakes, fires, floods or other emergencies. At all times, there shall be at least one employee either on the facility premises or on-call (i.e., available to respond to an emergency by reaching the facility within a short period of time) with the responsibility to coordinate all emergency response measures. This Emergency Coordinator shall be thoroughly familiar with all aspects of the Project's Emergency Response/Action Plan, all operations and activities at the facility, location of all records within the facility and the facility's layout. This Emergency Coordinator shall have the authority to commit the resources needed to carry out the contingency plan. Adequate personnel and equipment shall be available to respond to emergencies and to ensure compliance with the conditions of the Permit.

The Emergency Response/Action Plan shall be prepared in consultation with, but not be limited to, the ICFD/OES, County EHS/Health Department, County Sheriff/Coroner's office, County Department of Public Works, ICPDSD, and other appropriate state and county agencies. The plan shall include a notification list of response agencies which shall be notified immediately upon the discovery of a reportable unauthorized discharge and the list shall include:

- ICFD/OES;
- ICPDSD;
- County EHS/Health Department;
- County Department of Public Works; and
- California Highway Patrol, as applicable.

All employees shall be trained by classroom and hands-on training on safety procedures, maintenance programs and emergency response protocols to ensure safety and reliability in the event of an unforeseen emergency situation.

The Permittee shall provide adequate safety devices to protect against the hazard of fire and explosion for activities that involve the use and storage of flammable, explosive or highly corrosive or reactive materials as well as provide adequate firefighting and fire suppression equipment and using devices standard within the industry in compliance with all applicable state and local laws as determined by the ICFD/OES.
The Permittee shall implement all State and County-approved worker safety and fire protection plans and programs.

Any gates on-site shall have a "Knox" lock rapidly accessible by the ICFD/OES.

Appropriate first aid provisions for facility operations shall be made for emergency response during Project construction, operation, and

PC ORIGINAL PKG

maintenance activities with appropriate first aid training for Project employees.

During construction, a member of each working crew shall be trained in basic first aid and supplied with necessary medical equipment to respond to emergencies as provided for in the Emergency Response/Action Plan required above.

Permittee shall identify a responsible agent for emergency purposes, whose name, title, e-mail address and telephone number shall be provided to the County Department of Public Works, ICFD/OES, County Environmental Health Services/Health Department, County Sheriff/Coroner's office, IID, and ICPDSD.

S-8 HYDROLOGY AND WATER QUALITY:

Adhere to measures set forth in the MMRP.

S-9 BIOLOGICAL RESOURCES:

Adhere to all Biological measures in the MMRP

S-10 PUBLIC SERVICES:

(A) The Permittee shall widely publicize to County residents the availability of job opportunities associated with the Project (whether or not those job opportunities are within Imperial County or are regional). Postings at City Halls, newspaper and television advertisements, local job centers, and dedicated website shall offer sufficient avenues of communication. The Imperial County Office of Employment and Training in addition to the Imperial Valley College presents viable sources for community awareness. The information shall provide available positions, details of positions including qualifications, number of openings, indicated the anticipated start date for each, and application process. In order to maintain oversight of the process, the application process can be completed both on a dedicated website and at dedicated computers at the County which would afford those without Internet connection the ability to apply. The Permittee's information shall be forwarded to the Permittee or their contractor and copies of applications files are maintained at the County.

(B) During the development phase of the Project, the Permittee shall provide a roster of employees to include their position and place of residence.

(C) Unless prohibited by local, state or federal law or regulation, Permittee shall make good faith efforts to hire qualified residents of the Imperial County with the objective that a majority of the total work force is comprised of the Imperial County residents.

(D) The Permittee shall install and implement security measures which may include, but not limited to, secured perimeter fencing with barbed wire, sensors, controlled

PC ORIGINAL PKG

access points, security alarms, security camera systems, and security guard vehicle patrols to deter trespass or unauthorized activities that would interfere with operation of the Project.

(E) Permittee shall compensate the County pursuant to the Department of Environmental Health Fee Schedule for any costs of calls related to bees and mosquitoes.

(F) The Permittee shall reimburse the Sheriff's Department for any investigations regarding theft on the Project site and related law enforcement.

(G) All construction supervisors and foremen shall be provided with communication devices, cell phones or walkie-talkies, in the event of an emergency situation on-site.

(H) All construction-related activities shall take place within the development footprint of the Project as defined by the final engineering plans. The anticipated impact areas, including staging areas, equipment access, and disposal or temporary placement of spoils, shall be delineated with staking and/or orange construction fencing prior to construction to avoid natural resources where possible. No construction-related activities shall occur outside of the designated impact area. All construction materials, staging, storage, dispensing, fueling, and maintenance activities shall be designated on construction maps and shall be situated a minimum of fifty (50) feet from all drainages. Staging and temporary access shall occur on existing roadways whenever possible.

(I) **Emergency Operations Plan** - The Applicant shall develop an Emergency Operation Plan in conjunction with local fire service personnel and the AHJ and hold a comprehensive understanding of the hazards associated with lithium-ion battery technology. Lithium-ion battery energy storage systems must incorporate adequate explosion prevention protection as required in NFPA 855 or International Fire Code Chapter 12, where applicable.

(J) **Signage** - The Applicant shall provide signage that identifies the contents of an energy storage system on all energy storage system installations to alert first responders to the potential hazards associated with the installation.

S-11 TRANSPORATION AND TRAFFIC:

A. Permittee shall prepare and submit a Construction Traffic Control Plan to Imperial County Department of Public Works-Development Review and Caltrans District 11, as appropriate, for approval. The Construction Traffic Control Plan must be prepared in accordance with both the California Department of Transportation Manual on Uniform Traffic Control Devices and Work Area Traffic Control Handbook and must include, but not be limited to, the following issues:

PC ORIGINAL PKG

1. Timing of deliveries of heavy equipment and building materials;
2. Directing construction traffic with a flag person;
3. Placing temporary signing, lighting, and traffic control devices if required, including, but not limited to, appropriate signage along access routes to indicate the presence of heavy vehicles and construction traffic;
4. Ensuring access for emergency vehicles to the Project site;
5. Temporarily closing travel lanes or delaying traffic during materials delivery, transmission line stringing activities, or any other utility connections;
6. Maintaining access to adjacent property;
7. Specifying both construction-related vehicle travel and oversize load haul routes, minimizing construction traffic during the AM and PM peak hours, distributing construction traffic flow across alternative routes to access the Project site, and avoiding residential neighborhoods to the maximum extent feasible.

B. Permittee shall Institute construction work hours as necessary, such that the arrival and/or departure times of workers would be staggered as necessary.

C. Permittee shall identify vehicle safety procedure for entering and exiting site access roads.

D. Permittee shall submit documentation that identifies the roads to be used during construction.

E. The Permittee shall be responsible for repairing any damage to non-County maintained roads that may result from construction activities. The Permittee shall submit a preconstruction video log and inspection report regarding roadway conditions for roads used during construction to the Imperial County Department of Public Works Within 30 days of completion of construction, the project proponent/operator shall submit a post-construction video log and inspection report to the County. This information shall be submitted in electronic format. The County, in consultation with the Permittee's engineer, shall determine the extent of remediation required, if any.

S-12 COMMENCEMENT OF WORK:

(A) If the Project has not commenced, or permits for the Project have not been issued, within one (1) year from approval date this CUP shall be null and void. If this CUP has been unused, abandoned, discontinued, or ceased for one (1) year, it shall be null and void and of no effect.

(B) If Permittee cannot initiate or obtain permits for the approved use during the one (1) year period following approve of this CUP, Permittee may request a one (1) year extension from the ICPDSD. The request for an extension shall be in writing and be submitted with explanation to the

PC ORIGINAL PKG

ICPDSD at least sixty (60) days prior to the end of the one (1) year period. The Director shall have the authority to extend the initial startup period of a CUP two times for a maximum of one (1) year each. No extension under this section shall be extended for more than two (2) years.

S-13 CONSTRUCTION STANDARDS:

(A) The solar energy and energy (battery) storage facility structures shall be built in accordance with the California Building Code requirements applicable to "Seismic Category D". All structures and facilities shall be designed in accordance with the publication entitled "Recommended Lateral Force Requirements and Commentary by the Structural Engineers Association of California". The structural components of the permitted facilities shall be reviewed by the Building Official/Planning and Development Services Director. Applicable building permits shall be procured from the County for facilities prior to commencement of construction of such facilities.

S-14 LAND USE IMPROVEMENTS:

(A) The Permittee shall prepare an appropriate parking plan for review and approval by the ICPDSD and County Public Works Department for any and/or all proposed Operation & Maintenance buildings.

(B) The Permittee shall surface with a material of higher quality all access drives, parking areas, and vehicular maneuvering areas from primary access to any constructed operation and maintenance buildings.

S-15 NOISE STANDARDS:

(A) During the construction period, heavy truck traffic shall be limited to the hours between 6:00 AM and 7:00 PM.

(B) During construction, in accordance with Imperial County Noise Element of the General Plan, the noise level shall not exceed 75 dBA_{Leq} at the property boundary when averaged over an 8-hour period.

(C) During operation of the facility, the maximum permitted continuous sound level shall be not more than 45 dBA_{Leq}, as measured at the nearest residence using the "A" scale and measured with a sound level meter and associated octave band analyzer. The level may be exceeded by ten percent (10%) if the noise is intermittent and during daylight hours.

(D) Haul trucks and other engine-powered equipment shall be muffled and operated with engine exhaust brake use limited to emergencies.

PC ORIGINAL PKG

S-16 ODOR CONTROL:

The Permittee shall control all odor-causing, harmful, noxious emissions to ensure that quantities or air contaminants released as a result of the permitted facilities do not exceed County, State or Federal standards, nor constitute a public nuisance, per the Imperial County Land Use Ordinance, Division 13, Enforcement, Chapter 2, Abatement of Nuisances, Sections 91302.00 through 91301.02.

S-17 PLAN APPROVALS:

Permittee shall submit to the ICPDSD, architectural, landscaping and lighting plans prior to construction of those facilities, to include painting of structures, planting of trees and/or vegetation, and shall receive all approvals prior to commencing construction of the applicable permitted facilities. Approval shall not be unreasonably withheld so long as the plans are consistent with applicable Imperial County Land Use Ordinance requirements.

S-18 PROJECT DESIGN:

(A) All facility access and parking areas shall be constructed to the standards of the Imperial County Land Use Ordinance.

(B) All permitted activities shall provide for the minimum feasible surface land disturbance for compatibility with the existing uses wherever possible.

(C) All equipment and electrical interconnection facilities used at the solar plant facilities shall be maintained in a manner that prevents breaking, cracking, and leaking, e.g. operator staffing and training, including appropriate quality assurance procedures, with the operation of back-up or auxiliary facilities when necessary.

(D) All on-site basins shall be designed and constructed under the supervision of a California-licensed Civil Engineer meeting sound engineering standards, with all applicable regulations and all requirements of the County EHS/Health Department and Public Works Departments are complied with.

(E) Permittee shall obtain encroachment permits for any construction or operation on IID existing rights of way or easements.

S-19 REPORTING AND MONITORING:

(A) The Permittee shall furnish to the County, at its sole cost within a reasonable time, any relevant reports/information which the County requires for monitoring purposes to determine whether cause exists for revoking this Permit, or to determine compliance with this Permit. The

PC ORIGINAL PKG

Permittee shall submit all required reports to the Planning Director, County Planning and Development Services Department, 801 Main Street, El Centro, CA 92243.

(B) Permittee and ICPDSD Director shall agree upon an environmental consultant for overseeing all the required mitigation, conditional use Permit conditions and public benefit agreement (if any) requirements during the construction of the Project.

(C) Permittee shall pay for third-party environmental consultant monitoring and compliance.

(D) The ICPDSD, in consultation with the third-party Environmental Consultant and the County Executive Office, will require that all mitigation measures be satisfied, all MMRP requirements have been satisfied, all Conditions of Approval in the CUP are in full compliance and all conditions of the Development Agreement (if any) have been satisfied before the Final Certificate of Occupancy Certificate is issued.

(E) During the operation of solar facility, an Annual Compliance Report shall be submitted to the ICPDS, documenting the implementation of the conditions and general measures as well as any resource-specific measures.

(F) The Permittee shall reimburse the ICPDS for County as well as monitoring and investigations related to the construction and operation of the Project. Permittee shall compensate the County pursuant to the ICPDSD Fee Schedule for any costs incurred.

(G) Permittee shall pay for all costs as required to comply with the Conditions of Approval and MMRP.

(H) All County staff time will be billed on a time and materials basis. Failure by Permittee to provide any payment required of Permittee to the County in the CUP shall cause Permittee to be in non-compliance of the CUP. Upon notice of such noncompliance, County may, at its sole discretion, cease processing, defending any lawsuit or paying for costs associated with the Project.

S-20 SPILLS AND RUNOFF:

The Permittee shall design and construct the permitted facilities to prevent spills from endangering adjacent properties and to prevent runoff from any source being channeled or directed in an unnatural way so as to cause erosion, siltation, or other detriments pursuant to the construction Storm Water Pollution Prevention Plan approved by the Regional Water Quality Control Board.

S-21 FACILITIES CLOSURE AND SITE RESTORATION:

PC ORIGINAL PKG

(A) Permittee shall implement the site restoration plan at the earlier of when the operation of the permitted facilities herein authorized has ceased or the term of the CUP has expired. At such time, all facilities shall be dismantled, and the lands involved restored to their pre-construction condition and available for agricultural production uses as agreed to by the Imperial County Planning and Development Services Director.

(B) Prior to the issuance of a grading Permit, a decommissioning and restoration plan (the Reclamation Plan) shall be submitted and approved by the Imperial County Planning and Development Services Director. The Reclamation Plan shall documents the procedures by which the Project site will be returned to its current conditions.

(C) Within thirty (30) days prior to ground disturbance, a Bond, or other acceptable surety, in the amount of the estimated site restoration financial calculations/bond, for the developed project area, or other forms of security acceptable to County Counsel's office, shall be filed with the County that guarantees restoration of the land to its condition prior to the permitted solar plant development.

(D) Upon completion of such site restoration, and demonstration that the land has been restored to the agriculturally productive/farmable condition prior to the permitted solar plant development the Bond or other surety shall be released by the County.

(E) The above financial calculations/bond shall be reviewed every five (5) years in December and adjusted on January 1st to add a Consumer Price Index (CPI) (Los Angeles) increase by the Planning and Development Services Director. This readjustment can be made in the County's sole discretion and must be funded by the Permittee within ninety (90) calendars after notice of the additional amount of such adjustment.

S-22 PUBLIC WORKS:

1. The Applicant shall acquire proper easements from adjacent property owners for the installation of any proposed transmission lines.

2. All survey monuments, including those within the interior of the project, shall be protected, and their locations shall remain accessible to any surveyor throughout the duration of the project. Section 8774 of the Business and Professions Code, and Section 846.5 of the Civil Code, each provide the right of entry to utilize boundary evidence and perform surveys, without undue delay, to any person authorized to practice land surveying. The right of entry is not contingent upon prior notice.

3. The Applicant shall furnish a Drainage and Grading Plan/Study to provide for property grading and drainage control, which shall also include prevention of

PC ORIGINAL PKG

sedimentation of damage to off-site properties. The Study/Plan shall be submitted to the Department of Public Works for review and approval. The applicant shall implement the approved plan. Employment of the appropriate Best Management Practices (BMP's) shall be included (Per Imperial County Code of Ordinances, Chapter 12.10.020 B).

4. Based from the information provided on the project documents, it is assumed that County roads will not be used for site access during or after construction activities have been completed. In the event that County roads are required for site access, the Applicant shall consult with this Department in advance for review and approval.

   Access to sites shall be completed from public roads.

5. Any unimproved access roads/routes between public roads and access gates shall be improved for all-weather access. Such all-weather improvements shall be completed as recommended by a Geotechnical Engineer licensed to practice in the State of California.

6. Each site shall have, as a minimum, one (1) primary Class 2 Base aggregate material driveway and one (1) emergency access Class 2 Base aggregate material driveway, if they are tied to a County Road only.

7. Access to project sites during and after construction is expected to be completed through private unpaved roads or private property.

The Applicant shall mitigate generation of dust caused by construction traffic as per Rule 805 – Paved and Unpaved Roads of the Imperial County Air Pollution Control District.

- All solid and hazardous waste shall be disposed of in approved solid waste disposal sites in accordance with existing County, State and Federal regulations (Per Imperial County Code of Ordinances, Chapter 8.72).

- All on-site traffic areas shall be hard surfaced to provide all weather access for emergency vehicles. The surfacing shall meet the Department of Public Works and Fire/Office of Emergency Services (EOS) Standards as well as those of the Air Pollution Control District (APCD).

- The project may require a National Pollutant Discharge Elimination System (NPDES) permit and Notice of Intent (NOI) from the Regional Water Quality Control Board (RWQCB) prior to County approval of onsite grading plan (40 CFR 122.28).

- A Transportation Permit may be required from road agency(s) having jurisdiction over the haul route(s) for any hauls of heavy equipment and/or large vehicles which impose greater than legal loads on riding surfaces, including bridges. (Per Imperial County Code of Ordinances, Chapter 10.12 - OVERWEIGHT VEHICLES AND LOADS).

PC ORIGINAL PKG

- Effective September 15, 2020, the State's Mandatory Organic Waste Recycling Law (AB 1826 or Chapter 727, Statutes of 2014) decreased the threshold requiring all businesses and multi-dwelling facilitates of 5 units or more generating two (2) cubic yards or more of solid waste per week to recycle their organic waste including landscape waste, wood waste, and food waste. Information about possible organics waste recycling services can be found at the CalRecycle site at: https://www.calrecycle.ca.gov/Recycle/Commercial/Organics/

S-23 WASTE DISPOSAL

(A) The Permittee shall insure that all solar plant facilities waste, liquid, gas or solid, which are generated on-site shall be disposed of in compliance with appropriate local, state, and federal regulations, in effect or as subsequently duly-enacted. All solid waste debris and/or any hazardous wastes located on the Project site must be satisfactorily removed to a permitted facility prior to the commencement of grading earthen material at the site.

(B) Littering shall not be allowed. Project personnel shall not deposit or leave any food or waste in the Project area, and no biodegradable or non-biodegradable debris shall remain in the right-of-way or on the Project site following completion of construction.

S-24 CALTRANS:

(A) An encroachment permit shall be required for any work performed within any Caltrans right-of-way. If required, any traffic control will need to be addressed as part of Caltrans permit approval in accordance with the Caltrans Standard Plans and the California Manual on Uniform Traffic Control Devices (MUTCD).

(B) Any application for a permit for work performed within a Caltrans right-of-way must include an approved final environmental document including the California Environmental Quality Act (CEQA) determination addressing any environmental impacts within the Caltrans right-of-way and any corresponding technical studies, if required. If these materials are not included with the encroachment permit application, the Permittee will be required to acquire and provide these to Caltrans before the permit application will be accepted. Identification of avoidance and/or mitigation measures will be a condition of encroachment permit approval as well as procurement of any necessary regulatory and resource agency permits.

(C) Any work performed within Caltrans' Right of Way (R/W) will require discretionary review and approval by Caltrans. As part of the encroachment permit process, the applicant must provide an approved

PC ORIGINAL PKG

final environmental document, corresponding technical studies, and necessary regulatory and resource agency permits, specifically, any CEQA determinations or exemptions.

S-25 IID Condition requirements

(A) The Project may impact IID drains with project site runoff flows draining into IID drains. To mitigate impacts, IID may require a comprehensive IID hydraulic drainage system analysis. IID's hydraulic drainage system analysis includes an associated drain impact fee.

(B) An IID encroachment permit is necessary to utilize existing surface-water drainpipe connections to drains and receive drainage service from IID. Surface-water drainpipe connections are to be modified in accordance with IID standards. A construction storm-water permit from the California Regional Water Quality Control Board is required before commencing construction and an industrial storm water permit from CRWQCB is needed for the operation of the proposed facility. Copies of these permits as well as the project's Storm Water Pollution Prevention Plan are to be submitted to IID.

S-26 FIRE PROTECTION:

Energy storage facilities create extreme hazards for firefighters and emergency responders with possibility of explosions, flammable gases, toxic fumes, water-reactive materials, electrical shock, corrosives, chemical burns. The hazards listed can create a potential significant impact on Imperial County Fire Department due personnel staffing to safely perform firefighting operations and Hazardous Material Response for a utility-scale energy storage facility. The location of the project will lead to longer response times. These longer response times can create incidents that can create difficulties in incident stabilization; therefor requiring additional personnel to safety manage the incident. Utility-scale energy storage will require specialized and reliable equipment to perform firefighting operations safely and effectively to NFPA, OSHA and ICFD standards and requirements.

Standards and requirements for energy storage system includes but not limited to:

NFPA:

1 Fire Code
70 National Electrical Code
855 Standard for the installation of Energy Storage System
111 Stored Electrical Energy Emergency and Standby Power System
1710 Standard for Organization and Deployment of Fire Suppression Operations, Emergency Medial Operations, and Special Operations to the Public by Career Fire Departments.

OSHA:

29 CFR 1910.134(g)(4)

CFC:

PC ORIGINAL PKG

Chapter 12 section 1206 Electrical Energy Storage System
Chapter 9 Fire Protection and Life Safety System.

1) Vega Solar Energy and Storage Project reviews for plans and inspections will be done by a third-party consultant determined by the Fire Department at the applicant's expense as per California Fire Code Chapter 1 [A] 104.7.2 Technical Assistance. This will be at the discretion of the Fire Department.

2) Project will provide adequate Fire water. Fire Department will determine number of gallons to be placed strategically once site plan is reviewed.

3) This payment shall be made before issuance of the first building permit for the Project, or for each phase of the Project, whichever is applicable.

4) Signage that identifies the contents of an ESS is required on all ESS installations to alert first responders to the potential hazards associated with the installation.

5) An approved water supply capable of supplying the required fire flow determined by appendix B in the California Fire Code shall be installed and maintained. Private fire service mains and appurtenance shall be installed in accordance with NFPA 24.

6) An approved automatic fire suppression system shall be installed on all structures as per the California Fire Code. All fire suppression systems will be installed and maintained to the current adapted fire code and regulations.

7) An approved automatic fire detection system shall be installed on all structures as per the California Fire Code. All fire detection systems will be installed and maintained to the current adapted fire code and regulations.

8) Fire department access roads and gates will be in accordance with the current adapted fire code and the facility will maintain a Knox Box for access on site.

9) Compliance with all required sections of the fire code.

10) Applicant shall provide product containment areas(s) for both product and water run-off in case of fire applications and retained for removal.

11) All hazardous material and wastes shall be handled, store, and disposed as per the approved Hazardous Waste Materials Plan. All spills shall be documented and reported to Imperial County Fire Department and CUPA as required by the Hazardous Waste Material Plan.

PC ORIGINAL PKG

S-27 COUNTY EXECUTIVE OFFICE:

1. Fiscal and Economic Impact Analysis. The Permittee will be invoiced by the Executive Office for expenses related to the procurement of a consultant to produce a Fiscal and Economic Impact Analysis (FEIA) and will be responsible for the cost of any subsequent updates as a result of modifications to the data and project by the developer.

2. Public Service Agreement ("Agreement" or "PSA"). Pursuant to the Guidelines for the Public Service Program for Solar Power Plants in Imperial County amended and adopted by the Board of Supervisors on May 9, 2023, PSA will be entered into by and between the County of Imperial and Developer to provide for a concerted and coordinated effort to maximize the benefits of the Project to the County of Imperial community.
   Sales Tax Benefit Solar Farm:

(a) Developer will require that all qualifying contractors and subcontractors exercise their option to obtain a California Department of Tax and Fee Administration (CDTFA) sub-permit for the jobsite and allocate all eligible use tax payments to Imperial County and LTA. Prior to commencement of any construction activity on-site the developer will require that the contractor or subcontractor provide County of Imperial with either a copy of their CDTFA account number and sub-permit.

(b) To accomplish this, Permittee shall either cause its construction contractor to treat the project in accordance with California Regulation 1521(b)(2)(B), California Regulation 1521(c)(13)(B), and California Regulation 1826(b) for sales and use tax purposes or form a "Buying Company" as defined in the CDTFA 1699(h). Permittee can adopt an alternate methodology to accomplish this goal if such methodology is approved by the County Executive Officer prior to issuance of building permits. Not later than forty five (45) days after the due date for filing sales and use tax returns for each calendar quarter, occurring after the commencement of any construction activity on-site through and including the first anniversary of COD (as defined below),

(c) Developer shall report, or cause its general contractor to report to County, the total amount of sales and use taxes related to the Project that are allocated to the County, and reported on Developer's, general contractor's, and subcontractors' applicable California sales and use tax returns. The obligations of Developer under this Section III.A are hereinafter referred to as the "Developer Sales and Use Tax Responsibilities."

(d) Guarantee Amounts. In the event that Developer shall fail to perform the Developer Sales and Use Tax Responsibilities and as a result of such failure, with respect to the Project, (i) County receives less than the amount of such sales and use taxes it would have received under existing applicable sales and use tax laws had such responsibilities been fully performed subject to adjustment as set forth in Section IV.C below) or (ii) Local Transportation Authority (LTA) receives less than the amount of such sales and use taxes it would have received under existing applicable sales and use tax laws had such responsibilities been fully-performed, then

PC ORIGINAL PKG

Developer shall pay, as and when provided below, to County or LTA as applicable, the amount of the applicable shortfall.

(e) Adjustments to Guarantee Amounts.

(f) Developer's sales tax guarantee set out in Section III.B above shall be adjusted to be eighty-five percent (85%) of the projected sales and use taxes for the Project. At least ten (10) days prior to the issuance of the first (1st) grading permit, Developer shall provide County with evidence of such projected sales and use taxes, including but not limited to sales taxes receipts, engineering contracts, procurement contracts, construction contracts. County shall meet with Developer to confirm that amount.

(g) The amount of sales and use tax anticipated to be generated is based on the projected construction of a two hundred-forty (240) megawatt alternating current solar generation facility. Construction of any additional output capacity beyond the 240 MW output now projected will require the sales tax guarantee be adjusted based on the actual output from solar generation facilities of the Project as evidenced by any Power Purchase Agreement subsequently entered into by Developer related to this Project.

(h) To the extent of any reduction in the size of the Project as the result of any final ruling, stipulated judgment, or settlement, in accordance with Section V.C below, the not-to-exceed amounts set forth in Section III.B shall be reduced pro rata based on the size of such reduction.

(i) The complete amount due to County for the Project must be received within one (1) year after Commercial Operation Date ("COD") for this Project. If, within one (1) year after issuance of the final Certificate of Occupancy, the sales and use taxes received by the County are less than the amount guaranteed for that portion of the project, Developer shall pay the difference to the County.

(j) Payments to County and LTA as a result of a shortfall shall be due within thirty days of Developer's receipt of written notice of shortfall from the County. Payments received by County after the ninetieth (90th) day following Developer's receipt of notice shall be deemed late. Developer hereby agrees to pay interest at the rate of six percent (6%) per annum of the payment due for any payment received by County beyond the due date. Said interest shall be included with the late payment. The obligation to pay interest shall be stayed when such amounts are disputed in good faith, so long as Developer submits the payments "under written protest." Upon determination of dispute, such interest may be assessed if it is determined that the dispute was not made in good faith.

(k) In the event that Developer repowers or replaces the equipment onsite, each Site shall be designated as the "Point of Sale" so as to create an additional local tax-funding source for the County of Imperial.

I. Battery Storage Sales Tax Benefit

1.1.1. To the extent permitted by applicable local, state, and Federal law, Developer will require that all qualifying contractors and subcontractors exercise their option to obtain a California Department of Tax and Fee Administration ("CDTFA") sub-permit for the jobsite and allocate all

PC ORIGINAL PKG

eligible sales and use tax payments to County and the Local Transit Authority ("LTA").

1.1.2. Prior to commencement of any construction activity onsite exclusive of grading, Developer shall require that the contractor or subcontractor provide County with a copy of their CDTFA account number and sub-permit. Developer shall either cause its construction contractor to treat the Project in accordance with California Sales and Use Tax Regulation 1521(b)(2)(B), California Sales and Use Tax Regulation 1521(c)(13)(B), and California Sales and Use Tax Regulation 1826(b) for sales and use tax purposes, or form a "Buying Company," as defined in the California Sales and Use Tax Regulation 1699(h). Developer may adopt an alternate methodology to accomplish this goal if such methodology is approved by the County's Executive Officer prior to issuance of any building permit.

1.1.3. No later than forty-five (45) days after the due date for filing sales and use tax returns for each calendar quarter, occurring after the commencement of any construction activity on-site through and including the first anniversary of commercial operating date ("COD"), Developer shall report, or cause its general contractor to report to County, the total amount of sales and use taxes related to the Project that are allocated to the County, and reported on Developer's, general contractor's and subcontractors' applicable California sales and use tax returns.

1.1.4. *Guarantee Amounts*. Prior to the issuance of any building permit for the Project, Developer shall provide County with a guarantee of the minimum sales and use that will be received by County and LTA under existing applicable sales and use tax laws. The guarantee amount shall be based on the total storage capacity of the Project in megawatts, which is projected to be four hundred-eighty megawatts (480 MW) Should Developer choose to develop the Project in phases, and receives the required approvals from County to do so, then Developer shall provide a separate guarantee amount for each phase of the project based on the total storage capacity in megawatts for the applicable phase.

(a) Developer warrants that the sales/use tax guarantee amounts to be provided to County as mandated in this Subparagraph 9.2.4 shall be true and accurate estimates of the projected sales and use taxes that will be generated for this Project. Developer shall provide County with evidence of the projected sales/use taxes for the Project, including but not limited to sales tax receipts, and executed or anticipated engineering contracts, procurement contracts, and construction contracts. If the Parties are unable to agree upon a guarantee amount, then the dispute shall be referred to an independent accountant mutually acceptable to both Parties. The costs for such nonbinding mediation shall be borne by Developer.

PC ORIGINAL PKG

(b) Developer warrants that the sales/use tax guarantee amounts to be provided to County as mandated in this Subparagraph 9.2.4 will incorporate any and all sales/use tax exemptions that Developer and/or its contractors and subcontractors intend to utilize, and that such exemptions will be disclosed to County fully and in good faith prior to the issuance of any building permit for this Project.

(c) Developer understands and acknowledges that the sales/use tax guarantee amounts to be provided to County as mandated by this Subparagraph 9.2.4 are a part of the consideration to be received by County in return for entering into this Agreement, and further understands and acknowledges that County would not enter into this Agreement but for said guarantee from Developer.

1.1.5. In the event that County and / or LTA receives less than the amount of sales/use taxes guaranteed pursuant to Subparagraph 9.2.4, then Developer shall pay, as and when provided below, to County or LTA as applicable, the amount of the applicable shortfall.

1.1.6. *Adjustments to Guarantee Amounts.*

(a) The amount of sales and use tax anticipated to be generated is based on the projected construction of a 480 MW utility-scale energy storage complex incorporating lithium ion batteries and/or flow battery technologies throughout the Project site. Construction of any additional storage capacity beyond the 480 MW storage capacity now projected will require the sales/use tax guarantee amounts to be adjusted based on the actual storage facilities of the Project as evidenced by any power purchase agreement or power storage agreement subsequently entered into by Developer related to this Project.

(b) To the extent of any reduction in the size of the Project as the result of any final ruling, stipulated judgment, or settlement, the sales/use tax guarantee amounts mandated under Subparagraph 9.2.4 shall be reduced pro rata based on the size of such reduction.

(c) Should Developer become of aware of a change in circumstances that would materially affect the sales/use tax guarantee amount, then Developer shall, within thirty (30) days of learning of such change in circumstances, inform the County in writing of the change in circumstances. If the County determines that such change in circumstances warrants an adjustment to the sales/use tax guarantee amount, then County shall negotiate in good faith with Developer in revising the sales/use tax guarantee amount. If the Parties are unable to agree upon a revised guarantee amount, then the dispute shall be referred to an independent accountant mutually acceptable to both Parties. The costs for such nonbinding mediation shall be borne by Developer. Failure of the Developer to inform the County of the change in circumstances shall constitute a waiver of Developer's ability to seek any adjustment to the sales/use tax guarantee based on such change in circumstances.

1.1.7. The complete sales/use tax guarantee amount due to County and LTA for the Project must be received within one (1) year after COD for this Project, or such later date as any applicable sales/use tax is due or is transmitted from the CDTFA, unless it is delayed due to causes beyond

PC ORIGINAL PKG

Developer's control or for which Developer is not responsible. If, within one (1) year after issuance of the final certificate of occupancy, or such later date as any applicable sales/use tax is due or is transmitted from the CDTFA, the sales/use taxes received by the County are less than the sales use tax guarantee amounts mandated under Subparagraph 9.2.4, then Developer shall pay the difference to the County.

1.1.8. Payments to County and LTA as a result of a shortfall shall be due within thirty days of Developer's receipt of written notice of shortfall from the County. Payments received by County after the ninetieth (90th) day following Developer's receipt of notice shall be deemed late. Developer hereby agrees to pay interest at the rate of six percent (6%) per annum of the payment due for any payment received by County beyond the due date. Said interest shall be included with the late payment. The obligation to pay interest shall be stayed when such amounts are disputed in good faith, so long as Developer submits the payments "under written protest." Upon determination of dispute, such interest may be assessed if it is determined that the dispute was not made in good faith.

In the event that Developer repowers or replaces the equipment onsite, each Site shall be designated as the "Point of Sale" so as to create an additional local tax-funding source for the County of Imperial

S-28 Additional Conditions

1. Because oversize vehicles may utilize this facility (i.e., SR 111), as a condition of the Conditional Use Permit, the project applicant will be required to obtain all applicable Caltrans permits required for construction of the project, including special transportation permits (if applicable) for oversize construction vehicles.
2. As a condition of the Conditional Use Permit, the applicant will be required to prepare and submit for approval a traffic management plan to Caltrans as specified in this comment.
3. As currently proposed, the project would not require an encroachment permit as no work or improvements are proposed within Caltrans right-of-way. However, as a condition of the Conditional Use Permit, the applicant will be required to obtain necessary permits from Caltrans. This includes encroachment permits if applicable.
4. **Coachella Valley Water District –** Review for requirements on elevated concrete foundations and appropriate spacing shall be evaluated, including with respect to existing training dikes and addressed as part of the final site plan engineering design.
5. **Bureau of Reclamation.** modifications to training dikes will require appropriate authorization from Bureau of Reclamation.

PC ORIGINAL PKG

6. Condition of approval that the County and Developer will coordinate with the U.S. Marine Corps to notify them of the project development and to determine any potential impacts to their operations, if any.

S-29 ACCEPTANCE:

Acceptance of this permit shall be deemed to constitute agreement by Permittee with all terms and conditions herein contained.

The rest of this page is intentionally left blank.

PC ORIGINAL PKG

NOW THEREFORE, County hereby issues the Conditional Use Permit #20-0021, and Permittee hereby accepts such permit upon the terms and conditions set forth herein.

IN WITNESS THEREOF, the parties hereto have executed this Agreement the day and year first written.

RESOLUTION NO.

A RESOLUTION OF THE PLANNING COMMISSION OF THE COUNTY OF IMPERIAL, CALIFORNIA, RECOMMENDING APPROVAL TO THE BOARD OF SUPERVISORS FOR " VEGA SES 3 SOLAR ENERGY STORAGE PROJECT" FOR CONDITIONAL USE PERMIT #20-0022"

WHEREAS, APEX ENERGY SOLUTIONS, LLC has submitted an application for Conditional Use Permit (CUP) #20-0022 to develop a nominal 60-megawatt (MW) solar photovoltaic (PV) energy generation project with an integrated battery storage system not to exceed 120 MW. The project includes solar energy generation facility, battery storage system, switching station and gen-tie line. The project is to be located on approximately 230 acres; and,

WHEREAS, an Environmental Impact Report and CEQA Findings have been prepared in accordance with the requirements of the California Environmental Quality Act, the State Guidelines, and the County's "Rules and Regulations to Implement CEQA," as Amended; and,

WHEREAS, the Planning Commission of the County of Imperial has been delegated with the responsibility of approvals, certifications and making recommendations to the Imperial County Board of Supervisors for approvals of conditional use permits; and,

WHEREAS, public notice of said application has been given, and the Planning Commission has heard, received and considered all oral and written protests, objections and evidence presented by interested parties at a public hearing held with respect to this item on August 23, 2023; and,

WHEREAS, the Draft EIR was received by the State Clearinghouse on December 14, 2022 and circulated for a period of 50 days (**SCH #2021050013**) with the commenting period ending February 2, 2023; and,

NOW, THEREFORE, the Planning Commission of the County of Imperial **DOES HEREBY RESOLVE** as follows:

SECTION 1. The Planning Commission has considered the proposed Conditional Use Permit #20-0022 prior to recommending approval and the County's consideration of the Project has been noticed in compliance with law.

PC ORIGINAL PKG

SECTION 2. That the Project complies with the requirements of the Imperial County Code and is in accordance with State Planning and Zoning law therefore, the following findings are made pursuant to Imperial County Code § 90203.09 as follows:

A. The proposed use is consistent with goals and policies of the adopted County General Plan. (Imperial County Code § 90203.09.A)

The current General Plan land use designations of the project site and proposed parcels are "Recreation/Open Space" and proposed project parcels are within the Renewable Energy Overlay (RE). Therefore, the proposed uses could be found consistent with the General Plan.

B. The proposed use is consistent with the purpose of the zone or sub-zone within which the use will be used. (Imperial County Code § 90203.09.B)

The proposed project parcels are zoned S-2-RE. (Open Space Preservation) with Renewable Energy Overlay). The proposed uses are consistent with the zone since they are listed as allowed uses under the S-2-RE zone with requirements for an approved Conditional Use Permit.

C. The proposed use is listed as a use within the zone or sub-zone or is found to be similar to a listed conditional use according to the procedures of Section 90203.00. (Imperial County Code § 90203.09.C)

The proposed use is consistent with the zone: S-2-RE (General Agriculture with Renewable Energy Overlay).

D. The proposed use meets the minimum requirements of this Title applicable to the use and complies with all applicable laws, ordinances and regulation of the County of Imperial and the State of California. (Imperial County Code § 90203.09.D)

The Project complies with the minimum requirements of this Title by, among other things, obtaining a CUP, complying with the California Environmental Quality Act, and participating in the public review and hearing process. Development standards have been established for the Project pursuant to these processes, and will be enforced via imposition and enforcement of the Mitigation Monitoring and Reporting Program recommended for approval by separate Resolution, as well as the conditions of approval imposed on this CUP. The Conditions of Approval will further insure that the project complies with all applicable regulations of the County

PC ORIGINAL PKG

of Imperial and the State of California. Therefore, the proposed project meets the minimum requirements of the Land Use Ordinance, Section 90203.00.

E. The proposed use will not be detrimental to the health, safety, and welfare of the public or to the property and residents in the vicinity. (Imperial County Code § 90203.09.E)

The Environmental Impact Report (EIR) prepared for the Project analyzed the Project's potential effects on the health, safety, and welfare of the public and property and found that, with mitigation, the Project would have less than significant effects and impacts in all resources areas.

In addition, the project site is not near a residential community and is mostly surrounded by farmland and or open space/recreational land.

F. The proposed use does not violate any other law or ordinance. (Imperial County Code § 90203.09.F)

The proposed project will be subject to the Conditional Use Permit and current Federal, State and Local regulations. State Planning and Zoning Law (Cal. Govt. Code §§ 65000-66035) establishes minimum statewide standards for the regulation of local land use through planning and zoning. The County regulates local land use via Title 9 of the Imperial County Code. As found above, the proposed project is conditioned to be consistent with Imperial County, Title 9, Land Use Ordinance and CEQA mitigation measures and therefore complies with both State and local laws and ordinance.

Pursuant to CEQA, the County has prepared an EIR for the Project, which analyzes the proposed Project's compliance and consistency with other federal, state, and local laws and ordinances regulating the environment. Substantial evidence supports the conclusions in the EIR that the Project complies with said environmental laws, and thus the finds that the proposed use does not violate any other law or ordinance.

G. The proposed use is not granting a special privilege. (Imperial County Code § 90203.09.G)

The proposed solar generating and storage facility is a permitted use subject to approval of the proposed Conditional Use Permit. No special privileges are being offered or will be granted.

PC ORIGINAL PKG

SECTION 3. Approval of the Project is conditioned upon the terms and conditions set forth in the Agreement for Conditional Use Permit #20-0022 attached hereto and incorporated herein by this reference.

NOW, THEREFORE, based on the above findings, the Imperial County Planning Commission **DOES HEREBY RECOMMEND APPROVAL** of Conditional Use Permit #20-0022 to the Board of Supervisors, subject to the attached Conditions of Approval.

AGREEMENT FOR CONDITIONAL USE PERMIT #20-0022
VEGA SES 3 SOLAR ENERGY STORAGE PROJECT
APN's 025-010-006-000-000

This Agreement is made and entered into on this ___day of _____, 2023, by and between APEX ENERGY SOLUTIONS, LLC hereinafter referred to as the Permittee (Permittee), and the COUNTY OF IMPERIAL, a political subdivision of the State of California (County or Imperial County), related to the VEGA SES 3 SOLAR ENERGY STORAGE PROJECT (CUP #20-0022) project area.

RECITALS

WHEREAS, Permittee is the lessee or successor-in-interest of certain land in Imperial County to be improved with the proposed utility-scale solar and battery storage facility. The project, Conditional Use Permit (CUP or Permit) #20-0022, consists of a proposed 60-megawatt (MW) photovoltaic solar energy facility, energy (battery) storage facility **(up to 120 MW and not to exceed a 2 to 1 solar/battery ratio)** and associated infrastructure, including but not limited to, electrical switch station, substation, on-site operations and maintenance (O&M), a gen-tie line and internal solar development transmission lines, on approximately 240 acres within Imperial County (the "Project"). The proposed facility is located approximately 5.67 miles southeast of the unincorporated community of Niland between the unincorporated communities of Iris and Slab City. The Coachella and East Highline Canals and the Union Pacific Railway transect the project area. The project area is located entirely within the County's Renewable Energy Overlay Zone. .

WHEREAS, Permittee has applied to the County of Imperial for CUP #20-0022 for constructing and operating a new 60 MW solar energy facility, energy (battery) storage facility (up to 120 MW and not to exceed a 2 to 1 solar/battery ratio) with ancillary support facilities, including electrical interconnections. The Project will connect to the existing IID "P" line located immediately north of the project site north of the All American Canal.

WHEREAS, the Project is located on portion of APN 025-010-006. Additionally, the legal description includes SEC 9 Township 11 South, Range 15 East on a portion of 640

PC ORIGINAL PKG

acre parcel. The project site is located entirely within the Imperial County Renewable Energy Overlay zone.

WHERAS, The Permittee for the VEGA SES 3 Solar Energy Project (CUP #20-0022) shall fully comply with all of the terms and conditions of the Project as specified hereinafter within this CUP.

The rest of this page is intentionally left blank.

PC ORIGINAL PKG

GENERAL CONDITIONS:

The "GENERAL CONDITIONS" are shown by the letter "G". These conditions are conditions that are either routinely and commonly included in all Conditional Use Permits as "standardized conditions" and/or are conditions that the Imperial County Planning Commission has established as a requirement on all CUP's for consistent application and enforcement. The Permittee is hereby advised that the General Conditions are as applicable as the SITE SPECIFIC conditions. The General Conditions are in addition to the MMRP and any and all other requirements for the project.

G-1 GENERAL LAWS:

The Permittee shall obtain, comply with and maintain all applicable County, State, and federal laws, rules, regulations, ordinances, and/or standards as they may pertain to this project whether specified herein or not.

G-2 EFFECTIVE DATE:

The approved Conditional Use Permit shall not become effective until ten (10) calendar days after the decision of the Planning Director or Commission. Further the Conditional Use Permit shall not be effective until applicable conditions have been met, and the Conditional Use Permit is recorded with the County Recorder, with payment of recording fees being paid by applicant. In the case of a decision by the Board of Supervisors there is no 10-day appeal.

G-3 RECORDATION:

CUP #20-0022 shall **not be effective** until it is recorded at the Imperial County Recorder's Office and if no appeal has been made after approval from the hearing body. Payment of the recordation fee shall be the responsibility of the Permittee. If this CUP is not recorded within one hundred eighty (180) days from the date of approval the CUP shall be deemed null and void, without notice having to be provided to Permittee. Permittee may submit a written request for a recordation extension for this CUP by filing such a request with the Planning Director at least sixty (60) days prior to the one hundred eighty 180-day expiration. The Director may approve one (1) extension for a period not to exceed one hundred eighty (180) days. An extension may not be granted if the request for an extension is filed after the expiration date. Failure to record this CUP within one (1) year including the granted extension period shall deem this CUP null and void.

G-4 COMMENCEMENT OF WORK:

If the project for which a CUP has been approved has not commenced, or permits for said project have not been issued, within one (1) year from effective date, the CUP shall be null and void. If an applicant cannot initiate or obtain permits for the approved use during the one (1) year, applicant may request a one (1) year extension from the Department. The request for an extension shall be in writing and be submitted with explanation to the Planning & Development Services Department at least sixty days prior to the end of the extended one (1) year period. The Director shall have the authority to extend the initial start-up period, or commencement of work, of a CUP up to two (2) times for a maximum of two (2) years. Should the

PC ORIGINAL PKG

Permittee desire to continue with the project, a new application shall be submitted and the entire process would have to begin anew.

G-5 TIME LIMIT:

Unless otherwise specified within the Site Specific Conditions, this Permit shall be limited to a maximum of thirty (30) years from the recordation of the CUP. The CUP may be extended for an additional ten (10) year period by the appropriate County entity (either the Planning Director, the Planning Commission or the Board of Supervisors as set forth in the applicable Imperial County Ordinances) upon a finding that the Project is in compliance with all conditions of the CUP as stated herein and any applicable Land Use regulation of the County of Imperial. In order to obtain an extension, the Permittee shall file a written extension request with the Planning Director at least sixty (60) days prior to the expiration date of the permit. Such an extension request shall include the appropriate extension fee. Nothing stated or implied within this Permit shall constitute a guarantee that an extension will be granted. An extension may or may not be granted if the Project is in violation of any one or all of the conditions or if there is a history of non-compliance with the Permit conditions.

G-6 ABANDONMENT:

If a CUP has been unused, abandoned, discontinued, or ceased for one (1) year, the CUP shall be null and void, and be of no effect. Notice to applicant/permittee under this division will not be required or provided by Department.

G-7 PERMIT/LICENSE:

Permittee shall obtain and comply with any and all required permits, licenses, and/or approvals, for the construction and/or operation of this project. This shall include, but shall NOT be limited to, permits from the County Division of Environmental Health Services (EHS), Planning & Development Services Department, Office of Emergency Services (OES), Imperial County Air Pollution Control District (ICAPCD) and Public Works Department. Permittee shall likewise comply with all such permit requirements for the life of the project. **Additionally, Permittee shall submit a copy of such additional permit(s) and/or license(s) to the Planning & Development Services Department within 60-days of receipt, including amendments or alternatives thereto.**

G-8 APPROVALS AND CONDITIONS SUBSEQUENT TO GRANTING PERMIT:

Permittee acceptance of this CUP shall be deemed to constitute agreement with the terms and conditions contained herein. Where a requirement is imposed in this CUP that Permittee conduct a monitoring program, and where the County has reserved the right to impose or modify conditions with which the Permittee must comply based on data obtained therefrom, or where the Permittee is required to prepare specific plans for County approval and disagreement arises, the Permittee, operator and/or agent, the Planning and Development Services Director or other affected party, to be determined by the Planning and Development Services

PC ORIGINAL PKG

Director, may request that a hearing be conducted before the Imperial County Planning Commission whereby they may state the requirements which will implement the applicable conditions as intended herein. Upon receipt of a request, the Planning Commission shall conduct a hearing and make a written determination. The Planning Commission may request support and advice from a technical advisory committee. Failure to take any action shall constitute endorsement of staff's determination with respect to implementation.

G-9 CONDITION PRIORITY:

This project shall be constructed/operated as described in the CUP application, the environmental documents, the project description, and as specified in these conditions. Where a conflict occurs, the CUP conditions shall govern.

G-10 INDEMNIFICATION:

As part of this application, applicant and real party in interest, if different, agree to defend, indemnify, hold harmless, and release the County of Imperial ("County"), its agents, officers, attorneys, and employees (including consultants) from any claim, action, or proceeding brought against any of them, the purpose of which is to attack, set aside, void, or annul the approval of this application or adoption of the environmental document which accompanies it. This indemnification obligation shall include, but not be limited to, damages, costs, expenses, attorney fees, or expert witness fees that may be asserted by any person or entity, including the applicant, arising out of or in connection with the approval of this application, whether or not there is concurrent negligence on the part of the County, its agents, officers, attorneys, or employees (including consultants).

If any claim, action, or proceeding is brought against the County, its agents, officers, attorneys, or employees (including consultants), to attack, set aside, void, or annul the approval of the application or adoption of the environmental document which accompanies it, then the following procedures shall apply: The Planning Director shall promptly notify the County Board of Supervisors of any claim, action or proceeding brought by an applicant challenging the County's action. The County, its agents, attorneys and employees (including consultants) shall fully cooperate in the defense of that action. The County shall have the final determination on how to best defend the case and will consult with applicant regularly regarding status and the plan for defense. The County will also consult and discuss with applicant the counsel to be used by County to defend it, either with in-house counsel, or by retaining outside counsel provided that the County shall have the final decision on the counsel retained to defend it. Applicant shall be fully responsible for all costs incurred. Applicant shell be entitled to provide his or her own counsel to defend the case, and said independent counsel shall work with County Counsel to provide a joint defense.

G-11 INSURANCE:

The Permittee shall take out and maintain workers compensation insurance as required by the State of California. The Permittee shall also secure liability

PC ORIGINAL PKG

insurance and such other insurance as required by state and/or federal law. A Certificate of Insurance is to be provided to the Planning and Development Services Department by the insurance carrier, and said insurance and certificate shall be kept current for the life of the project. Certificates of Insurance shall be sent directly to the Planning and Development Services Department by the insurance carrier and shall name the Department as a recipient of both renewal and cancellation notices.

G-12 RIGHT OF ENTRY:

The County reserves the right to enter the premises at any time, announced or unannounced, in order to make the appropriate inspection(s) and to determine if the condition(s) of this CUP are complied with. Access by authorized enforcement agency personnel shall not be denied.

G-13 SEVERABILITY:

Should any condition(s) of this CUP be determined by a Court or other agency with proper jurisdiction to be invalid for any reason, such determination shall not invalidate the remaining provision(s) of this CUP.

G-14 PROVISION TO RUN WITH LAND:

The provisions of this CUP are to run with the land/project and shall bind the current and future owner(s) successor(s) of interest; assignee(s) and/or transferee(s) of said CUP. **Permittee shall not without prior notification to the Planning & Development Services Department assign, sell, or transfer, or grant control of CUP or any right or privilege therein.** The Permittee shall provide a minimum of 60 days written notice prior to such proposed transfer becoming effective. The permitted use identified herein is limited for use upon this parcel described herein and may not be transferred to another parcel.

G-15 COMPLIANCE/REVOCATION:

Upon the determination by the Planning & Development Services Department that the project is or may not be in full compliance with any one or all of the conditions of this CUP, or upon the finding that the project is creating a nuisance as defined by law, the issue shall be brought immediately to the appropriate enforcement agency or to the Planning Commission for hearing to consider appropriate response including but not limited to the revocation of the CUP or to consider possible amendments to the CUP. The hearing shall be held upon due notice having been provided to the Permittee and to the public in accordance with established ordinance/policy.

G-16 NON-COMPLIANCE (ENFORCEMENT & TERMINATION):

Should the Permittee violate any condition herein, the County shall give written notice of such violation and actions required of Permittee to correct such violation. If Permittee does not act to correct the identified violation within forty-five (45) days

PC ORIGINAL PKG

after written notice, County may revoke the CUP. If Permittee pursues correction of such violation with reasonable diligence, the County may extend the cure period. Upon such revocation, County may, at its sole discretion, cease processing, defending any lawsuit or paying for costs associated with the Project.

G-17 COSTS:

Permittee shall pay any and all amounts determined by the County to defray any and all cost(s) for the review of reports, field investigations, monitoring, and other activities directly related to the enforcement/monitoring for compliance of this CUP, County Ordinance or any other applicable law. Any billing against this project, now or in the future, by the Planning & Development Services Department or any County Department for costs incurred as a result of this CUP, shall be billed through the Planning & Development Services Department.

G-18 REPORT(S)

Permittee shall file an annual report with the Planning and Development Services Department to show that Permittee is in full compliance with this CUP. The report shall be filed at least fifteen (15) days prior to the anniversary (recordation date) of this CUP. It shall be the responsibility of the Permittee to provide all reports and to include the information about other users. The County may request information at any time from the Permittee or other users if applicable; however, it shall be the responsibility of the Permittee to assure that the County receives such information in a timely manner.

G-19 RESPONSIBLE AGENT

Permittee shall maintain on file with the Planning and Development Services Department the name and phone number of the responsible agent for the site. A back-up name shall also be provided, and a phone number for twenty-four (24) hour emergency contact shall also be on file. If there are other users, the same information (as applicable) required from the Permittee shall also be made available to the County from such other users.

G-20 WATER AND SEWER:

Permittee shall provide water and sewer to Federal, State and County standards. Water and sewer systems shall be approved by the Environmental Health Services and the Planning & Development Services Department. Permittee shall hook up to a public water system or supplier if and when available.

G-21 DEFINITIONS:

In the event of a dispute, the meaning(s) or the intent of any word(s) phrase(s) and/or conditions or sections herein shall be determined by the Planning Commission of the County of Imperial. Their determination shall be final unless an appeal is made to the Board of Supervisors ten (10) days from the date of their decision.

PC ORIGINAL PKG

G-22 SPECIFICITY:

The issuance of this CUP does not authorize the Permittee to construct or operate this project in violation of any state, federal, local law nor beyond the specified boundaries of the project as shown in the application/project description/ CUP, nor shall this CUP allow any accessory or ancillary use not specified herein. This CUP does not provide any prescriptive right or use to the Permittee for future addition and/or modification to this project.

G-23 HEALTH HAZARD:

If the County Health Officer determines that a significant health hazard exists to the public, the County Health Officer may require appropriate measures and the Permittee shall implement such measures to mitigate the health hazard. If the hazard to the public is determined to be imminent, such measures may be imposed immediately and may include temporary suspension of the subject operations. However, within forty five (45) days of any such suspension of operations, the measures imposed by the County Health Officer must be submitted to the Planning Commission for review and approval. Nothing shall prohibit Permittee from requesting a special Planning Commission meeting provided Permittee bears all costs.

G-24 CHANGE OF OWNER/OPERATOR:

In the event the ownership of the site or the operation of the site transfers from the current Permittee to a new successor Permittee, the successor Permittee shall be bound by all terms and conditions of this CUP as if said successor was the original Permittee. Current Permittee shall inform the County Planning & Development Services Department in writing at least sixty (60) days prior to any such transfer. Failure of a notice of change of ownership or change of operator shall be grounds for the immediate revocation of the CUP. In the event of a change, the new Owner/Operator shall file with the Department, via certified mail, a letter stating that they are fully aware of all conditions and acknowledge that they will adhere to all.

G-25 PERMITS OF OTHER AGENCIES INCORPORATED:

Permits granted by other governmental agencies in connection with the Project are incorporated herein by reference. The County reserves the right to apply conditions of those permits, as the County deems appropriate; provided, however, that enforcement of a permit granted by another governmental agency shall require concurrence by the respective agency. Permittee shall provide to the County, upon request, copies and amendments of all such permits.

G-26 MINOR AMENDMENTS:

The Planning Director may approve minor changes or administrative extensions, as requested in writing by the Permittee, provided it does not result in additional

PC ORIGINAL PKG

environmental impacts and/or are generally procedural or technical and/or which may be necessary to comply with other government permit compliance requirements.

(TOTAL "G" CONDITIONS are 26)

SITE SPECIFIC CONDITIONS:

S-1 AUTHORIZED SCOPE OF ACTIVITIES:

(A) Permittee shall be responsible as for all improvements, septic, sewer, approved potable water system(s), pipelines, roads and other improvements discussed in the CUP Application and Conditions of Approval, FEIR, and MMRP. If Permittee sells all or part of this Project, an approved agreement shall be in place for new Project owner to build and maintain as agreed to by the conditions set forth in this CUP. Additionally, the County Assessor's Office shall be notified of any ownership change.

(B) Permittee shall develop this Project per approved CUP as a separate solar energy and energy (battery) storage facility. Any development with a combination of parcels will require the owner(s) to have a recorded deed restriction to "hold the parcel as one parcel" that runs with the land, or at Permmittee's option merge the parcels. This deed restriction shall be for a minimum of thirty (30) years and shall only be released upon the expiration of the thirty (30) years, the expiration or termination of the CUP, or upon approval of the Imperial County Planning and Development Director that the restriction is no longer needed based on a change in the development or regulation.

(C) The Permittee shall construct and operate the solar energy and energy (battery) storage facility in compliance with the CUP, the County's General Plan's Land Use Element, Land Use Ordinance and all other applicable local, state, and federal LORS, to include any other permits which are incorporated herein by reference.

(D) Construction, operation, maintenance, replacement and removal of a solar energy facility & energy (battery) storage system shall be as described in Permittee's CUP Application and previously approved FEIR for the Vega SES 3 Solar Energy project (CUP #20-0022), to include photovoltaic (PV) modules, mounting structures, electrical wiring, inverters, transformers and alternating current (AC) electric collector system, project electric substation and ancillary facilities. Ancillary facilities include safety and security equipment, retention basins, perimeter fencing, access gates, lighting systems, access roads, and may include temporary construction trailers, equipment

PC ORIGINAL PKG

enclosures, water treatment system and building, septic system, parking, and fire protection. The Project's PV arrays shall be comprised of solar PV panels organized into electrical groups referred to as "blocks." The panels shall be oriented from east to west for maximum sun exposure and the foundation shall be designed based on soil conditions. The PV panels are made of a poly-crystalline silicon semiconductor material encapsulated in glass. Installation of the PV arrays includes installation of mounting posts, module rail assemblies, PV modules, inverters, transformers and buried electrical conductors. Concrete is required for the footings, foundations and pads for the transformers and substation work. Tracker foundations shall be comprised of either driven or vibrated steel posts/pipes, and/or concrete in some places (depending on soil and underground conditions).

(E) The Project's energy (battery) storage (BESS) component will be located on a concrete pad at the northeastern edge of the project site, unless final engineering design and/or IID requirements require a different location.

The BESS will consist banks of batteries and will be supported by a DC Combiner, control panel, and inverter/transformer skid. Each enclosure will include built-in fire suppression systems. The batteries will be lithium-ion based and capable of storing up to 120 MW in total (not to exceed 120 MW. These racks would be integrated into containers or be self-contained in engineered systems such as for example the Tesla Mega Pack. The Project design would meet minimum spacing required by code and manufacturers specifications.

S-2 AESTHETICS:

(A) The Permittee shall design and maintain all buildings and equipment enclosures to have exterior surfaces with neutral, non-reflective colors.

(B) The Permittee shall design and install lighting at construction storage yards and staging areas, such that light bulbs and reflectors are not visible from public viewing areas; lighting does not create reflected glare; and illumination of the Project facilities, vicinity, and nighttime sky is minimized.

(C) Lighting shall be designed so exterior light fixtures are hooded, with lights directed downward or toward the area to be illuminated and so that backscatter to the nighttime sky is minimized. The design of the lighting shall be such that the luminescence or light source is shielded to minimize light trespass outside the Project boundary.

(D) All lighting shall be of minimum necessary brightness consistent with worker safety and OSHA requirements.

PC ORIGINAL PKG

(E) High illumination areas not occupied on a continuous basis shall have switches or motion detectors to light the area only when occupied.

S-3 AGRICULTURE:

MITIGATION FOR THE TEMPORARY CONVERSION OF PRIME FARMLAND, FARMLAND OF STATEWIDE IMPORTANCE AND LOCAL IMPORTANCE

Developer shall implement a Mitigation Measure for the loss of Farmland.

One of the following options included below shall be implemented prior to the issuance of a grading permit or building permit (whichever is issued first) for the proposed Project:

For Prime Farmland:

Option 1: The Permittee shall procure Agricultural Conservation Easements on a "2 to 1" basis on land of equal size, of equal quality farmland, outside of the path of development. The Conservation Easements shall meet the State Department of Conservation's regulations and shall be recorded prior to issuance of any grading or building permits; or

Option 2: The Permittee shall pay an "Agricultural In-Lieu Mitigation Fee" in the amount of 30 percent of the fair market value per acre for the total acres of the proposed site based on five comparable sales of land used for agricultural purposes as of the effective date of the permit, including program costs on a cost recovery/time and material basis. The Agricultural In-Lieu Mitigation Fee, will be placed in a trust account administered by the Imperial County Agricultural Commissioner's office and will be used for such purposes as the acquisition, stewardship, preservation and enhancement of agricultural lands within Imperial County; or

Option 3: The Permittee and the County voluntarily enter into an enforceable Public Service Agreement that includes a Agricultural Mitigation payment that is consistent with Board Resolution 2012-05; or

Option 4: The Permittee shall revise their CUP Application/Site Plan to avoid Prime Farmland.

PC ORIGINAL PKG

For Non-Prime Farmland:

Option 1: The Permittee shall procure Agricultural Conservation Easements on a 1 to 1 basis on land of equal size, of equal quality of farmland, outside the path of development. The Conservation Easement shall meet the State Department of Conservation's regulations and shall be recorded prior to issuance of any grading or building permits; or

Option 2: The Permittee shall pay an "Agricultural In-Lieu Mitigation Fee" in the amount of 20% of the fair market value per acre for the total acres of proposed site based on five comparable sales of land used for agricultural purposes as of the effective date of the permit, including program costs on a cost recovery/time and material basis. The Agricultural In-Lieu Mitigation Fee, will be placed in a trust account administered by the Imperial County Agricultural Commissioner's office and will be used for such purposes as the acquisition, stewardship, preservation and enhancement of agricultural lands within Imperial County; or

Option 3: The Permittee and the County voluntarily enter into an enforceable Public Service Agreement that includes a Agricultural Mitigation payment that is consistent with Board Resolution 2012-05; or

Option 4: The Permittee shall revise their CUP Application/Site Plan to avoid Non-Prime Farmland.

For Local Importance Farmland:

Option 1: The Permittee shall procure Agricultural Conservation Easements on a 1 to 1 basis on land of equal size, of equal quality of farmland, outside the path of development. The Conservation Easement shall meet the State Department of Conservation's regulations and shall be recorded prior to issuance of any grading or building permits; or

Option 2: The Permittee shall pay an "Agricultural In-Lieu Mitigation Fee" in the amount of 10% of the fair market value per acre for the total acres of proposed site based on five comparable sales of land used for agricultural purposes as of the effective date of the permit, including program costs on a cost recovery/time and material basis. The Agricultural In-Lieu Mitigation Fee, will be placed in a trust

PC ORIGINAL PKG

account administered by the Imperial County Agricultural Commissioner's office and will be used for such purposes as the acquisition, stewardship, preservation and enhancement of agricultural lands within Imperial County; or

Option 3: The Permittee and the County voluntarily enter into an enforceable Public Service Agreement that includes a Agricultural Mitigation payment that is consistent with Board Resolution 2012-05; or

Option 4: The Permittee shall revise their CUP Application/Site Plan to avoid Local Importance Farmland.

(A) Permittee shall minimize paving and ground disturbing activities to the maximum extent practical within agricultural fields to retain soil characteristics.

(B) Pest Management Plan. Prior to the issuance of a grading permit or building permit (whichever occurs first), a Pest Management Plan shall be developed by the Permittee and approved by the County of Imperial Agriculture Commissioner. The Permittee shall maintain a Pest Management Plan until reclamation is complete. The Plan shall provide the following:

1. Monitoring, preventative, and management strategies for weed and pest control during construction activities at any portion of the project (e.g., transmission line);
2. Control and management of weeds and pests in areas temporarily disturbed during construction where native seed will aid in site revegetation as follows:

- Monitor for all pests including insects, vertebrates, weeds, and pathogens. Promptly control or eradicate pests when found, or when notified by the Agricultural Commissioner's office that a pest problem is present on the project site. The assistance of a licensed pest control advisor is recommended.
- All treatments must be performed by a qualified applicator or a licensed pest control operator;
- "Control" means to reduce the population of common pests below economically damaging levels, and includes attempts to exclude pests before infestation, and effective control methods after infestation. Effective control methods may include physical/mechanical removal, bio control, cultural control, or chemical treatments;
- Use of "permanent" soil sterilants to control weeds or other pests is prohibited because this would interfere with reclamation;
- Notify the Agricultural Commissioner's office immediately regarding any suspected exotic/invasive pest species as defined by the California Department of Food Agriculture and the U.S. Department of Agriculture. Request a sample be taken by the Agricultural Commissioner's Office of a suspected invasive species. Eradication of exotic pests shall be done under

PC ORIGINAL PKG

the direction of the Agricultural Commissioner's Office and/or California Department of Food and Agriculture.

S-4 AIR QUALITY:

(A) The Permittee shall comply at all times with the ICAPCD Regulation VIII, Fugitive Dust Control. Please use MMRP for guidance.

(B) Prior to commencing construction, the Permittee shall submit a Dust Control Plan to the ICAPCD for approval identifying all sources of PM_{10} emissions and associated mitigation measures during the construction and operational phases of the Project. The Project Proponent shall submit a "Construction Notification Form" to the ICAPCD ten (10) days prior to the commencement of any earthmoving activity. The Dust Control Plan submitted to the ICAPCD shall meet all applicable requirements for control of fugitive dust emissions, including the following measures designed to achieve the no greater than 20% opacity performance standard for dust control:

(1) All on-site and off-site unpaved roads shall be effectively stabilized, and visible emissions shall be limited to no greater than 20% opacity for dust emissions by paving, chemical stabilizers, dust suppressants, and/or watering.

(2) All unpaved traffic areas one acre or more in size with seventy-five (75) or more average vehicle trips per day, shall be effectively stabilized, and visible emissions shall be limited to no greater than 20% opacity for dust emissions by paving, chemical stabilizers, dust suppressants and/or watering.

(3) The transport of bulk materials shall be completely covered, unless six inches of freeboard space from the top of the container is maintained with no spillage and loss of bulk material. In addition, the cargo compartment of all haul trucks shall be cleaned and/or washed at the delivery site after removal of bulk material.

(4) All track-out or carry-out, which includes bulk materials that adhere to the exterior surfaces of motor vehicles and/or equipment (including tires) that may then fall onto the pavement, shall be cleaned at the end of each workday, or immediately when mud or dirt extends a cumulative distance of fifty (50) linear feet or more onto a paved road within an urban area.

(5) Movement of bulk material handling or transfer shall be stabilized prior to handling, or at points of transfer with application of sufficient water, chemical stabilizers, or by sheltering or enclosing the operation and transfer line.

PC ORIGINAL PKG

(6) The construction of new unpaved roads is prohibited within any area with a population of five hundred (500) or more, unless the road meets ICAPCD's definition of a "temporary unpaved road." Any temporary unpaved road shall be effectively stabilized and visible emissions shall be limited to no greater than 20% opacity for dust emission by paving, chemical stabilizers, dust suppressants and/or watering.

(7) Shall comply with the MMRP's and its applicable mitigations.

(C) The Permittee shall implement all applicable standard mitigation measures for construction combustion equipment for the reduction of excess NOx emissions as contained in the Imperial County CEQA Air Quality Handbook and associated regulations. These measures include:

(1) Use of alternative fueled or catalyst equipped diesel construction equipment, including all off-road and portable diesel-powered equipment.

(2) Minimize idling time, either by shutting equipment off when not in use or reducing the time of idling to five minutes at a maximum.

(3) Limit the hours of operation of heavy-duty equipment and/or the amount of equipment in use.

(4) Replace fossil-fueled equipment with electrically driven equivalents (assuming powered by a portable generator set and are available, cost effective, and capable of performing the task in an effective, timely manner).

(5) Curtail construction during periods of high ambient pollutant concentrations; this may include ceasing construction activity during the peak hour of vehicular traffic on adjacent roadways.

(6) Implement activity management (e.g. rescheduling activities to avoid overlap of construction phases, which would reduce short-term impacts).

S-5 GEOLOGY/SOILS and MINERAL RESOURCES:

(A) Prior to approval of final engineering and grading plans for the Project, the County shall verify that all recommendations contained in the Geotechnical Report for this Solar Facility and have been incorporated into all final engineering and grading plans. The County's soil engineer and engineering geologist shall review grading plans prior to finalization to verify compliance with the recommendations of the report.

S-6 CULTURAL RESOURCES:

PC ORIGINAL PKG

(A) Compliance and Monitors shall insure all mitigations set forth in the MMRP are followed.

S-7 HEALTH, SAFETY AND HAZARDOUS MATERIAL/FIRE AND FUELS MANAGEMENT:

(A) All trash and debris within the Project site shall be disposed of off-site, in accordance with current, local, state, and federal disposal regulations. Compliance with this measure shall be verified by the Planning and Development Services Department.

(B) If it is determined that hazardous wastes are, or will be generated by the proposed operations, the wastes must be managed in accordance with the California Hazardous Waste Control Law (California Health and Safety Code, Division 20, Chapter 6.5) and the Hazardous Waste Control Regulations (California Code of Regulations, Title 22, Division 4.5).

(C) If it is determined that hazardous wastes will be generated, the Permittee should also obtain a United States Environmental Protection Agency, Identification Number by contacting (800) 618-6942. Certain hazardous waste treatment processes or hazardous material, handling, storage or uses may require authorization from the local Certified Unified Program Agency (CUPA). Information about the requirement for authorization can be obtained by contacting the local CUPA.

(D) Firearms shall be prohibited in all Project areas except for those used by licensed security personnel.

(E) The recognized environmental concerns shall be cleaned up and properly disposed of in accordance with all federal, state and local regulations.

(F) Any hazardous materials storage areas shall be designed with curbs or other containment measures, e.g., double-walled storage tanks, to contain spills and leaks. If on-site hazardous materials exceed fifty-five (55) gallons, a "Hazardous Material Management Plan" shall be prepared and approved by the County Local Enforcement Agency (LEA) and the Imperial County CUPA. A copy of the approved plan shall be submitted to ICPDSD prior to the issuance of the grading/building permit (Source: Imperial County Renewable Energy Ordinance, Title 9, Division 17, § 91702.00).

(G) The Permittee shall present to the Department an Emergency Response/Action Plan that has been approved by the ICFD/OES Department, and the LEA and any other agencies with jurisdiction (Source: Imperial County Renewable Energy Ordinance, Title 9, Division 17, § 91702.00).

PC ORIGINAL PKG

The Emergency Response/Action Plan shall cover all possible foreseeable emergencies, e.g., major fluid spills, earthquakes, fires, floods or other emergencies. At all times, there shall be at least one employee either on the facility premises or on-call (i.e., available to respond to an emergency by reaching the facility within a short period of time) with the responsibility to coordinate all emergency response measures. This Emergency Coordinator shall be thoroughly familiar with all aspects of the Project's Emergency Response/Action Plan, all operations and activities at the facility, location of all records within the facility and the facility's layout. This Emergency Coordinator shall have the authority to commit the resources needed to carry out the contingency plan. Adequate personnel and equipment shall be available to respond to emergencies and to ensure compliance with the conditions of the Permit.

The Emergency Response/Action Plan shall be prepared in consultation with, but not be limited to, the ICFD/OES, County EHS/Health Department, County Sheriff/Coroner's office, County Department of Public Works, ICPDSD, and other appropriate state and county agencies. The plan shall include a notification list of response agencies which shall be notified immediately upon the discovery of a reportable unauthorized discharge and the list shall include:

- ICFD/OES;
- ICPDSD;
- County EHS/Health Department;
- County Department of Public Works; and
- California Highway Patrol, as applicable.

All employees shall be trained by classroom and hands-on training on safety procedures, maintenance programs and emergency response protocols to ensure safety and reliability in the event of an unforeseen emergency situation.

The Permittee shall provide adequate safety devices to protect against the hazard of fire and explosion for activities that involve the use and storage of flammable, explosive or highly corrosive or reactive materials as well as provide adequate firefighting and fire suppression equipment and using devices standard within the industry in compliance with all applicable state and local laws as determined by the ICFD/OES.
The Permittee shall implement all State and County-approved worker safety and fire protection plans and programs.

Any gates on-site shall have a "Knox" lock rapidly accessible by the ICFD/OES.

Appropriate first aid provisions for facility operations shall be made for emergency response during Project construction, operation, and

PC ORIGINAL PKG

maintenance activities with appropriate first aid training for Project employees.

During construction, a member of each working crew shall be trained in basic first aid and supplied with necessary medical equipment to respond to emergencies as provided for in the Emergency Response/Action Plan required above.

Permittee shall identify a responsible agent for emergency purposes, whose name, title, e-mail address and telephone number shall be provided to the County Department of Public Works, ICFD/OES, County Environmental Health Services/Health Department, County Sheriff/Coroner's office, IID, and ICPDSD.

S-8 HYDROLOGY AND WATER QUALITY:

Adhere to measures set forth in the MMRP.

S-9 BIOLOGICAL RESOURCES:

Adhere to all Biological measures in the MMRP

S-10 PUBLIC SERVICES:

(A) The Permittee shall widely publicize to County residents the availability of job opportunities associated with the Project (whether or not those job opportunities are within Imperial County or are regional). Postings at City Halls, newspaper and television advertisements, local job centers, and dedicated website shall offer sufficient avenues of communication. The Imperial County Office of Employment and Training in addition to the Imperial Valley College presents viable sources for community awareness. The information shall provide available positions, details of positions including qualifications, number of openings, indicated the anticipated start date for each, and application process. In order to maintain oversight of the process, the application process can be completed both on a dedicated website and at dedicated computers at the County which would afford those without Internet connection the ability to apply. The Permittee's information shall be forwarded to the Permittee or their contractor and copies of applications files are maintained at the County.

(B) During the development phase of the Project, the Permittee shall provide a roster of employees to include their position and place of residence.

(C) Unless prohibited by local, state or federal law or regulation, Permittee shall make good faith efforts to hire qualified residents of the Imperial County with the objective that a majority of the total work force is comprised of the Imperial County residents.

(D) The Permittee shall install and implement security measures which may include, but not limited to, secured perimeter fencing with barbed wire, sensors, controlled

PC ORIGINAL PKG

access points, security alarms, security camera systems, and security guard vehicle patrols to deter trespass or unauthorized activities that would interfere with operation of the Project.

(E) Permittee shall compensate the County pursuant to the Department of Environmental Health Fee Schedule for any costs of calls related to bees and mosquitoes.

(F) The Permittee shall reimburse the Sheriff's Department for any investigations regarding theft on the Project site and related law enforcement.

(G) All construction supervisors and foremen shall be provided with communication devices, cell phones or walkie-talkies, in the event of an emergency situation on-site.

(H) All construction-related activities shall take place within the development footprint of the Project as defined by the final engineering plans. The anticipated impact areas, including staging areas, equipment access, and disposal or temporary placement of spoils, shall be delineated with staking and/or orange construction fencing prior to construction to avoid natural resources where possible. No construction-related activities shall occur outside of the designated impact area. All construction materials, staging, storage, dispensing, fueling, and maintenance activities shall be designated on construction maps and shall be situated a minimum of fifty (50) feet from all drainages. Staging and temporary access shall occur on existing roadways whenever possible.

(I) **Emergency Operations Plan** - The Applicant shall develop an Emergency Operation Plan in conjunction with local fire service personnel and the AHJ and hold a comprehensive understanding of the hazards associated with lithium-ion battery technology. Lithium-ion battery energy storage systems must incorporate adequate explosion prevention protection as required in NFPA 855 or International Fire Code Chapter 12, where applicable.

(J) **Signage** - The Applicant shall provide signage that identifies the contents of an energy storage system on all energy storage system installations to alert first responders to the potential hazards associated with the installation.

S-11 TRANSPORATION AND TRAFFIC:

A. Permittee shall prepare and submit a Construction Traffic Control Plan to Imperial County Department of Public Works-Development Review and Caltrans District 11, as appropriate, for approval. The Construction Traffic Control Plan must be prepared in accordance with both the California Department of Transportation Manual on Uniform Traffic Control Devices and Work Area Traffic Control Handbook and must include, but not be limited to, the following issues:

PC ORIGINAL PKG

1. Timing of deliveries of heavy equipment and building materials;
2. Directing construction traffic with a flag person;
3. Placing temporary signing, lighting, and traffic control devices if required, including, but not limited to, appropriate signage along access routes to indicate the presence of heavy vehicles and construction traffic;
4. Ensuring access for emergency vehicles to the Project site;
5. Temporarily closing travel lanes or delaying traffic during materials delivery, transmission line stringing activities, or any other utility connections;
6. Maintaining access to adjacent property;
7. Specifying both construction-related vehicle travel and oversize load haul routes, minimizing construction traffic during the AM and PM peak hours, distributing construction traffic flow across alternative routes to access the Project site, and avoiding residential neighborhoods to the maximum extent feasible.

B. Permittee shall Institute construction work hours as necessary, such that the arrival and/or departure times of workers would be staggered as necessary.

C. Permittee shall identify vehicle safety procedure for entering and exiting site access roads.

D. Permittee shall submit documentation that identifies the roads to be used during construction.

E. The Permittee shall be responsible for repairing any damage to non-County maintained roads that may result from construction activities. The Permittee shall submit a preconstruction video log and inspection report regarding roadway conditions for roads used during construction to the Imperial County Department of Public Works Within 30 days of completion of construction, the project proponent/operator shall submit a post-construction video log and inspection report to the County. This information shall be submitted in electronic format. The County, in consultation with the Permittee's engineer, shall determine the extent of remediation required, if any.

S-12 COMMENCEMENT OF WORK:

(A) If the Project has not commenced, or permits for the Project have not been issued, within one (1) year from approval date this CUP shall be null and void. If this CUP has been unused, abandoned, discontinued, or ceased for one (1) year, it shall be null and void and of no effect.

(B) If Permittee cannot initiate or obtain permits for the approved use during the one (1) year period following approve of this CUP, Permittee may request a one (1) year extension from the ICPDSD. The request for an extension shall be in writing and be submitted with explanation to the

PC ORIGINAL PKG

ICPDSD at least sixty (60) days prior to the end of the one (1) year period. The Director shall have the authority to extend the initial startup period of a CUP two times for a maximum of one (1) year each. No extension under this section shall be extended for more than two (2) years.

S-13 CONSTRUCTION STANDARDS:

(A) The solar energy and energy (battery) storage facility structures shall be built in accordance with the California Building Code requirements applicable to "Seismic Category D". All structures and facilities shall be designed in accordance with the publication entitled "Recommended Lateral Force Requirements and Commentary by the Structural Engineers Association of California". The structural components of the permitted facilities shall be reviewed by the Building Official/Planning and Development Services Director. Applicable building permits shall be procured from the County for facilities prior to commencement of construction of such facilities.

S-14 LAND USE IMPROVEMENTS:

(A) The Permittee shall prepare an appropriate parking plan for review and approval by the ICPDSD and County Public Works Department for any and/or all proposed Operation & Maintenance buildings.

(B) The Permittee shall surface with a material of higher quality all access drives, parking areas, and vehicular maneuvering areas from primary access to any constructed operation and maintenance buildings.

S-15 NOISE STANDARDS:

(A) During the construction period, heavy truck traffic shall be limited to the hours between 6:00 AM and 7:00 PM.

(B) During construction, in accordance with Imperial County Noise Element of the General Plan, the noise level shall not exceed 75 dBA_{Leq} at the property boundary when averaged over an 8-hour period.

(C) During operation of the facility, the maximum permitted continuous sound level shall be not more than 45 dBA_{Leq}, as measured at the nearest residence using the "A" scale and measured with a sound level meter and associated octave band analyzer. The level may be exceeded by ten percent (10%) if the noise is intermittent and during daylight hours.

(D) Haul trucks and other engine-powered equipment shall be muffled and operated with engine exhaust brake use limited to emergencies.

PC ORIGINAL PKG

S-16 ODOR CONTROL:

The Permittee shall control all odor-causing, harmful, noxious emissions to ensure that quantities or air contaminants released as a result of the permitted facilities do not exceed County, State or Federal standards, nor constitute a public nuisance, per the Imperial County Land Use Ordinance, Division 13, Enforcement, Chapter 2, Abatement of Nuisances, Sections 91302.00 through 91301.02.

S-17 PLAN APPROVALS:

Permittee shall submit to the ICPDSD, architectural, landscaping and lighting plans prior to construction of those facilities, to include painting of structures, planting of trees and/or vegetation, and shall receive all approvals prior to commencing construction of the applicable permitted facilities. Approval shall not be unreasonably withheld so long as the plans are consistent with applicable Imperial County Land Use Ordinance requirements.

S-18 PROJECT DESIGN:

(A) All facility access and parking areas shall be constructed to the standards of the Imperial County Land Use Ordinance.

(B) All permitted activities shall provide for the minimum feasible surface land disturbance for compatibility with the existing uses wherever possible.

(C) All equipment and electrical interconnection facilities used at the solar plant facilities shall be maintained in a manner that prevents breaking, cracking, and leaking, e.g. operator staffing and training, including appropriate quality assurance procedures, with the operation of back-up or auxiliary facilities when necessary.

(D) All on-site basins shall be designed and constructed under the supervision of a California-licensed Civil Engineer meeting sound engineering standards, with all applicable regulations and all requirements of the County EHS/Health Department and Public Works Departments are complied with.

(E) Permittee shall obtain encroachment permits for any construction or operation on IID existing rights of way or easements.

S-19 REPORTING AND MONITORING:

(A) The Permittee shall furnish to the County, at its sole cost within a reasonable time, any relevant reports/information which the County requires for monitoring purposes to determine whether cause exists for revoking this Permit, or to determine compliance with this Permit. The

PC ORIGINAL PKG

Permittee shall submit all required reports to the Planning Director, County Planning and Development Services Department, 801 Main Street, El Centro, CA 92243.

(B) Permittee and ICPDSD Director shall agree upon an environmental consultant for overseeing all the required mitigation, conditional use Permit conditions and public benefit agreement (if any) requirements during the construction of the Project.

(C) Permittee shall pay for third-party environmental consultant monitoring and compliance.

(D) The ICPDSD, in consultation with the third-party Environmental Consultant and the County Executive Office, will require that all mitigation measures be satisfied, all MMRP requirements have been satisfied, all Conditions of Approval in the CUP are in full compliance and all conditions of the Development Agreement (if any) have been satisfied before the Final Certificate of Occupancy Certificate is issued.

(E) During the operation of solar facility, an Annual Compliance Report shall be submitted to the ICPDS, documenting the implementation of the conditions and general measures as well as any resource-specific measures.

(F) The Permittee shall reimburse the ICPDS for County as well as monitoring and investigations related to the construction and operation of the Project. Permittee shall compensate the County pursuant to the ICPDSD Fee Schedule for any costs incurred.

(G) Permittee shall pay for all costs as required to comply with the Conditions of Approval and MMRP.

(H) All County staff time will be billed on a time and materials basis. Failure by Permittee to provide any payment required of Permittee to the County in the CUP shall cause Permittee to be in non-compliance of the CUP. Upon notice of such noncompliance, County may, at its sole discretion, cease processing, defending any lawsuit or paying for costs associated with the Project.

S-20 SPILLS AND RUNOFF:

The Permittee shall design and construct the permitted facilities to prevent spills from endangering adjacent properties and to prevent runoff from any source being channeled or directed in an unnatural way so as to cause erosion, siltation, or other detriments pursuant to the construction Storm Water Pollution Prevention Plan approved by the Regional Water Quality Control Board.

S-21 FACILITIES CLOSURE AND SITE RESTORATION:

PC ORIGINAL PKG

(A) Permittee shall implement the site restoration plan at the earlier of when the operation of the permitted facilities herein authorized has ceased or the term of the CUP has expired. At such time, all facilities shall be dismantled, and the lands involved restored to their pre-construction condition and available for agricultural production uses as agreed to by the Imperial County Planning and Development Services Director.

(B) Prior to the issuance of a grading Permit, a decommissioning and restoration plan (the Reclamation Plan) shall be submitted and approved by the Imperial County Planning and Development Services Director. The Reclamation Plan shall documents the procedures by which the Project site will be returned to its current conditions.

(C) Within thirty (30) days prior to ground disturbance, a Bond, or other acceptable surety, in the amount of the estimated site restoration financial calculations/bond, for the developed project area, or other forms of security acceptable to County Counsel's office, shall be filed with the County that guarantees restoration of the land to its condition prior to the permitted solar plant development.

(D) Upon completion of such site restoration, and demonstration that the land has been restored to the agriculturally productive/farmable condition prior to the permitted solar plant development the Bond or other surety shall be released by the County.

(E) The above financial calculations/bond shall be reviewed every five (5) years in December and adjusted on January 1st to add a Consumer Price Index (CPI) (Los Angeles) increase by the Planning and Development Services Director. This readjustment can be made in the County's sole discretion and must be funded by the Permittee within ninety (90) calendars after notice of the additional amount of such adjustment.

S-22 PUBLIC WORKS:

1. The Applicant shall acquire proper easements from adjacent property owners for the installation of any proposed transmission lines.

2. All survey monuments, including those within the interior of the project, shall be protected, and their locations shall remain accessible to any surveyor throughout the duration of the project. Section 8774 of the Business and Professions Code, and Section 846.5 of the Civil Code, each provide the right of entry to utilize boundary evidence and perform surveys, without undue delay, to any person authorized to practice land surveying. The right of entry is not contingent upon prior notice.

3. The Applicant shall furnish a Drainage and Grading Plan/Study to provide for property grading and drainage control, which shall also include prevention of

PC ORIGINAL PKG

sedimentation of damage to off-site properties. The Study/Plan shall be submitted to the Department of Public Works for review and approval. The applicant shall implement the approved plan. Employment of the appropriate Best Management Practices (BMP's) shall be included (Per Imperial County Code of Ordinances, Chapter 12.10.020 B).

4. Based from the information provided on the project documents, it is assumed that County roads will not be used for site access during or after construction activities have been completed. In the event that County roads are required for site access, the Applicant shall consult with this Department in advance for review and approval.

   Access to sites shall be completed from public roads.

5. Any unimproved access roads/routes between public roads and access gates shall be improved for all-weather access. Such all-weather improvements shall be completed as recommended by a Geotechnical Engineer licensed to practice in the State of California.

6. Each site shall have, as a minimum, one (1) primary Class 2 Base aggregate material driveway and one (1) emergency access Class 2 Base aggregate material driveway, if they are tied to a County Road only.

7. Access to project sites during and after construction is expected to be completed through private unpaved roads or private property.

The Applicant shall mitigate generation of dust caused by construction traffic as per Rule 805 – Paved and Unpaved Roads of the Imperial County Air Pollution Control District.

- All solid and hazardous waste shall be disposed of in approved solid waste disposal sites in accordance with existing County, State and Federal regulations (Per Imperial County Code of Ordinances, Chapter 8.72).

- All on-site traffic areas shall be hard surfaced to provide all weather access for emergency vehicles. The surfacing shall meet the Department of Public Works and Fire/Office of Emergency Services (EOS) Standards as well as those of the Air Pollution Control District (APCD).

- The project may require a National Pollutant Discharge Elimination System (NPDES) permit and Notice of Intent (NOI) from the Regional Water Quality Control Board (RWQCB) prior to County approval of onsite grading plan (40 CFR 122.28).

- A Transportation Permit may be required from road agency(s) having jurisdiction over the haul route(s) for any hauls of heavy equipment and/or large vehicles which impose greater than legal loads on riding surfaces, including bridges. (Per Imperial County Code of Ordinances, Chapter 10.12 - OVERWEIGHT VEHICLES AND LOADS).

PC ORIGINAL PKG

- Effective September 15, 2020, the State's Mandatory Organic Waste Recycling Law (AB 1826 or Chapter 727, Statutes of 2014) decreased the threshold requiring all businesses and multi-dwelling facilitates of 5 units or more generating two (2) cubic yards or more of solid waste per week to recycle their organic waste including landscape waste, wood waste, and food waste. Information about possible organics waste recycling services can be found at the CalRecycle site at: https://www.calrecycle.ca.gov/Recycle/Commercial/Organics/

S-23 WASTE DISPOSAL

(A) The Permittee shall insure that all solar plant facilities waste, liquid, gas or solid, which are generated on-site shall be disposed of in compliance with appropriate local, state, and federal regulations, in effect or as subsequently duly-enacted. All solid waste debris and/or any hazardous wastes located on the Project site must be satisfactorily removed to a permitted facility prior to the commencement of grading earthen material at the site.

(B) Littering shall not be allowed. Project personnel shall not deposit or leave any food or waste in the Project area, and no biodegradable or non-biodegradable debris shall remain in the right-of-way or on the Project site following completion of construction.

S-24 CALTRANS:

(A) An encroachment permit shall be required for any work performed within any Caltrans right-of-way. If required, any traffic control will need to be addressed as part of Caltrans permit approval in accordance with the Caltrans Standard Plans and the California Manual on Uniform Traffic Control Devices (MUTCD).

(B) Any application for a permit for work performed within a Caltrans right-of-way must include an approved final environmental document including the California Environmental Quality Act (CEQA) determination addressing any environmental impacts within the Caltrans right-of-way and any corresponding technical studies, if required. If these materials are not included with the encroachment permit application, the Permittee will be required to acquire and provide these to Caltrans before the permit application will be accepted. Identification of avoidance and/or mitigation measures will be a condition of encroachment permit approval as well as procurement of any necessary regulatory and resource agency permits.

(C) Any work performed within Caltrans' Right of Way (R/W) will require discretionary review and approval by Caltrans. As part of the encroachment permit process, the applicant must provide an approved

PC ORIGINAL PKG

final environmental document, corresponding technical studies, and necessary regulatory and resource agency permits, specifically, any CEQA determinations or exemptions.

S-25 IID Condition requirements

(A) The Project may impact IID drains with project site runoff flows draining into IID drains. To mitigate impacts, IID may require a comprehensive IID hydraulic drainage system analysis. IID's hydraulic drainage system analysis includes an associated drain impact fee.

(B) An IID encroachment permit is necessary to utilize existing surface-water drainpipe connections to drains and receive drainage service from IID. Surface-water drainpipe connections are to be modified in accordance with IID standards. A construction storm-water permit from the California Regional Water Quality Control Board is required before commencing construction and an industrial storm water permit from CRWQCB is needed for the operation of the proposed facility. Copies of these permits as well as the project's Storm Water Pollution Prevention Plan are to be submitted to IID.

S-26 FIRE PROTECTION:

Energy storage facilities create extreme hazards for firefighters and emergency responders with possibility of explosions, flammable gases, toxic fumes, water-reactive materials, electrical shock, corrosives, chemical burns. The hazards listed can create a potential significant impact on Imperial County Fire Department due personnel staffing to safely perform firefighting operations and Hazardous Material Response for a utility-scale energy storage facility. The location of the project will lead to longer response times. These longer response times can create incidents that can create difficulties in incident stabilization; therefor requiring additional personnel to safety manage the incident. Utility-scale energy storage will require specialized and reliable equipment to perform firefighting operations safely and effectively to NFPA, OSHA and ICFD standards and requirements.
Standards and requirements for energy storage system includes but not limited to:
NFPA:

1 Fire Code
70 National Electrical Code
855 Standard for the installation of Energy Storage System
111 Stored Electrical Energy Emergency and Standby Power System
1710 Standard for Organization and Deployment of Fire Suppression Operations, Emergency Medial Operations, and Special Operations to the Public by Career Fire Departments.

OSHA:

29 CFR 1910.134(g)(4)

PC ORIGINAL PKG

CFC:

Chapter 12 section 1206 Electrical Energy Storage System
Chapter 9 Fire Protection and Life Safety System.

1) Vega Solar Energy and Storage Project reviews for plans and inspections will be done by a third-party consultant determined by the Fire Department at the applicant's expense as per California Fire Code Chapter 1 [A] 104.7.2 Technical Assistance. This will be at the discretion of the Fire Department.

2) Project will provide adequate Fire water. Fire Department will determine number of gallons to be placed strategically once site plan is reviewed.

3) Signage that identifies the contents of an ESS is required on all ESS installations to alert first responders to the potential hazards associated with the installation.

4) An approved water supply capable of supplying the required fire flow determined by appendix B in the California Fire Code shall be installed and maintained. Private fire service mains and appurtenance shall be installed in accordance with NFPA 24.

5) An approved automatic fire suppression system shall be installed on all structures as per the California Fire Code. All fire suppression systems will be installed and maintained to the current adapted fire code and regulations.

6) An approved automatic fire detection system shall be installed on all structures as per the California Fire Code. All fire detection systems will be installed and maintained to the current adapted fire code and regulations.

7) Fire department access roads and gates will be in accordance with the current adapted fire code and the facility will maintain a Knox Box for access on site.

8) Compliance with all required sections of the fire code.

9) Applicant shall provide product containment areas(s) for both product and water run-off in case of fire applications and retained for removal.

10) All hazardous material and wastes shall be handled, store, and disposed as per the approved Hazardous Waste Materials Plan. All spills shall be documented and reported to Imperial County Fire Department and CUPA as required by the Hazardous Waste Material Plan.

S-27 COUNTY EXECUTIVE OFFICE:

PC ORIGINAL PKG

1. Fiscal and Economic Impact Analysis. The Permittee will be invoiced by the Executive Office for expenses related to the procurement of a consultant to produce a Fiscal and Economic Impact Analysis (FEIA) and will be responsible for the cost of any subsequent updates as a result of modifications to the data and project by the developer.

2. Public Service Agreement ("Agreement" or "PSA"). Pursuant to the Guidelines for the Public Service Program for Solar Power Plants in Imperial County amended and adopted by the Board of Supervisors on May 9, 2023, PSA will be entered into by and between the County of Imperial and Developer to provide for a concerted and coordinated effort to maximize the benefits of the Project to the County of Imperial community.

Sales Tax Benefit Solar Farm:

(a) Developer will require that all qualifying contractors and subcontractors exercise their option to obtain a California Department of Tax and Fee Administration (CDTFA) sub-permit for the jobsite and allocate all eligible use tax payments to Imperial County and LTA. Prior to commencement of any construction activity on-site the developer will require that the contractor or subcontractor provide County of Imperial with either a copy of their CDTFA account number and sub-permit.

(b) To accomplish this, Permittee shall either cause its construction contractor to treat the project in accordance with California Regulation 1521(b)(2)(B), California Regulation 1521(c)(13)(B), and California Regulation 1826(b) for sales and use tax purposes or form a "Buying Company" as defined in the CDTFA 1699(h). Permittee can adopt an alternate methodology to accomplish this goal if such methodology is approved by the County Executive Officer prior to issuance of building permits. Not later than forty five (45) days after the due date for filing sales and use tax returns for each calendar quarter, occurring after the commencement of any construction activity on-site through and including the first anniversary of COD (as defined below),

(c) Developer shall report, or cause its general contractor to report to County, the total amount of sales and use taxes related to the Project that are allocated to the County, and reported on Developer's, general contractor's, and subcontractors' applicable California sales and use tax returns. The obligations of Developer under this Section III.A are hereinafter referred to as the "Developer Sales and Use Tax Responsibilities."

(d) Guarantee Amounts. In the event that Developer shall fail to perform the Developer Sales and Use Tax Responsibilities and as a result of such failure, with respect to the Project, (i) County receives less than the amount of such sales and use taxes it would have received under existing applicable sales and use tax laws had such responsibilities been fully performed subject to adjustment as set forth in Section IV.C below) or (ii) Local Transportation Authority (LTA) receives less than the amount of such sales and use taxes it would have received under existing applicable sales and use tax laws had such responsibilities been fully-performed, then

PC ORIGINAL PKG

Developer shall pay, as and when provided below, to County or LTA as applicable, the amount of the applicable shortfall.

(e) Adjustments to Guarantee Amounts.

(f) Developer's sales tax guarantee set out in Section III.B above shall be adjusted to be eighty-five percent (85%) of the projected sales and use taxes for the Project. At least ten (10) days prior to the issuance of the first (1st) grading permit, Developer shall provide County with evidence of such projected sales and use taxes, including but not limited to sales taxes receipts, engineering contracts, procurement contracts, construction contracts. County shall meet with Developer to confirm that amount.

(g) The amount of sales and use tax anticipated to be generated is based on the projected construction of a sixty megawatt alternating current 60 MW AC solar generation facility. Construction of any additional output capacity beyond the 60 MW output now projected will require the sales tax guarantee be adjusted based on the actual output from solar generation facilities of the Project as evidenced by any Power Purchase Agreement subsequently entered into by Developer related to this Project.

(h) To the extent of any reduction in the size of the Project as the result of any final ruling, stipulated judgment, or settlement, in accordance with Section V.C below, the not-to-exceed amounts set forth in Section III.B shall be reduced pro rata based on the size of such reduction.

(i) The complete amount due to County for the Project must be received within one (1) year after Commercial Operation Date ("COD") for this Project. If, within one (1) year after issuance of the final Certificate of Occupancy, the sales and use taxes received by the County are less than the amount guaranteed for that portion of the project, Developer shall pay the difference to the County.

(j) Payments to County and LTA as a result of a shortfall shall be due within thirty days of Developer's receipt of written notice of shortfall from the County. Payments received by County after the ninetieth (90th) day following Developer's receipt of notice shall be deemed late. Developer hereby agrees to pay interest at the rate of six percent (6%) per annum of the payment due for any payment received by County beyond the due date. Said interest shall be included with the late payment. The obligation to pay interest shall be stayed when such amounts are disputed in good faith, so long as Developer submits the payments "under written protest." Upon determination of dispute, such interest may be assessed if it is determined that the dispute was not made in good faith.

(k) In the event that Developer repowers or replaces the equipment onsite, each Site shall be designated as the "Point of Sale" so as to create an additional local tax-funding source for the County of Imperial.

Battery Storage Sales Tax Benefit

1.1.1. To the extent permitted by applicable local, state, and Federal law, Developer will require that all qualifying contractors and subcontractors exercise their option to obtain a California Department of Tax and Fee Administration ("CDTFA") sub-permit for the jobsite and allocate all

PC ORIGINAL PKG

eligible sales and use tax payments to County and the Local Transit Authority ("LTA").

1.1.2. Prior to commencement of any construction activity onsite exclusive of grading, , Developer shall require that the contractor or subcontractor provide County with a copy of their CDTFA account number and sub-permit. Developer shall either cause its construction contractor to treat the Project in accordance with California Sales and Use Tax Regulation 1521(b)(2)(B), California Sales and Use Tax Regulation 1521(c)(13)(B), and California Sales and Use Tax Regulation 1826(b) for sales and use tax purposes, or form a "Buying Company," as defined in the California Sales and Use Tax Regulation 1699(h). Developer may adopt an alternate methodology to accomplish this goal if such methodology is approved by the County's Executive Officer prior to issuance of any building permit.

1.1.3. No later than forty-five (45) days after the due date for filing sales and use tax returns for each calendar quarter, occurring after the commencement of any construction activity on-site through and including the first anniversary of commercial operating date ("COD"), Developer shall report, or cause its general contractor to report to County, the total amount of sales and use taxes related to the Project that are allocated to the County, and reported on Developer's, general contractor's and subcontractors' applicable California sales and use tax returns.

1.1.4. *Guarantee Amounts*. Prior to the issuance of any building permit for the Project, Developer shall provide County with a guarantee of the minimum sales and use that will be received by County and LTA under existing applicable sales and use tax laws. The guarantee amount shall be based on the total storage capacity of the Project in megawatts, which is projected to be one hundred twenty megawatts (120 Mws) Should Developer choose to develop the Project in phases, and receives the required approvals from County to do so, then Developer shall provide a separate guarantee amount for each phase of the project based on the total storage capacity in megawatts for the applicable phase.

(a) Developer warrants that the sales/use tax guarantee amounts to be provided to County as mandated in this Subparagraph 9.2.4 shall be true and accurate estimates of the projected sales and use taxes that will be generated for this Project. Developer shall provide County with evidence of the projected sales/use taxes for the Project, including but not limited to sales tax receipts, and executed or anticipated engineering contracts, procurement contracts, and construction contracts. If the Parties are unable to agree upon a guarantee amount, then the dispute shall be referred to an independent accountant mutually acceptable to both Parties. The costs for such nonbinding mediation shall be borne by Developer.

PC ORIGINAL PKG

(b) Developer warrants that the sales/use tax guarantee amounts to be provided to County as mandated in this Subparagraph 9.2.4 will incorporate any and all sales/use tax exemptions that Developer and/or its contractors and subcontractors intend to utilize, and that such exemptions will be disclosed to County fully and in good faith prior to the issuance of any building permit for this Project.

(c) Developer understands and acknowledges that the sales/use tax guarantee amounts to be provided to County as mandated by this Subparagraph 9.2.4 are a part of the consideration to be received by County in return for entering into this Agreement, and further understands and acknowledges that County would not enter into this Agreement but for said guarantee from Developer.

1.1.5. In the event that County and / or LTA receives less than the amount of sales/use taxes guaranteed pursuant to Subparagraph 9.2.4, then Developer shall pay, as and when provided below, to County or LTA as applicable, the amount of the applicable shortfall.

1.1.6. *Adjustments to Guarantee Amounts.*

(a) The amount of sales and use tax anticipated to be generated is based on the projected construction of a 120 MW utility-scale energy storage complex incorporating lithium ion batteries and/or flow battery technologies throughout the Project site. Construction of any additional storage capacity beyond the 120 MW storage capacity now projected will require the sales/use tax guarantee amounts to be adjusted based on the actual storage facilities of the Project as evidenced by any power purchase agreement or power storage agreement subsequently entered into by Developer related to this Project.

(b) To the extent of any reduction in the size of the Project as the result of any final ruling, stipulated judgment, or settlement, the sales/use tax guarantee amounts mandated under Subparagraph 9.2.4 shall be reduced pro rata based on the size of such reduction.

(c) Should Developer become of aware of a change in circumstances that would materially affect the sales/use tax guarantee amount, then Developer shall, within thirty (30) days of learning of such change in circumstances, inform the County in writing of the change in circumstances. If the County determines that such change in circumstances warrants an adjustment to the sales/use tax guarantee amount, then County shall negotiate in good faith with Developer in revising the sales/use tax guarantee amount. If the Parties are unable to agree upon a revised guarantee amount, then the dispute shall be referred to an independent accountant mutually acceptable to both Parties. The costs for such nonbinding mediation shall be borne by Developer. Failure of the Developer to inform the County of the change in circumstances shall constitute a waiver of Developer's ability to seek any adjustment to the sales/use tax guarantee based on such change in circumstances.

1.1.7. The complete sales/use tax guarantee amount due to County and LTA for the Project must be received within one (1) year after COD for this Project, or such later date as any applicable sales/use tax is due or is transmitted from the CDTFA, unless it is delayed due to causes beyond

PC ORIGINAL PKG

Developer's control or for which Developer is not responsible. If, within one (1) year after issuance of the final certificate of occupancy, or such later date as any applicable sales/use tax is due or is transmitted from the CDTFA, the sales/use taxes received by the County are less than the sales use tax guarantee amounts mandated under Subparagraph 9.2.4, then Developer shall pay the difference to the County.

1.1.8. Payments to County and LTA as a result of a shortfall shall be due within thirty days of Developer's receipt of written notice of shortfall from the County. Payments received by County after the ninetieth (90th) day following Developer's receipt of notice shall be deemed late. Developer hereby agrees to pay interest at the rate of six percent (6%) per annum of the payment due for any payment received by County beyond the due date. Said interest shall be included with the late payment. The obligation to pay interest shall be stayed when such amounts are disputed in good faith, so long as Developer submits the payments "under written protest." Upon determination of dispute, such interest may be assessed if it is determined that the dispute was not made in good faith.

In the event that Developer repowers or replaces the equipment onsite, each Site shall be designated as the "Point of Sale" so as to create an additional local tax-funding source for the County of Imperial.

S-28 Additional Conditions

1. Because oversize vehicles may utilize this facility (i.e., SR 111), as a condition of the Conditional Use Permit, the project applicant will be required to obtain all applicable Caltrans permits required for construction of the project, including special transportation permits (if applicable) for oversize construction vehicles.
2. As a condition of the Conditional Use Permit, the applicant will be required to prepare and submit for approval a traffic management plan to Caltrans as specified in this comment.
3. As currently proposed, the project would not require an encroachment permit as no work or improvements are proposed within Caltrans right-of-way. However, as a condition of the Conditional Use Permit, the applicant will be required to obtain necessary permits from Caltrans. This includes encroachment permits if applicable.
4. **Coachella Valley Water District** – Review for requirements on elevated concrete foundations and appropriate spacing shall be evaluated, including with respect to existing training dikes and addressed as part of the final site plan engineering design.
5. **Bureau of Reclamation.** modifications to training dikes will require appropriate authorization from Bureau of Reclamation.

PC ORIGINAL PKG

6. Condition of approval that the County and Developer will coordinate with the U.S. Marine Corps to notify them of the project development and to determine any potential impacts to their operations, if any.

S-29 ACCEPTANCE:

Acceptance of this permit shall be deemed to constitute agreement by Permittee with all terms and conditions herein contained.

The rest of this page is intentionally left blank.

PC ORIGINAL PKG

NOW THEREFORE, County hereby issues the Conditional Use Permit #20-0022, and Permittee hereby accepts such permit upon the terms and conditions set forth herein.

IN WITNESS THEREOF, the parties hereto have executed this Agreement the day and year first written.

PC ORIGINAL PKG

RESOLUTION NO.

A RESOLUTION OF THE PLANNING COMMISSION OF THE COUNTY OF IMPERIAL, CALIFORNIA, RECOMMENDING APPROVAL TO THE BOARD OF SUPERVISORS FOR " VEGA SES 5 SOLAR ENERGY STORAGE PROJECT" FOR CONDITIONAL USE PERMIT #20-0023"

WHEREAS, APEX ENERGY SOLUTIONS, LLC has submitted an application for Conditional Use Permit (CUP) #20-0023 to develop a nominal 50-megawatt (MW) solar photovoltaic (PV) energy generation project with an integrated battery storage system not to exceed 100 MW. The project includes solar energy generation facility, battery storage system, switching station and gen-tie line. The project is to be located on approximately 250 acres; and,

WHEREAS, an Environmental Impact Report and CEQA Findings have been prepared in accordance with the requirements of the California Environmental Quality Act, the State Guidelines, and the County's "Rules and Regulations to Implement CEQA," as Amended; and,

WHEREAS, the Planning Commission of the County of Imperial has been delegated with the responsibility of approvals, certifications and making recommendations to the Imperial County Board of Supervisors for approvals of conditional use permits; and,

WHEREAS, public notice of said application has been given, and the Planning Commission has heard, received and considered all oral and written protests, objections and evidence presented by interested parties at a public hearing held with respect to this item on August 23, 2023; and,

WHEREAS, the Draft EIR was received by the State Clearinghouse on December 14, 2022 and circulated for a period of 50 days (**SCH #2021050013**) with the commenting period ending February 2, 2023; and,

NOW, THEREFORE, the Planning Commission of the County of Imperial **DOES HEREBY RESOLVE** as follows:

SECTION 1. The Planning Commission has considered the proposed Conditional Use Permit #20-0023 prior to recommending approval and the County's consideration of the Project has been noticed in compliance with law.

PC ORIGINAL PKG

SECTION 2. That the Project complies with the requirements of the Imperial County Code and is in accordance with State Planning and Zoning law therefore, the following findings are made pursuant to Imperial County Code § 90203.09 as follows:

A. The proposed use is consistent with goals and policies of the adopted County General Plan. (Imperial County Code § 90203.09.A)

The current General Plan land use designations of the project site and proposed parcels are "Recreation/Open Space" and proposed project parcels are within the Renewable Energy Overlay (RE). Therefore, the proposed uses could be found consistent with the General Plan.

B. The proposed use is consistent with the purpose of the zone or sub-zone within which the use will be used. (Imperial County Code § 90203.09.B)

The proposed project parcels are zoned S-2-RE, A-2 & A-3 RE. (Open Space Preservation & General and Heavy Agriculture) with Renewable Energy Overlay). The proposed uses are consistent with the zone since they are listed as allowed uses under the S-2, A-2 & A-3 RE zones with requirements for an approved Conditional Use Permit.

C. The proposed use is listed as a use within the zone or sub-zone or is found to be similar to a listed conditional use according to the procedures of Section 90203.00. (Imperial County Code § 90203.09.C)

The proposed use is consistent with the zone: S-2-RE Open Space Preservation with Renewable Energy Overlay).

D. The proposed use meets the minimum requirements of this Title applicable to the use and complies with all applicable laws, ordinances and regulation of the County of Imperial and the State of California. (Imperial County Code § 90203.09.D)

The Project complies with the minimum requirements of this Title by, among other things, obtaining a CUP, complying with the California Environmental Quality Act, and participating in the public review and hearing process. Development standards have been established for the Project pursuant to these processes, and will be enforced via imposition and enforcement of the Mitigation Monitoring and Reporting Program recommended for approval by separate Resolution, as well as the conditions of approval imposed on this CUP. The Conditions of Approval will

PC ORIGINAL PKG

further insure that the project complies with all applicable regulations of the County of Imperial and the State of California. Therefore, the proposed project meets the minimum requirements of the Land Use Ordinance, Section 90203.00.

E. The proposed use will not be detrimental to the health, safety, and welfare of the public or to the property and residents in the vicinity. (Imperial County Code § 90203.09.E)

The Environmental Impact Report (EIR) prepared for the Project analyzed the Project's potential effects on the health, safety, and welfare of the public and property and found that, with mitigation, the Project would have less than significant effects and impacts in all resources areas.

In addition, the project site is not near a residential community and is mostly surrounded by farmland and or open space/recreational land.

F. The proposed use does not violate any other law or ordinance. (Imperial County Code § 90203.09.F)

The proposed project will be subject to the Conditional Use Permit and current Federal, State and Local regulations. State Planning and Zoning Law (Cal. Govt. Code §§ 65000-66035) establishes minimum statewide standards for the regulation of local land use through planning and zoning. The County regulates local land use via Title 9 of the Imperial County Code. As found above, the proposed project is conditioned to be consistent with Imperial County, Title 9, Land Use Ordinance and CEQA mitigation measures and therefore complies with both State and local laws and ordinance.

Pursuant to CEQA, the County has prepared an EIR for the Project, which analyzes the proposed Project's compliance and consistency with other federal, state, and local laws and ordinances regulating the environment. Substantial evidence supports the conclusions in the EIR that the Project complies with said environmental laws, and thus the finds that the proposed use does not violate any other law or ordinance.

G. The proposed use is not granting a special privilege. (Imperial County Code § 90203.09.G)

PC ORIGINAL PKG

The proposed solar generating and storage facility is a permitted use subject to approval of the proposed Conditional Use Permit. No special privileges are being offered or will be granted.

SECTION 3. Approval of the Project is conditioned upon the terms and conditions set forth in the Agreement for Conditional Use Permit #20-0023 attached hereto and incorporated herein by this reference.

NOW, THEREFORE, based on the above findings, the Imperial County Planning Commission **DOES HEREBY RECOMMEND APPROVAL** of Conditional Use Permit #20-0023 to the Board of Supervisors, subject to the attached Conditions of Approval.

_____

Rudy Schaffner, Chairperson
Imperial County Planning Commission

I hereby certify that the Planning Commission at a meeting conducted on **August 23, 2023** by the following vote approved the preceding resolution:

When Recorded Return To:

Imperial County
Planning & Development Services
801 Main Street
El Centro, California 92243

AGREEMENT FOR CONDITIONAL USE PERMIT #20-0023
VEGA SES 5 SOLAR ENERGY STORAGE PROJECT
APN's 025-260-019 & 025-260-022-000 & partial APN 025-260-011-000

This Agreement is made and entered into on this ___day of _____, 2023, by and between APEX ENERGY SOLUTIONS, LLC hereinafter referred to as the Permittee (Permittee), and the COUNTY OF IMPERIAL, a political subdivision of the State of California (County or Imperial County), related to the VEGA SES 5 SOLAR ENERGY STORAGE PROJECT (CUP #20-0023) project area.

RECITALS

WHEREAS, Permittee is the lessee or successor-in-interest of certain land in Imperial County to be improved with the proposed utility-scale solar and battery storage facility. The project, Conditional Use Permit (CUP or Permit) #20-0023, consists of a proposed 50 megawatt (MW) photovoltaic solar energy facility, energy (battery) storage facility **(up to 100 MW and not to exceed a 2 to 1 solar/battery ratio)** and associated infrastructure, including but not limited to, electrical switch station, substation, on-site operations and maintenance (O&M), a gen-tie line and internal solar development transmission lines, on approximately 250 acres within Imperial County (the "Project"). The proposed facility is located approximately 5.67 miles southeast of the unincorporated community of Niland between the unincorporated communities of Iris and Slab City. The Coachella and East Highline Canals and the Union Pacific Railway transect the project area. The project area is located entirely within the County's Renewable Energy Overlay Zone. .

WHEREAS, Permittee has applied to the County of Imperial for CUP #20-0023 for constructing and operating a new 50 MW solar energy facility, energy (battery) storage facility (up to 100 MW and not to exceed a 2 to 1 solar/battery ratio) with ancillary support facilities, including electrical interconnections. The Project will connect to the existing IID "P" line located immediately north of the project site north of the All American Canal.

WHEREAS, the Project is located on portion of APN 025-260-011; 025-260-019 & 025-260-022-000. Additionally, the legal description includes SEC 9, 15, 17 Township 11 South, Range 15 East on approximately 250 aces. The project site is located entirely within the Imperial County Renewable Energy Overlay zone.

PC ORIGINAL PKG

WHEREAS, the Permittee for the VEGA SES 5 Solar Energy Project (CUP #20-0023) shall fully comply with all of the terms and conditions of the Project as specified hereinafter within this CUP.

The rest of this page is intentionally left blank.

PC ORIGINAL PKG

GENERAL CONDITIONS:

The "GENERAL CONDITIONS" are shown by the letter "G". These conditions are conditions that are either routinely and commonly included in all Conditional Use Permits as "standardized conditions" and/or are conditions that the Imperial County Planning Commission has established as a requirement on all CUP's for consistent application and enforcement. The Permittee is hereby advised that the General Conditions are as applicable as the SITE SPECIFIC conditions. The General Conditions are in addition to the MMRP and any and all other requirements for the project.

G-1 GENERAL LAWS:

The Permittee shall obtain, comply with and maintain all applicable County, State, and federal laws, rules, regulations, ordinances, and/or standards as they may pertain to this project whether specified herein or not.

G-2 EFFECTIVE DATE:

The approved Conditional Use Permit shall not become effective until ten (10) calendar days after the decision of the Planning Director or Commission. Further the Conditional Use Permit shall not be effective until applicable conditions have been met, and the Conditional Use Permit is recorded with the County Recorder, with payment of recording fees being paid by applicant. In the case of a decision by the Board of Supervisors there is no 10-day appeal.

G-3 RECORDATION:

CUP #20-0023 shall **not be effective** until it is recorded at the Imperial County Recorder's Office and if no appeal has been made after approval from the hearing body. Payment of the recordation fee shall be the responsibility of the Permittee. If this CUP is not recorded within one hundred eighty (180) days from the date of approval the CUP shall be deemed null and void, without notice having to be provided to Permittee. Permittee may submit a written request for a recordation extension for this CUP by filing such a request with the Planning Director at least sixty (60) days prior to the one hundred eighty 180-day expiration. The Director may approve one (1) extension for a period not to exceed one hundred eighty (180) days. An extension may not be granted if the request for an extension is filed after the expiration date. Failure to record this CUP within one (1) year including the granted extension period shall deem this CUP null and void.

G-4 COMMENCEMENT OF WORK:

If the project for which a CUP has been approved has not commenced, or permits for said project have not been issued, within one (1) year from effective date, the CUP shall be null and void. If an applicant cannot initiate or obtain permits for the approved use during the one (1) year, applicant may request a one (1) year extension from the Department. The request for an extension shall be in writing and be submitted with explanation to the Planning & Development Services Department at least sixty days prior to the end of the extended one (1) year period. The Director shall have the authority to extend the initial start-up period, or commencement of work, of a CUP up to two (2) times for a maximum of two (2) years. Should the

PC ORIGINAL PKG

Permittee desire to continue with the project, a new application shall be submitted and the entire process would have to begin anew.

G-5 TIME LIMIT:

Unless otherwise specified within the Site Specific Conditions, this Permit shall be limited to a maximum of thirty (30) years from the recordation of the CUP. The CUP may be extended for an additional ten (10) year period by the appropriate County entity (either the Planning Director, the Planning Commission or the Board of Supervisors as set forth in the applicable Imperial County Ordinances) upon a finding that the Project is in compliance with all conditions of the CUP as stated herein and any applicable Land Use regulation of the County of Imperial. In order to obtain an extension, the Permittee shall file a written extension request with the Planning Director at least sixty (60) days prior to the expiration date of the permit. Such an extension request shall include the appropriate extension fee. Nothing stated or implied within this Permit shall constitute a guarantee that an extension will be granted. An extension may or may not be granted if the Project is in violation of any one or all of the conditions or if there is a history of non-compliance with the Permit conditions.

G-6 ABANDONMENT:

If a CUP has been unused, abandoned, discontinued, or ceased for one (1) year, the CUP shall be null and void, and be of no effect. Notice to applicant/permittee under this division will not be required or provided by Department.

G-7 PERMIT/LICENSE:

Permittee shall obtain and comply with any and all required permits, licenses, and/or approvals, for the construction and/or operation of this project. This shall include, but shall NOT be limited to, permits from the County Division of Environmental Health Services (EHS), Planning & Development Services Department, Office of Emergency Services (OES), Imperial County Air Pollution Control District (ICAPCD) and Public Works Department. Permittee shall likewise comply with all such permit requirements for the life of the project. **Additionally, Permittee shall submit a copy of such additional permit(s) and/or license(s) to the Planning & Development Services Department within 60-days of receipt, including amendments or alternatives thereto.**

G-8 APPROVALS AND CONDITIONS SUBSEQUENT TO GRANTING PERMIT:

Permittee acceptance of this CUP shall be deemed to constitute agreement with the terms and conditions contained herein. Where a requirement is imposed in this CUP that Permittee conduct a monitoring program, and where the County has reserved the right to impose or modify conditions with which the Permittee must comply based on data obtained therefrom, or where the Permittee is required to prepare specific plans for County approval and disagreement arises, the Permittee, operator and/or agent, the Planning and Development Services Director or other affected party, to be determined by the Planning and Development Services

PC ORIGINAL PKG

Director, may request that a hearing be conducted before the Imperial County Planning Commission whereby they may state the requirements which will implement the applicable conditions as intended herein. Upon receipt of a request, the Planning Commission shall conduct a hearing and make a written determination. The Planning Commission may request support and advice from a technical advisory committee. Failure to take any action shall constitute endorsement of staff's determination with respect to implementation.

G-9 CONDITION PRIORITY:

This project shall be constructed/operated as described in the CUP application, the environmental documents, the project description, and as specified in these conditions. Where a conflict occurs, the CUP conditions shall govern.

G-10 INDEMNIFICATION:

As part of this application, applicant and real party in interest, if different, agree to defend, indemnify, hold harmless, and release the County of Imperial ("County"), its agents, officers, attorneys, and employees (including consultants) from any claim, action, or proceeding brought against any of them, the purpose of which is to attack, set aside, void, or annul the approval of this application or adoption of the environmental document which accompanies it. This indemnification obligation shall include, but not be limited to, damages, costs, expenses, attorney fees, or expert witness fees that may be asserted by any person or entity, including the applicant, arising out of or in connection with the approval of this application, whether or not there is concurrent negligence on the part of the County, its agents, officers, attorneys, or employees (including consultants).

If any claim, action, or proceeding is brought against the County, its agents, officers, attorneys, or employees (including consultants), to attack, set aside, void, or annul the approval of the application or adoption of the environmental document which accompanies it, then the following procedures shall apply: The Planning Director shall promptly notify the County Board of Supervisors of any claim, action or proceeding brought by an applicant challenging the County's action. The County, its agents, attorneys and employees (including consultants) shall fully cooperate in the defense of that action. The County shall have the final determination on how to best defend the case and will consult with applicant regularly regarding status and the plan for defense. The County will also consult and discuss with applicant the counsel to be used by County to defend it, either with in-house counsel, or by retaining outside counsel provided that the County shall have the final decision on the counsel retained to defend it. Applicant shall be fully responsible for all costs incurred. Applicant shell be entitled to provide his or her own counsel to defend the case, and said independent counsel shall work with County Counsel to provide a joint defense.

G-11 INSURANCE:

The Permittee shall take out and maintain workers compensation insurance as required by the State of California. The Permittee shall also secure liability

PC ORIGINAL PKG

insurance and such other insurance as required by state and/or federal law. A Certificate of Insurance is to be provided to the Planning and Development Services Department by the insurance carrier, and said insurance and certificate shall be kept current for the life of the project. Certificates of Insurance shall be sent directly to the Planning and Development Services Department by the insurance carrier and shall name the Department as a recipient of both renewal and cancellation notices.

G-12 RIGHT OF ENTRY:

The County reserves the right to enter the premises at any time, announced or unannounced, in order to make the appropriate inspection(s) and to determine if the condition(s) of this CUP are complied with. Access by authorized enforcement agency personnel shall not be denied.

G-13 SEVERABILITY:

Should any condition(s) of this CUP be determined by a Court or other agency with proper jurisdiction to be invalid for any reason, such determination shall not invalidate the remaining provision(s) of this CUP.

G-14 PROVISION TO RUN WITH LAND:

The provisions of this CUP are to run with the land/project and shall bind the current and future owner(s) successor(s) of interest; assignee(s) and/or transferee(s) of said CUP. **Permittee shall not without prior notification to the Planning & Development Services Department assign, sell, or transfer, or grant control of CUP or any right or privilege therein.** The Permittee shall provide a minimum of 60 days written notice prior to such proposed transfer becoming effective. The permitted use identified herein is limited for use upon this parcel described herein and may not be transferred to another parcel.

G-15 COMPLIANCE/REVOCATION:

Upon the determination by the Planning & Development Services Department that the project is or may not be in full compliance with any one or all of the conditions of this CUP, or upon the finding that the project is creating a nuisance as defined by law, the issue shall be brought immediately to the appropriate enforcement agency or to the Planning Commission for hearing to consider appropriate response including but not limited to the revocation of the CUP or to consider possible amendments to the CUP. The hearing shall be held upon due notice having been provided to the Permittee and to the public in accordance with established ordinance/policy.

G-16 NON-COMPLIANCE (ENFORCEMENT & TERMINATION):

Should the Permittee violate any condition herein, the County shall give written notice of such violation and actions required of Permittee to correct such violation. If Permittee does not act to correct the identified violation within forty-five (45) days

PC ORIGINAL PKG

after written notice, County may revoke the CUP. If Permittee pursues correction of such violation with reasonable diligence, the County may extend the cure period. Upon such revocation, County may, at its sole discretion, cease processing, defending any lawsuit or paying for costs associated with the Project.

G-17 COSTS:

Permittee shall pay any and all amounts determined by the County to defray any and all cost(s) for the review of reports, field investigations, monitoring, and other activities directly related to the enforcement/monitoring for compliance of this CUP, County Ordinance or any other applicable law. Any billing against this project, now or in the future, by the Planning & Development Services Department or any County Department for costs incurred as a result of this CUP, shall be billed through the Planning & Development Services Department.

G-18 REPORT(S)

Permittee shall file an annual report with the Planning and Development Services Department to show that Permittee is in full compliance with this CUP. The report shall be filed at least fifteen (15) days prior to the anniversary (recordation date) of this CUP. It shall be the responsibility of the Permittee to provide all reports and to include the information about other users. The County may request information at any time from the Permittee or other users if applicable; however, it shall be the responsibility of the Permittee to assure that the County receives such information in a timely manner.

G-19 RESPONSIBLE AGENT

Permittee shall maintain on file with the Planning and Development Services Department the name and phone number of the responsible agent for the site. A back-up name shall also be provided, and a phone number for twenty-four (24) hour emergency contact shall also be on file. If there are other users, the same information (as applicable) required from the Permittee shall also be made available to the County from such other users.

G-20 WATER AND SEWER:

Permittee shall provide water and sewer to Federal, State and County standards. Water and sewer systems shall be approved by the Environmental Health Services and the Planning & Development Services Department. Permittee shall hook up to a public water system or supplier if and when available.

G-21 DEFINITIONS:

In the event of a dispute, the meaning(s) or the intent of any word(s) phrase(s) and/or conditions or sections herein shall be determined by the Planning Commission of the County of Imperial. Their determination shall be final unless an appeal is made to the Board of Supervisors ten (10) days from the date of their decision.

PC ORIGINAL PKG

G-22 SPECIFICITY:

The issuance of this CUP does not authorize the Permittee to construct or operate this project in violation of any state, federal, local law nor beyond the specified boundaries of the project as shown in the application/project description/ CUP, nor shall this CUP allow any accessory or ancillary use not specified herein. This CUP does not provide any prescriptive right or use to the Permittee for future addition and/or modification to this project.

G-23 HEALTH HAZARD:

If the County Health Officer determines that a significant health hazard exists to the public, the County Health Officer may require appropriate measures and the Permittee shall implement such measures to mitigate the health hazard. If the hazard to the public is determined to be imminent, such measures may be imposed immediately and may include temporary suspension of the subject operations. However, within forty five (45) days of any such suspension of operations, the measures imposed by the County Health Officer must be submitted to the Planning Commission for review and approval. Nothing shall prohibit Permittee from requesting a special Planning Commission meeting provided Permittee bears all costs.

G-24 CHANGE OF OWNER/OPERATOR:

In the event the ownership of the site or the operation of the site transfers from the current Permittee to a new successor Permittee, the successor Permittee shall be bound by all terms and conditions of this CUP as if said successor was the original Permittee. Current Permittee shall inform the County Planning & Development Services Department in writing at least sixty (60) days prior to any such transfer. Failure of a notice of change of ownership or change of operator shall be grounds for the immediate revocation of the CUP. In the event of a change, the new Owner/Operator shall file with the Department, via certified mail, a letter stating that they are fully aware of all conditions and acknowledge that they will adhere to all.

G-25 PERMITS OF OTHER AGENCIES INCORPORATED:

Permits granted by other governmental agencies in connection with the Project are incorporated herein by reference. The County reserves the right to apply conditions of those permits, as the County deems appropriate; provided, however, that enforcement of a permit granted by another governmental agency shall require concurrence by the respective agency. Permittee shall provide to the County, upon request, copies and amendments of all such permits.

G-26 MINOR AMENDMENTS:

The Planning Director may approve minor changes or administrative extensions, as requested in writing by the Permittee, provided it does not result in additional

PC ORIGINAL PKG

environmental impacts and/or are generally procedural or technical and/or which may be necessary to comply with other government permit compliance requirements.

(TOTAL "G" CONDITIONS are 26)

SITE SPECIFIC CONDITIONS:

S-1 AUTHORIZED SCOPE OF ACTIVITIES:

(A) Permittee shall be responsible as for all improvements, septic, sewer, approved potable water system(s), pipelines, roads and other improvements discussed in the CUP Application and Conditions of Approval, FEIR, and MMRP. If Permittee sells all or part of this Project, an approved agreement shall be in place for new Project owner to build and maintain as agreed to by the conditions set forth in this CUP. Additionally, the County Assessor's Office shall be notified of any ownership change.

(B) Permittee shall develop this 50 Mw solar energy Project per approved CUP 20-0023 as a separate solar energy and energy (battery) storage facility. Any development with a combination of parcels will require the owner(s) to have a recorded deed restriction to "hold the parcel as one parcel" that runs with the land, or at Permmittee's option merge the parcels. This deed restriction shall be for a minimum of thirty (30) years and shall only be released upon the expiration of the thirty (30) years, the expiration or termination of the CUP, or upon approval of the Imperial County Planning and Development Director that the restriction is no longer needed based on a change in the development or regulation.

(C) The Permittee shall construct and operate the 50 Mw solar energy and 100 Mw energy (battery) storage facility in compliance with the CUP, the County's General Plan's Land Use Element, Land Use Ordinance and all other applicable local, state, and federal LORS, to include any other permits which are incorporated herein by reference.

(D) Construction, operation, maintenance, replacement and removal of a solar energy facility & energy (battery) storage system shall be as described in Permittee's CUP Application and previously approved FEIR for the Vega SES 5 Solar Energy project (CUP #20-0023), to include photovoltaic (PV) modules, mounting structures, electrical wiring, inverters, transformers and alternating current (AC) electric collector system, project electric substation and ancillary facilities. Ancillary facilities include safety and security equipment, retention basins, perimeter fencing, access gates, lighting systems, access roads, and may include temporary construction trailers, equipment enclosures, water treatment system and building, septic system, parking, and fire protection. The Project's PV arrays shall be comprised of solar PV panels organized into

PC ORIGINAL PKG

electrical groups referred to as "blocks." The panels shall be oriented from east to west for maximum sun exposure and the foundation shall be designed based on soil conditions. The PV panels are made of a poly-crystalline silicon semiconductor material encapsulated in glass. Installation of the PV arrays includes installation of mounting posts, module rail assemblies, PV modules, inverters, transformers and buried electrical conductors. Concrete is required for the footings, foundations and pads for the transformers and substation work. Tracker foundations shall be comprised of either driven or vibrated steel posts/pipes, and/or concrete in some places (depending on soil and underground conditions).

(E) The Project's energy (battery) storage (BESS) component will be located on a concrete pad at the northeastern edge of the project site, unless final engineering design and/or IID requirements require a different location.

The BESS will consist banks of batteries and will be supported by a DC Combiner, control panel, and inverter/transformer skid. Each enclosure will include built-in fire suppression systems. The batteries will be lithium-ion based and capable of storing up to 100 MW in total (not to exceed 100 MW. These racks would be integrated into containers or be self-contained in engineered systems such as for example the Tesla Mega Pack. The Project design would meet minimum spacing required by code and manufacturers specifications.

S-2 AESTHETICS:

(A) The Permittee shall design and maintain all buildings and equipment enclosures to have exterior surfaces with neutral, non-reflective colors.

(B) The Permittee shall design and install lighting at construction storage yards and staging areas, such that light bulbs and reflectors are not visible from public viewing areas; lighting does not create reflected glare; and illumination of the Project facilities, vicinity, and nighttime sky is minimized.

(C) Lighting shall be designed so exterior light fixtures are hooded, with lights directed downward or toward the area to be illuminated and so that backscatter to the nighttime sky is minimized. The design of the lighting shall be such that the luminescence or light source is shielded to minimize light trespass outside the Project boundary.

(D) All lighting shall be of minimum necessary brightness consistent with worker safety and OSHA requirements.

(E) High illumination areas not occupied on a continuous basis shall have switches or motion detectors to light the area only when occupied.

PC ORIGINAL PKG.

S-3 AGRICULTURE:

MITIGATION FOR THE TEMPORARY CONVERSION OF PRIME FARMLAND, FARMLAND OF STATEWIDE IMPORTANCE AND LOCAL IMPORTANCE

Developer shall implement a Mitigation Measure for the loss of Farmland.

One of the following options included below shall be implemented prior to the issuance of a grading permit or building permit (whichever is issued first) for the proposed Project:

For Prime Farmland:

Option 1: The Permittee shall procure Agricultural Conservation Easements on a "2 to 1" basis on land of equal size, of equal quality farmland, outside of the path of development. The Conservation Easements shall meet the State Department of Conservation's regulations and shall be recorded prior to issuance of any grading or building permits; or

Option 2: The Permittee shall pay an "Agricultural In-Lieu Mitigation Fee" in the amount of 30 percent of the fair market value per acre for the total acres of the proposed site based on five comparable sales of land used for agricultural purposes as of the effective date of the permit, including program costs on a cost recovery/time and material basis. The Agricultural In-Lieu Mitigation Fee, will be placed in a trust account administered by the Imperial County Agricultural Commissioner's office and will be used for such purposes as the acquisition, stewardship, preservation and enhancement of agricultural lands within Imperial County; or

Option 3: The Permittee and the County voluntarily enter into an enforceable Public Service Agreement that includes a Agricultural Mitigation payment that is consistent with Board Resolution 2012-05; or

Option 4: The Permittee shall revise their CUP Application/Site Plan to avoid Prime Farmland.

PC ORIGINAL PKG

For Non-Prime Farmland:

Option 1: The Permittee shall procure Agricultural Conservation Easements on a 1 to 1 basis on land of equal size, of equal quality of farmland, outside the path of development. The Conservation Easement shall meet the State Department of Conservation's regulations and shall be recorded prior to issuance of any grading or building permits; or

Option 2: The Permittee shall pay an "Agricultural In-Lieu Mitigation Fee" in the amount of 20% of the fair market value per acre for the total acres of proposed site based on five comparable sales of land used for agricultural purposes as of the effective date of the permit, including program costs on a cost recovery/time and material basis. The Agricultural In-Lieu Mitigation Fee, will be placed in a trust account administered by the Imperial County Agricultural Commissioner's office and will be used for such purposes as the acquisition, stewardship, preservation and enhancement of agricultural lands within Imperial County; or

Option 3: The Permittee and the County voluntarily enter into an enforceable Public Service Agreement that includes a Agricultural Mitigation payment that is consistent with Board Resolution 2012-05; or

Option 4: The Permittee shall revise their CUP Application/Site Plan to avoid Non-Prime Farmland.

For Local Importance Farmland:

Option 1: The Permittee shall procure Agricultural Conservation Easements on a 1 to 1 basis on land of equal size, of equal quality of farmland, outside the path of development. The Conservation Easement shall meet the State Department of Conservation's regulations and shall be recorded prior to issuance of any grading or building permits; or

Option 2: The Permittee shall pay an "Agricultural In-Lieu Mitigation Fee" in the amount of 10% of the fair market value per acre for the total acres of proposed site based on five comparable sales of land used for agricultural purposes as of the effective date of the permit, including program costs on a cost recovery/time and material basis. The Agricultural In-Lieu Mitigation Fee, will be placed in a trust

PC ORIGINAL PKG

account administered by the Imperial County Agricultural Commissioner's office and will be used for such purposes as the acquisition, stewardship, preservation and enhancement of agricultural lands within Imperial County; or

Option 3: The Permittee and the County voluntarily enter into an enforceable Public Service Agreement that includes a Agricultural Mitigation payment that is consistent with Board Resolution 2012-05; or

Option 4: The Permittee shall revise their CUP Application/Site Plan to avoid Local Importance Farmland.

(A) Permittee shall minimize paving and ground disturbing activities to the maximum extent practical within agricultural fields to retain soil characteristics.

(B) Pest Management Plan. Prior to the issuance of a grading permit or building permit (whichever occurs first), a Pest Management Plan shall be developed by the Permittee and approved by the County of Imperial Agriculture Commissioner. The Permittee shall maintain a Pest Management Plan until reclamation is complete. The Plan shall provide the following:

1. Monitoring, preventative, and management strategies for weed and pest control during construction activities at any portion of the project (e.g., transmission line);
2. Control and management of weeds and pests in areas temporarily disturbed during construction where native seed will aid in site revegetation as follows:

- Monitor for all pests including insects, vertebrates, weeds, and pathogens. Promptly control or eradicate pests when found, or when notified by the Agricultural Commissioner's office that a pest problem is present on the project site. The assistance of a licensed pest control advisor is recommended.
- All treatments must be performed by a qualified applicator or a licensed pest control operator;
- "Control" means to reduce the population of common pests below economically damaging levels, and includes attempts to exclude pests before infestation, and effective control methods after infestation. Effective control methods may include physical/mechanical removal, bio control, cultural control, or chemical treatments;
- Use of "permanent" soil sterilants to control weeds or other pests is prohibited because this would interfere with reclamation;
- Notify the Agricultural Commissioner's office immediately regarding any suspected exotic/invasive pest species as defined by the California Department of Food Agriculture and the U.S. Department of Agriculture. Request a sample be taken by the Agricultural Commissioner's Office of a suspected invasive species. Eradication of exotic pests shall be done under

PC ORIGINAL PKG

the direction of the Agricultural Commissioner's Office and/or California Department of Food and Agriculture.

S-4 AIR QUALITY:

(A) The Permittee shall comply at all times with the ICAPCD Regulation VIII, Fugitive Dust Control. Please use MMRP for guidance.

(B) Prior to commencing construction, the Permittee shall submit a Dust Control Plan to the ICAPCD for approval identifying all sources of PM_{10} emissions and associated mitigation measures during the construction and operational phases of the Project. The Project Proponent shall submit a "Construction Notification Form" to the ICAPCD ten (10) days prior to the commencement of any earthmoving activity. The Dust Control Plan submitted to the ICAPCD shall meet all applicable requirements for control of fugitive dust emissions, including the following measures designed to achieve the no greater than 20% opacity performance standard for dust control:

(1) All on-site and off-site unpaved roads shall be effectively stabilized, and visible emissions shall be limited to no greater than 20% opacity for dust emissions by paving, chemical stabilizers, dust suppressants, and/or watering.

(2) All unpaved traffic areas one acre or more in size with seventy-five (75) or more average vehicle trips per day, shall be effectively stabilized, and visible emissions shall be limited to no greater than 20% opacity for dust emissions by paving, chemical stabilizers, dust suppressants and/or watering.

(3) The transport of bulk materials shall be completely covered, unless six inches of freeboard space from the top of the container is maintained with no spillage and loss of bulk material. In addition, the cargo compartment of all haul trucks shall be cleaned and/or washed at the delivery site after removal of bulk material.

(4) All track-out or carry-out, which includes bulk materials that adhere to the exterior surfaces of motor vehicles and/or equipment (including tires) that may then fall onto the pavement, shall be cleaned at the end of each workday, or immediately when mud or dirt extends a cumulative distance of fifty (50) linear feet or more onto a paved road within an urban area.

(5) Movement of bulk material handling or transfer shall be stabilized prior to handling, or at points of transfer with application of sufficient water, chemical stabilizers, or by sheltering or enclosing the operation and transfer line.

PC ORIGINAL PKG

(6) The construction of new unpaved roads is prohibited within any area with a population of five hundred (500) or more, unless the road meets ICAPCD's definition of a "temporary unpaved road." Any temporary unpaved road shall be effectively stabilized and visible emissions shall be limited to no greater than 20% opacity for dust emission by paving, chemical stabilizers, dust suppressants and/or watering.

(7) Shall comply with the MMRP's and its applicable mitigations.

(C) The Permittee shall implement all applicable standard mitigation measures for construction combustion equipment for the reduction of excess NOx emissions as contained in the Imperial County CEQA Air Quality Handbook and associated regulations. These measures include:

(1) Use of alternative fueled or catalyst equipped diesel construction equipment, including all off-road and portable diesel-powered equipment.

(2) Minimize idling time, either by shutting equipment off when not in use or reducing the time of idling to five minutes at a maximum.

(3) Limit the hours of operation of heavy-duty equipment and/or the amount of equipment in use.

(4) Replace fossil-fueled equipment with electrically driven equivalents (assuming powered by a portable generator set and are available, cost effective, and capable of performing the task in an effective, timely manner).

(5) Curtail construction during periods of high ambient pollutant concentrations; this may include ceasing construction activity during the peak hour of vehicular traffic on adjacent roadways.

(6) Implement activity management (e.g. rescheduling activities to avoid overlap of construction phases, which would reduce short-term impacts).

S-5 GEOLOGY/SOILS and MINERAL RESOURCES:

(A) Prior to approval of final engineering and grading plans for the Project, the County shall verify that all recommendations contained in the Geotechnical Report for this Solar Facility and have been incorporated into all final engineering and grading plans. The County's soil engineer and engineering geologist shall review grading plans prior to finalization to verify compliance with the recommendations of the report.

S-6 CULTURAL RESOURCES:

PC ORIGINAL PKG

(A) Compliance and Monitors shall insure all mitigations set forth in the MMRP are followed.

S-7 HEALTH, SAFETY AND HAZARDOUS MATERIAL/FIRE AND FUELS MANAGEMENT:

(A) All trash and debris within the Project site shall be disposed of off-site, in accordance with current, local, state, and federal disposal regulations. Compliance with this measure shall be verified by the Planning and Development Services Department.

(B) If it is determined that hazardous wastes are, or will be generated by the proposed operations, the wastes must be managed in accordance with the California Hazardous Waste Control Law (California Health and Safety Code, Division 20, Chapter 6.5) and the Hazardous Waste Control Regulations (California Code of Regulations, Title 22, Division 4.5).

(C) If it is determined that hazardous wastes will be generated, the Permittee should also obtain a United States Environmental Protection Agency, Identification Number by contacting (800) 618-6942. Certain hazardous waste treatment processes or hazardous material, handling, storage or uses may require authorization from the local Certified Unified Program Agency (CUPA). Information about the requirement for authorization can be obtained by contacting the local CUPA.

(D) Firearms shall be prohibited in all Project areas except for those used by licensed security personnel.

(E) The recognized environmental concerns shall be cleaned up and properly disposed of in accordance with all federal, state and local regulations.

(F) Any hazardous materials storage areas shall be designed with curbs or other containment measures, e.g., double-walled storage tanks, to contain spills and leaks. If on-site hazardous materials exceed fifty-five (55) gallons, a "Hazardous Material Management Plan" shall be prepared and approved by the County Local Enforcement Agency (LEA) and the Imperial County CUPA. A copy of the approved plan shall be submitted to ICPDSD prior to the issuance of the grading/building permit (Source: Imperial County Renewable Energy Ordinance, Title 9, Division 17, § 91702.00).

(G) The Permittee shall present to the Department an Emergency Response/Action Plan that has been approved by the ICFD/OES Department, and the LEA and any other agencies with jurisdiction (Source: Imperial County Renewable Energy Ordinance, Title 9, Division 17, § 91702.00).

The Emergency Response/Action Plan shall cover all possible foreseeable emergencies, e.g., major fluid spills, earthquakes, fires, floods or other emergencies. At all times, there shall be at least one employee either on the facility premises or on-call (i.e., available to respond to an emergency by reaching the facility within a short period of time) with the responsibility to coordinate all emergency response measures. This Emergency Coordinator shall be thoroughly familiar with all aspects of the Project's Emergency Response/Action Plan, all operations and activities at the facility, location of all records within the facility and the facility's layout. This Emergency Coordinator shall have the authority to commit the resources needed to carry out the contingency plan. Adequate personnel and equipment shall be available to respond to emergencies and to ensure compliance with the conditions of the Permit.

The Emergency Response/Action Plan shall be prepared in consultation with, but not be limited to, the ICFD/OES, County EHS/Health Department, County Sheriff/Coroner's office, County Department of Public Works, ICPDSD, and other appropriate state and county agencies. The plan shall include a notification list of response agencies which shall be notified immediately upon the discovery of a reportable unauthorized discharge and the list shall include:

- ICFD/OES;
- ICPDSD;
- County EHS/Health Department;
- County Department of Public Works; and
- California Highway Patrol, as applicable.

All employees shall be trained by classroom and hands-on training on safety procedures, maintenance programs and emergency response protocols to ensure safety and reliability in the event of an unforeseen emergency situation.

The Permittee shall provide adequate safety devices to protect against the hazard of fire and explosion for activities that involve the use and storage of flammable, explosive or highly corrosive or reactive materials as well as provide adequate firefighting and fire suppression equipment and using devices standard within the industry in compliance with all applicable state and local laws as determined by the ICFD/OES.
The Permittee shall implement all State and County-approved worker safety and fire protection plans and programs.

Any gates on-site shall have a "Knox" lock rapidly accessible by the ICFD/OES.

Appropriate first aid provisions for facility operations shall be made for emergency response during Project construction, operation, and

PC ORIGINAL PKG

maintenance activities with appropriate first aid training for Project employees.

During construction, a member of each working crew shall be trained in basic first aid and supplied with necessary medical equipment to respond to emergencies as provided for in the Emergency Response/Action Plan required above.

Permittee shall identify a responsible agent for emergency purposes, whose name, title, e-mail address and telephone number shall be provided to the County Department of Public Works, ICFD/OES, County Environmental Health Services/Health Department, County Sheriff/Coroner's office, IID, and ICPDSD.

S-8 HYDROLOGY AND WATER QUALITY:

Adhere to measures set forth in the MMRP.

S-9 BIOLOGICAL RESOURCES:

Adhere to all Biological measures in the MMRP

S-10 PUBLIC SERVICES:

(A) The Permittee shall widely publicize to County residents the availability of job opportunities associated with the Project (whether or not those job opportunities are within Imperial County or are regional). Postings at City Halls, newspaper and television advertisements, local job centers, and dedicated website shall offer sufficient avenues of communication. The Imperial County Office of Employment and Training in addition to the Imperial Valley College presents viable sources for community awareness. The information shall provide available positions, details of positions including qualifications, number of openings, indicated the anticipated start date for each, and application process. In order to maintain oversight of the process, the application process can be completed both on a dedicated website and at dedicated computers at the County which would afford those without Internet connection the ability to apply. The Permittee's information shall be forwarded to the Permittee or their contractor and copies of applications files are maintained at the County.

(B) During the development phase of the Project, the Permittee shall provide a roster of employees to include their position and place of residence.

(C) Unless prohibited by local, state or federal law or regulation, Permittee shall make good faith efforts to hire qualified residents of the Imperial County with the objective that a majority of the total work force is comprised of the Imperial County residents.

(D) The Permittee shall install and implement security measures which may include, but not limited to, secured perimeter fencing with barbed wire, sensors, controlled

PC ORIGINAL PKG

access points, security alarms, security camera systems, and security guard vehicle patrols to deter trespass or unauthorized activities that would interfere with operation of the Project.

(E) Permittee shall compensate the County pursuant to the Department of Environmental Health Fee Schedule for any costs of calls related to bees and mosquitoes.

(F) The Permittee shall reimburse the Sheriff's Department for any investigations regarding theft on the Project site and related law enforcement.

(G) All construction supervisors and foremen shall be provided with communication devices, cell phones or walkie-talkies, in the event of an emergency situation on-site.

(H) All construction-related activities shall take place within the development footprint of the Project as defined by the final engineering plans. The anticipated impact areas, including staging areas, equipment access, and disposal or temporary placement of spoils, shall be delineated with staking and/or orange construction fencing prior to construction to avoid natural resources where possible. No construction-related activities shall occur outside of the designated impact area. All construction materials, staging, storage, dispensing, fueling, and maintenance activities shall be designated on construction maps and shall be situated a minimum of fifty (50) feet from all drainages. Staging and temporary access shall occur on existing roadways whenever possible.

(I) **Emergency Operations Plan** - The Applicant shall develop an Emergency Operation Plan in conjunction with local fire service personnel and the AHJ and hold a comprehensive understanding of the hazards associated with lithium-ion battery technology. Lithium-ion battery energy storage systems must incorporate adequate explosion prevention protection as required in NFPA 855 or International Fire Code Chapter 12, where applicable.

(J) **Signage** - The Applicant shall provide signage that identifies the contents of an energy storage system on all energy storage system installations to alert first responders to the potential hazards associated with the installation.

S-11 TRANSPORATION AND TRAFFIC:

A. Permittee shall prepare and submit a Construction Traffic Control Plan to Imperial County Department of Public Works-Development Review and Caltrans District 11, as appropriate, for approval. The Construction Traffic Control Plan must be prepared in accordance with both the California Department of Transportation Manual on Uniform Traffic Control Devices and Work Area Traffic Control Handbook and must include, but not be limited to, the following issues:

1. Timing of deliveries of heavy equipment and building materials;
2. Directing construction traffic with a flag person;

PC ORIGINAL PKG

3. Placing temporary signing, lighting, and traffic control devices if required, including, but not limited to, appropriate signage along access routes to indicate the presence of heavy vehicles and construction traffic;
4. Ensuring access for emergency vehicles to the Project site;
5. Temporarily closing travel lanes or delaying traffic during materials delivery, transmission line stringing activities, or any other utility connections;
6. Maintaining access to adjacent property;
7. Specifying both construction-related vehicle travel and oversize load haul routes, minimizing construction traffic during the AM and PM peak hours, distributing construction traffic flow across alternative routes to access the Project site, and avoiding residential neighborhoods to the maximum extent feasible.

B. Permittee shall Institute construction work hours as necessary, such that the arrival and/or departure times of workers would be staggered as necessary.

C. Permittee shall identify vehicle safety procedure for entering and exiting site access roads.

D. Permittee shall submit documentation that identifies the roads to be used during construction.

E. The Permittee shall be responsible for repairing any damage to non-County maintained roads that may result from construction activities. The Permittee shall submit a preconstruction video log and inspection report regarding roadway conditions for roads used during construction to the Imperial County Department of Public Works Within 30 days of completion of construction, the project proponent/operator shall submit a post-construction video log and inspection report to the County. This information shall be submitted in electronic format. The County, in consultation with the Permittee's engineer, shall determine the extent of remediation required, if any.

S-12 COMMENCEMENT OF WORK:

(A) If the Project has not commenced, or permits for the Project have not been issued, within one (1) year from approval date this CUP shall be null and void. If this CUP has been unused, abandoned, discontinued, or ceased for one (1) year, it shall be null and void and of no effect.

(B) If Permittee cannot initiate or obtain permits for the approved use during the one (1) year period following approve of this CUP, Permittee may request a one (1) year extension from the ICPDSD. The request for an extension shall be in writing and be submitted with explanation to the ICPDSD at least sixty (60) days prior to the end of the one (1) year period. The Director shall have the authority to extend the initial startup period of a CUP two times for a maximum of one (1) year each. No

PC ORIGINAL PKG

extension under this section shall be extended for more than two (2) years.

S-13 CONSTRUCTION STANDARDS:

(A) The solar energy and energy (battery) storage facility structures shall be built in accordance with the California Building Code requirements applicable to "Seismic Category D". All structures and facilities shall be designed in accordance with the publication entitled "Recommended Lateral Force Requirements and Commentary by the Structural Engineers Association of California". The structural components of the permitted facilities shall be reviewed by the Building Official/Planning and Development Services Director. Applicable building permits shall be procured from the County for facilities prior to commencement of construction of such facilities.

S-14 LAND USE IMPROVEMENTS:

(A) The Permittee shall prepare an appropriate parking plan for review and approval by the ICPDSD and County Public Works Department for any and/or all proposed Operation & Maintenance buildings.

(B) The Permittee shall surface with a material of higher quality all access drives, parking areas, and vehicular maneuvering areas from primary access to any constructed operation and maintenance buildings.

S-15 NOISE STANDARDS:

(A) During the construction period, heavy truck traffic shall be limited to the hours between 6:00 AM and 7:00 PM.

(B) During construction, in accordance with Imperial County Noise Element of the General Plan, the noise level shall not exceed 75 dBA_{Leq} at the property boundary when averaged over an 8-hour period.

(C) During operation of the facility, the maximum permitted continuous sound level shall be not more than 45 dBA_{Leq}, as measured at the nearest residence using the "A" scale and measured with a sound level meter and associated octave band analyzer. The level may be exceeded by ten percent (10%) if the noise is intermittent and during daylight hours.

(D) Haul trucks and other engine-powered equipment shall be muffled and operated with engine exhaust brake use limited to emergencies.

S-16 ODOR CONTROL:

PC ORIGINAL PKG

The Permittee shall control all odor-causing, harmful, noxious emissions to ensure that quantities or air contaminants released as a result of the permitted facilities do not exceed County, State or Federal standards, nor constitute a public nuisance, per the Imperial County Land Use Ordinance, Division 13, Enforcement, Chapter 2, Abatement of Nuisances, Sections 91302.00 through 91301.02.

S-17 PLAN APPROVALS:

Permittee shall submit to the ICPDSD, architectural, landscaping and lighting plans prior to construction of those facilities, to include painting of structures, planting of trees and/or vegetation, and shall receive all approvals prior to commencing construction of the applicable permitted facilities. Approval shall not be unreasonably withheld so long as the plans are consistent with applicable Imperial County Land Use Ordinance requirements.

S-18 PROJECT DESIGN:

(A) All facility access and parking areas shall be constructed to the standards of the Imperial County Land Use Ordinance.

(B) All permitted activities shall provide for the minimum feasible surface land disturbance for compatibility with the existing uses wherever possible.

(C) All equipment and electrical interconnection facilities used at the solar plant facilities shall be maintained in a manner that prevents breaking, cracking, and leaking, e.g. operator staffing and training, including appropriate quality assurance procedures, with the operation of back-up or auxiliary facilities when necessary.

(D) All on-site basins shall be designed and constructed under the supervision of a California-licensed Civil Engineer meeting sound engineering standards, with all applicable regulations and all requirements of the County EHS/Health Department and Public Works Departments are complied with.

(E) Permittee shall obtain encroachment permits for any construction or operation on IID existing rights of way or easements.

S-19 REPORTING AND MONITORING:

(A) The Permittee shall furnish to the County, at its sole cost within a reasonable time, any relevant reports/information which the County requires for monitoring purposes to determine whether cause exists for revoking this Permit, or to determine compliance with this Permit. The Permittee shall submit all required reports to the Planning Director,

PC ORIGINAL PKG

County Planning and Development Services Department, 801 Main Street, El Centro, CA 92243.

(B) Permittee and ICPDSD Director shall agree upon an environmental consultant for overseeing all the required mitigation, conditional use Permit conditions and public benefit agreement (if any) requirements during the construction of the Project.

(C) Permittee shall pay for third-party environmental consultant monitoring and compliance.

(D) The ICPDSD, in consultation with the third-party Environmental Consultant and the County Executive Office, will require that all mitigation measures be satisfied, all MMRP requirements have been satisfied, all Conditions of Approval in the CUP are in full compliance and all conditions of the Development Agreement (if any) have been satisfied before the Final Certificate of Occupancy Certificate is issued.

(E) During the operation of solar facility, an Annual Compliance Report shall be submitted to the ICPDS, documenting the implementation of the conditions and general measures as well as any resource-specific measures.

(F) The Permittee shall reimburse the ICPDS for County as well as monitoring and investigations related to the construction and operation of the Project. Permittee shall compensate the County pursuant to the ICPDSD Fee Schedule for any costs incurred.

(G) Permittee shall pay for all costs as required to comply with the Conditions of Approval and MMRP.

(H) All County staff time will be billed on a time and materials basis. Failure by Permittee to provide any payment required of Permittee to the County in the CUP shall cause Permittee to be in non-compliance of the CUP. Upon notice of such noncompliance, County may, at its sole discretion, cease processing, defending any lawsuit or paying for costs associated with the Project.

S-20 SPILLS AND RUNOFF:

The Permittee shall design and construct the permitted facilities to prevent spills from endangering adjacent properties and to prevent runoff from any source being channeled or directed in an unnatural way so as to cause erosion, siltation, or other detriments pursuant to the construction Storm Water Pollution Prevention Plan approved by the Regional Water Quality Control Board.

S-21 FACILITIES CLOSURE AND SITE RESTORATION:

PC ORIGINAL PKG

(A) Permittee shall implement the site restoration plan at the earlier of when the operation of the permitted facilities herein authorized has ceased or the term of the CUP has expired. At such time, all facilities shall be dismantled, and the lands involved restored to their pre-construction condition and available for agricultural production uses as agreed to by the Imperial County Planning and Development Services Director.

(B) Prior to the issuance of a grading Permit, a decommissioning and restoration plan (the Reclamation Plan) shall be submitted and approved by the Imperial County Planning and Development Services Director. The Reclamation Plan shall documents the procedures by which the Project site will be returned to its current conditions.

(C) Within thirty (30) days prior to ground disturbance, a Bond, or other acceptable surety, in the amount of the estimated site restoration financial calculations/bond, for the developed project area, or other forms of security acceptable to County Counsel's office, shall be filed with the County that guarantees restoration of the land to its condition prior to the permitted solar plant development.

(D) Upon completion of such site restoration, and demonstration that the land has been restored to the agriculturally productive/farmable condition prior to the permitted solar plant development the Bond or other surety shall be released by the County.

(E) The above financial calculations/bond shall be reviewed every five (5) years in December and adjusted on January 1st to add a Consumer Price Index (CPI) (Los Angeles) increase by the Planning and Development Services Director. This readjustment can be made in the County's sole discretion and must be funded by the Permittee within ninety (90) calendars after notice of the additional amount of such adjustment.

S-22 PUBLIC WORKS:

1. The Applicant shall acquire proper easements from adjacent property owners for the installation of any proposed transmission lines.

2. All survey monuments, including those within the interior of the project, shall be protected, and their locations shall remain accessible to any surveyor throughout the duration of the project. Section 8774 of the Business and Professions Code, and Section 846.5 of the Civil Code, each provide the right of entry to utilize boundary evidence and perform surveys, without undue delay, to any person authorized to practice land surveying. The right of entry is not contingent upon prior notice.

3. The Applicant shall furnish a Drainage and Grading Plan/Study to provide for property grading and drainage control, which shall also include prevention of sedimentation of damage to off-site properties. The Study/Plan shall be

PC ORIGINAL PKG

submitted to the Department of Public Works for review and approval. The applicant shall implement the approved plan. Employment of the appropriate Best Management Practices (BMP's) shall be included (Per Imperial County Code of Ordinances, Chapter 12.10.020 B).

4. Based from the information provided on the project documents, it is assumed that County roads will not be used for site access during or after construction activities have been completed. In the event that County roads are required for site access, the Applicant shall consult with this Department in advance for review and approval.

   Access to sites shall be completed from public roads.

5. Any unimproved access roads/routes between public roads and access gates shall be improved for all-weather access. Such all-weather improvements shall be completed as recommended by a Geotechnical Engineer licensed to practice in the State of California.

6. Each site shall have, as a minimum, one (1) primary Class 2 Base aggregate material driveway and one (1) emergency access Class 2 Base aggregate material driveway, if they are tied to a County Road only.

7. Access to project sites during and after construction is expected to be completed through private unpaved roads or private property.

The Applicant shall mitigate generation of dust caused by construction traffic as per Rule 805 – Paved and Unpaved Roads of the Imperial County Air Pollution Control District.

- All solid and hazardous waste shall be disposed of in approved solid waste disposal sites in accordance with existing County, State and Federal regulations (Per Imperial County Code of Ordinances, Chapter 8.72).

- All on-site traffic areas shall be hard surfaced to provide all weather access for emergency vehicles. The surfacing shall meet the Department of Public Works and Fire/Office of Emergency Services (EOS) Standards as well as those of the Air Pollution Control District (APCD).

- The project may require a National Pollutant Discharge Elimination System (NPDES) permit and Notice of Intent (NOI) from the Regional Water Quality Control Board (RWQCB) prior to County approval of onsite grading plan (40 CFR 122.28).

- A Transportation Permit may be required from road agency(s) having jurisdiction over the haul route(s) for any hauls of heavy equipment and/or large vehicles which impose greater than legal loads on riding surfaces, including bridges. (Per Imperial County Code of Ordinances, Chapter 10.12 - OVERWEIGHT VEHICLES AND LOADS).

PC ORIGINAL PKG

- Effective September 15, 2020, the State's Mandatory Organic Waste Recycling Law (AB 1826 or Chapter 727, Statutes of 2014) decreased the threshold requiring all businesses and multi-dwelling facilitates of 5 units or more generating two (2) cubic yards or more of solid waste per week to recycle their organic waste including landscape waste, wood waste, and food waste. Information about possible organics waste recycling services can be found at the CalRecycle site at: https://www.calrecycle.ca.gov/Recycle/Commercial/Organics/

S-23 WASTE DISPOSAL

(A) The Permittee shall insure that all solar plant facilities waste, liquid, gas or solid, which are generated on-site shall be disposed of in compliance with appropriate local, state, and federal regulations, in effect or as subsequently duly-enacted. All solid waste debris and/or any hazardous wastes located on the Project site must be satisfactorily removed to a permitted facility prior to the commencement of grading earthen material at the site.

(B) Littering shall not be allowed. Project personnel shall not deposit or leave any food or waste in the Project area, and no biodegradable or non-biodegradable debris shall remain in the right-of-way or on the Project site following completion of construction.

S-24 CALTRANS:

(A) An encroachment permit shall be required for any work performed within any Caltrans right-of-way. If required, any traffic control will need to be addressed as part of Caltrans permit approval in accordance with the Caltrans Standard Plans and the California Manual on Uniform Traffic Control Devices (MUTCD).

(B) Any application for a permit for work performed within a Caltrans right-of-way must include an approved final environmental document including the California Environmental Quality Act (CEQA) determination addressing any environmental impacts within the Caltrans right-of-way and any corresponding technical studies, if required. If these materials are not included with the encroachment permit application, the Permittee will be required to acquire and provide these to Caltrans before the permit application will be accepted. Identification of avoidance and/or mitigation measures will be a condition of encroachment permit approval as well as procurement of any necessary regulatory and resource agency permits.

(C) Any work performed within Caltrans' Right of Way (R/W) will require discretionary review and approval by Caltrans. As part of the encroachment permit process, the applicant must provide an approved final environmental document, corresponding technical studies, and

PC ORIGINAL PKG

necessary regulatory and resource agency permits, specifically, any CEQA determinations or exemptions.

S-25 IID Condition requirements

(A) The Project may impact IID drains with project site runoff flows draining into IID drains. To mitigate impacts, IID may require a comprehensive IID hydraulic drainage system analysis. IID's hydraulic drainage system analysis includes an associated drain impact fee.

(B) An IID encroachment permit is necessary to utilize existing surface-water drainpipe connections to drains and receive drainage service from IID. Surface-water drainpipe connections are to be modified in accordance with IID standards. A construction storm-water permit from the California Regional Water Quality Control Board is required before commencing construction and an industrial storm water permit from CRWQCB is needed for the operation of the proposed facility. Copies of these permits as well as the project's Storm Water Pollution Prevention Plan are to be submitted to IID.

S-26 FIRE PROTECTION:

Energy storage facilities create extreme hazards for firefighters and emergency responders with possibility of explosions, flammable gases, toxic fumes, water-reactive materials, electrical shock, corrosives, chemical burns. The hazards listed can create a potential significant impact on Imperial County Fire Department due personnel staffing to safely perform firefighting operations and Hazardous Material Response for a utility-scale energy storage facility. The location of the project will lead to longer response times. These longer response times can create incidents that can create difficulties in incident stabilization; therefor requiring additional personnel to safety manage the incident. Utility-scale energy storage will require specialized and reliable equipment to perform firefighting operations safely and effectively to NFPA, OSHA and ICFD standards and requirements.

Standards and requirements for energy storage system includes but not limited to:

NFPA:

1 Fire Code
70 National Electrical Code
855 Standard for the installation of Energy Storage System
111 Stored Electrical Energy Emergency and Standby Power System
1710 Standard for Organization and Deployment of Fire Suppression Operations, Emergency Medial Operations, and Special Operations to the Public by Career Fire Departments.

OSHA:

29 CFR 1910.134(g)(4)

CFC:

PC ORIGINAL PKG

Chapter 12 section 1206 Electrical Energy Storage System
Chapter 9 Fire Protection and Life Safety System.

1) Vega Solar Energy and Storage Project reviews for plans and inspections will be done by a third-party consultant determined by the Fire Department at the applicant's expense as per California Fire Code Chapter 1 [A] 104.7.2 Technical Assistance. This will be at the discretion of the Fire Department.

2) Project will provide adequate Fire water. Fire Department will determine number of gallons to be placed strategically once site plan is reviewed.

3) Signage that identifies the contents of an ESS is required on all ESS installations to alert first responders to the potential hazards associated with the installation.

4) An approved water supply capable of supplying the required fire flow determined by appendix B in the California Fire Code shall be installed and maintained. Private fire service mains and appurtenance shall be installed in accordance with NFPA 24.

5) An approved automatic fire suppression system shall be installed on all structures as per the California Fire Code. All fire suppression systems will be installed and maintained to the current adapted fire code and regulations.

6) An approved automatic fire detection system shall be installed on all structures as per the California Fire Code. All fire detection systems will be installed and maintained to the current adapted fire code and regulations.

7) Fire department access roads and gates will be in accordance with the current adapted fire code and the facility will maintain a Knox Box for access on site.

8) Compliance with all required sections of the fire code.

9) Applicant shall provide product containment areas(s) for both product and water run-off in case of fire applications and retained for removal.

10) All hazardous material and wastes shall be handled, store, and disposed as per the approved Hazardous Waste Materials Plan. All spills shall be documented and reported to Imperial County Fire Department and CUPA as required by the Hazardous Waste Material Plan.

S-27 COUNTY EXECUTIVE OFFICE:

1. Fiscal and Economic Impact Analysis. The Permittee will be invoiced by the Executive Office for expenses related to the procurement of a consultant to

PC ORIGINAL PKG

produce a Fiscal and Economic Impact Analysis (FEIA) and will be responsible for the cost of any subsequent updates as a result of modifications to the data and project by the developer.

2. Public Service Agreement ("Agreement" or "PSA"). Pursuant to the Guidelines for the Public Service Program for Solar Power Plants in Imperial County amended and adopted by the Board of Supervisors on May 9, 2023, PSA will be entered into by and between the County of Imperial and Developer to provide for a concerted and coordinated effort to maximize the benefits of the Project to the County of Imperial community.

Sales Tax Benefit Solar Farm:

(a) Developer will require that all qualifying contractors and subcontractors exercise their option to obtain a California Department of Tax and Fee Administration (CDTFA) sub-permit for the jobsite and allocate all eligible use tax payments to Imperial County and LTA. Prior to commencement of any construction activity on-site the developer will require that the contractor or subcontractor provide County of Imperial with either a copy of their CDTFA account number and sub-permit.

(b) To accomplish this, Permittee shall either cause its construction contractor to treat the project in accordance with California Regulation 1521(b)(2)(B), California Regulation 1521(c)(13)(B), and California Regulation 1826(b) for sales and use tax purposes or form a "Buying Company" as defined in the CDTFA 1699(h). Permittee can adopt an alternate methodology to accomplish this goal if such methodology is approved by the County Executive Officer prior to issuance of building permits. Not later than forty five (45) days after the due date for filing sales and use tax returns for each calendar quarter, occurring after the commencement of any construction activity on-site through and including the first anniversary of COD (as defined below),

(c) Developer shall report, or cause its general contractor to report to County, the total amount of sales and use taxes related to the Project that are allocated to the County, and reported on Developer's, general contractor's, and subcontractors' applicable California sales and use tax returns. The obligations of Developer under this Section III.A are hereinafter referred to as the "Developer Sales and Use Tax Responsibilities."

(d) Guarantee Amounts. In the event that Developer shall fail to perform the Developer Sales and Use Tax Responsibilities and as a result of such failure, with respect to the Project, (i) County receives less than the amount of such sales and use taxes it would have received under existing applicable sales and use tax laws had such responsibilities been fully performed subject to adjustment as set forth in Section IV.C below) or (ii) Local Transportation Authority (LTA) receives less than the amount of such sales and use taxes it would have received under existing applicable sales and use tax laws had such responsibilities been fully-performed, then Developer shall pay, as and when provided below, to County or LTA as applicable, the amount of the applicable shortfall.

(e) Adjustments to Guarantee Amounts.

PC ORIGINAL PKG

(f) Developer's sales tax guarantee set out in Section III.B above shall be adjusted to be eighty-five percent (85%) of the projected sales and use taxes for the Project. At least ten (10) days prior to the issuance of the first (1st) grading permit, Developer shall provide County with evidence of such projected sales and use taxes, including but not limited to sales taxes receipts, engineering contracts, procurement contracts, construction contracts. County shall meet with Developer to confirm that amount.

(g) The amount of sales and use tax anticipated to be generated is based on the projected construction of a **fifty (50 Mw) megawatt** alternating current 50 MW AC solar generation facility. Construction of any additional output capacity beyond the 50 MW output now projected will require the sales tax guarantee be adjusted based on the actual output from solar generation facilities of the Project as evidenced by any Power Purchase Agreement subsequently entered into by Developer related to this Project.

(h) To the extent of any reduction in the size of the Project as the result of any final ruling, stipulated judgment, or settlement, in accordance with Section V.C below, the not-to-exceed amounts set forth in Section III.B shall be reduced pro rata based on the size of such reduction.

(i) The complete amount due to County for the Project must be received within one (1) year after Commercial Operation Date ("COD") for this Project. If, within one (1) year after issuance of the final Certificate of Occupancy, the sales and use taxes received by the County are less than the amount guaranteed for that portion of the project, Developer shall pay the difference to the County.

(j) Payments to County and LTA as a result of a shortfall shall be due within thirty days of Developer's receipt of written notice of shortfall from the County. Payments received by County after the ninetieth (90th) day following Developer's receipt of notice shall be deemed late. Developer hereby agrees to pay interest at the rate of six percent (6%) per annum of the payment due for any payment received by County beyond the due date. Said interest shall be included with the late payment. The obligation to pay interest shall be stayed when such amounts are disputed in good faith, so long as Developer submits the payments "under written protest." Upon determination of dispute, such interest may be assessed if it is determined that the dispute was not made in good faith.

(k) In the event that Developer repowers or replaces the equipment onsite, each Site shall be designated as the "Point of Sale" so as to create an additional local tax-funding source for the County of Imperial.

Battery Storage Sales Tax Benefit

1.1.1. To the extent permitted by applicable local, state, and Federal law, Developer will require that all qualifying contractors and subcontractors exercise their option to obtain a California Department of Tax and Fee Administration ("CDTFA") sub-permit for the jobsite and allocate all eligible sales and use tax payments to County and the Local Transit Authority ("LTA").

BC ORIGINAL PKG

1.1.2. Prior to commencement of any construction activity onsite exclusive of grading. Developer shall require that the contractor or subcontractor provide County with a copy of their CDTFA account number and sub-permit. Developer shall either cause its construction contractor to treat the Project in accordance with California Sales and Use Tax Regulation 1521(b)(2)(B), California Sales and Use Tax Regulation 1521(c)(13)(B), and California Sales and Use Tax Regulation 1826(b) for sales and use tax purposes, or form a "Buying Company," as defined in the California Sales and Use Tax Regulation 1699(h). Developer may adopt an alternate methodology to accomplish this goal if such methodology is approved by the County's Executive Officer prior to issuance of any building permit.

1.1.3. No later than forty-five (45) days after the due date for filing sales and use tax returns for each calendar quarter, occurring after the commencement of any construction activity on-site through and including the first anniversary of commercial operating date ("COD"), Developer shall report, or cause its general contractor to report to County, the total amount of sales and use taxes related to the Project that are allocated to the County, and reported on Developer's, general contractor's and subcontractors' applicable California sales and use tax returns.

1.1.4. *Guarantee Amounts*. Prior to the issuance of any building permit for the Project, Developer shall provide County with a guarantee of the minimum sales and use that will be received by County and LTA under existing applicable sales and use tax laws. The guarantee amount shall be based on the total storage capacity of the Project in megawatts, which is projected to be **one hundred megawatts (100 Mws)** Should Developer choose to develop the Project in phases, and receives the required approvals from County to do so, then Developer shall provide a separate guarantee amount for each phase of the project based on the total storage capacity in megawatts for the applicable phase.

(a) Developer warrants that the sales/use tax guarantee amounts to be provided to County as mandated in this Subparagraph 9.2.4 shall be true and accurate estimates of the projected sales and use taxes that will be generated for this Project. Developer shall provide County with evidence of the projected sales/use taxes for the Project, including but not limited to sales tax receipts, and executed or anticipated engineering contracts, procurement contracts, and construction contracts. If the Parties are unable to agree upon a guarantee amount, then the dispute shall be referred to an independent accountant mutually acceptable to both Parties. The costs for such nonbinding mediation shall be borne by Developer.

(b) Developer warrants that the sales/use tax guarantee amounts to be provided to County as mandated in this Subparagraph 9.2.4 will incorporate any and all sales/use tax exemptions that Developer and/or its contractors and subcontractors intend to utilize, and that such exemptions will be

PC ORIGINAL PKG

disclosed to County fully and in good faith prior to the issuance of any building permit for this Project.

(c) Developer understands and acknowledges that the sales/use tax guarantee amounts to be provided to County as mandated by this Subparagraph 9.2.4 are a part of the consideration to be received by County in return for entering into this Agreement, and further understands and acknowledges that County would not enter into this Agreement but for said guarantee from Developer.

1.1.5. In the event that County and / or LTA receives less than the amount of sales/use taxes guaranteed pursuant to Subparagraph 9.2.4, then Developer shall pay, as and when provided below, to County or LTA as applicable, the amount of the applicable shortfall.

1.1.6. *Adjustments to Guarantee Amounts.*

(a) The amount of sales and use tax anticipated to be generated is based on the projected construction of a **100 MW utility**-scale energy storage complex incorporating lithium ion batteries and/or flow battery technologies throughout the Project site. Construction of any additional storage capacity beyond the **100 MW storage** capacity now projected will require the sales/use tax guarantee amounts to be adjusted based on the actual storage facilities of the Project as evidenced by any power purchase agreement or power storage agreement subsequently entered into by Developer related to this Project.

(b) To the extent of any reduction in the size of the Project as the result of any final ruling, stipulated judgment, or settlement, the sales/use tax guarantee amounts mandated under Subparagraph 9.2.4 shall be reduced pro rata based on the size of such reduction.

(c) Should Developer become of aware of a change in circumstances that would materially affect the sales/use tax guarantee amount, then Developer shall, within thirty (30) days of learning of such change in circumstances, inform the County in writing of the change in circumstances. If the County determines that such change in circumstances warrants an adjustment to the sales/use tax guarantee amount, then County shall negotiate in good faith with Developer in revising the sales/use tax guarantee amount. If the Parties are unable to agree upon a revised guarantee amount, then the dispute shall be referred to an independent accountant mutually acceptable to both Parties. The costs for such nonbinding mediation shall be borne by Developer. Failure of the Developer to inform the County of the change in circumstances shall constitute a waiver of Developer's ability to seek any adjustment to the sales/use tax guarantee based on such change in circumstances.

1.1.7. The complete sales/use tax guarantee amount due to County and LTA for the Project must be received within one (1) year after COD for this Project, or such later date as any applicable sales/use tax is due or is transmitted from the CDTFA, unless it is delayed due to causes beyond Developer's control or for which Developer is not responsible. If, within one (1) year after issuance of the final certificate of occupancy, or such later date as any applicable sales/use tax is due or is transmitted from the CDTFA, the sales/use taxes received by the County are less than the

PC ORIGINAL PKG

sales use tax guarantee amounts mandated under Subparagraph 9.2.4, then Developer shall pay the difference to the County.

1.1.8. Payments to County and LTA as a result of a shortfall shall be due within thirty days of Developer's receipt of written notice of shortfall from the County. Payments received by County after the ninetieth (90th) day following Developer's receipt of notice shall be deemed late. Developer hereby agrees to pay interest at the rate of six percent (6%) per annum of the payment due for any payment received by County beyond the due date. Said interest shall be included with the late payment. The obligation to pay interest shall be stayed when such amounts are disputed in good faith, so long as Developer submits the payments "under written protest." Upon determination of dispute, such interest may be assessed if it is determined that the dispute was not made in good faith.

In the event that Developer repowers or replaces the equipment onsite, each Site shall be designated as the "Point of Sale" so as to create an additional local tax-funding source for the County of Imperial.

S-28 Additional Conditions

1. Because oversize vehicles may utilize this facility (i.e., SR 111), as a condition of the Conditional Use Permit, the project applicant will be required to obtain all applicable Caltrans permits required for construction of the project, including special transportation permits (if applicable) for oversize construction vehicles.
2. As a condition of the Conditional Use Permit, the applicant will be required to prepare and submit for approval a traffic management plan to Caltrans as specified in this comment.
3. As currently proposed, the project would not require an encroachment permit as no work or improvements are proposed within Caltrans right-of-way. However, as a condition of the Conditional Use Permit, the applicant will be required to obtain necessary permits from Caltrans. This includes encroachment permits if applicable.
4. **Coachella Valley Water District** – Review for requirements on elevated concrete foundations and appropriate spacing shall be evaluated, including with respect to existing training dikes and addressed as part of the final site plan engineering design.
5. **Bureau of Reclamation.** modifications to training dikes will require appropriate authorization from Bureau of Reclamation.
6. Condition of approval that the County and Developer will coordinate with the U.S. Marine Corps to notify them of the project development and to determine any potential impacts to their operations, if any.

S-29 ACCEPTANCE:

Acceptance of this permit shall be deemed to constitute agreement by Permittee with all terms and conditions herein contained.

The rest of this page is intentionally left blank.

PC ORIGINAL PKG

NOW THEREFORE, County hereby issues the Conditional Use Permit #20-0021, and Permittee hereby accepts such permit upon the terms and conditions set forth herein.

IN WITNESS THEREOF, the parties hereto have executed this Agreement the day and year first written.

Resolutions & Water Well CUP's #20-0025, # 20-0026, #20-0027

PC ORIGINAL PKG

RESOLUTION NO. ___

A RESOLUTION OF THE PLANNING COMMISSION OF THE COUNTY OF IMPERIAL, CALIFORNIA, FOR THE RECOMMENDATION TO THE BOARD OF SUPERVISORS FOR THE APPROVAL OF CONDITIONAL USE PERMIT #20-0025- AND CONDITIONS OF APPROVAL FOR THE VEGA SES 2 SOLAR ENERGY COMMERCIAL GROUND WATER WELL.

WHEREAS, APEX ENERGY, LLC has submitted an application for Conditional Use Permit proposing to drill and install a water well for commercial purposes to serve as a potable water source for a commercial purpose; and,

WHEREAS, an Environmental Impact Report (EIR) and CEQA Findings have been prepared in accordance with the requirements of the California Environmental Quality Act, the State Guidelines, and the County's "Rules and Regulations to Implement CEQA, as Amended"; and,

WHEREAS, the Planning Commission of the County of Imperial has the responsibility of recommendations to Board of Supervisors for the approvals and certifications; and,

WHEREAS, public notice of said application has been given, and the Planning Commission has considered evidence presented by the Imperial County Planning & Development Services Department, and other comments by interested parties at a public hearing held with respect to this item on August 23, 2023; and,

WHEREAS, on August 23, 2023, the Planning Commission heard the proposed project; and,

NOW, THEREFORE, the Planning Commission of the County of Imperial **DOES HEREBY RESOLVE** as follows:

SECTION 1. The Planning Commission has considered Conditional Use Permit #20-0025 and Conditions of Approval prior to recommend approval; the Planning Commission finds and determines that the Conditional Use Permit and Conditions of Approval are adequate and prepared in accordance with the requirements of the Imperial County General Plan and Land Use Ordinance and the (EIR) which analyzed environmental effects, based upon the following findings and determinations.

SECTION 2. That in accordance with State Planning and Zoning Law and the County of Imperial Land Use Ordinance and General Plan, the following findings for the approval of Conditional Use Permit #20-0025 have been made:

PC ORIGINAL PKG

A. The proposed use is consistent with the goals and policies of the adopted County General Plan.

The General Plan designates the project site as "Agriculture". It is classified as S-2 RE Open Space Recreational Renewable Energy Overlay under the Imperial County Land Use Ordinance (Title 9). The proposed project is for a water well and is a conditionally permitted use pursuant to County's Land Use Ordinance (Section 92102.00).

B. The proposed use is consistent with the purpose of the zone or sub-zone which the use will be used.

The water well is for commercial purposes. Section 92102.00 of the Imperial County Land Use Ordinance governs water wells. The purposed use could be considered a compatible use with a Conditional Use Permit pursuant to the Water Well Regulation (Land Use Ordinance, Section 92102.00).

C. The proposed use is listed as a use within the zone or sub-zone or is found to be similar to a listed conditional use according to the procedures of Section 90203.10.

The proposed water well is consistent with Land Use Ordinance, Section 92102.00 with an approved Conditional Use Permit.

D. The proposed use meets the minimum requirements of this Title applicable to the use and complies with all applicable laws, ordinances and regulations of the County of Imperial and the State of California.

The Conditions of Approval will insure that the project complies with all applicable regulations of the County of Imperial and State of California. Therefore, the proposed project will meet the minimum requirements of the Land Use Ordinance, Section 90203.00.

E. The proposed use will not be detrimental to the health, safety, and welfare of the public or to the property and residents in the vicinity.

The proposed water well anticipated water usage amount to **661.5-acre-feet** for construction and **24-acre-feet** per year for operational water. The water well will be used for the construction period and then periodically for dust control and cleaning of panels at the solar site. There will be no detrimental to

PC ORIGINAL PKG

the health safety, and welfare of the public or to the property and residents in the vicinity.

F. The proposed use does not violate any other law or ordinance.

The proposed project is conditioned to be consistent with Title 9, Codified Land Use Ordinance of the County of Imperial and CEQA. The proposed project will be subject to a Conditional Use Permit and current Federal, State and Local regulations.

G. The proposed use is not granting a special privilege.

The proposed water well is a conditional permitted use subject to the conditions of approval of CUP #22-0025 (Land Use Ordinance, Section 92102.00) and will not grant a special privilege.

NOW, THEREFORE, based on the above findings, the Imperial County Planning Commission **DOES HEREBY Recommend for the Board of Supervisors to approve** Conditional Use Permit #22-0025, subject to the attached Conditions of Approval.

AGREEMENT FOR CONDITIONAL USE PERMIT #22-0025
FOR A WATER WELL
VEGA SES 2 WATER WELL
(APN 025-010-006, 025-260-011 & 025-270-023-000)

This Agreement is made and entered into on this ____ day of _____, 2023, by and between [**APEX ENERGY, LLC**,] (hereinafter referred to as "Permittee"), and the COUNTY OF IMPERIAL, a political subdivision of the State of California, (hereinafter referred to as "COUNTY").

RECITALS

WHEREAS, Permittee is the owner, and/or operator and/or successor-in-interest in certain land in Imperial County known as "Assessor's Parcel 025-010-006, 025-260-011, & 025-270-023 further described as a Section 9, 15, 17 of Township 11 South, Range 15 East, S.B.B.M, approximately 1,323-acres, and,

WHEREAS, Permittee has applied to the County for permission to construct, operate and maintain one water well, at the above site, and;

WHEREAS, Permittee has applied to the County to be allowed to pump up to 24 acre feet per year of groundwater for operations, and a one-time maximum of 661.5 acre feet of groundwater during construction, from the water well to provide water to a solar development project, and;

PC ORIGINAL PKG

WHEREAS, Permittee and/or any subsequent owner(s) would be required to and intend to fully comply with all of the terms and conditions of the project as specified in this Conditional Use Permit.

WHEREAS, County, after a noticed public hearing, agreed to issue Conditional Use Permit #20-0025 to Permittee, and/or his or her successor in interest subject to the following conditions:

---

*The "GENERAL CONDITIONS" are shown by the letter **"G"**. These conditions are conditions that are either routinely and commonly included in all Conditional Use Permits as "standardized" conditions and/or are conditions that the Imperial County Planning Commission has established as a requirement on all CUP's for consistent application and enforcement. The Permittee is advised that the General Conditions are as applicable as the SITE SPECIFIC conditions!*

GENERAL CONDITIONS:

G-1 ACQUISITION OF PERMITS/LICENSES AND COMPLIANCE WITH GENERAL LAWS:

The Permittee shall obtain, comply with, and maintain all applicable County, State, and Federal permits, licenses, and/or approvals, including, but not limited to those required by Imperial County Planning & Development Services Department, Air Pollution Control District (APCD), County Division of Environmental Health Services (EHS), and Public Works Department. Additionally, Permittee agrees to comply with all applicable laws, ordinances, and/or regulations promulgated by County, State, and Federal jurisdictions whether specified herein or not. Furthermore, Permittee shall submit a copy of such additional permit(s)/license(s) to the Planning & Development Services Department within thirty (30) days of receipt, including amendments or alterations thereto.

PC ORIGINAL PKG

G-2 RECORDATION:

This permit shall not be effective until it is recorded at the Imperial County Recorder's Office, and payment of the recordation fee shall be the responsibility of the Permittee.

G-3 INDEMNIFICATION:

Permittee shall defend, indemnify and hold harmless County and its agents, including consultants, officers and employees from any claim, action or proceeding against the County or its agents, including consultants, officers or employees to attack, set aside, void, or annul the approval of this application or adoption of the environmental documents which accompanies it. This indemnification obligation shall include, but not be limited to, damages, costs, expenses, attorney's fees, or expert witness costs that may be asserted by any person or entity, including the Permittee arising out of or in connection with the approval of this application, including any claim for private attorney general fees claimed by or awarded to any party from the County.

G-4 RIGHT OF ENTRY:

The County reserves the right to enter the premises to make the appropriate inspection(s) and to determine if the condition(s) of this permit are complied with and access to authorized enforcement agency personnel shall not be denied.

G-5 PROVISION TO RUN WITH THE LAND/PROJECT:

The provisions of this permit are to run with the land/project and shall bind the current and future owner(s) successor(s) of interest, assignee(s) and/or transferor(s) of said project.

- Permittee shall not without prior notification to the Planning & Development Services Department assign, sell, or transfer, or grant control of project or any right or privilege therein.

PC ORIGINAL PKG

- The Permittee shall provide a minimum of 60 days written notice prior to such proposed transfer becoming effective.
- In the event that the new owner or assignee or transferor has a history of non-compliance with environmental laws or is not of substantial equivalent or superior financial capability and/or responsibility or is not willing to or has not agreed to in writing to abide by the terms or conditions of this permit, the Planning & Development Services Department shall bring this matter to the Planning Commission for either revocation or modification to the permit.

G-6 CONDITION PRIORITY:

This project shall be constructed/operated as described in the approved Conditional Use Permit and conditions , site plan, support documentation, the Environmental Impact Report (EIR), the project description, and as specified in these conditions. Where a conflict occurs, the Conditional Use Permit conditions shall govern and take precedence.

G-7 INVALID CONDITIONS/SEVERABILITY:

Should any condition(s) of this permit be determined by a Court or other agency with property jurisdiction to be invalid for any reason, such determination shall not invalidate the remaining provision(s) of this permit.

G-8 TIME LIMIT:

Unless otherwise specified within the specific conditions, this permit shall be limited to a maximum of thirty (30) years from the recordation of the CUP. If an extension is necessary, the Permittee shall file a written extension request with the Planning Director at least sixty (60) days prior to the expiration date of the permit. Such an extension request shall include the appropriate extension fee. If the original approval was granted by the Planning Commission and/or the Board of Supervisors, such an extension shall only be

PC ORIGINAL PKG

considered by the approving body, after a noticed public hearing. Nothing stated or implied within this permit shall constitute a guarantee that an extension will be granted. An extension may not be granted if the Project is in violation of any one or all of the conditions or if there is a history of non-compliance with the permit conditions.

G-9 PERMIT/MONITORING-RELATED FEES:

The Permittee shall pay any and all amounts determined by the County Planning & Development Services Department to defray any and all cost(s) for the review of reports, field investigations, monitoring, and other activities directly related to the enforcement/monitoring for compliance of this Conditional Use Permit, County Ordinance or any other applicable law. All County Departments, directly involved in the monitoring/enforcement of this project may bill Permittee under this provision, however said billing shall only be through and with the approval of the Planning & Development Services Department.

G-10 DEFINITIONS:

In the event of a dispute the meaning(s) or the intent of any word(s), phrase(s) and/or conditions or sections herein shall be determined by the Planning Commission of the County of Imperial. Their determination shall be final unless an appeal is made to the Board of Supervisors within ten (10) days from the date of the Commission's decision.

G-11 REVOCATION:

Upon the determination by the Planning & Development Services Department that the project is or may not be in full compliance with any one or all of the conditions of this Conditional Use Permit, or upon the finding that the project is creating a nuisance as defined by law, the issue shall be brought immediately to the appropriate enforcement agency or to the Planning

PC ORIGINAL PKG

Commission for hearing to consider appropriate response including but not limited to the revocation of the CUP or to consider possible amendments to the CUP. The hearing shall be held upon due notice having been provided to the Permittee and to the public in accordance with established ordinance/policy.

G-12 HEALTH HAZARD:

If the County Health Officer determines that a significant health hazard exists to the public, the Health Officer may require appropriate measures and the Permittee shall implement such measures to mitigate the health hazard. If the hazard to the public is determined to be imminent, such measures may be imposed immediately and may include temporary suspension of operations; the measures imposed by the County Health Officer must be submitted to the Planning Commission for review and approval. Nothing shall prohibit Permittee from requesting a special Planning Commission meeting provided Permittee bears all costs.

PROJECT SPECIFIC CONDITIONS:

S-1 The Conditional Use Permit (CUP) 22-0025 allows the Permittee to draw a maximum of **24-acre-feet** of groundwater per year for operations, and a one-time maximum of **661.5-acre**-feet of groundwater during construction. Exceeding the amount of water specified herein will result in the Planning & Development Services Department taking action to rescind the CUP for non-compliance.

PC ORIGINAL PKG

S-2 Water from the well shall not be used, sold, given, exported, or transported from those lands within VEGA SES 2 Solar Development and Battery Storage designated areas per the VEGA SES 2 approved EIR

S-3 The water shall be used only for on-site use(s) within VEGA SES 2 solar and battery development areas only which includes the washing of solar panels, dust control and onsite construction related activities.

S-4 If the Board of Supervisors determines that groundwater management activities may be necessary to improve and preserve the quality or quantity of groundwater resources or prevent other environmental damage, the Board , after notice to the public and a public hearing, limitations or suspension of extractions from this water well. Title 9: Division 22: Ground Water Ordinance, Chapter 2: 92202.00 (E).

S-5 A flow meter shall be installed and sealed by a California State Licensed Water Well Drilling Contractor. Registered user shall submit an annual report to the Planning & Development Services Department indicating the yearly amount of water extracted from the well. A photograph (dated and signed) of the flow meter readings shall be included in the annual report. The report shall be received within thirty (30) days following the anniversary date of the issuance of this registration. In the event of a flow meter failure, the registered user shall be required to cease the water well operation and notify the Planning & Development Services Department. The registered user may be allowed to temporarily substitute the flow meter for an alternative measuring device, at the approval of the Planning & Development Services Department. In this case two (2) separate reports shall be submitted as stipulated herein. **Title 9, Division 22: Groundwater Ordinance 92202.04 Extraction Facility Water Flow Measurements.**

S-6 Should the water well be "abandoned" at any time for more than 365 consecutive days, or such longer period of not more than twenty-four (24)

PC ORIGINAL PKG

consecutive months as the Director may approve in writing, Permittee shall seal/cap the well according to standards set by the State and in a manner acceptable to the County Building Official. Abandonment shall mean as follows:

- ABANDONMENT: A well is deemed "abandoned" when it has not been used for one (1) year. An owner may have the well deemed "inactive" by filling a written notice with the Department stating his/her intentions to use the well under specific conditions and/or time frames. As evidence of his/her intentions, the conditions contained in Bulletin 74-81 (Sec. 21) shall be met.
- Any well that is open or whose services/operating equipment (e.g. pumps/motors/pipes, etc.) has been removed shall be deemed abandoned.

S-7 The water well shall be registered with the Planning & Development Services Department to comply with the Imperial County's Groundwater Ordinance (Title 9, Division 22) and Water Well Regulations (Title 9, Division 21). The applicant is required to sign the registration form prior to recordation of the CUP.

S-8 Permittee shall provide a bond, letter of credit, cash deposit or other surety acceptable to County Counsel in the amount of $5,000 to the County to assure for proper closure and/or transfer of permit.

S-9 Water Well Replacement: In the event the proposed water well under this CUP requires replacement, and the CUP is still active and in compliance, said replacement water well shall be constructed by a California Licensed Driller in accordance with California Department of Water Resources Bulletin 74-81 and

PC ORIGINAL PKG

74-90 (including any subsequent revisions), and with the Imperial County Water Well Ordinance, Section 92101.00 et seq.

- Permittee shall submit copies of the "Report of Completion" (as required by the California Water Code, Section 13751), by the California Licensed Driller on the construction of any water well replaced. Copies shall be submitted to the Environmental Health Services, Planning & Development Services Department, and Public Works within thirty (30) days of the construction or destruction of the well, this report shall include:

  1. A description of the exact location of the well'
  2. A detailed log of the well
  3. A description of the type and depth of casings
  4. Details of perforation
  5. The methods used for sealing off surface or contaminated waters.
  6. Methods for preventing contaminated waters from one aquifer to mix with another aquifer.
  7. Name of person who constructed the well.

S-10 On a bi-annual basis, the Permittee shall provide chemical analysis of the well water to the Departments of Planning, Public Works, and Health Services. The analysis shall include but not be limited to all General Mineral and Inorganic Chemical Analysis for chemicals listed in Section 64431, Article 4, Title 22, California Code of Regulations. All sampling and analysis shall be performed by a laboratory licensed by the State of California to perform drinking water analysis. The reported analysis results shall be provided to the Planning Department during the second year report, and all subsequent bi-annual reports.

NOW THEREFORE, County hereby issues Conditional Use Permit **#20-0025** and Permittee hereby accepts such permit upon the terms and conditions set forth herein.

RESOLUTION NO. ___

A RESOLUTION OF THE PLANNING COMMISSION OF THE COUNTY OF IMPERIAL, CALIFORNIA, FOR THE RECOMMENDATION TO THE BOARD OF SUPERVISORS FOR THE APPROVAL OF CONDITIONAL USE PERMIT #22-0026- AND CONDITIONS OF APPROVAL FOR THE VEGA SES 3 SOLAR ENERGY COMMERCIAL GROUND WATER WELL.

WHEREAS, APEX ENERGY, LLC has submitted an application for Conditional Use Permit proposing to drill and install a water well for commercial purposes to serve as a potable water source for a commercial purpose; and,

WHEREAS, an Environmental Impact Report (EIR) and CEQA Findings have been prepared in accordance with the requirements of the California Environmental Quality Act, the State Guidelines, and the County's "Rules and Regulations to Implement CEQA, as Amended"; and,

WHEREAS, the Planning Commission of the County of Imperial has the responsibility of recommendations to Board of Supervisors for the approvals and certifications; and,

WHEREAS, public notice of said application has been given, and the Planning Commission has considered evidence presented by the Imperial County Planning & Development Services Department, and other comments by interested parties at a public hearing held with respect to this item on August 23, 2023; and,

WHEREAS, on August 23, 2023, the Planning Commission heard the proposed project; and,

NOW, THEREFORE, the Planning Commission of the County of Imperial **DOES HEREBY RESOLVE** as follows:

SECTION 1. The Planning Commission has considered Conditional Use Permit #20-0026 and Conditions of Approval prior to recommend approval; the Planning Commission finds and determines that the Conditional Use Permit and Conditions of Approval are adequate and prepared in accordance with the requirements of the Imperial County General Plan and Land Use Ordinance and the (EIR) which analyzed environmental effects, based upon the following findings and determinations.

SECTION 2. That in accordance with State Planning and Zoning Law and the County of Imperial Land Use Ordinance and General Plan, the following findings for the approval of Conditional Use Permit #20-0026 have been made:

PC ORIGINAL PKG

A. The proposed use is consistent with the goals and policies of the adopted County General Plan.

The General Plan designates the project site as "Agriculture". It is classified as S-2 RE Open Space Recreational Renewable Energy Overlay under the Imperial County Land Use Ordinance (Title 9). The proposed project is for a water well and is a conditionally permitted use pursuant to County's Land Use Ordinance (Section 92102.00).

B. The proposed use is consistent with the purpose of the zone or sub-zone which the use will be used.

The water well is for commercial purposes. Section 92102.00 of the Imperial County Land Use Ordinance governs water wells. The purposed use could be considered a compatible use with a Conditional Use Permit pursuant to the Water Well Regulation (Land Use Ordinance, Section 92102.00).

C. The proposed use is listed as a use within the zone or sub-zone or is found to be similar to a listed conditional use according to the procedures of Section 90203.10.

The proposed water well is consistent with Land Use Ordinance, Section 92102.00 with an approved Conditional Use Permit.

D. The proposed use meets the minimum requirements of this Title applicable to the use and complies with all applicable laws, ordinances and regulations of the County of Imperial and the State of California.

The Conditions of Approval will insure that the project complies with all applicable regulations of the County of Imperial and State of California. Therefore, the proposed project will meet the minimum requirements of the Land Use Ordinance, Section 90203.00.

E. The proposed use will not be detrimental to the health, safety, and welfare of the public or to the property and residents in the vicinity.

The proposed water well anticipated annual water usage amount to **115-acre-feet** for construction and **6-acre-feet** per year for operational water. The water well will be used for the construction period and then periodically for dust control and cleaning of panels at the solar site. There will be no detrimental to

PC ORIGINAL PKG

the health safety, and welfare of the public or to the property and residents in the vicinity.

F. The proposed use does not violate any other law or ordinance.

The proposed project is conditioned to be consistent with Title 9, Codified Land Use Ordinance of the County of Imperial and CEQA. The proposed project will be subject to a Conditional Use Permit and current Federal, State and Local regulations.

G. The proposed use is not granting a special privilege.

The proposed water well is a conditional permitted use subject to the conditions of approval of CUP #22-0026 (Land Use Ordinance, Section 92102.00) and will not grant a special privilege.

NOW, THEREFORE, based on the above findings, the Imperial County Planning Commission **DOES HEREBY Recommends for the Board of Supervisors to approve** Conditional Use Permit #22-0026, subject to the attached Conditions of Approval.

AGREEMENT FOR CONDITIONAL USE PERMIT # 22-0026
FOR A WATER WELL
VEGA SES 3 WATER WELL
(APN 025-010-006 -000)

This Agreement is made and entered into on this ____ day of _____, 2023, by and between [**APEX ENERGY, LLC**,] (hereinafter referred to as "Permittee"), and the COUNTY OF IMPERIAL, a political subdivision of the State of California, (hereinafter referred to as "COUNTY").

RECITALS

WHEREAS, Permittee is the owner, and/or operator and/or successor-in-interest in certain land in Imperial County known as "Assessor's Parcel 025-010-006, further described as a Section 9, 15, 17 of Township 11 South, Range 15 East, S.B.B.M, approximately 1,323-acres, and,

WHEREAS, Permittee has applied to the County for permission to construct, operate and maintain one water well, at the above site, and;

WHEREAS, Permittee has applied to the County to be allowed to pump up to **6-acre-feet** per year of groundwater for operations and **115-acre-feet** for construction phase of project from the water well to provide water to a solar development project, and;

PC ORIGINAL PKG

WHEREAS, Permittee and/or any subsequent owner(s) would be required to and intend to fully comply with all of the terms and conditions of the project as specified in this Conditional Use Permit.

WHEREAS, County, after a noticed public hearing, agreed to issue Conditional Use Permit #_____ to Permittee, and/or his or her successor in interest subject to the following conditions:

---

*The "GENERAL CONDITIONS" are shown by the letter **"G"**. These conditions are conditions that are either routinely and commonly included in all Conditional Use Permits as "standardized" conditions and/or are conditions that the Imperial County Planning Commission has established as a requirement on all CUP's for consistent application and enforcement. The Permittee is advised that the General Conditions are as applicable as the SITE SPECIFIC conditions!*

GENERAL CONDITIONS:

G-1 ACQUISITION OF PERMITS/LICENSES AND COMPLIANCE WITH GENERAL LAWS:

The Permittee shall obtain, comply with, and maintain all applicable County, State, and Federal permits, licenses, and/or approvals, including, but not limited to those required by Imperial County Planning & Development Services Department, Air Pollution Control District (APCD), County Division of Environmental Health Services (EHS), and Public Works Department. Additionally, Permittee agrees to comply with all applicable laws, ordinances, and/or regulations promulgated by County, State, and Federal jurisdictions whether specified herein or not. Furthermore, Permittee shall submit a copy of such additional permit(s)/license(s) to the Planning & Development Services Department within thirty (30) days of receipt, including amendments or alterations thereto.

PC ORIGINAL PKG

G-2 RECORDATION:

This permit shall not be effective until it is recorded at the Imperial County Recorder's Office, and payment of the recordation fee shall be the responsibility of the Permittee.

G-3 INDEMNIFICATION:

Permittee shall defend, indemnify and hold harmless County and its agents, including consultants, officers and employees from any claim, action or proceeding against the County or its agents, including consultants, officers or employees to attack, set aside, void, or annul the approval of this application or adoption of the environmental documents which accompanies it. This indemnification obligation shall include, but not be limited to, damages, costs, expenses, attorney's fees, or expert witness costs that may be asserted by any person or entity, including the Permittee arising out of or in connection with the approval of this application, including any claim for private attorney general fees claimed by or awarded to any party from the County.

G-4 RIGHT OF ENTRY:

The County reserves the right to enter the premises to make the appropriate inspection(s) and to determine if the condition(s) of this permit are complied with and access to authorized enforcement agency personnel shall not be denied.

G-5 PROVISION TO RUN WITH THE LAND/PROJECT:

The provisions of this permit are to run with the land/project and shall bind the current and future owner(s) successor(s) of interest, assignee(s) and/or transferor(s) of said project.

- Permittee shall not without prior notification to the Planning & Development Services Department assign, sell, or transfer, or grant control of project or any right or privilege therein.

PC ORIGINAL PKG

- The Permittee shall provide a minimum of 60 days written notice prior to such proposed transfer becoming effective.
- In the event that the new owner or assignee or transferor has a history of non-compliance with environmental laws or is not of substantial equivalent or superior financial capability and/or responsibility or is not willing to or has not agreed to in writing to abide by the terms or conditions of this permit, the Planning & Development Services Department shall bring this matter to the Planning Commission for either revocation or modification to the permit.

G-6 CONDITION PRIORITY:

This project shall be constructed/operated as described in the approved Conditional Use Permit and conditions , site plan, support documentation, the Environmental Impact Report (EIR), the project description, and as specified in these conditions. Where a conflict occurs, the Conditional Use Permit conditions shall govern and take precedence.

G-7 INVALID CONDITIONS/SEVERABILITY:

Should any condition(s) of this permit be determined by a Court or other agency with property jurisdiction to be invalid for any reason, such determination shall not invalidate the remaining provision(s) of this permit.

G-8 TIME LIMIT:

Unless otherwise specified within the specific conditions, this permit shall be limited to a maximum of thirty (30) years from the recordation of the CUP. If an extension is necessary, the Permittee shall file a written extension request with the Planning Director at least sixty (60) days prior to the expiration date of the permit. Such an extension request shall include the appropriate extension fee. If the original approval was granted by the Planning Commission and/or the Board of Supervisors, such an extension shall only be

PC ORIGINAL PKG

considered by the approving body, after a noticed public hearing. Nothing stated or implied within this permit shall constitute a guarantee that an extension will be granted. An extension may not be granted if the Project is in violation of any one or all of the conditions or if there is a history of non-compliance with the permit conditions.

G-9 PERMIT/MONITORING-RELATED FEES:

The Permittee shall pay any and all amounts determined by the County Planning & Development Services Department to defray any and all cost(s) for the review of reports, field investigations, monitoring, and other activities directly related to the enforcement/monitoring for compliance of this Conditional Use Permit, County Ordinance or any other applicable law. All County Departments, directly involved in the monitoring/enforcement of this project may bill Permittee under this provision, however said billing shall only be through and with the approval of the Planning & Development Services Department.

G-10 DEFINITIONS:

In the event of a dispute the meaning(s) or the intent of any word(s), phrase(s) and/or conditions or sections herein shall be determined by the Planning Commission of the County of Imperial. Their determination shall be final unless an appeal is made to the Board of Supervisors within ten (10) days from the date of the Commission's decision.

G-11 REVOCATION:

Upon the determination by the Planning & Development Services Department that the project is or may not be in full compliance with any one or all of the conditions of this Conditional Use Permit, or upon the finding that the project is creating a nuisance as defined by law, the issue shall be brought immediately to the appropriate enforcement agency or to the Planning

PC ORIGINAL PKG

Commission for hearing to consider appropriate response including but not limited to the revocation of the CUP or to consider possible amendments to the CUP. The hearing shall be held upon due notice having been provided to the Permittee and to the public in accordance with established ordinance/policy.

G-12 HEALTH HAZARD:

If the County Health Officer determines that a significant health hazard exists to the public, the Health Officer may require appropriate measures and the Permittee shall implement such measures to mitigate the health hazard. If the hazard to the public is determined to be imminent, such measures may be imposed immediately and may include temporary suspension of operations; the measures imposed by the County Health Officer must be submitted to the Planning Commission for review and approval. Nothing shall prohibit Permittee from requesting a special Planning Commission meeting provided Permittee bears all costs.

PROJECT SPECIFIC CONDITIONS:

S-1 The Conditional Use Permit (CUP) allows the Permittee to draw a maximum of **6-acre**-feet of groundwater per year for operations and **115-acre-feet** for construction phase of project. Exceeding the amount of water specified herein will result in the Planning & Development Services Department taking action to rescind the CUP for non-compliance.

S-2 Water from the well shall not be used, sold, given, exported, or transported from those lands within VEGA SES 3 Solar Development and Battery Storage designated areas per the VEGA SES 3 approved EIR

PC ORIGINAL PKG

S-3 The water shall be used only for on-site use(s) within VEGA SES 3 solar and battery development areas only which includes the washing of solar panels, dust control and onsite construction related activities.

S-4 If the Board of Supervisors determines that groundwater management activities may be necessary to improve and preserve the quality or quantity of groundwater resources or prevent other environmental damage, the Board , after notice to the public and a public hearing, limitations or suspension of extractions from this water well. Title 9: Division 22: Ground Water Ordinance, Chapter 2: 92202.00 (E).

S-5 A flow meter shall be installed and sealed by a California State Licensed Water Well Drilling Contractor. Registered user shall submit an annual report to the Planning & Development Services Department indicating the yearly amount of water extracted from the well. A photograph (dated and signed) of the flow meter readings shall be included in the annual report. The report shall be received within thirty (30) days following the anniversary date of the issuance of this registration. In the event of a flow meter failure, the registered user shall be required to cease the water well operation and notify the Planning & Development Services Department. The registered user may be allowed to temporarily substitute the flow meter for an alternative measuring device, at the approval of the Planning & Development Services Department. In this case two (2) separate reports shall be submitted as stipulated herein. **Title 9, Division 22: Groundwater Ordinance 92202.04 Extraction Facility Water Flow Measurements.**

S-6 Should the water well be "abandoned" at any time for more than 365 consecutive days, or such longer period of not more than twenty-four (24) consecutive months as the Director may approve in writing, Permittee shall seal/cap the well according to standards set by the State and in a manner

PC ORIGINAL PKG

acceptable to the County Building Official. Abandonment shall mean as follows:

- ABANDONMENT: A well is deemed "abandoned" when it has not been used for one (1) year. An owner may have the well deemed "inactive" by filling a written notice with the Department stating his/her intentions to use the well under specific conditions and/or time frames. As evidence of his/her intentions, the conditions contained in Bulletin 74-81 (Sec. 21) shall be met.
- Any well that is open or whose services/operating equipment (e.g. pumps/motors/pipes, etc.) has been removed shall be deemed abandoned.

S-7 The water well shall be registered with the Planning & Development Services Department to comply with the Imperial County's Groundwater Ordinance (Title 9, Division 22) and Water Well Regulations (Title 9, Division 21). The applicant is required to sign the registration form prior to recordation of the CUP.

S-8 Permittee shall provide a bond, letter of credit, cash deposit or other surety acceptable to County Counsel in the amount of $5,000 to the County to assure for proper closure and/or transfer of permit.

S-9 Water Well Replacement: In the event the proposed water well under this CUP requires replacement, and the CUP is still active and in compliance, said replacement water well shall be constructed by a California Licensed Driller in accordance with California Department of Water Resources Bulletin 74-81 and 74-90 (including any subsequent revisions), and with the Imperial County Water Well Ordinance, Section 92101.00 et seq.

PC ORIGINAL PKG

- Permittee shall submit copies of the "Report of Completion" (as required by the California Water Code, Section 13751), by the California Licensed Driller on the construction of any water well replaced. Copies shall be submitted to the Environmental Health Services, Planning & Development Services Department, and Public Works within thirty (30) days of the construction or destruction of the well, this report shall include:

  1. A description of the exact location of the well'
  2. A detailed log of the well
  3. A description of the type and depth of casings
  4. Details of perforation
  5. The methods used for sealing off surface or contaminated waters.
  6. Methods for preventing contaminated waters from one aquifer to mix with another aquifer.
  7. Name of person who constructed the well.

S-10 On a bi-annual basis, the Permittee shall provide chemical analysis of the well water to the Departments of Planning, Public Works, and Health Services. The analysis shall include but not be limited to all General Mineral and Inorganic Chemical Analysis for chemicals listed in Section 64431, Article 4, Title 22, California Code of Regulations. All sampling and analysis shall be performed by a laboratory licensed by the State of California to perform drinking water analysis. The reported analysis results shall be provided to the Planning Department during the second year report, and all subsequent bi-annual reports.

NOW THEREFORE, County hereby issues Conditional Use Permit # **22-0026** and Permittee hereby accepts such permit upon the terms and conditions set forth herein.

IN WITNESS THEREOF, the parties hereto have executed this Agreement the day and year first written.

RESOLUTION NO. ___

A RESOLUTION OF THE PLANNING COMMISSION OF THE COUNTY OF IMPERIAL, CALIFORNIA, FOR THE RECOMMENDATION TO THE BOARD OF SUPERVISORS FOR THE APPROVAL OF CONDITIONAL USE PERMIT #22-0027- AND CONDITIONS OF APPROVAL FOR THE VEGA SES 5 SOLAR ENERGY COMMERCIAL GROUND WATER WELL.

WHEREAS, APEX ENERGY, LLC has submitted an application for Conditional Use Permit proposing to drill and install a water well for commercial purposes to serve as a potable water source for a commercial purpose; and,

WHEREAS, an Environmental Impact Report (EIR) and CEQA Findings have been prepared in accordance with the requirements of the California Environmental Quality Act, the State Guidelines, and the County's "Rules and Regulations to Implement CEQA, as Amended"; and,

WHEREAS, the Planning Commission of the County of Imperial has the responsibility of recommendations to Board of Supervisors for the approvals and certifications; and,

WHEREAS, public notice of said application has been given, and the Planning Commission has considered evidence presented by the Imperial County Planning & Development Services Department, and other comments by interested parties at a public hearing held with respect to this item on August 23, 2023; and,

WHEREAS, on August 23, 2023, the Planning Commission heard the proposed project; and,

NOW, THEREFORE, the Planning Commission of the County of Imperial **DOES HEREBY RESOLVE** as follows:

SECTION 1. The Planning Commission has considered Conditional Use Permit #22-0027 and Conditions of Approval prior to recommend approval; the Planning Commission finds and determines that the Conditional Use Permit and Conditions of Approval are adequate and prepared in accordance with the requirements of the Imperial County General Plan and Land Use Ordinance and the (EIR) which analyzed environmental effects, based upon the following findings and determinations.

SECTION 2. That in accordance with State Planning and Zoning Law and the County of Imperial Land Use Ordinance and General Plan, the following findings for the approval of Conditional Use Permit #22-0027 have been made:

PC ORIGINAL PKG

A. The proposed use is consistent with the goals and policies of the adopted County General Plan.

The General Plan designates the project site as "Agriculture". It is classified as S-2 RE Open Space Recreational Renewable Energy Overlay under the Imperial County Land Use Ordinance (Title 9). The proposed project is for a water well and is a conditionally permitted use pursuant to County's Land Use Ordinance (Section 92102.00).

B. The proposed use is consistent with the purpose of the zone or sub-zone which the use will be used.

The water well is for commercial purposes. Section 92102.00 of the Imperial County Land Use Ordinance governs water wells. The purposed use could be considered a compatible use with a Conditional Use Permit pursuant to the Water Well Regulation (Land Use Ordinance, Section 92102.00).

C. The proposed use is listed as a use within the zone or sub-zone or is found to be similar to a listed conditional use according to the procedures of Section 90203.10.

The proposed water well is consistent with Land Use Ordinance, Section 92102.00 with an approved Conditional Use Permit.

D. The proposed use meets the minimum requirements of this Title applicable to the use and complies with all applicable laws, ordinances and regulations of the County of Imperial and the State of California.

The Conditions of Approval will insure that the project complies with all applicable regulations of the County of Imperial and State of California. Therefore, the proposed project will meet the minimum requirements of the Land Use Ordinance, Section 90203.00.

E. The proposed use will not be detrimental to the health, safety, and welfare of the public or to the property and residents in the vicinity.

The proposed water well anticipated water usage amount to **205-acre-feet** for construction and **5-acre-feet** per year for operational water. The water well will be used for the construction period and then periodically for dust control and cleaning of panels at the solar site. There will be no detrimental to the health safety, and welfare of the public or to the property and residents in the vicinity.

PC ORIGINAL PKG

F. The proposed use does not violate any other law or ordinance.

The proposed project is conditioned to be consistent with Title 9, Codified Land Use Ordinance of the County of Imperial and CEQA. The proposed project will be subject to a Conditional Use Permit and current Federal, State and Local regulations.

G. The proposed use is not granting a special privilege.

The proposed water well is a conditional permitted use subject to the conditions of approval of CUP#22-0027 (Land Use Ordinance, Section 92102.00) and will not grant a special privilege.

NOW, THEREFORE, based on the above findings, the Imperial County Planning Commission **DOES HEREBY Recommend for the Board of Supervisors to approve** Conditional Use Permit #22-0027, subject to the attached Conditions of Approval.

_____

AGREEMENT FOR CONDITIONAL USE PERMIT CUP 22-0027
VEGA SES 5 WATER WELL
(APN 025-010-006-000)

This Agreement is made and entered into on this ____ day of _____, 2024, by and between [**APEX ENERGY, LLC**,] (hereinafter referred to as "Permittee"), and the COUNTY OF IMPERIAL, a political subdivision of the State of California, (hereinafter referred to as "COUNTY").

RECITALS

WHEREAS, Permittee is the owner, and/or operator and/or successor-in-interest in certain land in Imperial County known as "Assessor's Parcel 025-010-006, further described as a Section 9, Township 11 South, Range 15 East, S.B.B.M, approximately 640-acre parcel, and,

WHEREAS, Permittee has applied to the County for permission to construct, operate and maintain one water well, at the above site, and;

WHEREAS, Permittee has applied to the County to be allowed to pump up to **5-acre-feet** per year of groundwater for operations, and a one-time maximum of **205-acre-feet** of groundwater during construction, from the water well to provide water to a solar development project, and;

PC ORIGINAL PKG

WHEREAS, Permittee and/or any subsequent owner(s) would be required to and intend to fully comply with all of the terms and conditions of the project as specified in this Conditional Use Permit.

WHEREAS, County, after a noticed public hearing, agreed to issue Conditional Use Permit # 22-0027 to Permittee, and/or his or her successor in interest subject to the following conditions:

---

*The "GENERAL CONDITIONS" are shown by the letter **"G"**. These conditions are conditions that are either routinely and commonly included in all Conditional Use Permits as "standardized" conditions and/or are conditions that the Imperial County Planning Commission has established as a requirement on all CUP's for consistent application and enforcement. The Permittee is advised that the General Conditions are as applicable as the SITE SPECIFIC conditions!*

GENERAL CONDITIONS:

G-1 ACQUISITION OF PERMITS/LICENSES AND COMPLIANCE WITH GENERAL LAWS:

The Permittee shall obtain, comply with, and maintain all applicable County, State, and Federal permits, licenses, and/or approvals, including, but not limited to those required by Imperial County Planning & Development Services Department, Air Pollution Control District (APCD), County Division of Environmental Health Services (EHS), and Public Works Department. Additionally, Permittee agrees to comply with all applicable laws, ordinances, and/or regulations promulgated by County, State, and Federal jurisdictions whether specified herein or not. Furthermore, Permittee shall submit a copy of such additional permit(s)/license(s) to the Planning & Development Services Department within thirty (30) days of receipt, including amendments or alterations thereto.

PC ORIGINAL PKG

G-2 RECORDATION:

This permit shall not be effective until it is recorded at the Imperial County Recorder's Office, and payment of the recordation fee shall be the responsibility of the Permittee.

G-3 INDEMNIFICATION:

Permittee shall defend, indemnify and hold harmless County and its agents, including consultants, officers and employees from any claim, action or proceeding against the County or its agents, including consultants, officers or employees to attack, set aside, void, or annul the approval of this application or adoption of the environmental documents which accompanies it. This indemnification obligation shall include, but not be limited to, damages, costs, expenses, attorney's fees, or expert witness costs that may be asserted by any person or entity, including the Permittee arising out of or in connection with the approval of this application, including any claim for private attorney general fees claimed by or awarded to any party from the County.

G-4 RIGHT OF ENTRY:

The County reserves the right to enter the premises to make the appropriate inspection(s) and to determine if the condition(s) of this permit are complied with and access to authorized enforcement agency personnel shall not be denied.

G-5 PROVISION TO RUN WITH THE LAND/PROJECT:

The provisions of this permit are to run with the land/project and shall bind the current and future owner(s) successor(s) of interest, assignee(s) and/or transferor(s) of said project.

- Permittee shall not without prior notification to the Planning & Development Services Department assign, sell, or transfer, or grant control of project or any right or privilege therein.

PC ORIGINAL PKG

- The Permittee shall provide a minimum of 60 days written notice prior to such proposed transfer becoming effective.
- In the event that the new owner or assignee or transferor has a history of non-compliance with environmental laws or is not of substantial equivalent or superior financial capability and/or responsibility or is not willing to or has not agreed to in writing to abide by the terms or conditions of this permit, the Planning & Development Services Department shall bring this matter to the Planning Commission for either revocation or modification to the permit.

G-6 CONDITION PRIORITY:

This project shall be constructed/operated as described in the approved Conditional Use Permit and conditions , site plan, support documentation, the Environmental Impact Report (EIR), the project description, and as specified in these conditions. Where a conflict occurs, the Conditional Use Permit conditions shall govern and take precedence.

G-7 INVALID CONDITIONS/SEVERABILITY:

Should any condition(s) of this permit be determined by a Court or other agency with property jurisdiction to be invalid for any reason, such determination shall not invalidate the remaining provision(s) of this permit.

G-8 TIME LIMIT:

Unless otherwise specified within the specific conditions, this permit shall be limited to a maximum of thirty (30) years from the recordation of the CUP. If an extension is necessary, the Permittee shall file a written extension request with the Planning Director at least sixty (60) days prior to the expiration date of the permit. Such an extension request shall include the appropriate extension fee. If the original approval was granted by the Planning Commission and/or the Board of Supervisors, such an extension shall only be

PC ORIGINAL PKG

considered by the approving body, after a noticed public hearing. Nothing stated or implied within this permit shall constitute a guarantee that an extension will be granted. An extension may not be granted if the Project is in violation of any one or all of the conditions or if there is a history of non-compliance with the permit conditions.

G-9 PERMIT/MONITORING-RELATED FEES:

The Permittee shall pay any and all amounts determined by the County Planning & Development Services Department to defray any and all cost(s) for the review of reports, field investigations, monitoring, and other activities directly related to the enforcement/monitoring for compliance of this Conditional Use Permit, County Ordinance or any other applicable law. All County Departments, directly involved in the monitoring/enforcement of this project may bill Permittee under this provision, however said billing shall only be through and with the approval of the Planning & Development Services Department.

G-10 DEFINITIONS:

In the event of a dispute the meaning(s) or the intent of any word(s), phrase(s) and/or conditions or sections herein shall be determined by the Planning Commission of the County of Imperial. Their determination shall be final unless an appeal is made to the Board of Supervisors within ten (10) days from the date of the Commission's decision.

G-11 REVOCATION:

Upon the determination by the Planning & Development Services Department that the project is or may not be in full compliance with any one or all of the conditions of this Conditional Use Permit, or upon the finding that the project is creating a nuisance as defined by law, the issue shall be brought immediately to the appropriate enforcement agency or to the Planning

PC ORIGINAL PKG

Commission for hearing to consider appropriate response including but not limited to the revocation of the CUP or to consider possible amendments to the CUP. The hearing shall be held upon due notice having been provided to the Permittee and to the public in accordance with established ordinance/policy.

G-12 HEALTH HAZARD:

If the County Health Officer determines that a significant health hazard exists to the public, the Health Officer may require appropriate measures and the Permittee shall implement such measures to mitigate the health hazard. If the hazard to the public is determined to be imminent, such measures may be imposed immediately and may include temporary suspension of operations; the measures imposed by the County Health Officer must be submitted to the Planning Commission for review and approval. Nothing shall prohibit Permittee from requesting a special Planning Commission meeting provided Permittee bears all costs.

PROJECT SPECIFIC CONDITIONS:

S-1 The Conditional Use Permit (CUP) allows the Permittee to draw a maximum of **5-acre-feet** of groundwater per year for operations, and a one-time maximum of **205–acre-feet** of groundwater during construction. Exceeding the amount of water specified herein will result in the Planning & Development Services Department taking action to rescind the CUP for non-compliance.

S-2 Water from the well shall not be used, sold, given, exported, or transported from those lands within VEGA SES 5 Solar Development and Battery Storage designated areas per the VEGA SES 5 approved EIR

PC ORIGINAL PKG

S-3 The water shall be used only for on-site use(s) within VEGA SES 5 solar and battery development areas only, which includes the washing of solar panels, dust control and onsite construction related activities.

S-4 If the Board of Supervisors determines that groundwater management activities may be necessary to improve and preserve the quality or quantity of groundwater resources or prevent other environmental damage, the Board , after notice to the public and a public hearing, limitations or suspension of extractions from this water well. Title 9: Division 22: Ground Water Ordinance, Chapter 2: 92202.00 (E).

S-5 A flow meter shall be installed and sealed by a California State Licensed Water Well Drilling Contractor. Registered user shall submit an annual report to the Planning & Development Services Department indicating the yearly amount of water extracted from the well. A photograph (dated and signed) of the flow meter readings shall be included in the annual report. The report shall be received within thirty (30) days following the anniversary date of the issuance of this registration. In the event of a flow meter failure, the registered user shall be required to cease the water well operation and notify the Planning & Development Services Department. The registered user may be allowed to temporarily substitute the flow meter for an alternative measuring device, at the approval of the Planning & Development Services Department. In this case two (2) separate reports shall be submitted as stipulated herein. **Title 9, Division 22: Groundwater Ordinance 92202.04 Extraction Facility Water Flow Measurements.**

S-6 Should the water well be "abandoned" at any time for more than 365 consecutive days, or such longer period of not more than twenty-four (24) consecutive months as the Director may approve in writing, Permittee shall seal/cap the well according to standards set by the State and in a manner

PC ORIGINAL PKG

acceptable to the County Building Official. Abandonment shall mean as follows:

- ABANDONMENT: A well is deemed "abandoned" when it has not been used for one (1) year. An owner may have the well deemed "inactive" by filling a written notice with the Department stating his/her intentions to use the well under specific conditions and/or time frames. As evidence of his/her intentions, the conditions contained in Bulletin 74-81 (Sec. 21) shall be met.
- Any well that is open or whose services/operating equipment (e.g. pumps/motors/pipes, etc.) has been removed shall be deemed abandoned.

S-7 The water well shall be registered with the Planning & Development Services Department to comply with the Imperial County's Groundwater Ordinance (Title 9, Division 22) and Water Well Regulations (Title 9, Division 21). The applicant is required to sign the registration form prior to recordation of the CUP.

S-8 Permittee shall provide a bond, letter of credit, cash deposit or other surety acceptable to County Counsel in the amount of $5,000 to the County to assure for proper closure and/or transfer of permit.

S-9 Water Well Replacement: In the event the proposed water well under this CUP requires replacement, and the CUP is still active and in compliance, said replacement water well shall be constructed by a California Licensed Driller in accordance with California Department of Water Resources Bulletin 74-81 and 74-90 (including any subsequent revisions), and with the Imperial County Water Well Ordinance, Section 92101.00 et seq.

PC ORIGINAL PKG

- Permittee shall submit copies of the "Report of Completion" (as required by the California Water Code, Section 13751), by the California Licensed Driller on the construction of any water well replaced. Copies shall be submitted to the Environmental Health Services, Planning & Development Services Department, and Public Works within thirty (30) days of the construction or destruction of the well, this report shall include:

  1. A description of the exact location of the well'
  2. A detailed log of the well
  3. A description of the type and depth of casings
  4. Details of perforation
  5. The methods used for sealing off surface or contaminated waters.
  6. Methods for preventing contaminated waters from one aquifer to mix with another aquifer.
  7. Name of person who constructed the well.

S-10 On a bi-annual basis, the Permittee shall provide chemical analysis of the well water to the Departments of Planning, Public Works, and Health Services. The analysis shall include but not be limited to all General Mineral and Inorganic Chemical Analysis for chemicals listed in Section 64431, Article 4, Title 22, California Code of Regulations. All sampling and analysis shall be performed by a laboratory licensed by the State of California to perform drinking water analysis. The reported analysis results shall be provided to the Planning Department during the second year report, and all subsequent bi-annual reports.

NOW THEREFORE, County hereby issues Conditional Use Permit # 22-0027 and Permittee hereby accepts such permit upon the terms and conditions set forth herein.

IN WITNESS THEREOF, the parties hereto have executed this Agreement the day and year first written.

LETTER OF TRANSMITTAL:

October 15, 2020

TO: Jim Minnick, Director of ICPDS

FROM: Jurg Heuberger, Consultant

RE: VEGA SES 2, 3, 4 and 5

Jim:

Attached are four (4) applications for four solar projects. They are titled VEGA SES 2, VEGA SES 3, VEGA SES 4 and VEGA SES 5.

We are requesting that VEGA 2, 3 and 5 be processed under one EIR and VEGA 4 under one EIR.

The fees per your office are $ $16,500.00 for processing VEGA 2, 3 & 5, and $ 14,500.00 for VEGA 4.

These applications are not complete in the sense that they do not have the accompanying technical studies. They are however complete enough for your office to commence the RFP process to retain appropriate consultant(s) for the preparation of the EIR's.

At this time, we are requesting that your office start the process to retain appropriate EIR Consultant(s).

Time is of the essence on these projects which is why we are requesting your cooperation and assistance in expediting this portion of the process.

We will have the technical studies plus any other documentation you need well before you have a contract for a CEQA consultant. To that end however we would also appreciate having your staff begin the review of these applications and advising me of what other information they feel is lacking aside from the "preliminary title reports", the original owners affidavits, and the technical studies which will include the following: traffic, biological, cultural, visual, air quality/GHG, Noise and AG/LESA.

Lastly, I am the primary point of contact on all of these applications and would respectfully request that all correspondence on these be directed to me at jurgheuberger@gmail.com, or 760-996-0313 or PO Box 4151, El Centro, Ca. 92244. I understand that you have to notify the property owners that a permit application has been filed on their land, however all other correspondence should be directed exclusively to me.

Thank you.

VEGA SES 2 AND VEGA SES 3

SOLAR PROJECT DESCRIPTION

Introduction

Apex Energy Solutions LLC. is proposing to develop the Vega SES 2 & Vega SES 3 Solar Energy Storage (Projects),

1. **Vega SES 2:** An up to two-hundred and forty (240)–megawatt alternating current (MWAC) solar photovoltaic (PV) energy generation project with an integrated 240 MW Battery Energy Storage System (BESS), on approximately 1,472 acres of land in the County of Imperial, California.
2. **Vega SES 3:** An up to sixty (60)–megawatt alternating current (MWAC) solar photovoltaic (PV) energy generation project with an integrated 60 MW Battery Energy Storage System (BESS), on approximately 240 acres of land in the County of Imperial, California.

The location of the project sites would be in Sections 9, 15 and 17 all within Township 11 South, Range 15 East of the San Bernardino Base and Meridian (SBB&M) of the "Iris" topographic quadrangles 7.5-minute quadrangle (U.S. Department of the Interior, Geological Survey 2005), in the unincorporated region of the County of Imperial, State of California. The projects are located between the unincorporated communities of Iris and Slab City, running parallel to the Coachella Canal (See Figure 1).

The electrical energy produced by Vega SES 2 would be delivered to the Imperial Irrigation District (IID) through the Project interconnection switching station delivering to the IID 230kV "KN/KS" Line.

The electrical energy produced by Vega SES 3 would be connected to the existing utility approved point of interconnection (POI) at the northern boundary of the Project parcel to the IID 161 kV "L" Line.

Property Description

1. **Vega SES 2** is located on Imperial County Assessor's Parcel Numbers (APNs) 025-260-011-000 (approximately 448.30 acres), APN 025-270-023 (approximately 624.76 acres) and APN 025-010-006-000 (approximately 400 of the 640 acres), the first owned by Joseph G. Clark (trustee), Marjorie Gardner (trustee) and Victoria Gabbard (Seller), the

PC ORIGINAL PKG

second by Mesa West Ranch LLC., and the third by Wang Li Tong & Sochu Chou Co Tr & Etal.

2. **Vega SES 3** is located on the remainder of APN 025-010-006-000 (approximately 240 of the 640 acres), owned by Mesa West Ranch LLC.

All project parcels, for both Vega SES 2 and Vega SES 3, are designated as "Recreation/Open Space" in the Imperial County General Plan and are zoned S-2-RE (Open Space/Preservation with a Renewable Energy overlay).

Pursuant to Section 91703.02 (CONDITIONAL USE PERMITS), Renewable Energy Projects must be located within the Renewable Energy Overlay Zone and may be permitted only through the issuance of a Conditional Use Permit (CUP) as approved by the Approving Authority unless otherwise allowed by applicable law. At present, the Projects are located within a Renewable Energy Zone. This Project Description is intended to support Apex Energy Solutions LLC's request approval of two independent Conditional Use Permits for the Vega SES 2 and Vega SES 3 Projects. Representative photographs of the Project areas will be provided.

Solar Technology

The Projects propose to utilize either thin film or crystalline solar photovoltaic (PV) technology modules mounted either on fixed frames or horizontal single-axis tracker (HSAT) systems. The fixed frame PV module arrays would be mounted on racks that would be supported by driven piles. The depth of the piles would be dependent on the recommendations of the geotechnical report prepared for the Projects. The fixed-frame racks would be secured at a fixed tilt of 20° to 30° from horizontal facing a southerly direction. Current Project designs would have individual PV modules, mounted two high on a fixed frame, providing a two-foot ground clearance and resulting in the tops of the panels at approximately 7.5 feet above the ground. The fixed PV modules would be arranged in arrays spaced approximately 15 to 25 feet apart (pile-to-pile) to maximize performance and to allow access for panel cleaning (if necessary). These arrays would be separated from each other and the perimeter security fence by up to 30-foot wide interior roads. If HSAT technology is used, the PV modules would rotate around the north-south HSAT axis so that the PV modules would continue to face the sun as the sun moves across the sky throughout the day. The PV modules would reach their maximum height (up to nine (9) feet above the ground, depending on the final design) at both sunrise and sunset, when the HSAT is rotated to point the modules at the rising or setting sun. At noon, or when stowed during high winds, when the HSAT system is rotated so that the PV modules are horizontal, the nominal height would be about six feet above the ground, depending on the final design. The individual PV systems would be arranged in large arrays by placing them in columns spaced approximately ten feet apart to maximize operational performance and to allow access for panel cleaning and maintenance. Current Project designs would have individual HSAT PV modules, each approximately two feet wide by four feet long (depending on the specific PV technology selected), mounted on a frame which is attached to an HSAT system. These HSAT arrays would be separated from each other and the perimeter security fence by up to 30-foot wide roads, consistent with agency emergency access requirements.

PC ORIGINAL PKG

Project Facilities

Electrical Power System: Electricity generated by the PV modules would be collected by a direct current (DC) collection system routed underground in trenches. This DC power would be delivered to one of the pad-mounted inverters in weatherproof enclosures located within the arrays. The inverters would convert the DC power to three-phase alternating current (AC). The inverters could be connected to AC interconnection facilities which, if needed, would raise the voltage to 34.5 kV, or the interconnection voltage selected by the Projects. Underground or overhead 34.5 kV or 60-kV collection lines would transmit the electricity to the new Project substations.

Substation(s), Distribution/Electrical Collection and Transmission:

1. **Vega SES 2:**

   One new Project substation would be constructed on APN 025-260-011 in the northwestern corner of the parcel (See Figure 3). This substation would take the delivery of up to 60 kV electricity from the below described parcel substations and increase the voltage of the electricity to 230 kV, where it would feed into the interconnection switching station for metering and delivery to the IID KN/KS Line. The substation would include two transformers, circuit breakers, meters, disconnect switches, microwave or other communication facilities and an electrical control building.

   Two new parcel substations would be constructed on each of the Project parcels. The first parcel substation is located on APN 025-010-006 in the northwestern corner of the parcel. The second parcel substation is located on APN 025-270-023 in the northwestern corner of the parcel (See Figure 3). These substations will be comprised of an underground combiner box used to connect all of the low voltage AC outputs of the inverters, a medium voltage transformer to increase the voltage to up to 60kV, a protective relay system and associated circuit breakers and disconnect switches. The parcel substation on APN 025-010-006 will also include one medium to high voltage transformer to bring the voltage to 230 kV, allowing for interconnection with IID via the interconnection switching station. The additional transformer would include high side protection and disconnect switches with associated protective relays. These substations would take delivery of the parcel generation and transmit it through one of the proposed 34.5 or 60 kV lines to the primary Project substation on APN 025-260-011. The parcel substations would include a transformer, circuit breaker, meters, disconnect switches and microwave or other communication facilities.

   One new Project interconnection switching station would be constructed on APN 025-260-011, immediately adjacent to the Project substation. These two stations would be connected via a single overhead 230 kV line. The interconnection switching station would include circuit breakers, switches, overhead bus work, protective relay equipment and control building. The station would operate at 230 kV and be configured in a Breaker-And-A-Half arrangement. This would allow for looping in of one or two of the

PC ORIGINAL PKG

IID 230 kV lines as well as connection of the total project output at 230 kV. The interconnection switching station would be enclosed within its own fence line.

The Projects distribution and interconnection would be as follows; the medium voltage power would be conveyed underground or aboveground via 34.5 or 60-kV distribution circuits from the parcel substations on the two eastern most parcels (APN 025-010-006 and 025-270-023) to the Project substation on the western most parcel (APN 025-260-011). The medium voltage distribution circuits would run along existing county roads [JN1]and terminate at the Project substation on the western most parcel (APN 025-260-011). These distribution lines can follow one of two contemplated pathways, Connection Option 1 and Connection Option 2 (See Figure 3).

2. **Vega SES 3:**

One new Project substation would be constructed on APN 025-010-006 in the northwestern corner of the Project area (See Figure 4). Medium voltage power electricity generated from the site would be conveyed underground, or above ground where necessary, to cross over any sensitive site features, to connect to the Project substation.

An interconnection switching station would be constructed immediately adjacent to the Project substation. These two stations, the Project substation and the interconnection switching station, would be connected via a single overhead 161 kV overhead line. The interconnection switching station would include circuit breakers, switches, overhead bus work, protective relay equipment and a control building. The station would operate at 161 kV and be configured in a Breaker-And-A-Half or three breaker ring bus arrangement. This would allow for looping in of the IID 161 kV "L" transmission line as well as connection of the project tie line. The interconnection switching station would be enclosed within its own fence.

This point of interconnection would meet all necessary utility standards and requirements. All required electrical breaker systems, transformer, and protective relays would be installed as part of the project. Surge arrestors would be used to protect the facilities and auxiliary equipment from lightning strikes or other disturbances, as required. Distribution from the site would be via an overhead connection.

Security: Six-foot high security fencing would be installed around the perimeter of each of the Project sites at the commencement of construction and site access would be limited to authorized site workers. In addition, a motion detection system and closed-circuit camera system may also be installed. The site would be remotely monitored 24 hours per day, 7 days per week. In addition, routine unscheduled security rounds may be made by the security team monitoring the site security.

Battery System: The proposed battery energy storage system (BESS or ESS) would be constructed adjacent to the projects solar facilities and would consist of either lithium ion (Li-ion) or flow batteries. The batteries will either be housed in storage containers or buildings fitted with HVAC and fire suppression systems. Inside the housing the batteries will be placed on

PC ORIGINAL PKG

racks, the orientation of which depends on the type of housing. Underground trenches with conduits will be used to connect the batteries to the control and monitoring systems, and inverters to convert the PV produced DC power to AC power.

Site Access

Each of the Project sites would include both a primary and secondary access (if required) driveway off the adjacent public roads (see Figure 3)[JN2]. No new access across IID lateral canals or drains is expected. These driveways would each be provided with a minimum of 30-foot double swing gates with "Knox Box" for keyed entry. Internal to the Project site up to 30-foot wide roads would be provided between the PV arrays, as well as around the perimeter of each Project site inside the perimeter security fence to provide access to all areas of each site for maintenance and emergency vehicles (see Figure 4 and Figure 5).

Site Construction

Construction Activities: Construction activities would primarily involve demolition and grubbing; grading of each Project site to establish access roads and pads for electrical equipment (inverters and step–up transformers); trenching for underground electrical collection lines; and the installation of solar equipment and security fencing. Dust generated during construction would be controlled by watering and, as necessary, the use of other dust suppression methods and materials accepted by the Imperial County Air Pollution Control District (ICAPCD) or the California Air Resources Board (CARB). A temporary, portable construction supply container would be located at the Project sites at the beginning of construction and removed at the end of construction. The number of on–site construction workers for the solar project facilities is not expected to exceed 150 workers at any one time. The number of on-site construction workers for the battery storage facility and the substation is not expected to exceed 100 workers at any one time. Onsite parking would be provided for all construction workers.

Traffic: The construction worker traffic is expected to travel to the site from Highway 111 east along one of the connecting county roads to Noffsinger Road over the canal crossing to Flowing Wells Road to access APN 025-260-011 and 025-010-006, and beyond to Coachella Canal Road using Niland Pegleg Well Road to cross a second canal and access APN 025-270-023.

Delivery trucks are expected to follow the same routes as the construction workers. An estimated two trucks would arrive at the Project sites each day during the first few weeks of construction of the solar generating facility.

Storm Water: Areas of the solar energy storage facilities where small amounts of contaminants could be released, such as the paved areas surrounding the containers, would be constructed in compliance with storm water quality management measures (i.e., basins and infiltration areas, where required) designed to meet State and local storm water management plan requirements. These paved areas would be maintained, and any vehicle leaks or spills would be periodically cleaned with absorbent materials to minimize the potential for contamination. All applicable local RWQCB discharge requirements and County of Imperial's water quality regulations would

PC ORIGINAL PKG

be adhered to in the development and maintenance of the project sites. A drainage study and preliminary grading plan for the project will be prepared by a local civil engineering firm to address the potential environmental impacts of site drainage and stormwater.

Site Operations

Once construction is completed the Project would be remotely controlled. No employees would be based at the Project sites. Primary security–related monitoring would be done remotely. Security personnel may conduct unscheduled security rounds, and would be dispatched to the site in response to a fence breach or other alarm. Site maintenance workers may access the Project site periodically to clean the panels and maintain the equipment and Project area. The public would not have access to the facility. Access to the Project sites would be infrequent and limited to authorized personnel.

Periodic washing of the PV modules is not expected to be necessary but could be needed to remove dust in order to maintain power generation efficiency. The amount of water needed for this purpose is conservatively estimated at 5 acre-feet per washing for Vega SES 2 and 1-acre foot per washing for Vega SES 3, with up to two washings per year, or a total of up to 10 acre-feet per year for Vega SES 2 and 2-acre feet per year for Vega SES 3. This water would be water purchased from the IID. Each washing is expected to take one to two weeks to complete. Vegetation growing on the site would periodically (approximately every three months) be removed manually and/or treated with herbicides.

Water Resource Requirements

Water for Construction: Water for construction (primarily dust control) would be obtained from local IID irrigation canals or laterals in conformance with IID construction water acquisition requirements. Water would be picked up from a nearby lateral canal and delivered to the construction location by a water truck which would be capable of carrying approximately 4,000 gallons per load. It is estimated that up to 750 acre-feet of water for Vega SES 2 and 200 acre-feet for Vega SES 3 would be needed for site grading and dust control over the expected Project construction period.

Water for Operations: Water for washing the PV modules, if required, would be purchased from the IID and delivered to the Project site by water trucks. The volume of water to be used for PV module washing and dust control, if needed, is estimated at up to 10 acre-feet per year for Vega SES 2 and 2-acre feet per year for Vega SES 3.

Waste

Relatively small amounts of trash would be generated during construction from packaging materials delivered to the site. Construction related waste would be transported to a local landfill authorized to receive this waste for disposal. Portable toilets would be located on-site during construction and sanitary waste would be removed from the site by a local contractor.

PC ORIGINAL PKG

No general waste is expected to be generated during normal operations. Sanitary waste generated during Project maintenance operations would be handled by bringing portable toilets to the Project sites, with waste removed periodically by a local contractor.

No hazardous waste is expected to be generated from the Project during either construction or normal Project operations.

Permit Requirements

The following permits/approvals may be required for the Project from the specified agencies, although some may not be applicable:

- Conditional Use Permit (Imperial County Planning & Development Services Department)
- Grading Permits (Imperial County Planning & Development Services Department)
- Building Permits (Imperial County Planning & Development Services Department)
- Dust Control Plan (Imperial County Air Pollution Control District)
- Rule 310 Exemption (Imperial County Air Pollution Control District)
- Encroachment Permits (Imperial County Public Works Department)
- Encroachment Permits (Imperial Irrigation District)
- Water Supply Agreement (Imperial Irrigation District)
- General Construction Storm Water Permit Notice of Intent/Storm Water Pollution Prevention Plan (California State Water Resource Control Board)
- Consultation for Sensitive Species (California Department of Fish and Wildlife)
- Consultation for Bird and Bat Conservation Strategy (U.S. Fish and Wildlife Service)

Environmental Protection Measures and Baseline Information

All Project construction and contractor personnel would be informed of Vega SES 2's and Vega SES 3's policy regarding undue degradation of the environment. These measures are intended to prevent all unacceptable impacts from occurring as a result of the proposed construction and ongoing operations.

Aesthetics:

Visibility: Project lighting for security purposes would be directed on–site and would incorporate shielding as necessary to minimize illumination of the night sky and potential impacts to surrounding viewers. The solar panels would be constructed to absorb light and minimize any potential glare. There are no panoramic scenic views from the Project area. Visual simulations of the proposed Project will be provided.

PC ORIGINAL PKG

Glare Effects: The Project PV modules are specifically designed to absorb light, rather than reflect it, as reflected light results in the loss of solar energy input, and thus electrical energy output. Modules are dark in color and have a coating that enables the panel to absorb as much of the available light as possible, which directly increases electrical energy production. The glare and reflectance levels from the PV panels are decisively lower than the glare and reflectance by standard glass and other common reflective surfaces. A solar glare analysis will be prepared to determine the potential for glare from the Project.

Odors: No malodorous chemicals or substances would be used or generated during Project construction or operations.

Agricultural Land: The current agricultural map for Imperial County prepared by the California Farmland Mapping and Monitoring Program will be used to determine the amount of the Project lands that have been mapped in each of the eight mapping categories.

There are no Williamson Act lands within or adjacent to the Project area.

Air Quality: Fugitive dust would be controlled during construction and operations as required by Imperial County Air Pollution Control District (ICAPCD) Regulation VIII. A Dust Control Plan would be prepared in conformance with ICAPCD requirements to address construction and earthmoving activities, track-out, open areas and unpaved roads. It would include information on the dust suppressants to be applied and the specific surface treatment(s) and/or control measures to be utilized to control track-out where unpaved and/or access points join paved public access roads. There would be no air pollutant emissions from stationary sources from the Project during solar power generation operations.

Air pollutant emissions would be estimated using the California Emission Estimator Model (CalEEMod) and other emission estimating tools from both Project construction and operation activities.

Biological Resources: A biological resources survey of the Project area and a 500-foot buffer (the "Biological Survey Area," or BSA) will be conducted to identify plant associations and animals present; identify dominant tree, shrub and herbaceous flora; and identifying potential habitat for "sensitive" or "special status" species (or documenting the lack thereof).

A jurisdictional delineation of the BSA for potential "state" and/or "federal" waters that may be subject to regulatory compliance relative to the California Department of Fish and Wildlife's (CDFW's) implementation of Section 1600 of the California Fish and Game Code and/or Section 404 and Section 401 of the Clean Water Act (CWA), respectively, will also be conducted.

Focused breeding season surveys of the BSA for burrowing owl may also be conducted in accordance with the methodologies provided in the California Department of Fish and Wildlife's (CDFW's) "2012 Staff Report on Burrowing Owl Mitigation."

Cultural Resources: A baseline cultural resources survey of the Project area will be conducted.

PC ORIGINAL PKG

Flood Hazard: According to the applicable Federal Emergency Management Agency (FEMA) flood hazard map (06025C0750C, effective 09/26/2008), the Project area is not located within a special flood hazard area.

Geology, Soils and Mineral Resources:

- *Geologic Hazards*: The Project is not located in a seismically active area. No other potential geologic hazards are known within the Project area, and the preliminary geotechnical survey report will provide mitigation recommendations for any identified geologic hazards.
- *Soils*: Soils within the Project area will be evaluated, and the preliminary geotechnical survey report will provide mitigation recommendations for any identified geologic hazards.
- *Mineral Resources*: There are no known developed or potential mineral resources within or adjacent to the Project area.

Hazardous Materials: The Project would not use nor store any hazardous chemicals on site during normal operations. Fuel that may be used on site during construction would be stored in secondary containment. A Phase I Environmental Site Assessment will be conducted to evaluate the potential for hazardous substance or petroleum hydrocarbon contamination at the site.

Hydrology and Water Quality: A drainage study will be prepared for the Project area which will be used to complete the preliminary grading plan in conformance with Imperial County Public Works Department (ICPWD) requirements. A Notice of Intent to comply with the general permit for construction activities would be filed with the State Water Resources Control Board, and the required Storm Water Pollution Prevention Plan (SWPPP) would be prepared and implemented consistent with the requirements of the State Water Resources Control Board general permit.

Noise: The Project would not generate any appreciable noise during normal operations. Construction noise would be limited to the short–term use of heavy equipment operated during daylight hours and to construction traffic.

Traffic: An analysis of the potential traffic-related impacts associated with the construction and day-to-day operations of the proposed Project will be prepared and provided.

Public Services: The following Project measures would minimize the potential need for public fire and police services.

- *Fire Prevention*: The construction site and access roads would be cleared of all vegetation. The cleared areas would be maintained throughout site construction and solar plant operations. Fire extinguishers would be available around the construction sites. Up to three (3) 10,000-gallon fire water tanks would be constructed across the Project sites and kept filled during operations to fight potential fires. Water that is used for construction would also be available for firefighting. Personnel would be allowed to smoke only in designated areas.
- *Emergency Services*: The Project preliminary site plans have been prepared to accommodate the requirements of emergency services which may need to respond to an

PC ORIGINAL PKG

emergency at the Project. Each Project site would be accessible from both a primary and secondary access driveway. These driveways would each be provided with a minimum of 30-foot double swing gates with "Knox Box" for keyed entry. Nominal 20-foot wide roads would be provided between the PV arrays, as well as around the perimeter of the Project site inside the perimeter security fence, to provide access for operational and emergency vehicles.

- *Security*: The entirety of each Project site would be enclosed within a gated security fence. Each site may also be monitored by a motion detection system and closed-circuit camera system.

Site Restoration: The Project areas are zoned S-2-RE, which is intended to preserve the cultural, biological, and open space areas that are rich and natural as well as cultural resources. At the end of the Project life, all facilities would be removed, and the Project sites restored to a condition for open space and recreational use. A proposed Project site restoration plan will be prepared and provided.

Utilities and Service Systems: Electricity for site security facilities when the panels are not generating power would be provided by the IID through interconnection with the existing IID distribution lines.

LETTER OF TRANSMITTAL:

October 15, 2020

TO: Jim Minnick, Director of ICPDS

FROM: Jurg Heuberger, Consultant

RE: VEGA SES 2, 3, 4 and 5

Jim:

Attached are four (4) applications for four solar projects. They are titled VEGA SES 2, VEGA SES 3, VEGA SES 4 and VEGA SES 5.

We are requesting that VEGA 2, 3 and 5 be processed under one EIR and VEGA 4 under one EIR.

The fees per your office are $ $16,500.00 for processing VEGA 2, 3 & 5, and $ 14,500.00 for VEGA 4.

These applications are not complete in the sense that they do not have the accompanying technical studies. They are however complete enough for your office to commence the RFP process to retain appropriate consultant(s) for the preparation of the EIR's.

At this time, we are requesting that your office start the process to retain appropriate EIR Consultant(s).

Time is of the essence on these projects which is why we are requesting your cooperation and assistance in expediting this portion of the process.

We will have the technical studies plus any other documentation you need well before you have a contract for a CEQA consultant. To that end however we would also appreciate having your staff begin the review of these applications and advising me of what other information they feel is lacking aside from the "preliminary title reports", the original owners affidavits, and the technical studies which will include the following: traffic, biological, cultural, visual, air quality/GHG, Noise and AG/LESA.

Lastly, I am the primary point of contact on all of these applications and would respectfully request that all correspondence on these be directed to me at jurgheuberger@gmail.com, or 760-996-0313 or PO Box 4151, El Centro, Ca. 92244. I understand that you have to notify the property owners that a permit application has been filed on their land, however all other correspondence should be directed exclusively to me.

Thank you.

VEGA SES 2 AND VEGA SES 3

SOLAR PROJECT DESCRIPTION

Introduction

Apex Energy Solutions LLC. is proposing to develop the Vega SES 2 & Vega SES 3 Solar Energy Storage (Projects),

1. **Vega SES 2:** An up to two-hundred and forty (240)–megawatt alternating current (MWAC) solar photovoltaic (PV) energy generation project with an integrated 240 MW Battery Energy Storage System (BESS), on approximately 1,472 acres of land in the County of Imperial, California.
2. **Vega SES 3:** An up to sixty (60)–megawatt alternating current (MWAC) solar photovoltaic (PV) energy generation project with an integrated 60 MW Battery Energy Storage System (BESS), on approximately 240 acres of land in the County of Imperial, California.

The location of the project sites would be in Sections 9, 15 and 17 all within Township 11 South, Range 15 East of the San Bernardino Base and Meridian (SBB&M) of the "Iris" topographic quadrangles 7.5-minute quadrangle (U.S. Department of the Interior, Geological Survey 2005), in the unincorporated region of the County of Imperial, State of California. The projects are located between the unincorporated communities of Iris and Slab City, running parallel to the Coachella Canal (See Figure 1).

The electrical energy produced by Vega SES 2 would be delivered to the Imperial Irrigation District (IID) through the Project interconnection switching station delivering to the IID 230kV "KN/KS" Line.

The electrical energy produced by Vega SES 3 would be connected to the existing utility approved point of interconnection (POI) at the northern boundary of the Project parcel to the IID 161 kV "L" Line.

Property Description

1. **Vega SES 2** is located on Imperial County Assessor's Parcel Numbers (APNs) 025-260-011-000 (approximately 448.30 acres), APN 025-270-023 (approximately 624.76 acres) and APN 025-010-006-000 (approximately 400 of the 640 acres), the first owned by Joseph G. Clark (trustee), Marjorie Gardner (trustee) and Victoria Gabbard (Seller), the

PC ORIGINAL PKG

second by Mesa West Ranch LLC., and the third by Wang Li Tong & Sochu Chou Co Tr & Etal.

2. **Vega SES 3** is located on the remainder of APN 025-010-006-000 (approximately 240 of the 640 acres), owned by Mesa West Ranch LLC.

All project parcels, for both Vega SES 2 and Vega SES 3, are designated as "Recreation/Open Space" in the Imperial County General Plan and are zoned S-2-RE (Open Space/Preservation with a Renewable Energy overlay).

Pursuant to Section 91703.02 (CONDITIONAL USE PERMITS), Renewable Energy Projects must be located within the Renewable Energy Overlay Zone and may be permitted only through the issuance of a Conditional Use Permit (CUP) as approved by the Approving Authority unless otherwise allowed by applicable law. At present, the Projects are located within a Renewable Energy Zone. This Project Description is intended to support Apex Energy Solutions LLC's request approval of two independent Conditional Use Permits for the Vega SES 2 and Vega SES 3 Projects. Representative photographs of the Project areas will be provided.

Solar Technology

The Projects propose to utilize either thin film or crystalline solar photovoltaic (PV) technology modules mounted either on fixed frames or horizontal single-axis tracker (HSAT) systems. The fixed frame PV module arrays would be mounted on racks that would be supported by driven piles. The depth of the piles would be dependent on the recommendations of the geotechnical report prepared for the Projects. The fixed-frame racks would be secured at a fixed tilt of 20° to 30° from horizontal facing a southerly direction. Current Project designs would have individual PV modules, mounted two high on a fixed frame, providing a two-foot ground clearance and resulting in the tops of the panels at approximately 7.5 feet above the ground. The fixed PV modules would be arranged in arrays spaced approximately 15 to 25 feet apart (pile-to-pile) to maximize performance and to allow access for panel cleaning (if necessary). These arrays would be separated from each other and the perimeter security fence by up to 30-foot wide interior roads. If HSAT technology is used, the PV modules would rotate around the north-south HSAT axis so that the PV modules would continue to face the sun as the sun moves across the sky throughout the day. The PV modules would reach their maximum height (up to nine (9) feet above the ground, depending on the final design) at both sunrise and sunset, when the HSAT is rotated to point the modules at the rising or setting sun. At noon, or when stowed during high winds, when the HSAT system is rotated so that the PV modules are horizontal, the nominal height would be about six feet above the ground, depending on the final design. The individual PV systems would be arranged in large arrays by placing them in columns spaced approximately ten feet apart to maximize operational performance and to allow access for panel cleaning and maintenance. Current Project designs would have individual HSAT PV modules, each approximately two feet wide by four feet long (depending on the specific PV technology selected), mounted on a frame which is attached to an HSAT system. These HSAT arrays would be separated from each other and the perimeter security fence by up to 30-foot wide roads, consistent with agency emergency access requirements.

PC ORIGINAL PKG

Project Facilities

Electrical Power System: Electricity generated by the PV modules would be collected by a direct current (DC) collection system routed underground in trenches. This DC power would be delivered to one of the pad-mounted inverters in weatherproof enclosures located within the arrays. The inverters would convert the DC power to three-phase alternating current (AC). The inverters could be connected to AC interconnection facilities which, if needed, would raise the voltage to 34.5 kV, or the interconnection voltage selected by the Projects. Underground or overhead 34.5 kV or 60-kV collection lines would transmit the electricity to the new Project substations.

Substation(s), Distribution/Electrical Collection and Transmission:

1. **Vega SES 2:**

   One new Project substation would be constructed on APN 025-260-011 in the northwestern corner of the parcel (See Figure 3). This substation would take the delivery of up to 60 kV electricity from the below described parcel substations and increase the voltage of the electricity to 230 kV, where it would feed into the interconnection switching station for metering and delivery to the IID KN/KS Line. The substation would include two transformers, circuit breakers, meters, disconnect switches, microwave or other communication facilities and an electrical control building.

   Two new parcel substations would be constructed on each of the Project parcels. The first parcel substation is located on APN 025-010-006 in the northwestern corner of the parcel. The second parcel substation is located on APN 025-270-023 in the northwestern corner of the parcel (See Figure 3). These substations will be comprised of an underground combiner box used to connect all of the low voltage AC outputs of the inverters, a medium voltage transformer to increase the voltage to up to 60kV, a protective relay system and associated circuit breakers and disconnect switches. The parcel substation on APN 025-010-006 will also include one medium to high voltage transformer to bring the voltage to 230 kV, allowing for interconnection with IID via the interconnection switching station. The additional transformer would include high side protection and disconnect switches with associated protective relays. These substations would take delivery of the parcel generation and transmit it through one of the proposed 34.5 or 60 kV lines to the primary Project substation on APN 025-260-011. The parcel substations would include a transformer, circuit breaker, meters, disconnect switches and microwave or other communication facilities.

   One new Project interconnection switching station would be constructed on APN 025-260-011, immediately adjacent to the Project substation. These two stations would be connected via a single overhead 230 kV line. The interconnection switching station would include circuit breakers, switches, overhead bus work, protective relay equipment and control building. The station would operate at 230 kV and be configured in a Breaker-And-A-Half arrangement. This would allow for looping in of one or two of the

PC ORIGINAL PKG

IID 230 kV lines as well as connection of the total project output at 230 kV. The interconnection switching station would be enclosed within its own fence line.

The Projects distribution and interconnection would be as follows; the medium voltage power would be conveyed underground or aboveground via 34.5 or 60-kV distribution circuits from the parcel substations on the two eastern most parcels (APN 025-010-006 and 025-270-023) to the Project substation on the western most parcel (APN 025-260-011). The medium voltage distribution circuits would run along existing county roads [JN1]and terminate at the Project substation on the western most parcel (APN 025-260-011). These distribution lines can follow one of two contemplated pathways, Connection Option 1 and Connection Option 2 (See Figure 3).

2. **Vega SES 3:**

One new Project substation would be constructed on APN 025-010-006 in the northwestern corner of the Project area (See Figure 4). Medium voltage power electricity generated from the site would be conveyed underground, or above ground where necessary, to cross over any sensitive site features, to connect to the Project substation.

An interconnection switching station would be constructed immediately adjacent to the Project substation. These two stations, the Project substation and the interconnection switching station, would be connected via a single overhead 161 kV overhead line. The interconnection switching station would include circuit breakers, switches, overhead bus work, protective relay equipment and a control building. The station would operate at 161 kV and be configured in a Breaker-And-A-Half or three breaker ring bus arrangement. This would allow for looping in of the IID 161 kV "L" transmission line as well as connection of the project tie line. The interconnection switching station would be enclosed within its own fence.

This point of interconnection would meet all necessary utility standards and requirements. All required electrical breaker systems, transformer, and protective relays would be installed as part of the project. Surge arrestors would be used to protect the facilities and auxiliary equipment from lightning strikes or other disturbances, as required. Distribution from the site would be via an overhead connection.

Security: Six-foot high security fencing would be installed around the perimeter of each of the Project sites at the commencement of construction and site access would be limited to authorized site workers. In addition, a motion detection system and closed-circuit camera system may also be installed. The site would be remotely monitored 24 hours per day, 7 days per week. In addition, routine unscheduled security rounds may be made by the security team monitoring the site security.

Battery System: The proposed battery energy storage system (BESS or ESS) would be constructed adjacent to the projects solar facilities and would consist of either lithium ion (Li-ion) or flow batteries. The batteries will either be housed in storage containers or buildings fitted with HVAC and fire suppression systems. Inside the housing the batteries will be placed on

PC ORIGINAL PKG

racks, the orientation of which depends on the type of housing. Underground trenches with conduits will be used to connect the batteries to the control and monitoring systems, and inverters to convert the PV produced DC power to AC power.

Site Access

Each of the Project sites would include both a primary and secondary access (if required) driveway off the adjacent public roads (see Figure 3)[JN2]. No new access across IID lateral canals or drains is expected. These driveways would each be provided with a minimum of 30-foot double swing gates with "Knox Box" for keyed entry. Internal to the Project site up to 30-foot wide roads would be provided between the PV arrays, as well as around the perimeter of each Project site inside the perimeter security fence to provide access to all areas of each site for maintenance and emergency vehicles (see Figure 4 and Figure 5).

Site Construction

Construction Activities: Construction activities would primarily involve demolition and grubbing; grading of each Project site to establish access roads and pads for electrical equipment (inverters and step–up transformers); trenching for underground electrical collection lines; and the installation of solar equipment and security fencing. Dust generated during construction would be controlled by watering and, as necessary, the use of other dust suppression methods and materials accepted by the Imperial County Air Pollution Control District (ICAPCD) or the California Air Resources Board (CARB). A temporary, portable construction supply container would be located at the Project sites at the beginning of construction and removed at the end of construction. The number of on–site construction workers for the solar project facilities is not expected to exceed 150 workers at any one time. The number of on-site construction workers for the battery storage facility and the substation is not expected to exceed 100 workers at any one time. Onsite parking would be provided for all construction workers.

Traffic: The construction worker traffic is expected to travel to the site from Highway 111 east along one of the connecting county roads to Noffsinger Road over the canal crossing to Flowing Wells Road to access APN 025-260-011 and 025-010-006, and beyond to Coachella Canal Road using Niland Pegleg Well Road to cross a second canal and access APN 025-270-023.

Delivery trucks are expected to follow the same routes as the construction workers. An estimated two trucks would arrive at the Project sites each day during the first few weeks of construction of the solar generating facility.

Storm Water: Areas of the solar energy storage facilities where small amounts of contaminants could be released, such as the paved areas surrounding the containers, would be constructed in compliance with storm water quality management measures (i.e., basins and infiltration areas, where required) designed to meet State and local storm water management plan requirements. These paved areas would be maintained, and any vehicle leaks or spills would be periodically cleaned with absorbent materials to minimize the potential for contamination. All applicable local RWQCB discharge requirements and County of Imperial's water quality regulations would

PC ORIGINAL PKG

be adhered to in the development and maintenance of the project sites. A drainage study and preliminary grading plan for the project will be prepared by a local civil engineering firm to address the potential environmental impacts of site drainage and stormwater.

Site Operations

Once construction is completed the Project would be remotely controlled. No employees would be based at the Project sites. Primary security–related monitoring would be done remotely. Security personnel may conduct unscheduled security rounds, and would be dispatched to the site in response to a fence breach or other alarm. Site maintenance workers may access the Project site periodically to clean the panels and maintain the equipment and Project area. The public would not have access to the facility. Access to the Project sites would be infrequent and limited to authorized personnel.

Periodic washing of the PV modules is not expected to be necessary but could be needed to remove dust in order to maintain power generation efficiency. The amount of water needed for this purpose is conservatively estimated at 5 acre-feet per washing for Vega SES 2 and 1-acre foot per washing for Vega SES 3, with up to two washings per year, or a total of up to 10 acre-feet per year for Vega SES 2 and 2-acre feet per year for Vega SES 3. This water would be water purchased from the IID. Each washing is expected to take one to two weeks to complete. Vegetation growing on the site would periodically (approximately every three months) be removed manually and/or treated with herbicides.

Water Resource Requirements

Water for Construction: Water for construction (primarily dust control) would be obtained from local IID irrigation canals or laterals in conformance with IID construction water acquisition requirements. Water would be picked up from a nearby lateral canal and delivered to the construction location by a water truck which would be capable of carrying approximately 4,000 gallons per load. It is estimated that up to 750 acre-feet of water for Vega SES 2 and 200 acre-feet for Vega SES 3 would be needed for site grading and dust control over the expected Project construction period.

Water for Operations: Water for washing the PV modules, if required, would be purchased from the IID and delivered to the Project site by water trucks. The volume of water to be used for PV module washing and dust control, if needed, is estimated at up to 10 acre-feet per year for Vega SES 2 and 2-acre feet per year for Vega SES 3.

Waste

Relatively small amounts of trash would be generated during construction from packaging materials delivered to the site. Construction related waste would be transported to a local landfill authorized to receive this waste for disposal. Portable toilets would be located on-site during construction and sanitary waste would be removed from the site by a local contractor.

PC ORIGINAL PKG

No general waste is expected to be generated during normal operations. Sanitary waste generated during Project maintenance operations would be handled by bringing portable toilets to the Project sites, with waste removed periodically by a local contractor.

No hazardous waste is expected to be generated from the Project during either construction or normal Project operations.

Permit Requirements

The following permits/approvals may be required for the Project from the specified agencies, although some may not be applicable:

- Conditional Use Permit (Imperial County Planning & Development Services Department)
- Grading Permits (Imperial County Planning & Development Services Department)
- Building Permits (Imperial County Planning & Development Services Department)
- Dust Control Plan (Imperial County Air Pollution Control District)
- Rule 310 Exemption (Imperial County Air Pollution Control District)
- Encroachment Permits (Imperial County Public Works Department)
- Encroachment Permits (Imperial Irrigation District)
- Water Supply Agreement (Imperial Irrigation District)
- General Construction Storm Water Permit Notice of Intent/Storm Water Pollution Prevention Plan (California State Water Resource Control Board)
- Consultation for Sensitive Species (California Department of Fish and Wildlife)
- Consultation for Bird and Bat Conservation Strategy (U.S. Fish and Wildlife Service)

Environmental Protection Measures and Baseline Information

All Project construction and contractor personnel would be informed of Vega SES 2's and Vega SES 3's policy regarding undue degradation of the environment. These measures are intended to prevent all unacceptable impacts from occurring as a result of the proposed construction and ongoing operations.

Aesthetics:

Visibility: Project lighting for security purposes would be directed on–site and would incorporate shielding as necessary to minimize illumination of the night sky and potential impacts to surrounding viewers. The solar panels would be constructed to absorb light and minimize any potential glare. There are no panoramic scenic views from the Project area. Visual simulations of the proposed Project will be provided.

PC ORIGINAL PKG

Glare Effects: The Project PV modules are specifically designed to absorb light, rather than reflect it, as reflected light results in the loss of solar energy input, and thus electrical energy output. Modules are dark in color and have a coating that enables the panel to absorb as much of the available light as possible, which directly increases electrical energy production. The glare and reflectance levels from the PV panels are decisively lower than the glare and reflectance by standard glass and other common reflective surfaces. A solar glare analysis will be prepared to determine the potential for glare from the Project.

Odors: No malodorous chemicals or substances would be used or generated during Project construction or operations.

Agricultural Land: The current agricultural map for Imperial County prepared by the California Farmland Mapping and Monitoring Program will be used to determine the amount of the Project lands that have been mapped in each of the eight mapping categories.

There are no Williamson Act lands within or adjacent to the Project area.

Air Quality: Fugitive dust would be controlled during construction and operations as required by Imperial County Air Pollution Control District (ICAPCD) Regulation VIII. A Dust Control Plan would be prepared in conformance with ICAPCD requirements to address construction and earthmoving activities, track-out, open areas and unpaved roads. It would include information on the dust suppressants to be applied and the specific surface treatment(s) and/or control measures to be utilized to control track-out where unpaved and/or access points join paved public access roads. There would be no air pollutant emissions from stationary sources from the Project during solar power generation operations.

Air pollutant emissions would be estimated using the California Emission Estimator Model (CalEEMod) and other emission estimating tools from both Project construction and operation activities.

Biological Resources: A biological resources survey of the Project area and a 500-foot buffer (the "Biological Survey Area," or BSA) will be conducted to identify plant associations and animals present; identify dominant tree, shrub and herbaceous flora; and identifying potential habitat for "sensitive" or "special status" species (or documenting the lack thereof).

A jurisdictional delineation of the BSA for potential "state" and/or "federal" waters that may be subject to regulatory compliance relative to the California Department of Fish and Wildlife's (CDFW's) implementation of Section 1600 of the California Fish and Game Code and/or Section 404 and Section 401 of the Clean Water Act (CWA), respectively, will also be conducted.

Focused breeding season surveys of the BSA for burrowing owl may also be conducted in accordance with the methodologies provided in the California Department of Fish and Wildlife's (CDFW's) "2012 Staff Report on Burrowing Owl Mitigation."

Cultural Resources: A baseline cultural resources survey of the Project area will be conducted.

PC ORIGINAL PKG

Flood Hazard: According to the applicable Federal Emergency Management Agency (FEMA) flood hazard map (06025C0750C, effective 09/26/2008), the Project area is not located within a special flood hazard area.

Geology, Soils and Mineral Resources:

- *Geologic Hazards*: The Project is not located in a seismically active area. No other potential geologic hazards are known within the Project area, and the preliminary geotechnical survey report will provide mitigation recommendations for any identified geologic hazards.
- *Soils*: Soils within the Project area will be evaluated, and the preliminary geotechnical survey report will provide mitigation recommendations for any identified geologic hazards.
- *Mineral Resources*: There are no known developed or potential mineral resources within or adjacent to the Project area.

Hazardous Materials: The Project would not use nor store any hazardous chemicals on site during normal operations. Fuel that may be used on site during construction would be stored in secondary containment. A Phase I Environmental Site Assessment will be conducted to evaluate the potential for hazardous substance or petroleum hydrocarbon contamination at the site.

Hydrology and Water Quality: A drainage study will be prepared for the Project area which will be used to complete the preliminary grading plan in conformance with Imperial County Public Works Department (ICPWD) requirements. A Notice of Intent to comply with the general permit for construction activities would be filed with the State Water Resources Control Board, and the required Storm Water Pollution Prevention Plan (SWPPP) would be prepared and implemented consistent with the requirements of the State Water Resources Control Board general permit.

Noise: The Project would not generate any appreciable noise during normal operations. Construction noise would be limited to the short–term use of heavy equipment operated during daylight hours and to construction traffic.

Traffic: An analysis of the potential traffic-related impacts associated with the construction and day-to-day operations of the proposed Project will be prepared and provided.

Public Services: The following Project measures would minimize the potential need for public fire and police services.

- *Fire Prevention*: The construction site and access roads would be cleared of all vegetation. The cleared areas would be maintained throughout site construction and solar plant operations. Fire extinguishers would be available around the construction sites. Up to three (3) 10,000-gallon fire water tanks would be constructed across the Project sites and kept filled during operations to fight potential fires. Water that is used for construction would also be available for firefighting. Personnel would be allowed to smoke only in designated areas.
- *Emergency Services*: The Project preliminary site plans have been prepared to accommodate the requirements of emergency services which may need to respond to an

PC ORIGINAL PKG

emergency at the Project. Each Project site would be accessible from both a primary and secondary access driveway. These driveways would each be provided with a minimum of 30-foot double swing gates with "Knox Box" for keyed entry. Nominal 20-foot wide roads would be provided between the PV arrays, as well as around the perimeter of the Project site inside the perimeter security fence, to provide access for operational and emergency vehicles.

- *Security*: The entirety of each Project site would be enclosed within a gated security fence. Each site may also be monitored by a motion detection system and closed-circuit camera system.

Site Restoration: The Project areas are zoned S-2-RE, which is intended to preserve the cultural, biological, and open space areas that are rich and natural as well as cultural resources. At the end of the Project life, all facilities would be removed, and the Project sites restored to a condition for open space and recreational use. A proposed Project site restoration plan will be prepared and provided.

Utilities and Service Systems: Electricity for site security facilities when the panels are not generating power would be provided by the IID through interconnection with the existing IID distribution lines.

LETTER OF TRANSMITTAL:

October 15, 2020

TO: Jim Minnick, Director of ICPDS

FROM: Jurg Heuberger, Consultant

RE: VEGA SES 2, 3, 4 and 5

Jim:

Attached are four (4) applications for four solar projects. They are titled VEGA SES 2, VEGA SES 3, VEGA SES 4 and VEGA SES 5.

We are requesting that VEGA 2, 3 and 5 be processed under one EIR and VEGA 4 under one EIR.

The fees per your office are $ $16,500.00 for processing VEGA 2, 3 & 5, and $ 14,500.00 for VEGA 4.

These applications are not complete in the sense that they do not have the accompanying technical studies. They are however complete enough for your office to commence the RFP process to retain appropriate consultant(s) for the preparation of the EIR's.

At this time, we are requesting that your office start the process to retain appropriate EIR Consultant(s).

Time is of the essence on these projects which is why we are requesting your cooperation and assistance in expediting this portion of the process.

We will have the technical studies plus any other documentation you need well before you have a contract for a CEQA consultant. To that end however we would also appreciate having your staff begin the review of these applications and advising me of what other information they feel is lacking aside from the "preliminary title reports", the original owners affidavits, and the technical studies which will include the following: traffic, biological, cultural, visual, air quality/GHG, Noise and AG/LESA.

Lastly, I am the primary point of contact on all of these applications and would respectfully request that all correspondence on these be directed to me at jurgheuberger@gmail.com, or 760-996-0313 or PO Box 4151, El Centro, Ca. 92244. I understand that you have to notify the property owners that a permit application has been filed on their land, however all other correspondence should be directed exclusively to me.

Thank you.

VEGA SES 5

SOLAR PROJECT DESCRIPTION

Introduction

Apex Energy Solutions LLC. is proposing to develop the Vega SES 5 Solar Energy Storage (Project), a nominal 50-megawatt alternating current (MWAC) solar photovoltaic (PV) energy generation project with an integrated 50 MW battery storage project on approximately 249.7 acres of land in the County of Imperial, California. The Project would be located approximately 9 miles east of the Salton Sea, directly south of Noffsinger Road, east of Wiest Road in Sections 17 and 19 all within Township 11 South, and Range 15 East of the San Bernardino Base and Meridian (SBB&M) of the "Iris" topographic quadrangles 7.5-minute quadrangle (U.S. Department of the Interior, Geological Survey 2005). The electrical energy produced by the Project would be conducted through a proposed 92 kV generator intertie ("gen-tie") line and delivered to the Imperial Irrigation District (IID) through a short interconnection with the IID 92kV "Midway" Substation or the proposed Project switching station.

Property Description

The Project would be located on Imperial County Assessors Parcels (APNs) 025-260-019-000 (approximately 89.7 acres) and 025-260-022-000 (approximately 160.0 acres), the former owned by Clark Joseph G Trustee Etal and the latter by Tedana LLC. Both Project parcels are designated as "Recreation/Open Space" in the Imperial County General Plan. The parcel with APN 025-260-019-000 is zoned S-2-RE (areas with intent to preserve the cultural, biological, and open spaces that are rich and natural as well as cultural resources) and the parcel with APN 025-260-022-000 is zoned A-2-RE (areas that are suitable and intended primarily for agricultural uses [limited] and agricultural related compatible uses), A-3-RE (areas that are suitable for agricultural land uses; to prevent the encroachment of incompatible uses onto and within agricultural lands; and to prohibit the premature conversion of such lands to non-agricultural uses) and S-2-RE (see above). Pursuant to Section 91703.02 (CONDITIONAL USE PERMITS), Renewable Energy Projects must be located within the Renewable Energy Overlay Zone and may be permitted only through the issuance of a Conditional Use Permit (CUP) as approved by the Approving Authority unless otherwise allowed by applicable law. At present, all Project parcels are located within the Renewable Energy (RE) Zone. This Project Description is intended to support Apex Energy Solutions LLC's requested approval of a Conditional Use Permit for the Vega SES 5 Project. Representative photographs of the Project areas will be provided.

Solar Technology

PC ORIGINAL PKG

The Project proposes to utilize either thin film or crystalline solar photovoltaic (PV) technology modules mounted either on fixed frames or horizontal single-axis tracker (HSAT) systems. The fixed frame PV module arrays would be mounted on racks that would be supported by driven piles. The depth of the piles would be dependent on the recommendations of the geotechnical report prepared for the Project. The fixed-frame racks would be secured at a fixed tilt of 20° to 30° from horizontal facing a southerly direction. Current Project designs would have individual PV modules, mounted two high on a fixed frame, providing a two-foot ground clearance and resulting in the tops of the panels at approximately 7.5 feet above the ground. The fixed PV modules would be arranged in arrays spaced approximately 15 to 25 feet apart (pile-to-pile) to maximize performance and to allow access for panel cleaning (if necessary). These arrays would be separated from each other and the perimeter security fence by up to 30-foot wide interior roads. If HSAT technology is used, the PV modules would rotate around the north-south HSAT axis so that the PV modules would continue to face the sun as the sun moves across the sky throughout the day. The PV modules would reach their maximum height (up to nine (9) feet above the ground, depending on the final design) at both sunrise and sunset, when the HSAT is rotated to point the modules at the rising or setting sun. At noon, or when stowed during high winds, when the HSAT system is rotated so that the PV modules are horizontal, the nominal height would be about six (6) feet above the ground, depending on the final design. The individual PV systems would be arranged in large arrays by placing them in columns spaced approximately ten feet apart to maximize operational performance and to allow access for panel cleaning and maintenance. Current Project designs would have individual HSAT PV modules, each approximately two feet wide by four feet long (depending on the specific PV technology selected), mounted on a frame which is attached to an HSAT system. These HSAT arrays would be separated from each other and the perimeter security fence by up to 30-foot wide roads, consistent with agency emergency access requirements.

Project Facilities

Electrical Power System: Electricity generated by the PV modules would be collected by a direct current (DC) collection system routed underground in trenches. This DC power would be delivered to one of the pad-mounted inverters in weatherproof enclosures located within the arrays. The inverters would convert the DC power to three-phase alternating current (AC). The inverters could be connected to AC interconnection facilities which, if needed, would raise the voltage to up to 34.5 kV, or the interconnection voltage selected by the Projects. Underground or overhead 12.5 kV to 34.5-kV collection lines would transmit the electricity to the new Project substation.

Interconnection Facilities:

A new Project substation would be constructed on the southwestern boundary of APN 025-260-022 (See Figure 3~~Figure 3~~). This substation would take the delivery of the up to 34.5 kV power from the Project and increase the voltage of the electricity to 92 kV, where it would be delivered to the IID 92 kV "Midway" Substation. The substation would include a transformer, circuit breakers, meters, disconnect switches, and microwave or other communication facilities.

PC ORIGINAL PKG

The medium voltage power produced by the Project would be conveyed underground, or above ground where necessary to cross over any sensitive site features, to connect to the Projects' interconnection facilities. The Projects' interconnection facilities design would meet all necessary utility standards and requirements. As required, surge arrestors would be used to protect facilities and auxiliary equipment from lightning strikes or other disturbances. Distribution from the site would be via an overhead connection.

Transmission Lines: The electrical energy produced by the Project would be conducted through the Project substation to the proposed 92kV generator intertie ("gen-tie") line and delivered to the existing Imperial Irrigation District (IID) approved point of interconnection (POI) at the IID 92kV "Midway" Substation (See Figure 3~~Figure 3~~).

Security: Six-foot high security fencing would be installed around the perimeter of each of the Project sites at the commencement of construction and site access would be limited to authorized site workers. In addition, a motion detection system and closed-circuit camera system may also be installed. The site would be remotely monitored 24 hours per day, 7 days per week. In addition, routine unscheduled security rounds may be made by the security team monitoring the site security.

Battery System: The proposed battery energy storage system (BESS or ESS) would be constructed adjacent to the projects solar facilities and would consist of either lithium ion (Li-ion) or flow batteries. The batteries will either be housed in storage containers or buildings fitted with HVAC and fire suppression systems. Inside the housing the batteries will be placed on racks, the orientation of which depends on the type of housing. Underground trenches with conduits will be used to connect the batteries to the control and monitoring systems, and inverters to convert the PV produced DC power to AC power.

Site Access

The Project site would include one primary access driveway per parcel for a total of two primary access points and a secondary access driveway per parcel (if required) with a to be determined location; the driveway for APN 025-260-019 will be located in the northwestern corner off the parcel off of Noffsinger Road, while the driveway for APN 025-260-022 will be located along Weist Road which runs parallel to the western boundary of said parcel. (see Figure 3~~Figure 3~~). Both driveways would be provided with a minimum of 30-foot double swing gates with "Knox Box" for keyed entry. Internal to the Project site up to 30-foot wide roads would be provided between the PV arrays, as well as around the perimeter of each Project site inside the perimeter security fence to provide access to all areas of each site for maintenance and emergency vehicles (see Figure 3~~Figure 3~~).

Site Construction

Construction Activities: Construction activities would primarily involve demolition and grubbing; grading of the Project area to establish access roads and pads for electrical equipment

PC ORIGINAL PKG

(inverters and step–up transformers); trenching for underground electrical collection lines; and the installation of solar equipment and security fencing. Dust generated during construction would be controlled by watering and, as necessary, the use of other dust suppression methods and materials accepted by the Imperial County Air Pollution Control District (ICAPCD) or the California Air Resources Board (CARB). A temporary, portable construction supply container would be located at the Project sites at the beginning of construction and removed at the end of construction. The number of on–site construction workers for the solar project facilities is not expected to exceed 150 workers at any one time. The number of on-site construction workers for the battery storage facility and the substation is not expected to exceed 100 workers at any one time. Onsite parking would be provided for all construction workers.

Traffic: The construction worker traffic is expected to travel to the site from three directions:

- From the east via S98 (Yuha Cutoff) to Drew Road (S29), then north on Drew Road to the Project area;
- From the north via Interstate 8, then south on Drew Road to the Project area; or
- From the west via either S98 to Drew Road north or Interstate 8 to Drew Road south.

Delivery trucks are expected to follow the same routes as the construction workers. An estimated two trucks would arrive at the Project sites each day during the first few weeks of construction of the solar generating facility.

Storm Water: Areas of the solar energy storage facilities where small amounts of contaminants could be released, such as the paved areas surrounding the containers, would be constructed in compliance with storm water quality management measures (i.e., basins and infiltration areas, where required) designed to meet State and local storm water management plan requirements. These paved areas would be maintained, and any vehicle leaks or spills would be periodically cleaned with absorbent materials to minimize the potential for contamination. All applicable local RWQCB discharge requirements and County of Imperial's water quality regulations would be adhered to in the development and maintenance of the project sites. A drainage study and preliminary grading plan for the project will be prepared by a local civil engineering firm to address the potential environmental impacts of site drainage and stormwater.

Site Operations

Once construction is completed the Project would be remotely controlled. No employees would be based at the Project sites. Primary security–related monitoring would be done remotely. Security personnel may conduct unscheduled security rounds, and would be dispatched to the site in response to a fence breach or other alarm. Site maintenance workers may access the Project site periodically to clean the panels and maintain the equipment and Project area. The public would not have access to the facility. Access to the Project site would be infrequent and limited to authorized personnel.

Periodic washing of the PV modules is not expected to be necessary but could be needed to remove dust in order to maintain power generation efficiency. The amount of water needed for

PC ORIGINAL PKG

this purpose is conservatively estimated at 10 acre-feet per washing, with up to two washings per year, or a total of up to 20 acre-feet per year. This water would be water purchased from the IID. Each washing is expected to take one to two weeks to complete. Vegetation growing on the site would periodically (approximately every three months) be removed manually and/or treated with herbicides.

Water Resource Requirements

Water for Construction: Water for construction (primarily dust control) would be obtained from local IID irrigation canals or laterals in conformance with IID construction water acquisition requirements. Water would be picked up from a nearby lateral canal and delivered to the construction location by a water truck which would be capable of carrying approximately 4,000 gallons per load. It is estimated that up to 550 acre-feet of water would be needed for site grading and dust control over the expected Project construction period.

Water for Operations: Water for washing the PV modules, if required, would be purchased from the IID and delivered to the Project site by water trucks. The volume of water to be used for PV module washing and dust control, if needed, is estimated at up to 20 acre-feet per year.

Waste

Relatively small amounts of trash would be generated during construction from packaging materials delivered to the site. Construction related waste would be transported to a local landfill authorized to receive this waste for disposal. Portable toilets would be located on-site during construction and sanitary waste would be removed from the site by a local contractor.

No general waste is expected to be generated during normal operations. Sanitary waste generated during Project maintenance operations would be handled by bringing portable toilets to the Project sites, with waste removed periodically by a local contractor.

No hazardous waste is expected to be generated from the Project during either construction or normal Project operations.

Permit Requirements

The following permits/approvals may be required for the Project from the specified agencies, although some may not be applicable:

- Conditional Use Permit (Imperial County Planning & Development Services Department)
- Grading Permits (Imperial County Planning & Development Services Department)
- Building Permits (Imperial County Planning & Development Services Department)
- Dust Control Plan (Imperial County Air Pollution Control District)
- Rule 310 Exemption (Imperial County Air Pollution Control District)

PC ORIGINAL PKG

- Encroachment Permits (Imperial County Public Works Department)
- Encroachment Permits (Imperial Irrigation District)
- Water Supply Agreement (Imperial Irrigation District)
- General Construction Storm Water Permit Notice of Intent/Storm Water Pollution Prevention Plan (California State Water Resource Control Board)
- Consultation for Sensitive Species (California Department of Fish and Wildlife)
- Consultation for Bird and Bat Conservation Strategy (U.S. Fish and Wildlife Service)[JN1]

Environmental Protection Measures and Baseline Information

All Project construction and contractor personnel would be informed of Vega SES 5 policy regarding undue degradation of the environment. These measures are intended to prevent all unacceptable impacts from occurring as a result of the proposed construction and ongoing operations.

Aesthetics:

Visibility: Project lighting for security purposes would be directed on–site and would incorporate shielding as necessary to minimize illumination of the night sky and potential impacts to surrounding viewers. The solar panels would be constructed to absorb light and minimize any potential glare. There are no panoramic scenic views from the Project area. Visual simulations of the proposed Project will be provided.

Glare Effects: The Project PV modules are specifically designed to absorb light, rather than reflect it, as reflected light results in the loss of solar energy input, and thus electrical energy output. Modules are dark in color and have a coating that enables the panel to absorb as much of the available light as possible, which directly increases electrical energy production. The glare and reflectance levels from the PV panels are decisively lower than the glare and reflectance by standard glass and other common reflective surfaces. A solar glare analysis will be prepared to determine the potential for glare from the Project.

Odors: No malodorous chemicals or substances would be used or generated during Project construction or operations.

Agricultural Land: The current agricultural map for Imperial County prepared by the California Farmland Mapping and Monitoring Program will be used to determine the amount of the Project lands that have been mapped in each of the eight mapping categories.

The California Department of Conservation (CDOC) Land Evaluation Site Assessment (LESA) model will be used to evaluate the potential for impacts from conversion of Project area agricultural land to solar use.

There are no Williamson Act lands within or adjacent to the Project area.

PC ORIGINAL PKG

Air Quality: Fugitive dust would be controlled during construction and operations as required by Imperial County Air Pollution Control District (ICAPCD) Regulation VIII. A Dust Control Plan would be prepared in conformance with ICAPCD requirements to address construction and earthmoving activities, track-out, open areas and unpaved roads. It would include information on the dust suppressants to be applied and the specific surface treatment(s) and/or control measures to be utilized to control track-out where unpaved and/or access points join paved public access roads. There would be no air pollutant emissions from stationary sources from the Project during solar power generation operations.

Air pollutant emissions would be estimated using the California Emission Estimator Model (CalEEMod) and other emission estimating tools from both Project construction and operation activities.

Biological Resources: A biological resources survey of the Project area and a 500-foot buffer (the "Biological Survey Area," or BSA) will be conducted to identify plant associations and animals present; identify dominant tree, shrub and herbaceous flora; and identifying potential habitat for "sensitive" or "special status" species (or documenting the lack thereof).

A jurisdictional delineation of the BSA for potential "state" and/or "federal" waters that may be subject to regulatory compliance relative to the California Department of Fish and Wildlife's (CDFW's) implementation of Section 1600 of the California Fish and Game Code and/or Section 404 and Section 401 of the Clean Water Act (CWA), respectively, will also be conducted.

Focused breeding season surveys of the BSA for burrowing owl may also be conducted in accordance with the methodologies provided in the California Department of Fish and Wildlife's (CDFW's) "2012 Staff Report on Burrowing Owl Mitigation."

Cultural Resources: A baseline cultural resources survey of the Project area will be conducted.

Flood Hazard: According to the applicable Federal Emergency Management Agency (FEMA) flood hazard map (06025C0750C, effective 09/26/2008), the Project area is not located within a special flood hazard area.

Geology, Soils and Mineral Resources:

- *Geologic Hazards*: The Project is not located in a seismically active area. No other potential geologic hazards are known within the Project area, and the preliminary geotechnical survey report will provide mitigation recommendations for any identified geologic hazards.
- *Soils*: Soils within the Project area will be evaluated, and the preliminary geotechnical survey report will provide mitigation recommendations for any identified geologic hazards.
- *Mineral Resources*: There are no known developed or potential mineral resources within or adjacent to the Project area.

PC ORIGINAL PKG

Hazardous Materials: The Project would not use nor store any hazardous chemicals on site during normal operations. Fuel that may be used on site during construction would be stored in secondary containment. A Phase I Environmental Site Assessment will be conducted to evaluate the potential for hazardous substance or petroleum hydrocarbon contamination at the site.

Hydrology and Water Quality: A drainage study will be prepared for the Project area which will be used to complete the preliminary grading plan in conformance with Imperial County Public Works Department (ICPWD) requirements. A Notice of Intent to comply with the general permit for construction activities would be filed with the State Water Resources Control Board, and the required Storm Water Pollution Prevention Plan (SWPPP) would be prepared and implemented consistent with the requirements of the State Water Resources Control Board general permit.

Noise: The Project would not generate any appreciable noise during normal operations. Construction noise would be limited to the short–term use of heavy equipment operated during daylight hours and to construction traffic.

Traffic: An analysis of the potential traffic-related impacts associated with the construction and day-to-day operations of the proposed Project will be prepared and provided.

Public Services: The following Project measures would minimize the potential need for public fire and police services.

- *Fire Prevention*: The construction site and access roads would be cleared of all vegetation. The cleared areas would be maintained throughout site construction and solar plant operations. Fire extinguishers would be available around the construction sites. Up to three (3) 10,000-gallon fire water tanks would be constructed across the Project sites and kept filled during operations to fight potential fires. Water that is used for construction would also be available for firefighting. Personnel would be allowed to smoke only in designated areas.
- *Emergency Services*: The Project preliminary site plans have been prepared to accommodate the requirements of emergency services which may need to respond to an emergency at the Project. Each Project site would be accessible from both a primary and secondary (if required) access driveway. [JN2]These driveways would each be provided with a minimum of 30-foot double swing gates with "Knox Box" for keyed entry. Nominal 20-foot wide roads would be provided between the PV arrays, as well as around the perimeter of the Project site inside the perimeter security fence, to provide access for operational and emergency vehicles.
- *Security*: The entirety of each Project site would be enclosed within a gated security fence. Each site may also be monitored by a motion detection system and closed-circuit camera system.

Site Restoration: The Project areas are zoned either A-2-RE/A-3-RE, which are intended to provide for agricultural uses, as well as S-2-RE, which is intended to provide for open space and recreational uses. At the end of the Project life, all facilities would be removed, and the Project sites restored to a condition for either future agricultural use or future preservation and recreational uses. A proposed Project site restoration plan will be prepared and provided.

PC ORIGINAL PKG

Utilities and Service Systems: Electricity for site security facilities when the panels are not generating power would be provided by the IID through interconnection with the existing IID distribution line.
