## 1.0 Introduction

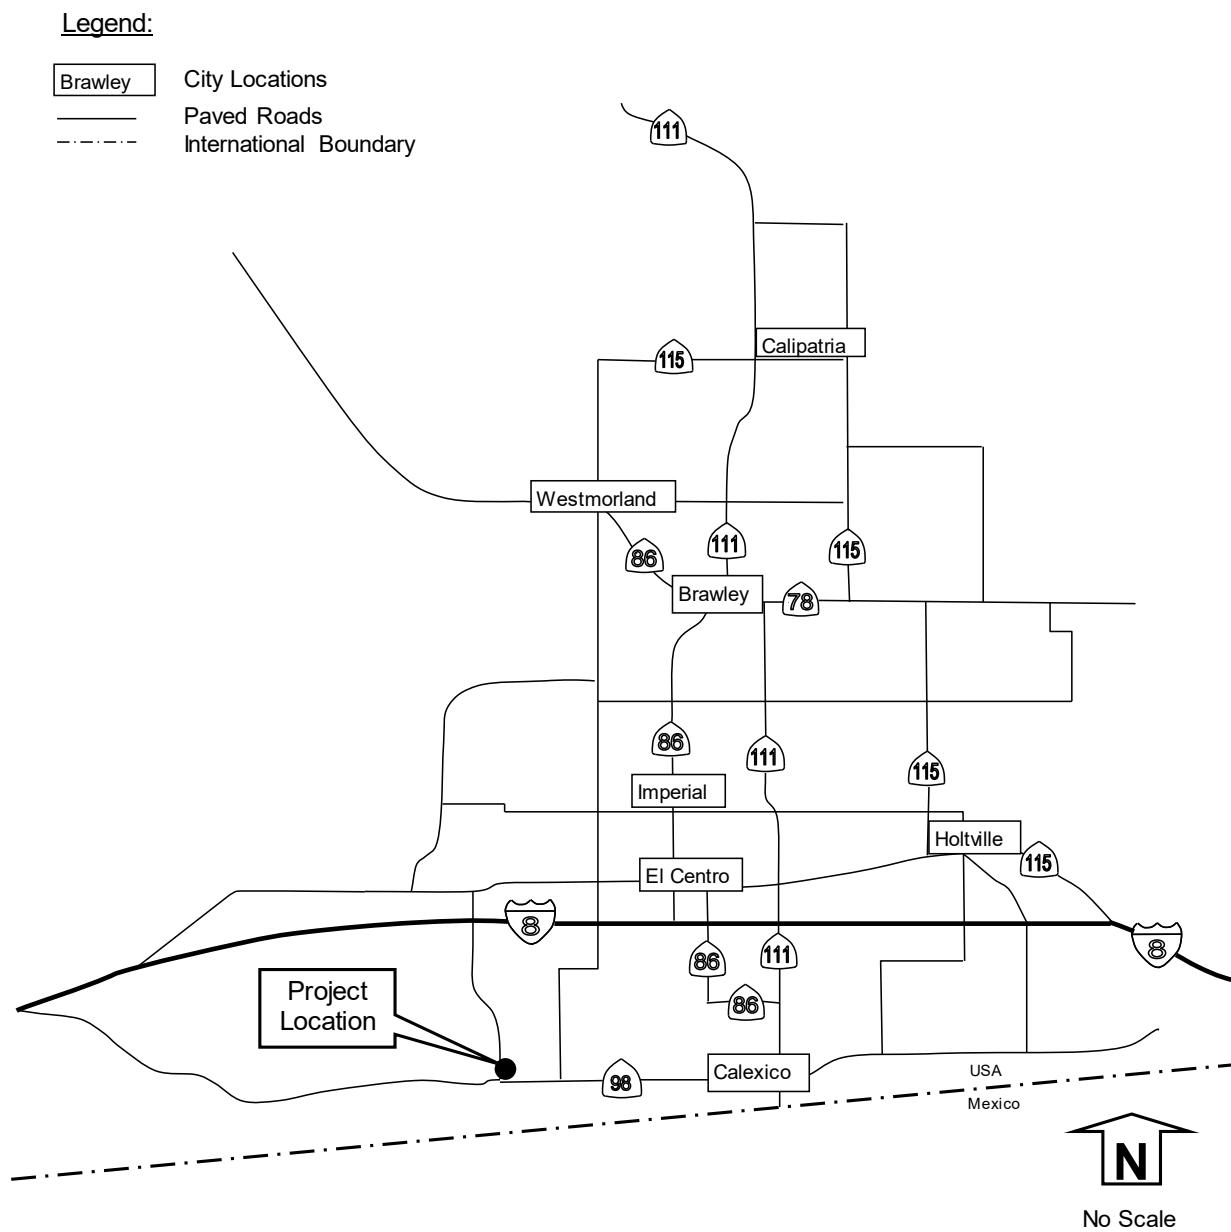

The purpose of this study is to determine and analyze potential traffic impacts for the proposed Drew Solar Project. The project is a solar photovoltaic energy-generating and energy storage facility of approximately 100 megawatts of electricity on approximately 855 gross acres and 762.8 net acres of lands that have been used for agriculture. The project is located approximately 6.5 miles southwest of the city of El Centro and approximately 7.5 miles west of Calexico, California. The location of the project is shown in **Figure 1**. A site plan is included in **Figure 2**.

This report describes the existing roadway network in the vicinity of the project site. It includes a review of the existing and proposed traffic activities for weekday peak AM and PM periods and daily traffic conditions. The format of this study includes the following chapters:

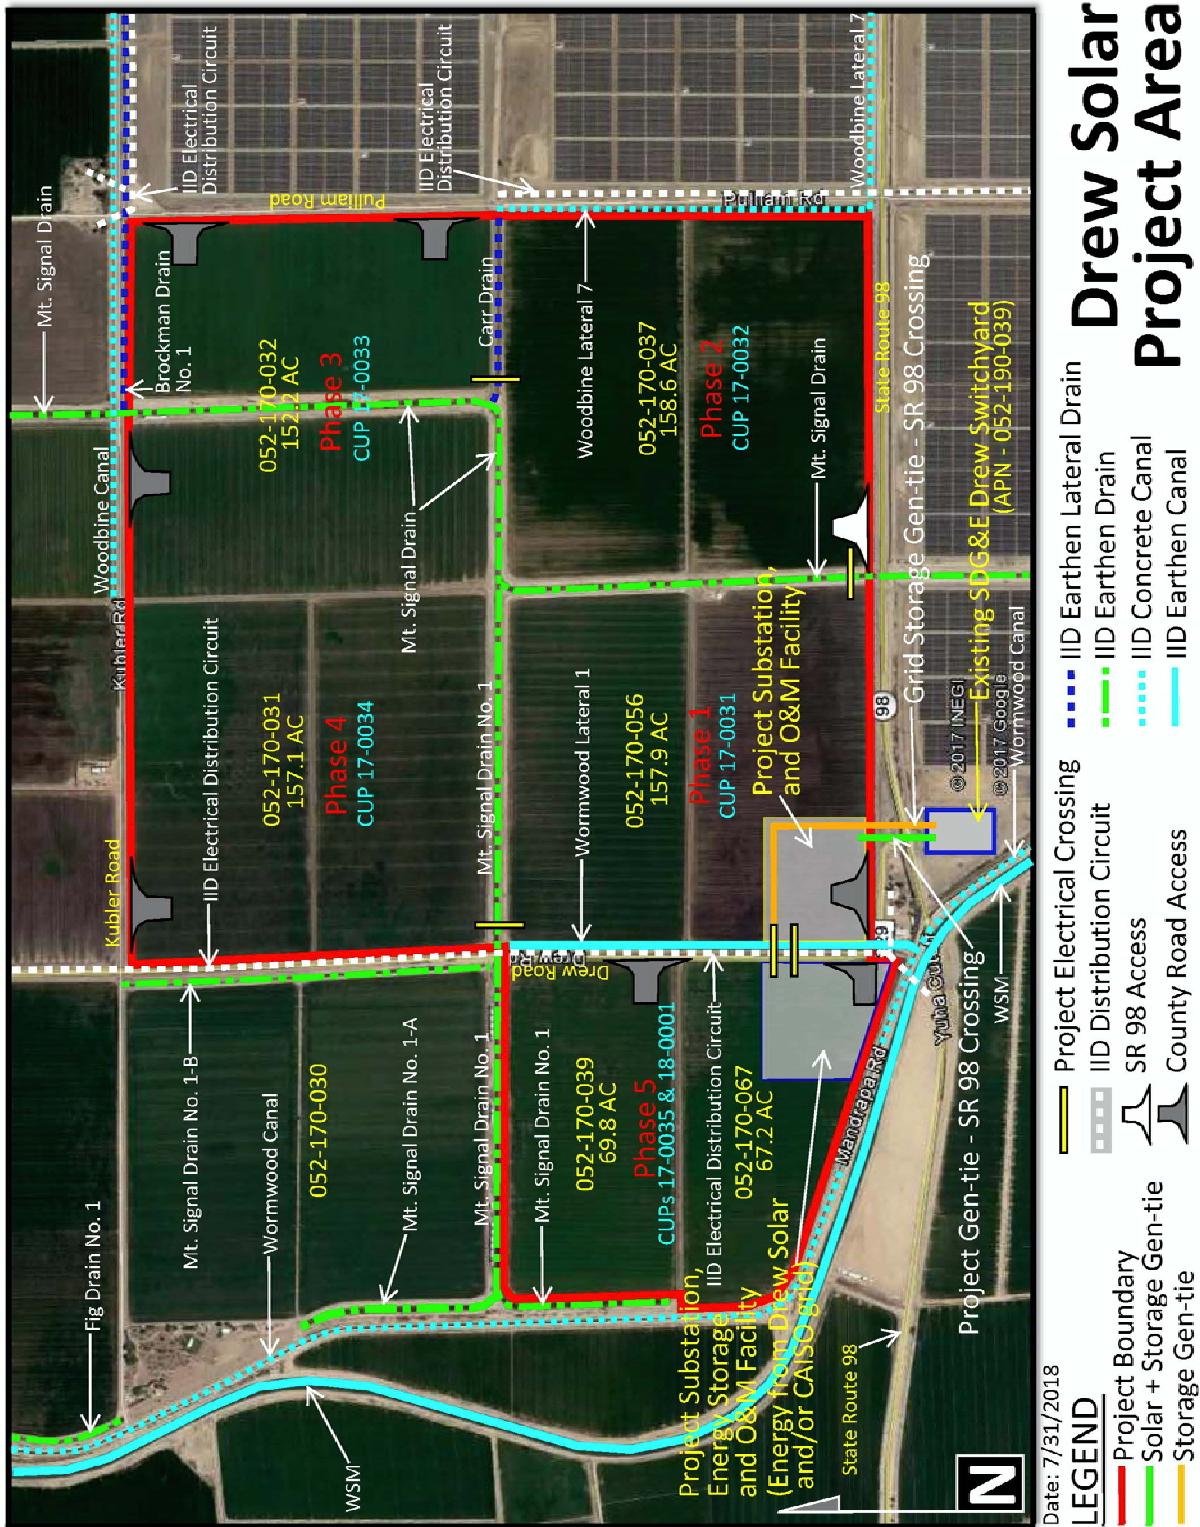

- 1.0 Introduction
- 2.0 Study Methodology
- 3.0 Existing Conditions
- 4.0 Project Description
- 5.0 Cumulative Projects
- 6.0 Existing Year 2017 + Project Conditions
- 7.0 Existing Year 2017 + Project Construction + Cumulative Conditions
- 8.0 Near-Term 2019 Conditions
- 9.0 Near-Term Year 2019 + Project Conditions
- 10.0 Near-Term Year 2019 + Project + Cumulative Conditions
- 11.0 Long-Term Year 2027 Conditions
- 12.0 Long-Term Year 2027 + Project Conditions
- 13.0 Long-Term Year 2027 Cumulative Projects
- 14.0 Long-Term Year 2027 + Project + Cumulative Conditions
- 15.0 Horizon Year 2060 Conditions
- 16.0 Conclusions and Recommendations
- 17.0 References

**Figure 1: Project Location**

## **Figure 2: Site Plan**

## **2.0 Traffic Analysis Methodology and Significance Criteria**

The parameters by which this traffic study was prepared included the determination of what intersections and roadways are to be analyzed, the scenarios to be analyzed and the methods required for analysis. The criteria for each of these parameters are included herein.

### **2.1 Study Area Criteria**

The study area is determined based on the County of Imperial Department of Public Works *Traffic Study and Report Policy* dated March 12, 2007, revised June 29, 2007 and approved by the Board of Supervisors of the County of Imperial on August 7, 2007 (“Traffic Study and Report Policy”). “Any project that has the potential to degrade an existing road section, an existing signalized intersection, or an existing unsignalized intersection to below the existing level of service or to cause it to be lower than a level of service (LOS) “C” during any peak hour, using the HCM Methods of analysis on any individual, existing traffic movement.” Traffic Study and Report Policy, 4-5. The project study area was determined based on similar solar projects in the same general area. The following intersections and project driveways on SR-98 were analyzed as part of this study:

- 1) Forrester Road/I-8 WB Ramp (un-signalized)
- 2) Forrester Road/I-8 EB Ramp (un-signalized)
- 3) Forrester Road/McCabe Road (un-signalized)
- 4) Kubler Road/Pulliam Road (un-signalized)
- 5) Kubler Road/Brockman Road (un-signalized)
- 6) SR-98/Drew Road (un-signalized)
- 7) SR-98/Pulliam Road (un-signalized)
- 8) SR-98/Project Driveway (currently does not exist)

Along with the following roadway and State Route segments:

- 1) Brockman Road from McCabe Road to Kubler Road
- 2) Forrester Road from I-8 to McCabe Road
- 3) Kubler Road from Pulliam Road to Brockman Road
- 4) McCabe Road from Brockman Road to Forrester Road
- 5) Pulliam Road from Kubler Road to SR-98
- 6) SR-98 between Drew Road and Pulliam Road
- 7) SR-98 between Pulliam Road and Brockman Road

And, the following Freeway (also referred to as Interstate) segments:

- 1) I-8 between Dunaway Road and Drew Road
- 2) I-8 between Forrester Road and Imperial Avenue

## 2.2 Scenario Criteria

The number of scenarios to be analyzed is based on the methodology outlined in the County's Traffic Study and Report Policy. Excerpts from the Traffic Study and Report Policy showing the scenario criteria are included in **Appendix A**. Based on the aforementioned methodology source and to account for the possibility that the project may be phased, the following scenarios were analyzed:

- 1) Existing 2017 Conditions
- 2) Existing 2017 + Project Conditions
- 3) Existing 2017 + Project + Cumulative Conditions
- 4) Near-Term Year 2019 Conditions
- 5) Near-Term Year 2019 + Project Conditions
- 6) Near-Term Year 2019 + Project + Cumulative Conditions
- 7) Long-Term Year 2027 Conditions
- 8) Long-Term Year 2027 + Project Conditions
- 9) Long-Term Year 2027 + Project + Cumulative Conditions
- 10) Horizon Year 2060 Conditions

Please note that there is not a separate analysis of phased construction of the project because such phasing is captured within the bookend analysis provided by near- and long-term project forecasts.

## 2.3 Traffic Analysis Criteria

The traffic analyses herein utilize the *2010 Highway Capacity Manual* (HCM) published by the Transportation Research Board National Research Council. Specifically, the operations analysis is based on Level of Service (LOS) evaluation criteria. The operating conditions of the study intersections are measured using the HCM LOS designations ranging from A through F where LOS A represents the best operating condition and LOS F denotes the worst operating condition. The individual LOS criteria for each roadway component are described below.

### 2.3.1 Intersections

The study intersections were analyzed based on the **operational analysis** outlined in the HCM. This process defines LOS in terms of **average control delay** per vehicle, which is measured in seconds. LOS at the intersections were calculated using the computer software program Synchro 10 (Trafficware Corporation). The HCM LOS for the range of delay by seconds for un-signalized and signalized intersections is described in **Table 1**.

**TABLE 1: INTERSECTION LEVEL OF SERVICE DEFINITIONS (HCM 2010)**

| Level of Service | Un-Signalized (TWSC and AWSC)<br>Control Delay (seconds/vehicle) | Signalized<br>Control Delay (seconds/vehicle) |
|------------------|--|---|
| A                | 0-10   | ≤ 10  |
| B                | > 10-15  | > 10-20                                       |
| C                | > 15-25  | > 20-35                                       |
| D                | > 25-35  | > 35-55                                       |
| E                | > 35-50  | > 55-80                                       |
| F                | > 50   | > 80  |

TWSC: Two Way Stop Control. AWSC: All Way Stop Control. Source: Highway Capacity Manual 2010 (exhibit 19-1 for two way stop control, exhibit 20-2 for all way stop control, and exhibit 18-4 for signalized intersections).

According to the California Department of Transportation's (Caltrans) *Guide for the Preparation of Traffic Impact Studies*, December 2002 ("Caltrans Guide"), the accepted methodology for un-signalized intersections is that contained in the most current edition of the HCM (excerpts included in **Appendix B**). Therefore, all of the study interchanges with un-signalized intersections were analyzed using the most currently used edition of the HCM.

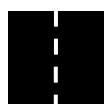

### 2.3.2 Roadway and State Route Segments

The roadway and State Route segments were analyzed based on the functional classification of the roadway using the Imperial County Standard Street Classification capacity lookup table (copy included in **Appendix C**). The capacity for State Route 98 in the project vicinity is based on a "Local Collector" as noted in the Imperial County *Circulation and Scenic Highways Element* dated January 29, 2008 ("Circulation Element"). The roadway segment capacity and LOS standards used to analyze roadway segments are summarized in **Table 2**.

**TABLE 2: ROADWAY SEGMENT DAILY CAPACITY AND LOS (IMPERIAL COUNTY)**

| Circulation Element<br>Road Classification              | CROSS<br>SECTION | LOS<br>A | LOS<br>B | LOS<br>C | LOS<br>D | LOS<br>E |
|---|------------------|----------|----------|----------|----------|----------|
| Expressway  | 154/210          | <30,000  | <42,000  | <60,000  | <70,000  | <80,000  |
| Prime Arterial  | 106/136          | <22,200  | <37,000  | <44,600  | <50,000  | <57,000  |
| Minor Arterial  | 82/102           | <14,800  | <24,700  | <29,600  | <33,400  | <37,000  |
| Major Collector (Collector)                             | 64/84            | <13,700  | <22,800  | <27,400  | <30,800  | <34,200  |
| Minor Collector<br>(Local Collector)                    | 40/70            | <1,900   | <4,100   | <7,100   | <10,900  | <16,200  |
| Local County (Residential)                              | 40/60            | *        | *        | <1,500   | *        | *        |
| Local County (Residential<br>Cul-de-Sac or Loop Street) | 40/60            | *        | *        | <200     | *        | *        |
| Major Industrial Collector –<br>(Industrial)            | 76/96            | <5,000   | <10,000  | <14,000  | <17,000  | <20,000  |
| Industrial Local  | 44/64            | <2,500   | <5,000   | <7,000   | <8,500   | <10,000  |

Source: Imperial County Department of Planning & Development Services *Circulation and Scenic Highways Element* January 29, 2008. Notes: \*Levels of service are not applied to residential streets since their primary purpose is to serve abutting lots, not carry through traffic. Levels of service normally apply to roads carrying through traffic between major trip generators and attractors.

**Traffic and Transportation**

Drew Solar Draft Traffic Impact Analysis

### 2.3.3 Freeway Segments

The freeway segments, covering Interstate 8, were analyzed based on a multilane highway LOS criteria using a Volume to Capacity (V/C) ratio as outlined in the HCM. The V/C ratio is the ratio of traffic to the roadway capacity that provides a measure of how much roadway capacity is being used. The methodology accepted by Caltrans for the analysis of freeway sections is to use the most current edition of the HCM as noted on page 5 of the Caltrans Guide. The freeway LOS operations are based on the Caltrans Guide V/C ratios summarized below in **Table 3**. Relevant excerpts from the Caltrans Guide are included in **Appendix D**.

**TABLE 3: FREEWAY LEVEL OF SERVICE**

| Measure of Effectiveness  | LOS A | LOS B | LOS C | LOS D | LOS E |
|---------------------------|-------|-------|-------|-------|-------|
| Max Volume/Capacity Ratio | 0.30  | 0.50  | 0.71  | 0.89  | 1.00  |

Source: Caltrans' *Guide for the Preparation of Traffic Impact Studies*, December 2002.

### 2.4 Significance Criteria

The significance criteria for traffic impacts are based on the Imperial County Planning & Development Services Department LOS standard as outlined in the "Circulation Element". "The County's goal for an acceptable traffic service standard on an Average Daily Traffic (ADT) basis and during AM and PM peak periods for all County-Maintained Roads shall be LOS C for all street segment links and intersections." Circulation Element, 55. Excerpts from the *Circulation and Scenic Highways Element* are included in **Appendix E**. The determination of direct or cumulative traffic impacts is defined by the significance criteria outlined in **Table 4**, which was obtained from several EIRs for projects located in Imperial County. Copies of traffic significance criteria from these project EIRs are included in **Appendix F**.

**TABLE 4: SIGNIFICANCE CRITERIA**

| Existing             | Existing + Project  | Existing + Project + Cumulative Projects | Impact Type |
|----------------------|---|--|-------------|
| <b>Intersections</b> |   |  |             |
| LOS C or better      | LOS C or better   | LOS C or better                          | None        |
| LOS C or better      | LOS D or worse  | NA                                       | Direct      |
| LOS D                | LOS D and adds 2.0 seconds or more of delay                       | LOS D or worse                           | Cumulative  |
| LOS D                | LOS E or F  | NA                                       | Direct      |
| LOS E                | LOS F   | NA                                       | Direct      |
| LOS F                | LOS F and delay increases by > 10.0 seconds                       | LOS F                                    | Direct      |
| Any LOS              | Project does not degrade LOS and adds < 2.0 seconds of delay      | Any LOS                                  | None        |

Notes: LOS: Level of Service. (1) Exception: post-project segment operation is LOS D and intersections along segment are LOS D or better resulting in no significant impact. NA: Not Applicable.

## 2.5 Study Limitations

The findings and recommendations of this report were prepared in accordance with generally accepted professional traffic and transportation engineering principles and practice, and California Environmental Quality Act (CEQA) based on substantial evidence. No other warranty, express or implied, is made.

## **3.0 Existing Conditions**

This section describes the study area street system, peak hour intersection volumes, daily roadway volumes, and existing LOS.

### **3.1 Existing Street System**

The existing roadway system and classifications are described below. The classifications are based on the Imperial County's Circulation Element and valid as of the date of the Project's Notice of Preparation of the EIR. Excerpts are included in **Appendix G**.

Brockman Road between McCabe Road and Kubler Road has a classification of Major Collector in the Circulation Element. This roadway is currently constructed as a 2 lane undivided roadway.

Forrester Road between I-8 and McCabe Road has a classification of Prime Arterial in the Circulation Element. This roadway is currently constructed as a 2 lane undivided roadway.

Interstate 8 (I-8) between Drew Road and Imperial Avenue is constructed as a 4 lane divided interstate highway with 2 lanes in each direction.

Kubler Road between Pulliam Road and Brockman Road has a classification of Minor Collector in the Circulation Element. This roadway is currently constructed as a 2 lane undivided roadway.

McCabe Road between Brockman Road and Forrester Road has a classification of Major Collector in the Circulation Element. This roadway is currently constructed as a 2 lane undivided roadway.

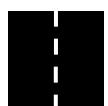

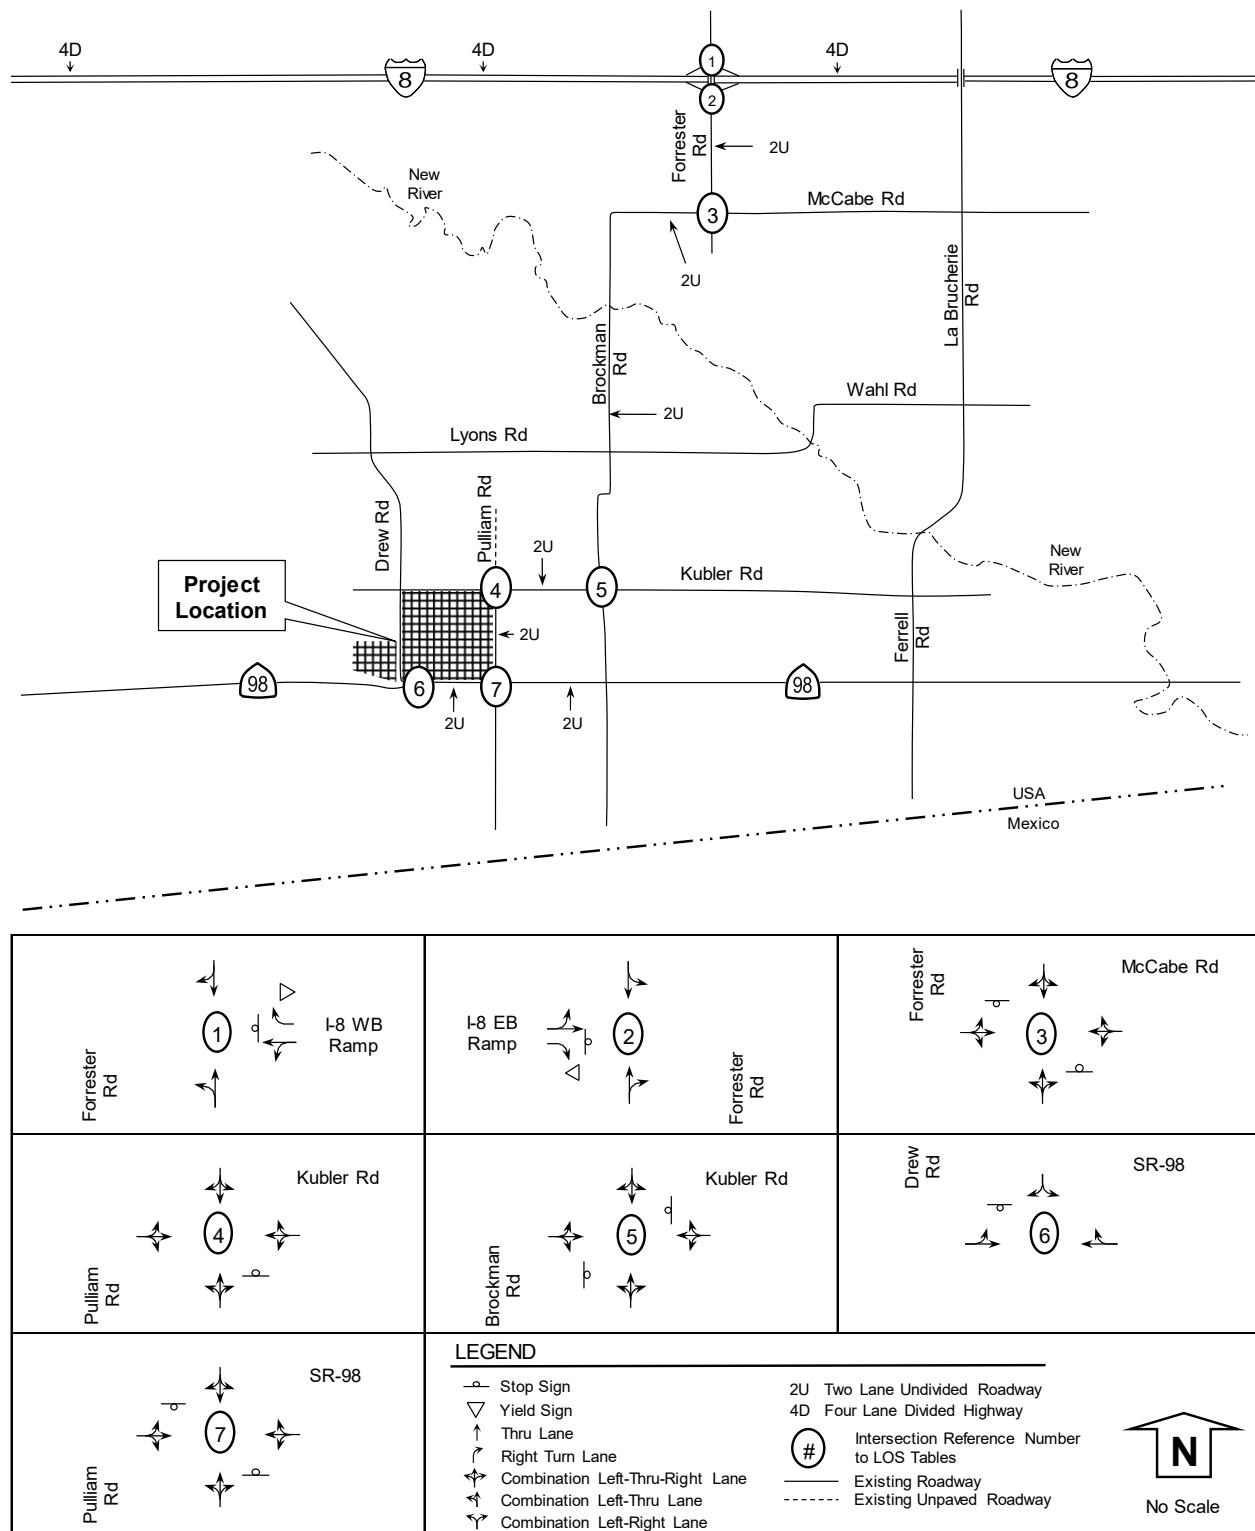

Pulliam Road between Kubler Road and SR-98 has a classification of Minor Collector in the Circulation Element. This roadway is currently constructed as a 2 lane undivided roadway.

State Route (SR-98) between Drew Road and Clark Road has a classification of State Highway in the Circulation Element. This roadway is currently constructed as a 2 lane undivided roadway.

The existing roadway conditions are shown in **Figure 3**.

**Figure 3: Existing Roadway Conditions**

## 3.2 Existing Traffic Volumes and LOS Analyses

Existing peak hour intersection volumes (with count dates) were collected from 6:00 to 8:00 AM and from 4:00 to 6:00 PM for this study:

- 1) Forrester Road/I-8 WB Ramp (Tuesday 11/4/2017)
- 2) Forrester Road/I-8 EB Ramp (Tuesday 11/4/2017)
- 3) Forrester Road/McCabe Road (Tuesday 11/4/2017)
- 4) Kubler Road/Pulliam Road (Tuesday 11/4/2017)
- 5) Kubler Road/Brockman Road (Tuesday 11/4/2017)
- 6) SR-98/Drew Road (Tuesday 11/4/2017)
- 7) SR-98/Pulliam Road (Tuesday 11/4/2017)
- 8) SR-98/Project Driveway (currently does not exist)

Twenty-four hours of data were collected for the following roadway segments:

- 1) Brockman Road from McCabe Road to Kubler Road (Tuesday 11/4/2017)
- 2) Forrester Road from I-8 to McCabe Road (Tuesday 11/4/2017)
- 3) Kubler Road from Pulliam Road to Brockman Road (Tuesday 11/4/2017)
- 4) McCabe Road from Brockman Road to Forrester Road (Tuesday 11/4/2017)
- 5) Pulliam Road from Kubler Road to SR-98 (Tuesday 11/4/2017)

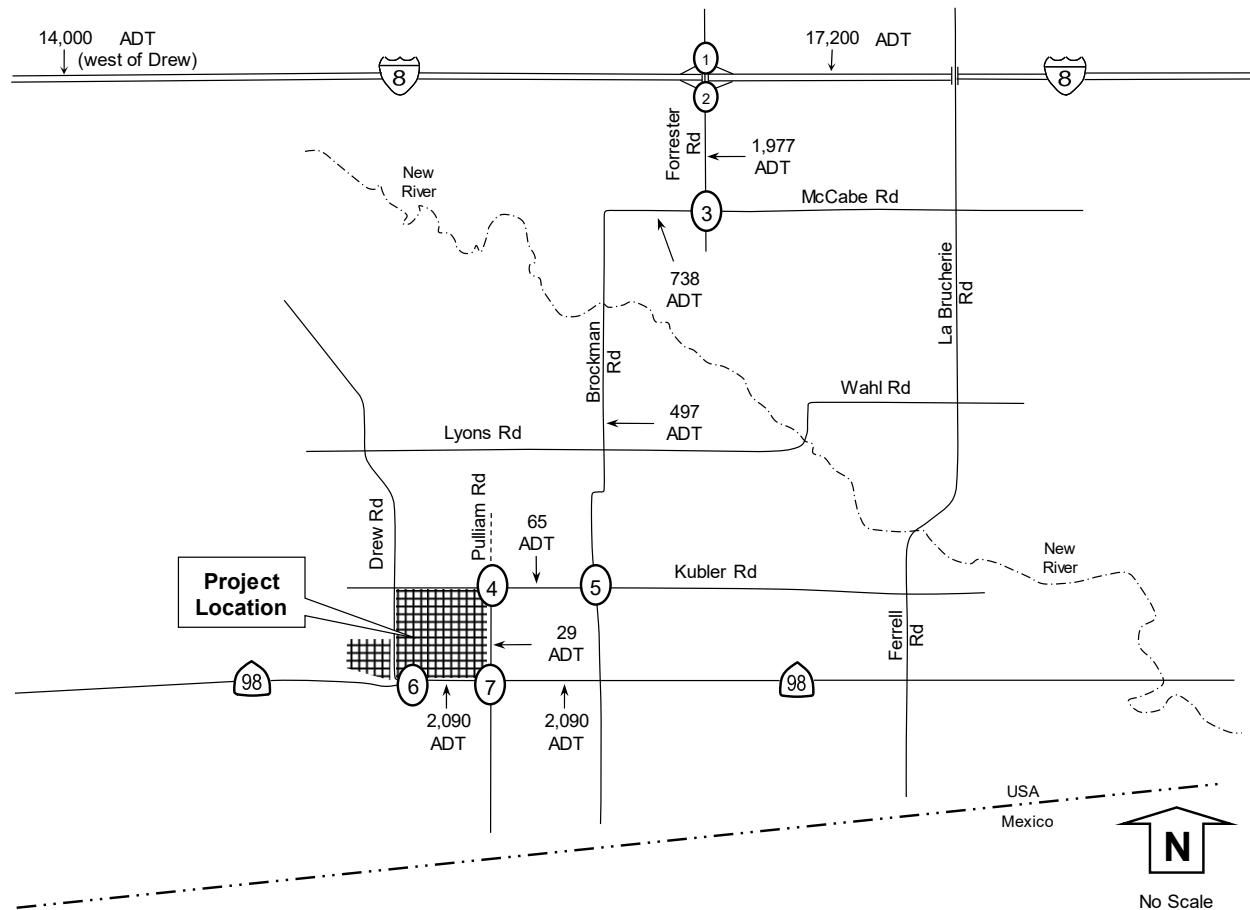

In addition, the data was obtained from Caltrans for the Freeway (Interstate) and State Route segments below. Please note that the latest available Caltrans data from 2016 was factored up to a year 2017 volume using a 1.8% annual growth factor [details included in Section 8.0 of this TIA].

- 1) I-8 between Dunaway Road and Drew Road
- 2) I-8 between Forrester Road and Imperial Avenue
- 3) SR-98 between Drew Road and Pulliam Road
- 4) SR-98 between Pulliam Road and Brockman Road

Existing AM, PM, and daily volumes are shown on **Figure 4**. Count data are included in **Appendix H**. The intersection, segment, and freeway LOS are shown in **Tables 5, 6, and 7** respectively. Intersections LOS calculations are included in **Appendix I**.

Notes: (1) Capacity of 2,350 pcpchl from CALTRANS' Guide for the Preparation of Traffic Impact Studies, December 2002. (2) Latest K factor from Caltrans (based on 2015 report), which is the percentage of AADT in both directions. (3) Latest D factor from Caltrans (based on 2015 report), which when multiplied by K and ADT will provide peak hour volume. (4) Latest truck factor from Caltrans (based on 2016 report).

Under existing conditions, the study intersections, roadways, State Route, and freeway were calculated to operate at LOS B or better.

**LOS Engineering, Inc.**

Traffic and Transportation

Drew Solar Draft Traffic Impact Analysis

## **4.0 Project Description**

The project is a solar photovoltaic energy-generating and energy storage facility of approximately 100 megawatts of electricity on approximately 855 gross acres and 762.8 net acres of lands that have been used for agriculture. The project site is located approximately 6.5 miles southwest of the city of El Centro and approximately 7.5 miles west of Calexico, California.

### **4.1 Project Trip Generation and Phases/Phasing**

The project trip generation consists of a construction phase and operations phase. The construction phase will have the highest number of trips followed by an operations phase with significantly fewer trips. This section describes the construction and operations trip generation. Traffic details for the project are included in **Appendix J**.

The project may be constructed at one time taking approximately 18 months or it may be completed over a ten-year period. Under the development agreement, the Conditional Use Permit (CUP) will be valid for 40 years with up to 10 years to commence construction. If construction is to commence immediately after approvals, the project could have the highest concentration of workers in year 2019. If delayed due to market forces, the project could have the highest concentration of construction workers in year 2027. The project may also be phased (e.g., 20 MW constructed at a time or 1/5 of the overall project) that would result in a lower concentration of construction workers and less trip generation. However, to be conservative, the entire project (100 MW) was analyzed under year 2019 and year 2027 conditions assuming an 18-month construction period.

#### **4.1.1 Project Construction Trip Generation**

Construction of the project includes site preparation, foundation construction, delivery of equipment and supplies, erection of major equipment and structures, installation of control systems, and start-up/testing. These construction activities are expected to require approximately 18 months.

According to the applicant, the construction workforce may reach the highest concentration in late 2019 (for the near-term scenario) with an average of 250 workers per day. Based on the applicant's experience, about 75% of the workers follow a 4 day at 10 hours per day (4-10 shift) schedule, about 25% follow a 5 day at 8 hours per day (5-8 shift) schedule, and roughly 25% of the workers carpool. The workers also have different start and end times between the 4-10 and 5-8 shift schedules. The 4-10 shift workers typically arrive between 6am and 7am (work starts at 7am) and depart sometime between 5pm and 6pm while the 8-5 shift workers typically arrive between 7 and 8am and depart between 4pm and 5pm.

Deliveries of equipment and supplies are anticipated to average about 10 daily truck trips per day. The HCM adjustment for heavy vehicles, such as trucks is through the application of a Passenger Car Equivalent (PCE) factor. Applying a PCE factor of 3 to the 10 daily truck trips, the PCE is 60

ADT with 6 AM peak hour trips (3 inbound and 3 outbound) and 6 PM peak hour trips (3 inbound and 3 outbound).

This analysis is based on the higher concentration (75%) of 4-10 shift workers that arrive between 6am and 7am and depart sometime between 5pm and 6pm. The combined worker and construction truck traffic is calculated at 436 ADT with 147 AM peak hour trips (144 inbound and 3 outbound) and 147 PM peak hour trips (3 inbound and 144 outbound) as shown in **Table 8**.

**TABLE 8: PROJECT CONSTRUCTION TRIP GENERATION**

| Proposed Construction Related Traffic                        | ADT        | 6-7 AM     |          | 7-8 AM |     | 4-5 PM |     | 5-6 PM   |            |
|--|------------|------------|----------|--------|-----|--------|-----|----------|------------|
|  |            | IN         | OUT      | IN     | OUT | IN     | OUT | IN       | OUT        |
| Construction Workers on 4-10 Shift (75% of 250) <sup>1</sup> | 282        | 141        | 0        | 0      | 0   | 0      | 0   | 0        | 141        |
| Construction Workers on 5-8 Shift (25% of 250) <sup>2</sup>  | 94         | 0          | 0        | 47     | 0   | 0      | 47  | 0        | 0          |
| Equipment and Construction Trucks (with PCE) <sup>3</sup>    | 60         | 3          | 3        | 3      | 3   | 3      | 3   | 3        | 3          |
| Total Traffic During Peak Construction Period                | 436        | 144        | 3        | 50     | 3   | 3      | 50  | 3        | 144        |
| <b>Daily and Higher Peak Hour Used For Analysis</b>          | <b>436</b> | <b>144</b> | <b>3</b> |        |     |        |     | <b>3</b> | <b>144</b> |

Notes: 1) Applicant estimates the 4 days at 10 hrs/day (4-10s) shift to include about 188 workers (75% of the total 250 peak work force) with about 25% carpooling (47) and riding with the 75% (141), thus the inbound is 141 trips and the ADT is 282. 2) Applicant estimates the 5 days at 8 hrs/day (5-8) shift to include about 62 workers (25% of the total 250 peak work force) with about 25% carpooling (15) and riding with the 75% (47), thus the inbound is 47 and the ADT is 94. 3) Approx. 10 daily trucks with a Passenger Car Equivalent (PCE) factor of 3 applied to each truck equals 60 ADT (10 trucks x 2 x 3 PCE = 60 ADT) that are anticipated to have a frequency of about 1 in and 1 out per hour for a peak period volume of 6 (with PCE).

#### 4.1.2 Project Operations and Maintenance Trip Generation

According to the applicant, the operations phase is expected to generate approximately 4 to 10 trips per day from maintenance and security personnel. Based on this information, the operations and maintenance personnel are estimated to generate up to 20 ADT with approximately 2 AM and 2 PM peak hour trips. Therefore, the higher and more conservative construction trip generation is used to determine potential project impacts.

### 4.2 Construction Trip Distribution and Assignment

The Applicant estimates that approximately 80% of the labor pool for the construction workforce is anticipated to come from a combination of existing residents and workers that will temporarily reside within Imperial County (“Local Workforce”). The Local Workforce is anticipated to travel from Calipatria, Westmorland, Brawley, Imperial, El Centro, Holtville, and Calexico. The distribution of the construction workforce by cities/communities was based on the concentration of populations per the Census 2010 from the U.S. Census Bureau (<http://2010.census.gov/2010census>). The percentage of the Local Workforce by city/community and county is shown in **Table 9**.

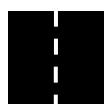

**TABLE 9: CONSTRUCTION WORKFORCE SOURCES BASED ON CENSUS 2010 POPULATIONS (80% LOCAL)**

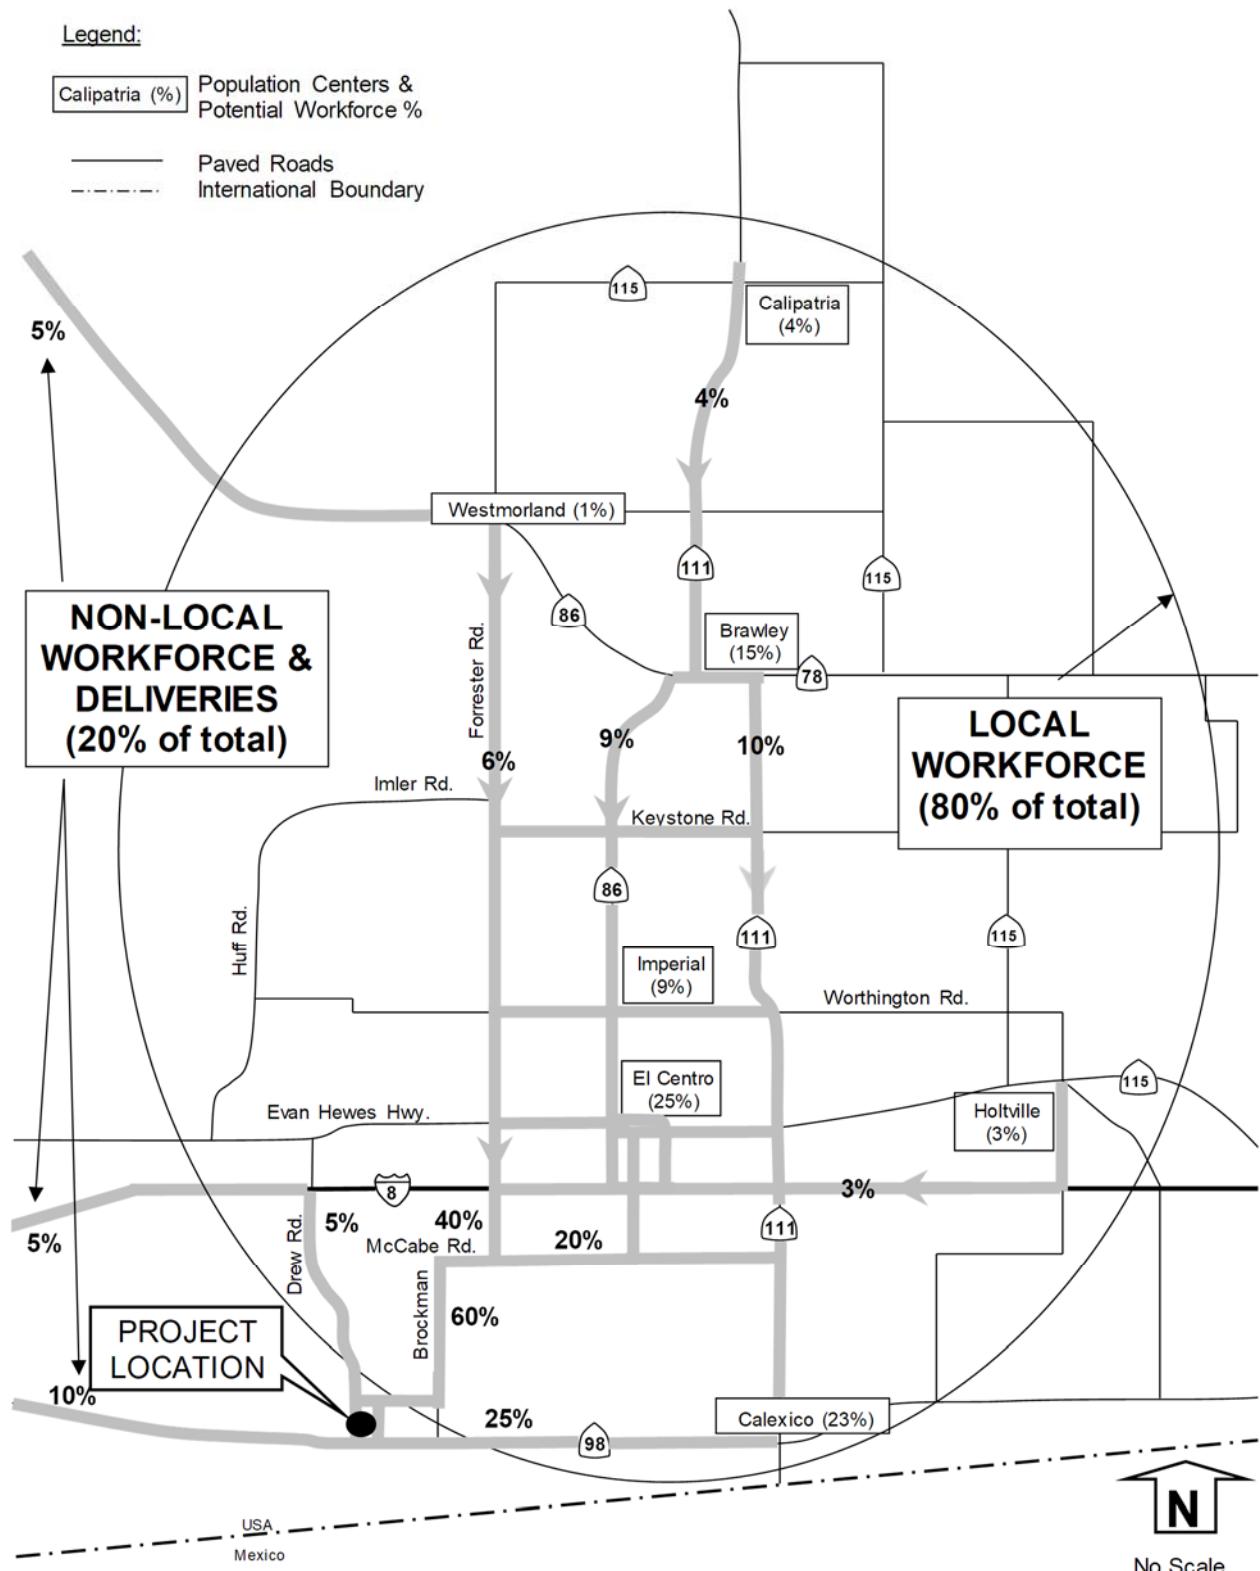

| <b>80% LOCAL<br/>WORKFORCE</b> | <b>2010 Census<br/>Population</b> | <b>Percentage<br/>of Total</b> | <b>Percentage of Construction Employees<br/>(80% from within Imperial County)</b> |
|--------------------------------|-----------------------------------|--------------------------------|---|
| Calipatria                     | 7,705                             | 5%                             | 4%  |
| Westmorland                    | 2,225                             | 2%                             | 1%  |
| Brawley                        | 24,953                            | 18%                            | 15%   |
| Imperial                       | 14,758                            | 11%                            | 9%  |
| El Centro                      | 42,598                            | 31%                            | 25%   |
| Holtville                      | 5,939                             | 4%                             | 3%  |
| Calexico                       | 38,572                            | 28%                            | 23%   |
| <b>Total</b>                   | <b>136,750</b>                    | <b>100%</b>                    | <b>80%</b>  |

Source: Population data from U.S. Census Bureau (<http://2010.census.gov/2010census>).

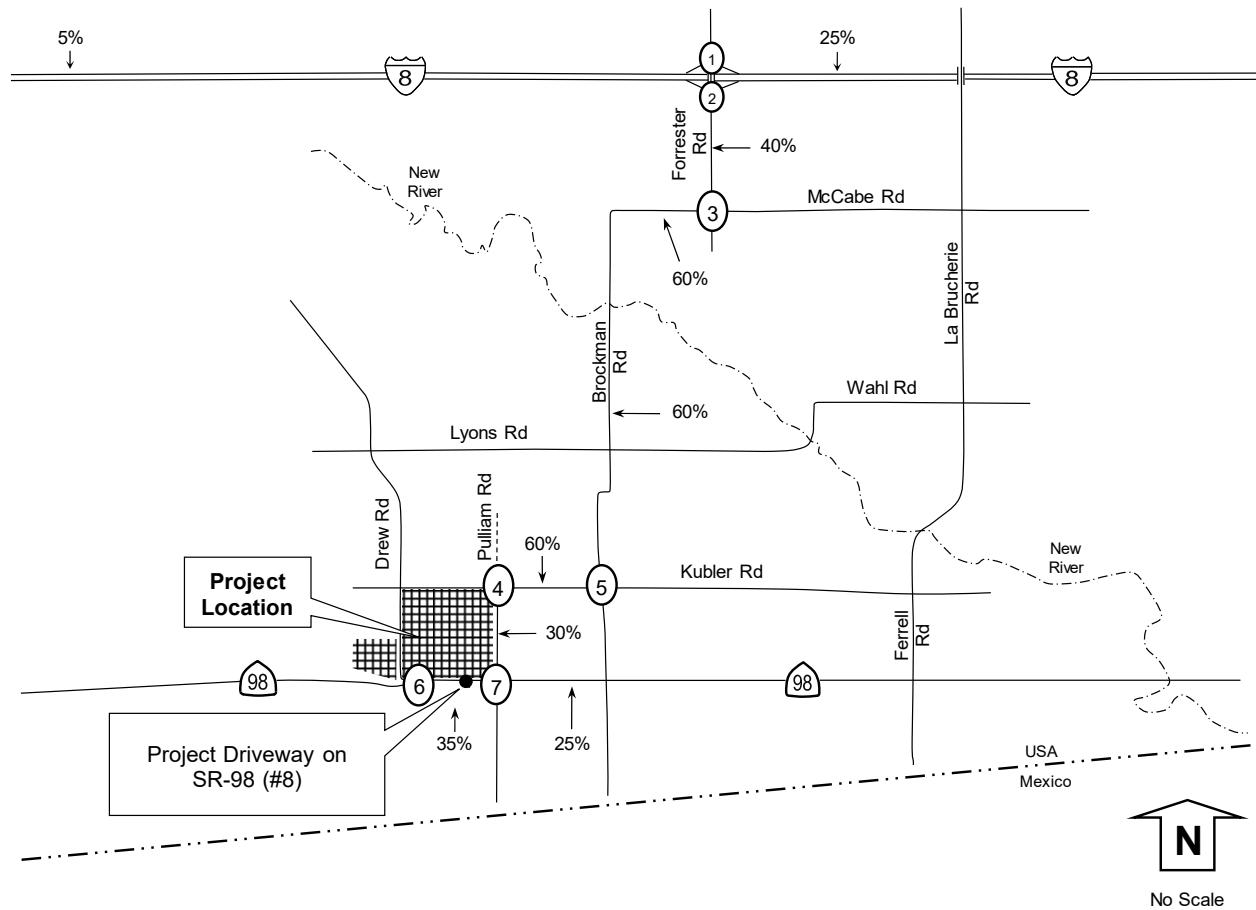

The remaining construction workforce and deliveries will come from outside Imperial County (“Non-Local Workforce”) and is estimated to be from San Diego County (15%) and Riverside County (5%). Based on the aforementioned Census information, the regional construction distribution is shown in **Figure 5**. The local distribution accounted for the project driveways throughout the project site. The local area distribution is shown in **Figure 6**. The peak (year 2019) construction trip assignment based on the aforementioned distribution is shown in **Figure 7**.

## **5.0 Cumulative Projects (Past, Existing & Reasonably Foreseeable New Development)**

Information on cumulative projects was obtained from the County of Imperial staff in November 2017. A County of Imperial map showing planned solar farm projects is included in **Appendix K**. Please note that the Acorn solar project has been identified by County staff as being withdrawn at the time of this analysis. The cumulative list below describes the cumulative projects in the immediate area around the project site (i.e. projects that are generally located south of I-8 and west of Clark Road). Some of the cumulative projects have completed technical studies including traffic generation information; however, several have not. For the projects that do not have detailed traffic generation information, an estimate was calculated based on traffic generation information for similar projects and are noted below with an asterisk “\*”. Traffic generation calculations and copies of the cumulative project descriptions, locations, traffic generation, and assignments are also included in **Appendix L**. Information for each cumulative project is included below:

- 1) Big Rock Solar\* and Laurel Solar\* - a photovoltaic solar facility capable of producing approximately 200 megawatts of electricity generally located west of Drew Road and south of I-8. The construction phase is calculated to generate 566 daily trips with 221 AM peak hour trips and 225 PM peak hour trips.
- 2) *Calexico 1-A\** - a photovoltaic solar facility capable of producing approximately 100 megawatts of electricity generally located 6 miles west of the City of Calexico. The construction phase is calculated to generate 283 daily trips with 110 AM peak hour trips and 112 PM peak hour trips.
- 3) *Calexico 1-B\** - a photovoltaic solar facility capable of producing approximately 100 megawatts of electricity generally located 6 miles west of the City of Calexico. The construction phase is calculated to generate 283 daily trips with 110 AM peak hour trips and 112 PM peak hour trips.
- 4) *Calexico 2-A\** - a photovoltaic solar facility capable of producing approximately 100 megawatts of electricity generally located 6 miles west of the City of Calexico. The construction phase is calculated to generate 283 daily trips with 110 AM peak hour trips and 112 PM peak hour trips.
- 5) *Campo Verde Battery Energy Storage System* – a battery storage system for the Campo Verde solar facility generally located west of Drew Road and south of I-8. The construction phase is calculated to generate 126 daily trips with 63 AM peak hour trips and 57 PM peak hour trips.
- 6) *Centinela Solar Phase 2\** - a photovoltaic solar facility capable of producing approximately 100 megawatts of electricity generally located east of Drew Road and south of I-8. The construction phase is calculated to generate 283 daily trips with 110 AM peak hour trips and 112 PM peak hour trips.
- 7) *Coyne Ranch Specific Plan* – a residential project with up to 546 residential units located at 1642 Ross Road. The residential project is calculated to generate 5,198 ADT with 410 AM peak hour trips and 546 PM peak hour trips.

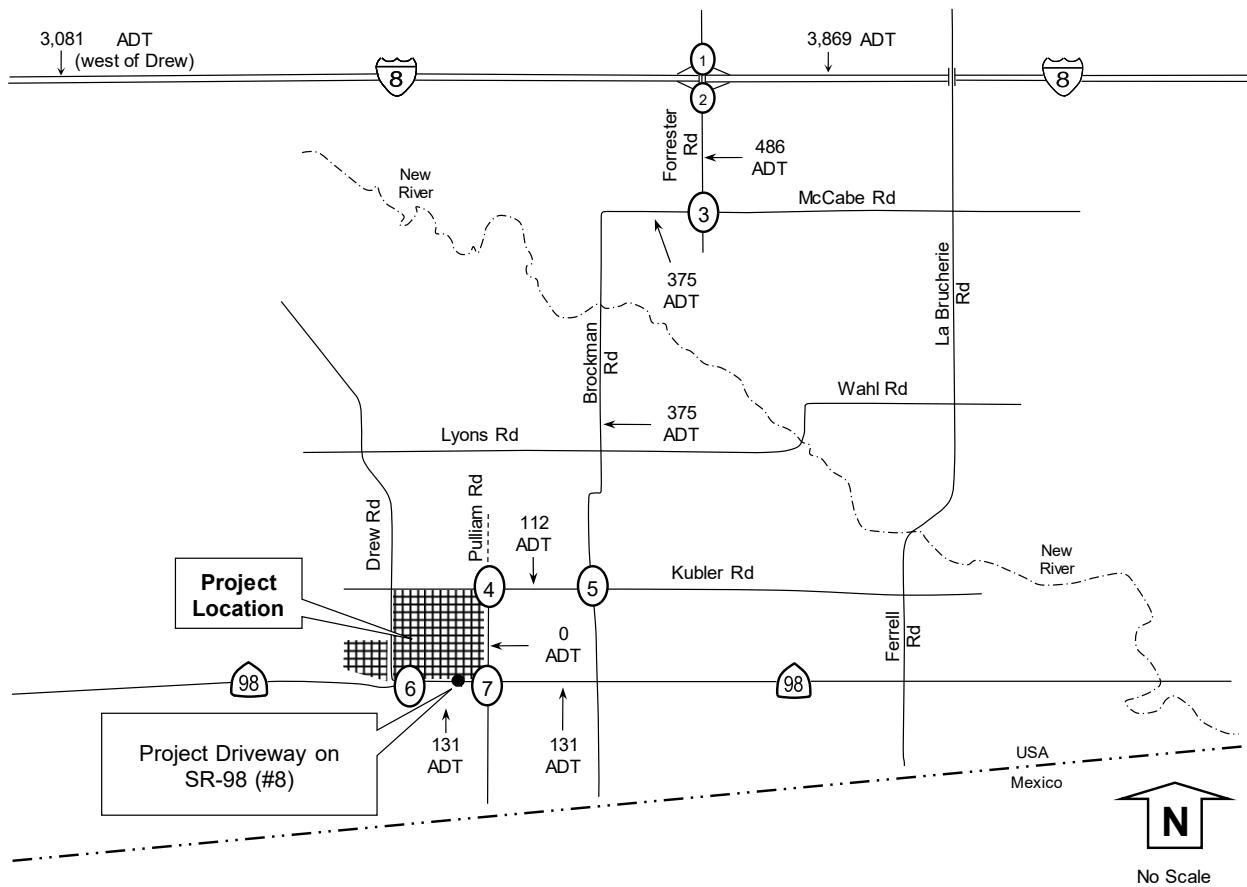

- 8) *County Center II Expansion* – a mixed use project of a commercial center, expansion of the Imperial County Office of Education, a Joint-Use Teacher Training and Conference Center, Judicial Center, County Park, Jail expansion, County Administrative Complex, Public Works Administration, and a County Administrative Complex located on the southwest corner of McCabe Road and Clark Road. The total project is calculated to generate 24,069 ADT with 2,581 AM peak hour trips and 2,242 PM peak hour trips.
- 9) *IV Substation and SDG&E Ocotillo Solar\** – a project connecting the Imperial Irrigation District’s “S” line from the Imperial Irrigation District substation to the Imperial Valley substation and a photovoltaic solar facility capable of producing approximately 14 megawatts of electricity generally located adjacent to the SDG&E Imperial Valley Substation. The combined projects are estimated at 240 ADT with 45 AM peak hour trips and 45 PM peak hour trips.
- 10) *IRIS Solar Farm Cluster (Ferrell, Rockwood, Iris, and Lyons)\** – photovoltaic solar facilities capable of producing approximately 360 megawatts of electricity generally located north of SR-98 between Brockman Road and Weed Road. The traffic generation for this cumulative project is calculated at 1,020 ADT with 398 AM and 405 PM peak hour trips.
- 11) *Wistaria* - a photovoltaic solar facility capable of producing approximately 250 megawatts of electricity generally located 8 miles west of the city of Calexico. The construction phase is calculated to generate 664 daily trips with 209 AM peak hour trips and 209 PM peak hour trips.
- 12) *Vega Solar\** - a photovoltaic solar facility capable of producing approximately 100 megawatts of electricity generally located west of Drew Road and south of I-8. The construction phase is calculated to generate 283 daily trips with 110 AM peak hour trips and 112 PM peak hour trips.
- 13) *Cumulative on I-8* – some of the remaining cumulative projects within Imperial County may add traffic to I-8. Many of the cumulative projects do not have traffic assignments for I-8 (because they are too far away) and some cumulative projects are too small to require a traffic study; therefore, they do not have reported cumulative traffic volumes for I-8. To account for the possibility of cumulative traffic being added to I-8, five percent of the existing I-8 peak hour volume was used as cumulative background peak hour traffic on I-8.

It was assumed that the cumulative projects listed above will be generating construction traffic during the construction phase of the Drew Solar project. Presently, however, some of the cumulative projects are still in the environmental review process and, thus, may add construction traffic after the completion of the Drew Solar project. Alternatively, some of the cumulative projects may add traffic before the construction phase of Drew Solar. Furthermore, most if not all of the cumulative solar projects will have a peak construction period that may or may not coincide with the Drew Solar peak construction period. Finally, there is a chance that some of the cumulative projects will not proceed; however, this study is made with the conservative assumption that all of the peak cumulative construction volumes were used in the cumulative analysis. Realistically, however, there is high likelihood that all construction peaks will not coincide. The cumulative project (new development) volumes are shown in **Figure 8**.

**Figure 8: Near-Term Cumulative Project (New Development) Volumes**

## 6.0 Existing Year 2017 + Project Construction Conditions

This section documents the addition of construction traffic onto year 2017 conditions to document the scenario if the project was constructed immediately over 18 months. Year 2017 plus project construction traffic volumes are shown in **Figure 9**. Intersection, segment, and freeway LOS are shown in **Tables 10, 11 and 12**. Intersection LOS calculations are included in **Appendix M**.

**TABLE 10: EXISTING YEAR 2017 WITHOUT AND WITH PROJECT CONSTRUCTION INTERSECTION LOS**

Notes: Classification based on 1/29/08 Circulation and Scenic Highways Element. 2U = 2 lane undivided roadway. Daily volume is a 24 hour volume. LOS: Level of Service. LOS based on actual number of lanes currently constructed. V/C: Volume to Capacity ratio. Impact? = type of impact (none, cumulative, or direct).

Notes: (1) Capacity of 2,350 pcphpl from CALTRANS' Guide for the Preparation of Traffic Impact Studies, December 2002. (2) Latest K factor from Caltrans (based on 2017 report), which is the percentage of AADT in both directions. (3) Latest D factor from Caltrans (based on 2017 report), which when multiplied by K and ADT will provide peak hour volume. (4) Latest truck factor from Caltrans (based on 2015 report). Impact? = Direct, Cumulative, or None.

Under existing year 2017 + project construction conditions, the study intersections, roadways, State Route and freeway were calculated to operate at LOS B or better with no significant direct project impacts.

## 7.0 Existing Year 2017 + Project Construction + Cumulative Conditions

This section documents the addition of project construction traffic onto year 2017 with cumulative conditions. Year 2017 plus project construction + cumulative traffic volumes are shown in **Figure 10**. Intersection, segment, and freeway LOS are shown in **Tables 13, 14 and 15**. Intersection LOS calculations are included in **Appendix N**.

**TABLE 13: EXISTING YEAR 2017 WITH PROJECT CONSTRUCTION WITH CUMULATIVE INTERSECTION LOS**

| Intersection & (Control) <sup>1</sup> | Movement  | Peak Hour | Year 2017 + Cumulative |                  | Year 2017 + Cumulative + Project |                  |                    |

Notes: 1) Intersection Control - (S) Signalized, (U) Unsignalized. 2) Delay - HCM Average Control Delay in seconds.

3) LOS: Level of Service. Minor Leg: approach LOS of minor/lesser roadway. All: combined LOS for all approaches.

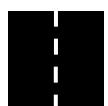

4) Delta is the increase in delay from project. 5) Type of impact: none, direct, or cumulative.

Notes: Classification based on 1/29/08 Circulation and Scenic Highways Element. 2U = 2 lane undivided roadway. Daily volume is a 24 hour volume. LOS: Level of Service. LOS based on actual number of lanes currently constructed. V/C: Volume to Capacity ratio. Impact? = type of impact (none, cumulative, or direct).

Notes: (1) Capacity of 2,350 pcphpl from CALTRANS' Guide for the Preparation of Traffic Impact Studies, December 2002. (2) Latest K factor from Caltrans (based on 2017 report), which is the percentage of AADT in both directions. (3) Latest D factor from Caltrans (based on 2017 report), which when multiplied by K and ADT will provide peak hour volume. (4) Latest truck factor from Caltrans (based on 2015 report). Impact? = Direct, Cumulative, or None.

Under existing year 2017 + project construction + cumulative conditions, the study intersections, roadways, State Route, and freeway were calculated to operate at LOS C or better with no cumulatively considerable impacts.

## 8.0 Near-Term Year 2019 Conditions

This section documents near-term year 2019 conditions when the project is anticipated to be at the peak of construction activities. The year 2019 background volumes are based on increasing the existing year 2017 volumes by an annual growth rate. The following documents and data were reviewed to determine a growth rate:

- 1) The California Economic Forecast *California County-Level Economic Forecast 2015-2040*, dated September 2015 documents an average annual growth factor of 1.8 percent from 2015 to 2020 for Imperial County.
- 2) The U.S. Census Bureau population data from year 2010 to year 2016 for Imperial County was used to calculate an average growth factor of 0.6 percent.

For the purpose of this traffic study, the more conservative average growth rate of **1.8 percent** was selected for the annual population growth rate. Excerpts from the California Economic Forecast and Census data are included in **Appendix O**. Year 2019 traffic data was factored up from existing data through the application of a 1.8% annual growth rate (3.6% total).

Year 2019 volumes for the construction peak period were calculated by increasing existing volumes year 2017 by 1.8% annually (3.6% total) as shown in **Figure 11**. Intersection, segment, and freeway LOS are shown in **Tables 16, 17 and 18**. Intersection LOS calculations are included in **Appendix P**.

**TABLE 16: NEAR-TERM YEAR 2019 INTERSECTION LOS**

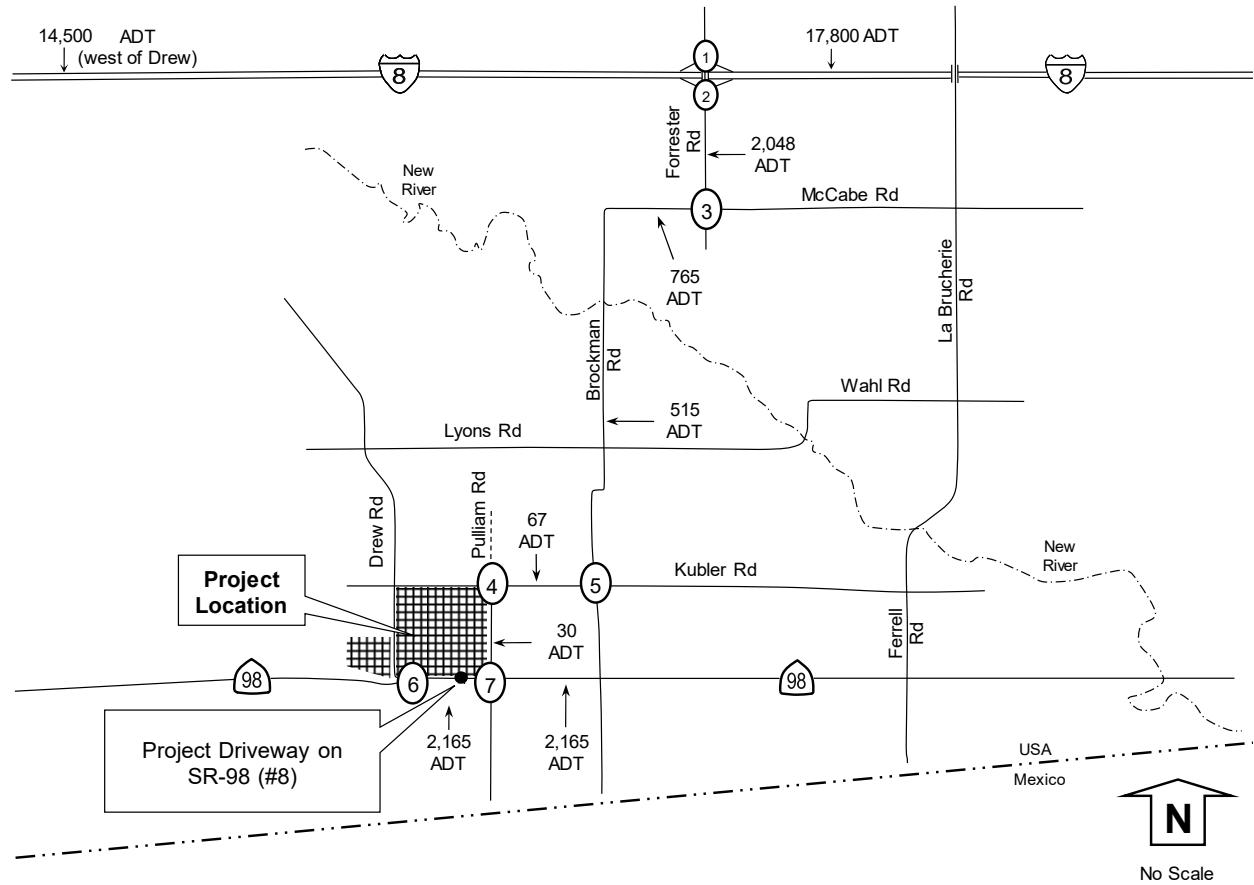

| Intersection &<br>(Control) <sup>1</sup> | Movement     | Peak<br>Hour | Year 2019          |                  |
|--|--------------|--------------|--------------------|------------------|
|  |              |              | Delay <sup>2</sup> | LOS <sup>3</sup> |
| 1) Forrester Rd at<br>I-8 WB Ramp (U)    | Minor<br>Leg | AM<br>PM     | 9.7<br>9.7         | A<br>A           |
| 2) Forrester Rd at<br>I-8 EB Ramp (U)    | Minor<br>Leg | AM<br>PM     | 11.1<br>14.3       | B<br>B           |
| 3) Forrester Rd at<br>McCabe Rd (U)      | Minor<br>Leg | AM<br>PM     | 9.6<br>9.6         | A<br>A           |
| 4) Pulliam Rd at<br>Kubler Rd (U)        | Minor<br>Leg | AM<br>PM     | 8.6<br>8.6         | A<br>A           |
| 5) Brockman Rd<br>at Kubler Rd (U)       | Minor<br>Leg | AM<br>PM     | 8.9<br>8.9         | A<br>A           |
| 6) Drew Rd at<br>SR-98 (U)               | Minor<br>Leg | AM<br>PM     | 8.7<br>8.9         | A<br>A           |
| 7) Pulliam Rd at<br>SR-98 (U)            | Minor<br>Leg | AM<br>PM     | 9.1<br>8.6         | A<br>A           |

Notes: 1) Intersection Control - (S) Signalized, (U) Unsignalized. 2) Delay - HCM Average Control Delay in seconds.

3) LOS: Level of Service. Minor Leg: approach LOS of minor/lesser roadway. All: combined LOS for all approaches.

Notes: (1) Capacity of 2,350 pcppl from CALTRANS' Guide for the Preparation of Traffic Impact Studies, December 2002. (2) Latest K factor from Caltrans (based on 2017 report), which is the percentage of AADT in both directions. (3) Latest D factor from Caltrans (based on 2017 report), which when multiplied by K and ADT will provide peak hour volume. (4) Latest truck factor from Caltrans (based on 2015 report).

Under near-term year 2019 conditions, the study intersections, roadways, State Route, and freeway were calculated to operate at LOS B or better.

## 9.0 Near-Term Year 2019 + Project Construction Conditions

This section documents the addition of construction traffic onto near-term year 2019 conditions for the anticipated construction peak. Year 2019 plus project construction traffic volumes are shown in **Figure 12**. Intersection, segment, and freeway LOS are shown in **Tables 19, 20 and 21**. Intersection LOS calculations are included in **Appendix Q**.

**TABLE 19: NEAR-TERM YEAR 2019 WITHOUT AND WITH PROJECT CONSTRUCTION INTERSECTION LOS**

Notes: (1) Capacity of 2,350 pcphpl from CALTRANS' Guide for the Preparation of Traffic Impact Studies, December 2002. (2) Latest K factor from Caltrans (based on 2017 report), which is the percentage of AADT in both directions. (3) Latest D factor from Caltrans (based on 2017 report), which when multiplied by K and ADT will provide peak hour volume. (4) Latest truck factor from Caltrans (based on 2015 report). Impact? = Direct, Cumulative, or None.

Under near-term year 2019 + project construction conditions, the study intersections, roadways, State Route, and freeway were calculated to operate at LOS C or better with no significant direct project impacts.

## 10.0 Near-Term Year 2019 + Project Construction + Cumulative Conditions

This section documents the addition of cumulative traffic onto near-term year 2019 with project construction conditions. Year 2019 plus project construction + cumulative traffic volumes are shown in **Figure 13**. Intersection, segment, and freeway LOS are shown in **Tables 22, 23 and 24**. Intersection LOS calculations are included in **Appendix R**.

**TABLE 22: NEAR-TERM YEAR 2019 WITH PROJECT CONSTRUCTION WITH CUMULATIVE INTERSECTION LOS**

| Intersection & (Control) <sup>1</sup> | Movement  | Peak Hour | Year 2019 + Cumulative |                  | Year 2019 + Cumulative + Project |                  |                    |
|---------------------------------------|-----------|-----------|------------------------|------------------|----------------------------------|------------------|--------------------|
|                                       |           |           | Delay <sup>2</sup>     | LOS <sup>3</sup> | Delay <sup>2</sup>               | LOS <sup>3</sup> | Delta <sup>4</sup> |
| 1) Forrester Rd at I-8 WB Ramp (U)    | Minor Leg | AM        | 13.0                   | B                | 14.4                             | B                | 1.4                |
|                                       |           | PM        | 10.9                   | B                | 11.2                             | B                | 0.3                |
| 2) Forrester Rd at I-8 EB Ramp (U)    | Minor Leg | AM        | 13.1                   | B                | 13.9                             | B                | 0.8                |

|                                       |           | PM        | 8.8                    | A                | 10.1                             | B                | 1.3                |
| 8) SR-98 at Project Driveway (U)      | Minor Leg | AM        | 0.0                    | A                | 0.8                              | A                | 0.8                |
|                                       |           | PM        | 0.0                    | A                | 9.5                              | A                | 9.5                |

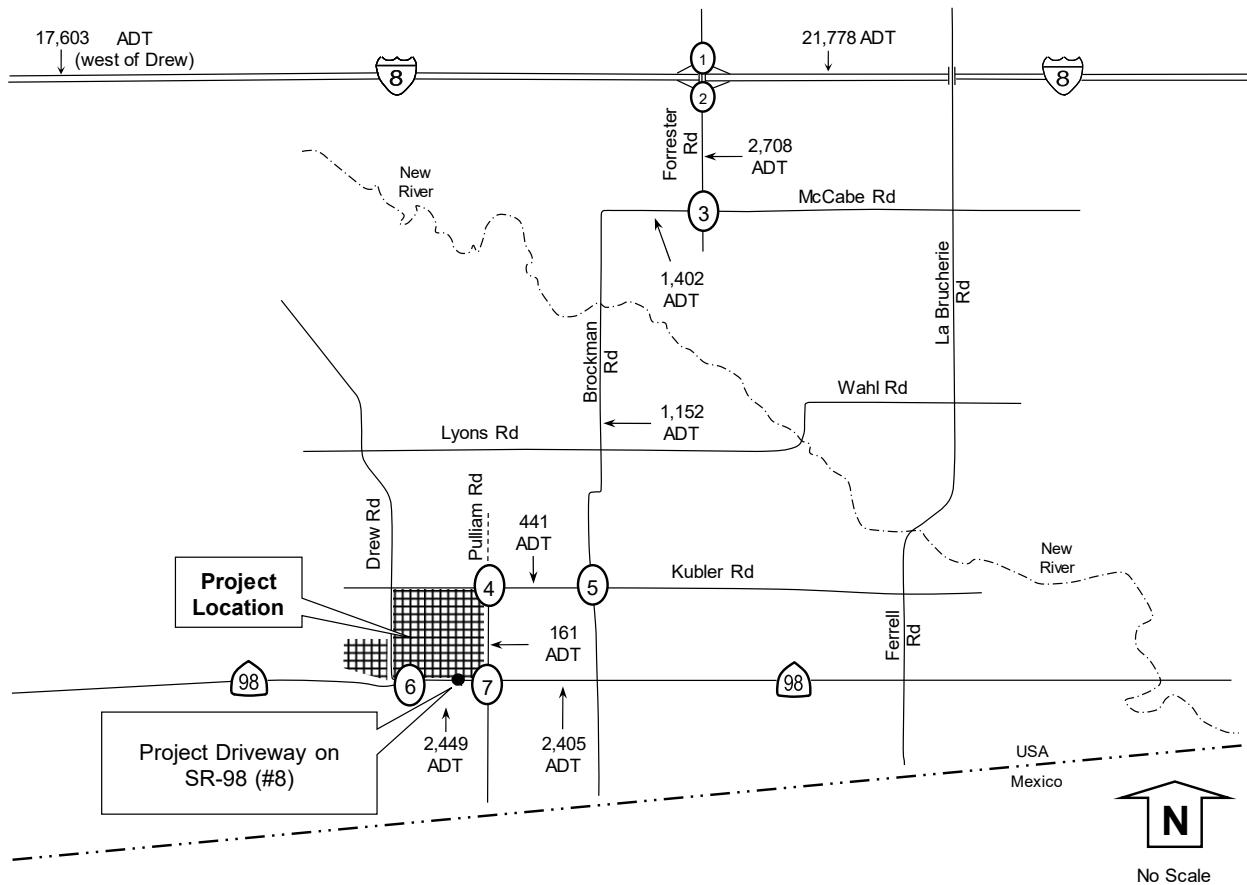

Notes: 1) Intersection Control - (S) Signalized, (U) Unsignalized. 2) Delay - HCM Average Control Delay in seconds.

3) LOS: Level of Service. Minor Leg: approach LOS of minor/lesser roadway. All: combined LOS for all approaches.

4) Delta is the increase in delay from project. 5) Type of impact: none, direct, or cumulative.

Notes: Classification based on 1/29/08 Circulation and Scenic Highways Element. 2U = 2 lane undivided roadway. Daily volume is a 24 hour volume. LOS: Level of Service. LOS based on actual number of lanes currently constructed. V/C: Volume to Capacity ratio. Impact? = type of impact (none, cumulative, or direct).

| Impact?                          | None                         | None   | None   | None   |                                     | None   | None   | None   |

Notes: (1) Capacity of 2,350 pcphpl from CALTRANS' Guide for the Preparation of Traffic Impact Studies, December 2002. (2) Latest K factor from Caltrans (based on 2017 report), which is the percentage of AADT in both directions. (3) Latest D factor from Caltrans (based on 2017 report), which when multiplied by K and ADT will provide peak hour volume. (4) Latest truck factor from Caltrans (based on 2015 report). Impact? = Direct, Cumulative, or None.

Under near-term year 2019 + project construction + cumulative conditions, the study intersections, roadways, State Route, and freeway were calculated to operate at LOS C or better with no cumulatively considerable impacts.

## 11.0 Long-Term Year 2027 Conditions

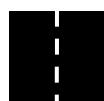

This section documents long-term year 2027 conditions in case the entire project (in 18 months) is constructed at the end of the period when construction must commence per the CUP. The year 2027 background volumes are based on increasing the existing year 2017 volumes by an annual growth rate of 1.8% (19.5% total due to compounding growth) as described in the Near-Term Year 2019 Conditions' Section. Year 2027 traffic volumes are shown in **Figure 14**. Intersection, segment, and freeway LOS are shown in **Tables 25, 26 & 27**. Intersection LOS calculations are included in **Appendix S**.

**TABLE 25: LONG-TERM YEAR 2027 INTERSECTION LOS**

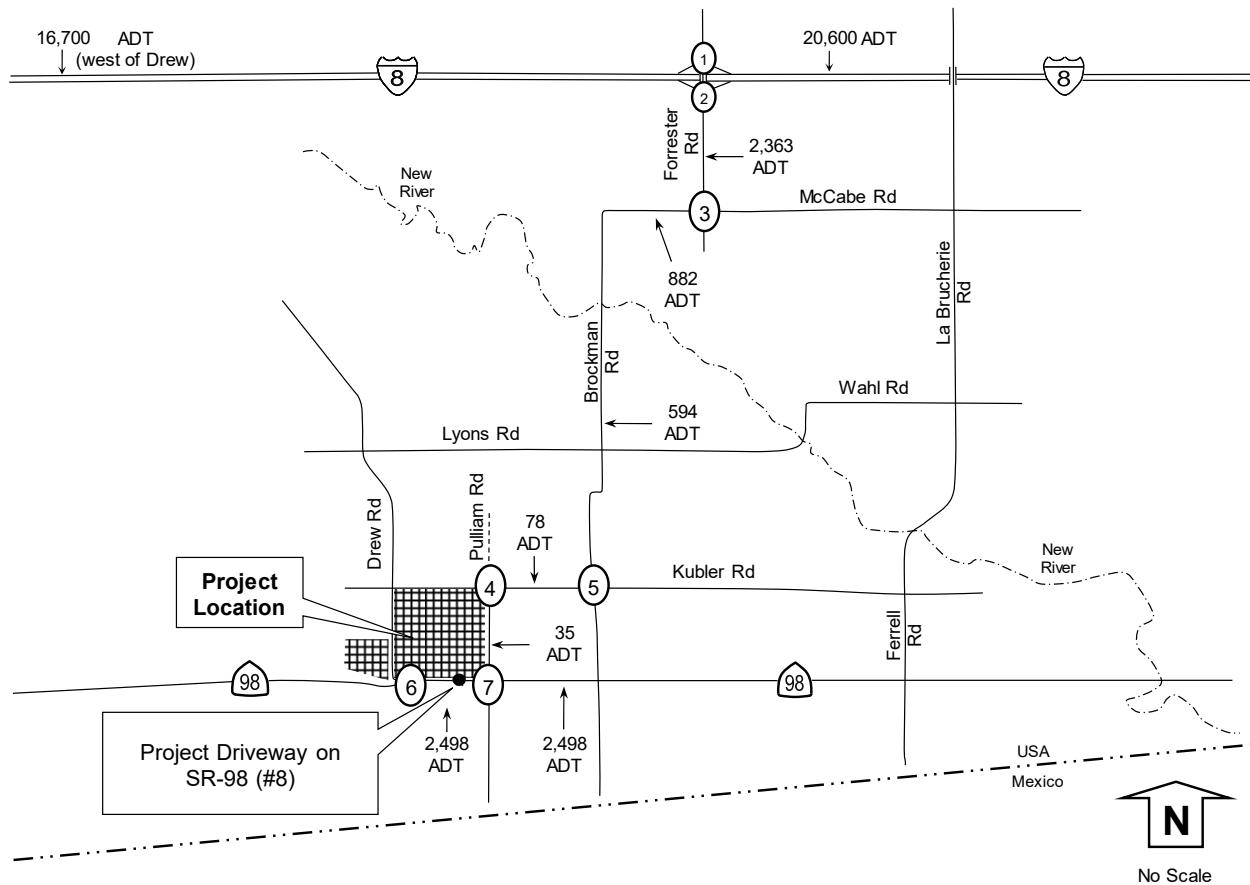

| Intersection &<br>(Control) <sup>1</sup> | Movement     | Peak<br>Hour | Year 2027          |                  |
|--|--------------|--------------|--------------------|------------------|
|  |              |              | Delay <sup>2</sup> | LOS <sup>3</sup> |
| 1) Forrester Rd at<br>I-8 WB Ramp (U)    | Minor<br>Leg | AM<br>PM     | 10.0<br>10.0       | B<br>B           |
| 2) Forrester Rd at<br>I-8 EB Ramp (U)    | Minor<br>Leg | AM<br>PM     | 11.8<br>16.4       | B<br>C           |
| 3) Forrester Rd at<br>McCabe Rd (U)      | Minor<br>Leg | AM<br>PM     | 9.8<br>9.7         | A<br>A           |
| 4) Pulliam Rd at<br>Kubler Rd (U)        | Minor<br>Leg | AM<br>PM     | 8.6<br>8.6         | A<br>A           |
| 5) Brockman Rd<br>at Kubler Rd (U)       | Minor<br>Leg | AM<br>PM     | 8.9<br>9.0         | A<br>A           |
| 6) Drew Rd at<br>SR-98 (U)               | Minor<br>Leg | AM<br>PM     | 8.7<br>9.0         | A<br>A           |
| 7) Pulliam Rd at<br>SR-98 (U)            | Minor<br>Leg | AM<br>PM     | 9.1<br>8.7         | A<br>A           |

Notes: 1) Intersection Control - (S) Signalized, (U) Unsignalized. 2) Delay - HCM Average Control Delay in seconds.

3) LOS: Level of Service. Minor Leg: approach LOS of minor/lesser roadway. All: combined LOS for all approaches.

Notes: (1) Capacity of 2,350 pcphpl from CALTRANS' Guide for the Preparation of Traffic Impact Studies, December 2002. (2) Latest K factor from Caltrans (based on 2017 report), which is the percentage of AADT in both directions. (3) Latest D factor from Caltrans (based on 2017 report), which when multiplied by K and ADT will provide peak hour volume. (4) Latest truck factor from Caltrans (based on 2015 report).

Under long-term year 2027 conditions, the study intersections, roadways, State Route, and freeway were calculated to operate at LOS C or better.

## 12.0 Long-Term Year 2027 + Project Construction Conditions

This section documents the addition of construction traffic onto long-term year 2027 conditions. Year 2027 plus project construction traffic volumes are shown in **Figure 15**. Intersection, segment, and freeway LOS are shown in **Tables 28, 29 and 30**. Intersection LOS calculations are included in **Appendix T**.

**TABLE 28: LONG-TERM YEAR 2027 WITH PROJECT CONSTRUCTION INTERSECTION LOS**

| Intersection & Movement<br>(Control) <sup>1</sup> |           | Year 2027          |                  | Year 2027 + Project |                  |                    |
|---|-----------|--------------------|------------------|---------------------|------------------|--------------------|

| Impact?                     | None                  | None   | None                         | None   | None   | None   | None   | None   |  |  |

Notes: (1) Capacity of 2,350 pcphpl from CALTRANS' Guide for the Preparation of Traffic Impact Studies, December 2002. (2) Latest K factor from Caltrans (based on 2017 report), which is the percentage of AADT in both directions. (3) Latest D factor from Caltrans (based on 2017 report), which when multiplied by K and ADT will provide peak hour volume. (4) Latest truck factor from Caltrans (based on 2015 report). Impact? = Direct, Cumulative, or None.

Under long-term year 2027 + project construction conditions, the study intersections, roadways, State Route, and freeway were calculated to operate at LOS C or better with no significant direct project impacts.

## **13.0 Long-Term Year 2027 Cumulative Projects (Past, Present, & Reasonably Foreseeable New Development)**

The long-term cumulative project list was based on the near-term cumulative project list; however, most of the projects on this list are solar or other renewable energy projects. For these solar/renewable energy projects, the traffic generation was updated to reflect the post construction operations phase, which has a significantly lower amount of traffic because the typical operations staff is about 10 people compared to about 200 to 250 construction workers required to construct a solar project. The timely conversion of construction to operations is supported by the fact that County Code section 90203.13 voids such project's conditional use permits unless the permittee commences the project within one year from the approval date of the conditional use permit or obtains an extension for up to two one-year periods. Therefore, if applications on file at the County in 2017 take two years to get approved, have a one year CUP life with two years of possible CUP extensions, and an 18 month construction period, then it is reasonable to assume all renewable energy projects on the cumulative list will be completed by year 2027 and would be generating operations traffic (not construction traffic) as noted below.

The long-term cumulative list below describes the cumulative projects in the immediate area around the project site (i.e. projects that are generally located south of I-8 and west of Clark Road). Most of the cumulative projects have completed technical studies including traffic generation information; however, several have not. For the projects that do not have detailed operations phase traffic generation information, an estimate was calculated based on operations traffic generation information for similar projects and are noted below with an asterisk “\*”. Operations traffic generation calculations are included in **Appendix U**. Information for each cumulative project is included below with text identifying if a cumulative project was observed to be under construction:

- 1) Big Rock Solar\* and Laurel Solar\* - a photovoltaic solar facility capable of producing approximately 200 megawatts of electricity generally located west of Drew Road and south of I-8. The operations phase is calculated to generate 16 daily trips with 5 AM peak hour trips and 5 PM peak hour trips.
- 2) *Calexico 1-A\** - a photovoltaic solar facility capable of producing approximately 100 megawatts of electricity generally located 6 miles west of the City of Calexico. The operations phase is calculated to generate 8 daily trips with 3 AM peak hour trips and 3 PM peak hour trips.
- 3) *Calexico 1-B\** - a photovoltaic solar facility capable of producing approximately 100 megawatts of electricity generally located 6 miles west of the City of Calexico. The operations phase is calculated to generate 8 daily trips with 3 AM peak hour trips and 3 PM peak hour trips.
- 4) *Calexico 2-A\** - a photovoltaic solar facility capable of producing approximately 100 megawatts of electricity generally located 6 miles west of the City of Calexico. The operations phase is calculated to generate 8 daily trips with 3 AM peak hour trips and 3 PM peak hour trips.
- 5) *Campo Verde Battery Energy Storage System* – a battery storage system for the Campo Verde

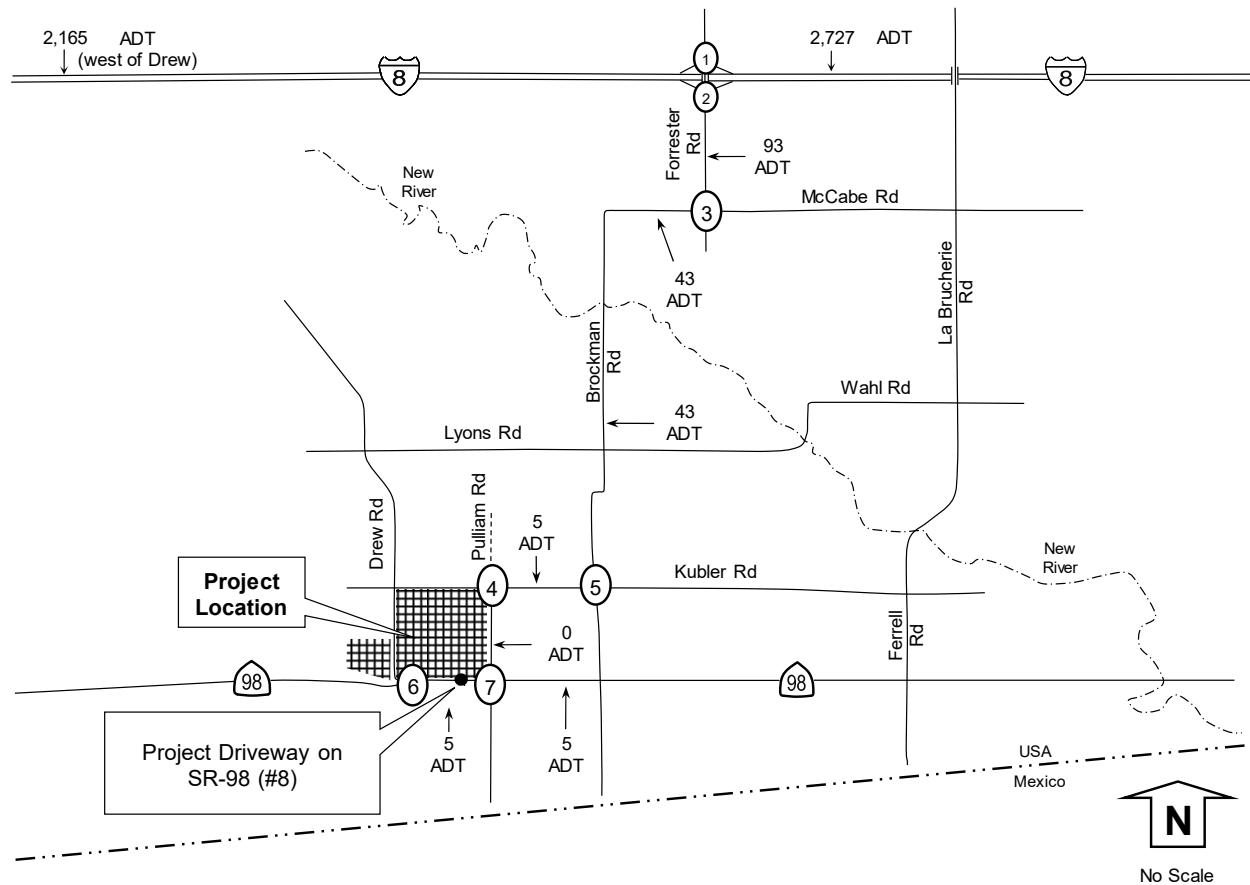

solar facility generally located west of Drew Road and south of I-8. The operations phase is calculated to generate 8 daily trips with 2 AM peak hour trips and 2 PM peak hour trips.

- 6) *Centinela Solar Phase 2\** - a photovoltaic solar facility capable of producing approximately 100 megawatts of electricity generally located east of Drew Road and south of I-8. The operations phase is calculated to generate 8 daily trips with 3 AM peak hour trips and 3 PM peak hour trips.
- 7) *Coyne Ranch Specific Plan* – a residential project with up to 546 residential units located at 1642 Ross Road. The residential project is calculated to generate 5,198 ADT with 410 AM peak hour trips and 546 PM peak hour trips.
- 8) *County Center II Expansion* – a mixed use project of a commercial center, expansion of the Imperial County Office of Education, a Joint-Use Teacher Training and Conference Center, Judicial Center, County Park, Jail expansion, County Administrative Complex, Public Works Administration, and a County Administrative Complex located on the southwest corner of McCabe Road and Clark Road. The total project is calculated to generate 24,069 ADT with 2,581 AM peak hour trips and 2,242 PM peak hour trips.
- 9) *IV Substation and SDG&E Ocotillo Solar\** – a project connecting the Imperial Irrigation District’s “S” line from the Imperial Irrigation District substation to the Imperial Valley substation and a photovoltaic solar facility capable of producing approximately 14 megawatts of electricity generally located adjacent to the SDG&E Imperial Valley Substation. The operations phase is calculated to generate 8 daily trips with 3 AM peak hour trips and 3 PM peak hour trips.
- 10) *IRIS Solar Farm Cluster (Ferrell, Rockwood, Iris, and Lyons)\** – photovoltaic solar facilities capable of producing approximately 360 megawatts of electricity generally located north of SR-98 between Brockman Road and Weed Road. The operations phase is calculated to generate 28 daily trips with 9 AM peak hour trips and 9 PM peak hour trips.
- 11) *Wistaria* - a photovoltaic solar facility capable of producing approximately 250 megawatts of electricity generally located 8 miles west of the city of Calexico. The operations phase is calculated to generate 19 daily trips with 6 AM peak hour trips and 6 PM peak hour trips.
- 12) *Vega Solar\** - a photovoltaic solar facility capable of producing approximately 100 megawatts of electricity generally located west of Drew Road and south of I-8. The operations phase is calculated to generate 8 daily trips with 3 AM peak hour trips and 3 PM peak hour trips.
- 13) *Cumulative on I-8* – some of the remaining cumulative projects within Imperial County may add traffic to I-8. Many of the cumulative projects do not have traffic assignments for I-8 (because they are too far away) and some cumulative projects are too small to require a traffic study; therefore, they do not have reported cumulative traffic volumes for I-8. To account for the possibility of cumulative traffic being added to I-8, five percent of the existing I-8 peak hour volume was used as cumulative background peak hour traffic on I-8.

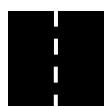

Traffic from the long-term cumulative list above was applied to the long-term year 2027 conditions. The long-term cumulative project (new development) volumes are shown in **Figure 16**.

**Figure 16: Long-Term Cumulative Project (New Development) Volumes**

## 14.0 Long-Term Year 2027 + Project Construction + Cumulative Conditions

This section documents the addition of project construction traffic onto year 2027 with cumulative conditions. The long-term cumulative project traffic was used for this scenario. Year 2027 plus project construction + cumulative traffic volumes are shown in **Figure 17**. Intersection, segment, and freeway LOS are shown in **Tables 31, 32 and 33**. Intersection LOS calculations are included in **Appendix V**.

**TABLE 31: LONG-TERM YEAR 2027 WITH PROJECT CONSTRUCTION WITH CUMULATIVE INTERSECTION LOS**

Notes: 1) Intersection Control - (S) Signalized, (U) Unsignalized. 2) Delay - HCM Average Control Delay in seconds.

3) LOS: Level of Service. Minor Leg: approach LOS of minor/lesser roadway. All: combined LOS for all approaches.

4) Delta is the increase in delay from project. 5) Type of impact: none, direct, or cumulative.

Notes: Classification based on 1/29/08 Circulation and Scenic Highways Element. 2U = 2 lane undivided roadway. Daily volume is a 24 hour volume. LOS: Level of Service. LOS based on actual number of lanes currently constructed. V/C: Volume to Capacity ratio. Impact? = type of impact (none, cumulative, or direct).

Notes: (1) Capacity of 2,350 pcphpl from CALTRANS' Guide for the Preparation of Traffic Impact Studies, December 2002. (2) Latest K factor from Caltrans (based on 2017 report), which is the percentage of AADT in both directions. (3) Latest D factor from Caltrans (based on 2017 report), which when multiplied by K and ADT will provide peak hour volume. (4) Latest truck factor from Caltrans (based on 2015 report). Impact? = Direct, Cumulative, or None.

Under long-term year 2027 + project construction + cumulative conditions, the study intersections, roadways, State Route, and freeway were calculated to operate at LOS C or better with no cumulatively considerable impacts.

## 15.0 Horizon Year 2060 Conditions

The year 2060 was selected as the horizon year because it is 40 years past the earliest estimate (year 2019 construction peak with completion about a year later or 2020) of when the project may be constructed and decommissioned. Under the development agreement, the CUP will be valid for 40 years with up to 10 years to commence construction. At the conclusion of the CUP term (estimated at year 2059), the Project entitlements require the Applicant to decommission the site and restore it to farmland uses in accordance with a future reclamation Plan. Implementation of the future reclamation plan is anticipated to generate traffic on the roads in the vicinity of the Project from trucks that will remove solar panels and other infrastructure from the site after the 40 year CUP life. The traffic would also include the workers who travel to and from the site to perform the work. Nevertheless, after careful consideration of various methodologies for evaluating such traffic impacts, it is not possible to accurately forecast the traffic impacts for the following reasons:

- 1) There have been no solar projects decommissioned in Imperial County yet to provide a reference point for potential traffic impacts,
- 2) The near-term construction work force is based on the concentration of populations per the 2010 Census. The source and location of a horizon year 2060 construction work force cannot be estimated in the same manner; therefore, it would require speculation to determine where the construction work force would originate and the amount of workers from the local area (i.e. Imperial Valley) vs. the regional area (i.e. Los Angeles, San Diego, or Arizona),
- 3) Other solar projects on the cumulative project list in the vicinity may or may not be performing their own decommissioning phase activities at the same time. Many of these other solar projects have a 10 year extension option and it is not possible to estimate how many would exercise the option. Accordingly, only a guess could be made to as to when the other cumulative projects would initiate their own decommissioning phases and thus would add traffic to the horizon year background conditions, and
- 4) The horizon year traffic model for Imperial County does not have horizon year volumes for the study area roadways around the project site nor does the traffic model have data for decommissioning scenarios.
- 5) The California Economic Forecast *California County-Level Economic Forecast 2015-2040*, dated September 2015 does not forecast beyond 2040.

Therefore, after a thorough investigation for reliable data and having used our best efforts to obtain and disclose all the information we reasonably can about traffic in the decommissioning phase, the only conclusion that can be drawn is that it is simply too speculative for evaluation.

## 16.0 Conclusions and Recommendations

The project is a solar photovoltaic energy-generating and energy storage facility of approximately 100 megawatts of electricity on approximately 855 gross acres and 762.8 net acres of lands that have been used for agriculture. The project is located approximately 6.5 miles southwest of the city of El Centro and approximately 7.5 miles west of Calexico, California.

The project consists of a construction phase, an operations phase and a decommissioning phase. The construction phase will have the highest amount of workers and greatest amount of traffic while the operations phase will have approximately 10 fulltime personnel. Therefore, the higher and more conservative construction trip generation was used to determine potential project impacts. The worker and construction truck traffic was calculated at 436 ADT with 147 AM peak hour trips (144 inbound and 3 outbound) and 147 PM peak hour trips (3 inbound and 144 outbound). The operations phase (after construction) is estimated to generate up to 20 ADT with approximately 2 AM and 2 PM peak hour trips.

The project may be constructed at one time taking approximately 18 months or it may be completed over a ten-year period. Under the development agreement, the CUP Permit will be valid for 40 years with up to 10 years to commence construction. If construction is to commence immediately after approvals, the project could have the highest concentration of workers in year 2019. If delayed due to market forces, the project could have the highest concentration of worker in year 2027. The project may also be phased (i.e. 20 MW constructed at a time or 1/5 of the overall project) that would result in a lower concentration of workers and less trip generation. However, to be conservative, the entire project (100 MW) was analyzed under year 2019 and year 2027 conditions, assuming a construction period of 18-months.

Information on cumulative projects was obtained from the County of Imperial and confirmed with the County of Imperial EIR team to be current as of November 2017. Cumulative projects that are located in the immediate area around the project site (i.e. projects that are generally located south of I-8 and west of Clark Road) were included in this analysis.

- 1) Under existing year 2017 conditions, the study intersections, roadways, State Route, and freeway were calculated to operate at LOS B or better.
- 2) Under existing year 2017 + project construction conditions, the study intersections, roadways, State Route, and freeway were calculated to operate at LOS B or better with no significant direct project impacts.
- 3) Under existing year 2017 + project construction + cumulative conditions, the study intersections, roadways, State Route, and freeway were calculated to operate at LOS C or better with no cumulatively considerable impacts.
- 4) Under near-term year 2019 conditions, the study intersections, roadways, State Route, and freeway were calculated to operate at LOS B or better.
- 5) Under near-term year 2019 + project construction conditions, the study intersections, roadways, State Route, and freeway were calculated to operate at LOS C or better with no significant direct project impacts.

- 6) Under near-term year 2019 + project construction + cumulative conditions, the study intersections, roadways, State Route, and freeway were calculated to operate at LOS C or better with no cumulatively considerable impacts.
- 7) Under long-term year 2027 conditions, the study intersections, roadways, State Route, and freeway were calculated to operate at LOS C or better.
- 8) Under long-term year 2027 + project construction conditions, the study intersections, roadways, State Route, and freeway were calculated to operate at LOS C or better with no significant direct project impacts.
- 9) Under long-term year 2027 + project construction + cumulative conditions, the study intersections, roadways, State Route, and freeway were calculated to operate at LOS C or better with no cumulatively considerable impacts.

The project may be phased with construction occurring in years 2019 or 2027. As noted above for the various scenarios, there are no calculated traffic impacts under existing 2017 conditions, near-term 2019 conditions, or long-term 2027 conditions. Since these are no significant impact from long-term conditions of the entire project in these scenarios where other cumulative projects are generating traffic, we conclude that if the project were to be constructed either one CUP or a group of CUPs at a time phased out over the 10 years permitted by the Project's Development Agreement, then such phased-CUP construction would also not have a significant direct project impact or cumulatively considerable impact on traffic.

The year 2060 was selected as the horizon year because it is 41 years past the earliest estimate (year 2019 construction peak with completion about a year later or 2020) of when the project may be constructed and decommissioned. Under the development agreement, the CUP will be valid for 40 years with up to 10 years to commence construction. At the conclusion of the CUP term (estimated at year 2059), the Project entitlements require the Applicant to decommission the site and restore it to farmland uses in accordance with a future reclamation Plan. Implementation of the future reclamation plan is anticipated to generate traffic on the roads in the vicinity of the Project from trucks that will remove solar panels and other infrastructure from the site immediately after the 40 year CUP life. The traffic would also include the workers who travel to and from the site to perform the work. Nevertheless, after careful consideration of various methodologies for evaluating such traffic impacts, it is not possible to accurately forecast the traffic impacts related to decommissioning the project at this time. The only conclusion that can be drawn is that it is simply too speculative for evaluation.

### **Excerpts from Imperial County's Traffic Study and Report Policy**

COUNTY OF IMPERIAL  
DEPARTMENT OF PUBLIC WORKS

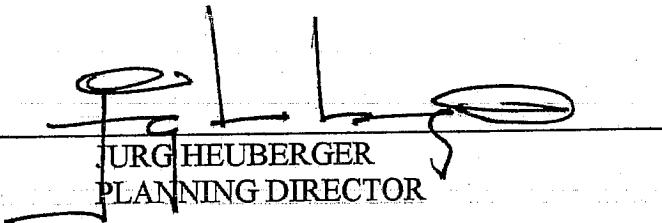

**TRAFFIC STUDY AND REPORT POLICY**

Date: March, 12, 2007

Revised June 29, 2007

**APPROVALS:**

William S. Brunet  
WILLIAM S. BRUNET, P. E.  
DIRECTOR OF PUBLIC WORKS  
ROAD COMMISSIONER

necessary to develop a traffic report that determines whether the traffic study general criteria have been met.

In the case of significant development, it may be necessary to hold one or more scope of work meetings which would be attended by a ICPDS staff, the County Traffic Engineer or other County Advisory Staff, the individual who will be responsible for preparing the traffic study report and the Traffic and/or Civil Engineer responsible for the report and its recommendations. The individual preparing the traffic study should be familiar with the project site and the local conditions which may affect any final conclusions and recommendations.

Listed below are the basic criteria that will be used to make the determination for providing a complete traffic study as a part of the project review process. The criteria are not a complete or exhaustive list, but they are intended to define when such a report is to be prepared and to indicate the necessary components of the study report to be submitted.

## 1. General Criteria

- a. Any project that adds more than 8% of the total existing vehicle trips on the adjacent road system at full build-out of the project.
- b. Any project that generates more than 400 daily residential trip ends, 800 commercial or industrial trip ends or 200 peak hour trip ends, as determined by the average trip rates contained in the ITE Trip Generation Informational Report or the **Imperial County local exceptions in Section 2**.
- c. Any project that has the potential to degrade an existing road section, an existing signalized intersection, or an existing unsignalized intersection to below the existing level of service or to cause it to be lower than a level of service (LOS)

- "C" during any peak hour, using the HCM Methods of analysis on any individual, existing traffic movement.
- d. Any project, within Section C. 1. b. above, which generates more than 10% of its total traffic in the form of truck traffic.
  - e. Any project that intensifies the usage of the site above the level currently allowed by zoning codes and requires a GPA; and/or CUP, zone change, variance or other discretionary permit.
  - f. Any project that may cause an existing or proposed intersection to meet traffic signal warrants or cause a proposed intersection to be lower than LOS "C."

## 2. Report Contents

Traffic Reports submitted for review and approval must contain the following items as a minimum:

- a. Total number of trips anticipated from the project based on the average trip generation rates as specified in this section for single family residential use or those contained in the ITE Trip Generation Informational Report for other residential, commercial and industrial uses for total build out of the project (minimum of 5 years), or by using fully documented (and previously approved by the County Engineer) data for a similar or like facility. Passer-by trips for commercial/retail projects will not be more than 35 percent of the total generated site traffic without Public Works/Engineering and Planning staff approval (see

Section B. above). Passer-by trips, over 35 percent and internal trips, over 5 percent, must be justified, if used. Reference to another report or another source of data will not be adequate justification.

*For traffic studies carried out for presentation to the County of Imperial, single family residential trip generation of less than 10.0 trip ends per D.U. per weekday must be justified by documentation, including the age or maturity of the development producing the trip ends. Normally, new development, that is not fully an infill project, will have a trip generation rate of at least 10 trip ends per D.U. per weekday. Studies carried out by local agencies in other areas have shown the trip generation rate to be at least 15 trip ends per dwelling unit for a development at full occupancy (at project build out), at 10 years of age and at least 15 trip ends per D. U. at 20 years after build out. The local sample studies showed that a residential development trip generation rate may be as high as 20 trip ends per D.U. per weekday. The estimated build-out, 5-year or 20-year peak hour trip ends generation rate will be 1.55 for the a.m. peak hour, and the p.m. peak hour trip ends generation rate will be 1.68 trip ends per dwelling unit for the same single family residential use at 15.0 trip ends per dwelling unit per weekday. The County of Imperial requires the use of the local exceptions, unless the report preparer provides previously approved data to support using other rates. The I.T.E. Trip Generation Report will not be accepted for single family residential daily and peak hour trip ends per dwelling*

*unit, unless it is for urban infill development, within one half mile of major retail and commercial development.*

- b. Existing traffic on the adjacent road system and projected traffic on the adjacent road system, projected for a minimum of five (5) years, to project build-out, or both, depending on the project and the area; larger projects or high traffic generation may require future year build-out, currently Year 2030. Future CMP TIA reports would require additional traffic projection information.
- c. Traffic projections on the adjacent road system for both the project and "normal background growth" (demonstrated growth, as detailed in the general plan, or as agreed upon with County staff). Normally, traffic will be projected to Year 2030 or later for an updated future year condition.
- d. Traffic projections shall include the additional impact of undeveloped land or new development within an area surrounding the proposed development site (project) as agreed to by the County Director of Public Works, the County Planning Director and advisory staff.
- e. Projected impacts on intersections adjacent to or within the defined impact area of the project, using intersection capacity analysis - Highway Capacity Manual Operations Delay Method. Right turn-on-red volumes and changes in signal timing can be incorporated in a signalized intersection analysis, but any signal timing changes must be specifically identified in the study recommendations with additional cautions or impact conclusions identified if the timing changes are not

- m. Traffic counts, calculations, other basic information, and supporting data shall be included in an Appendix to the report or provided as a separate Technical Appendix. All actual traffic count data will be provided to the County in a useful summary form, digital and paper format, as specified by the County.

### 3. Analysis Methodology

The build-up method of traffic analysis will be followed, showing:

- a. Existing traffic;
- b. Existing traffic and normal background growth (rate and time to be agreed to by County staff);
- c. Existing traffic and normal background growth (see C. 3. b. above) and project build-out traffic;
- d. Existing traffic and normal background growth (see C. 3. b. above) and new development traffic (see C. 3. b. above);
- e. Existing traffic and 5 year normal background growth (see b. above) and new development (see b. above) and project build out, if longer than 5 years to build out of project.

If the study period to build-out is longer than 5 years, the future projection time period appropriate for a new development will be determined by the County staff. Significant projects may require a future projection time period of 20 years or General Plan build out. The future year is currently year 2030 as of the date of adopting this Policy. State Highway traffic projections will usually be carried to the year 2030 or to Caltrans current policy and procedures.

## **Appendix B**

### **Excerpts from Caltrans' Guide for the Preparation of Traffic Impact Studies**

---

**GUIDE FOR THE PREPARATION  
OF  
TRAFFIC IMPACT STUDIES**

---

**STATE OF CALIFORNIA  
DEPARTMENT OF TRANSPORTATION**

**December 2002**

#### **D. Travel Forecasting (Transportation Modeling)**

The local or regional traffic model should reflect the most current land use and planned improvements (i.e., where programming or funding is secured). When a general plan build-out model is not available, the closest forecast model year to build-out should be used. If a traffic model is not available, historical growth rates and current trends can be used to project future traffic volumes. The TIS should clearly describe any changes made in the model to accommodate the analysis of a proposed project.

### **V. TRAFFIC IMPACT ANALYSIS METHODOLOGIES**

Typically, the traffic analysis methodologies for the facility types indicated below are used by Caltrans and will be accepted without prior consultation. When a State highway has saturated flows, the use of a micro-simulation model is encouraged for the analysis (please note however, the micro-simulation model must be calibrated and validated for reliable results). Other analysis methods may be accepted, however, consultation between the lead agency, Caltrans and those preparing the TIS is recommended to agree on the data necessary for the analysis.

- A. Freeway Segments – Highway Capacity Manual (HCM)\*, operational analysis
- B. Weaving Areas – Caltrans Highway Design Manual (HDM)
- C. Ramps and Ramp Junctions – HCM\*, operational analysis or Caltrans HDM, Caltrans Ramp Metering Guidelines (most recent edition)
- D. Multi-Lane Highways – HCM\*, operational analysis
- E. Two-lane Highways – HCM\*, operational analysis
- F. Signalized Intersections<sup>8</sup> – HCM\*, Highway Capacity Software\*\*, operational analysis, TRAFFIX<sup>TM</sup>\*\*, Synchro\*\*, see footnote 8
- G. Unsignalized Intersections – HCM\*, operational analysis, Caltrans Traffic Manual for signal warrants if a signal is being considered
- H. Transit – HCM\*, operational analysis
- I. Pedestrians – HCM\*
- J. Bicycles – HCM\*
- K. Caltrans Criteria/Warrants – Caltrans Traffic Manual (stop signs, traffic signals, freeway lighting, conventional highway lighting, school crossings)
- L. Channelization – Caltrans guidelines for Reconstruction of Intersections, August 1985, Ichiro Fukutome

\*The most current edition of the Highway Capacity Manual, Transportation Research Board, National Research Council, should be used.

\*\*NOTE: Caltrans does not officially advocate the use of any special software. However, consistency with the HCM is advocated in most but not all cases. The Caltrans local development review units utilize the software mentioned above. If different software or analytical techniques are used for the TIS then consultation between the lead agency, Caltrans and those preparing the TIS is recommended. Results that are significantly different than those produced with the analytical techniques above should be challenged.

---

<sup>8</sup> The procedures in the Highway Capacity Manual "do not explicitly address operations of closely spaced signalized intersections. Under such conditions, several unique characteristics must be considered, including spill-back potential from the downstream intersection to the upstream intersection, effects of downstream queues on upstream saturation flow rate, and unusual platoon dispersion or compression between intersections. An example of such closely spaced operations is signalized ramp terminals at urban interchanges. Queue interactions between closely spaced intersections may seriously distort the procedures in" the HCM.

| Major Industrial<br>Collector – (Industrial)            | 76/96     | 5,000                  | 10,000 | 14,000 | 17,000 | 20,000 |
| Industrial Local  | 44/64     | 2,500                  | 5,000  | 7,000  | 8,500  | 10,000 |

\* Levels of service are not applied to residential streets since their primary purpose is to serve abutting lots, not carry through traffic. Levels of service normally apply to roads carrying through traffic between major trip generators and attractors.

Table 5 was originally developed for the County of San Diego by the San Diego County Department of Public Works in 1985 and compares ADT to levels of service (LOS) for various roadway classifications. Proposed functional classifications were then inserted into this table and right-of-way widths adjusted to match County of Imperial standards.

### Transition Areas

The Circulation and Scenic Highways Element is the graphical reference guide which shows the present and planned street system, along with the classification of those streets. It is important to note that where there is a change from one classification to another along a certain street, the transition will occur in mid-block areas to preclude non-continuing lanes and intersections. The design criteria (design, speed, curve radii, etc.) for the higher classification shall generally take precedence through the transition area.

The capacity for SR-98 in the project vicinity is based on a 2 lane Local Collector as shown in Table 3 of the County's *Circulation and Scenic Highways Element* included on the following page.

**TABLE 3**  
**IMPERIAL COUNTY PROJECTED STREET SEGMENT CONFIGURATIONS AND VOLUMES (continued)**

## Transition between LOS "C" and LOS "D" Criteria (Reference Highway Capacity Manual)

### BASIC FREEWAY SEGMENTS @ 65 mi/hr

| LOS | Maximum Density (pc/mi/ln) | Minimum Speed (mph) | Maximum v/c | Maximum Service Flow Rate (pc/hr/ln) |
|-----|----------------------------|---------------------|-------------|--------------------------------------|
| A   | 11                         | 65.0                | 0.30        | 710                                  |
| B   | 18                         | 65.0                | 0.50        | 1170                                 |
| C   | 26                         | 64.6                | 0.71        | 1680                                 |
| D   | 35                         | 59.7                | 0.89        | 2090                                 |
| E   | 45                         | 52.2                | 1.00        | 2350                                 |

### SIGNALIZED INTERSECTIONS and RAMP TERMINALS

| LOS | Control Delay per Vehicle (sec/veh) |
|-----|-------------------------------------|
| A   | $\leq 10$                           |
| B   | $> 10 - 20$                         |
| C   | $> 20 - 35$                         |
| D   | $> 35 - 55$                         |
| E   | $> 55 - 80$                         |
| F   | $> 80$                              |

### MULTI-LANE HIGHWAYS @ 55 mi/hr

| LOS | Maximum Density (pc/mi/ln) | Minimum Speed (mph) | Maximum v/c | Maximum Service Flow Rate (pc/hr/ln) |
|-----|----------------------------|---------------------|-------------|--------------------------------------|
| A   | 11                         | 55.0                | 0.29        | 600                                  |
| B   | 18                         | 55.0                | 0.47        | 990                                  |
| C   | 26                         | 54.9                | 0.68        | 1430                                 |
| D   | 35                         | 52.9                | 0.88        | 1850                                 |
| E   | 41                         | 51.2                | 1.00        | 2100                                 |

## **Appendix E**

### **Excerpts of Significance Criteria from Imperial County's Circulation Element**

## **CIRCULATION AND SCENIC HIGHWAYS ELEMENT**

**Prepared by:**  
**Imperial County Planning & Development Services Department**  
**801 Main Street**  
**El Centro, CA 92243**

**in collaboration with the**

**Imperial County Public Works Department**  
**155 South 11<sup>th</sup> Street**  
**El Centro, CA 92243**

**WILLIAM S. BRUNET, P.E.**  
**Director of Public Works**

**JURG HEUBERGER, AICP**  
**Planning & Development Services Director**

**Approved by:**  
**Board of Supervisors**  
**January 29, 2008**

The County Director of Public Works shall review these transition areas and provide guidance in achieving this policy.

**c. New or enlarged Roads:**

**Local Roads**

The County shall require all new developments to provide for local roads to serve the direct access needs of abutting property. These streets should be designed with a discontinuous pattern to discourage through traffic. They generally should not intersect with arterial street classifications. Typical design features include two travel lanes with parking on both sides of the street. Local roads include loop streets and cul-de-sacs.

**Regional Roads (Roads beyond the actual development project)**

The County shall require that all new developments participate in the improvement of regional roads that may be impacted by the proposed development. The extent to which a project impacts regional roads is generally determined by a traffic study. In some cases however the County may have predetermined improvement requirements for certain road segments or road intersections. The new developments will be required to either make certain regional improvements or in the alternative contribute a "fair share" towards the cost of such improvements.

**d. Level of Service Standards**

As the County continues to grow, transportation demand management and systems management will be necessary to preserve and increase available roadway "capacity". Level of Service (LOS) standards are used to assess the performance of a street or highway system and the capacity of a roadway.

An important goal when planning the transportation system is to maintain acceptable levels of service along the federal and state highways and the local roadway network. To accomplish this, the California Department of Transportation (Caltrans), Imperial County and local agencies adopt minimum levels of service to determine future infrastructure needs.

Imperial County must provide and maintain a highway system with adequate capacity and acceptable levels of service to accommodate projected travel demands associated with the projected population growth within the Land Use Element. This can be accomplished by establishing minimum service levels for the designated street and conventional state highway system. Strategies that result in improvements to the transportation system, coupled with local job creation, will allow County residents to have access to a wide range of job opportunities within reasonable commute times.

The County's goal for an acceptable traffic service standard on an ADT basis and during AM and PM peak periods for all County-Maintained Roads shall be LOS C for all street segment links and intersections. These service values are defined by the 1985 or 2000 edition of the *Highway Capacity Manual* or any subsequent edition thereof. This policy shall acknowledge that the aforementioned level of service standards may not be obtainable on some existing facilities where abutting development precludes acquisition of additional right-of-way needed for changes in facility classification.

In order to achieve the level of service goals in the previous policy, the County shall develop and institute a long-range funding program in which new land development shall bear the major burden of the associated costs and improvement requirements.

#### e. Design Standards

The County shall adopt design standards for all streets in accordance with their functional classifications and recognized design guidelines. In developing these standards, the County shall consider the design standards of Caltrans and the American Association of State and Highway Transportation Officials (AASHTO). All streets within the County shall be designed in accordance with the adopted County of Imperial Design Standards. Typical cross sections and design criteria for the various street classifications are shown as an attachment to this document.

#### f. Private Streets

The County may permit construction of private streets within individual development projects (gated community). providing the following are addressed:

- They are designed geometrically and structurally to meet County standards.
- Only project occupants are served (gated community).
- Emergency vehicle access requirements are satisfied.
- The streets do not provide a direct through route between public streets.
- The Homeowners Associations and/or property owners provide an acceptable program for financing regular street maintenance.
- If the private street is permitted with a waiver of any of the above standards, any future requests to make the private street a public street shall require that all adjacent property owners provide and pay for all improvements and right of way required to bring the street to current public street or road standards. This includes road width, right of way widths and structural section. In no circumstance shall the County pay for any costs to upgrade a private street to public street standards if the above-mentioned requirements were waived at the request of the original developer or subdivider.

## **Appendix F**

### **Traffic Impact Significance Criteria from Imperial area EIRs**

## **4.6.2 Impact Significance Criteria**

### **Significance Criteria**

The significance criteria summarized in Table 4.6-2 by Linscott, Law and Greenspan Engineers is based upon the City of El Centro and the County of Imperial's goal for intersections and roadway segments to operate at LOS C or better. In general, a degradation in LOS from LOS C or better to LOS D or worse is considered a significant direct impact. A cumulative impact can occur if the intersection or segment LOS is already operating below City/County standards and the project increases the delay by more than 2 seconds or the v/c ratio by more than 0.02.

| <b>Table 4.6-2<br/>Significance Criteria</b> |  |   |                     |
|--|--|---|---------------------|
| INTERSECTIONS                                |  |   |                     |
| <b>Existing</b>                              | <b>Existing + Project</b>                                    | <b>Existing + Project + Cumulative Projects</b> | <b>Impact Type</b>  |
| LOS <sup>1</sup> C or better                 | LOS C or better  | LOS C or better                                 | None                |
| LOS C or better                              | LOS D or worse   | -   | Direct              |
| LOS D  | LOS E or F   | -   | Direct              |
| LOS E  | LOS F  | -   | Direct              |
| Any LOS                                      | Project does not degrade LOS and adds > 2.0 seconds of delay | LOS E or worse                                  | Cumulative          |
| Any LOS                                      | Project does not degrade LOS and adds < 2.0 seconds of delay | Any LOS   | None                |
| SEGMENTS                                     |  |   |                     |
| <b>Existing</b>                              | <b>Existing + Project</b>                                    | <b>Existing + Project + Cumulative Projects</b> | <b>Impact Type</b>  |
| LOS C or better                              | LOS C or better  | LOS C or better                                 | None                |
| LOS C or better                              | LOS D or worse   | -   | Direct <sup>2</sup> |
| LOS D  | LOS E or F   | -   | Direct              |
| LOS E  | LOS F  | -   | Direct              |
| Any LOS                                      | LOS E or worse and v/c <sup>3</sup> > 0.02                   | LOS E or worse                                  | Cumulative          |
| Any LOS                                      | LOS E or worse and v/c <sup>3</sup> < 0.02                   | Any LOS   | None                |

Source: Linscott, Law & Greenspan, Engineers (July 2004)

Notes:

1. LOS: Level of Service
2. Exception: post-project segment operation is D and intersections along segment are D or better, no significant impact.
3. V/C: Volume to Capacity Ratio

In addition the project would have a significant impact if:

- It would substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).

## 5.0 SIGNIFICANCE CRITERIA

**TABLE 5.1**  
**SIGNIFICANCE CRITERIA**

| Intersections   |   |  |                     |
|-----------------|---|--|---------------------|
| Existing        | Existing + Project                                      | Existing + Project + Cumulative Projects | Impact Type         |
| LOS C or better | LOS C or better   | LOS C or better                          | None                |
| LOS C or better | LOS C or better and project adds < 2.0 seconds of delay | LOS D or worse                           | None                |
| LOS C or better | LOS C or better and project adds > 2.0 seconds of delay | LOS D or worse                           | Cumulative          |
| LOS C or better | LOS D or worse  | LOS D or worse                           | Direct              |
| LOS D           | LOS D and project adds < 2.0 seconds of delay           | LOS D or worse                           | None                |
| LOS D           | LOS D and project adds > 2.0 seconds of delay           | LOS D or worse                           | Cumulative          |
| LOS D           | LOS E or F  | LOS E or F                               | Direct              |
| LOS E           | LOS E and project adds < 2.0 seconds of delay           | LOS E or F                               | None                |

| LOS E           | LOS F   | LOS F                                    | Direct              |
| LOS F           | Project add < 2.0 seconds of delay                      | LOS F                                    | None                |
| LOS F           | Project adds 2.0 to 9.9 seconds of delay                | LOS F                                    | Cumulative          |
| LOS F           | Project adds 10.0 or more seconds of delay              | LOS F                                    | Direct              |
| Segments        |   |  |                     |
| Existing        | Existing + Project                                      | Existing + Project + Cumulative Projects | Impact Type         |
| LOS C or better | LOS C or better   | LOS C or better                          | None                |
| LOS C or better | LOS or better and project increases V/C by < 0.02       | LOS D or worse                           | None                |
| LOS C or better | LOS C or better and project increase V/C by > 0.02      | LOS D or worse                           | Cumulative          |
| LOS C or better | LOS D or worse  | LOS D or worse                           | Direct <sup>1</sup> |
| LOS D           | LOS D and project increases V/C by < 0.02               | LOS D or worse                           | None                |
| LOS D           | LOS D and project increases V/C by > 0.02               | LOS D or worse                           | Cumulative          |
| LOS D           | LOS E or F  | LOS E or F                               | Direct              |
| LOS E           | LOS E and project increases V/C by < 0.02               | LOS E or F                               | None                |
| LOS E           | LOS E and project increases V/C by > 0.02               | LOS E or F                               | Cumulative          |
| LOS E           | LOS F   | LOS F                                    | Direct              |
| LOS F           | Project increases V/C by < 0.02                         | LOS F                                    | None                |
| LOS F           | Project increases V/C by > 0.02 and < 0.09              | LOS F                                    | Cumulative          |
| LOS F           | Project increases V/C by > 0.09                         | LOS F                                    | Direct              |

Notes: LOS = Level of Service; V/C = Volume to Capacity Ratio; <sup>1</sup> Exception: If Existing + Project segment operation is LOS D and intersections along segment are LOS D or better, then there is no significant impact.

In addition to the above listed projects, the Lerno/Verhaegen project was recently submitted and is currently starting the CEQA process. This project is listed for information purposes but cannot be analyzed in cumulative terms. The following is a brief description based on the limited information available for this project.

**Lerno-Verhaegen Specific Plan** is proposed to be a mixed-use development of 2,708 dwelling units. The project consists of 680 acres on the west side of the City of El Centro. The project includes a zone change, Tentative Map, an amendment of the City's General Plan and an annexation.

Individual traffic assignments were completed for each cumulative project. Figure 2-7 depicts the total cumulative project traffic volumes in the area. Figure 2-8 shows the existing + project + cumulative projects traffic volumes for the vicinity. Appendix D of this Mitigated Negative Declaration contains the individual cumulative project traffic assignments.

### ***Significance Criteria***

The significance criteria summarized in Table 2-7 by Linscott, Law and Greenspan, engineers is based upon the County of Imperial's goal for intersections and roadway segments to operate at LOS C or better. Intersections or segments operating at LOS D, E or F are unacceptable and therefore constitute a significant impact.

**Table 2-7 – Significance Criteria**

| INTERSECTIONS                |  |  |             |
|------------------------------|--|--|-------------|
| Existing                     | Existing + Project   | Existing + Project + Cumulative Projects | Impact Type |
| LOS <sup>1</sup> C or better | LOS C or better  | LOS C or better                          | None        |
| LOS C or better              | LOS D or worse   | -  | Direct      |
| LOS D                        | LOS E or F   | -  | Direct      |
| LOS E                        | LOS F  | -  | Direct      |
| Any LOS                      | Project does not degrade LOS and adds > 2.0 seconds of delay | LOS E or worse                           | Cumulative  |
| Any LOS                      | Project does not degrade LOS and adds < 2.0 seconds of delay | Any LOS                                  | None        |

| SEGMENTS        |  |  |                     |
|-----------------|--|--|---------------------|
| Existing        | Existing + Project                         | Existing + Project + Cumulative Projects | Impact Type         |
| LOS C or better | LOS C or better                            | LOS C or better                          | None                |
| LOS C or better | LOS D or worse                             | -  | Direct <sup>2</sup> |
| LOS D           | LOS E or F                                 | -  | Direct              |
| LOS E           | LOS F                                      | -  | Direct              |
| Any LOS         | LOS E or worse and v/c <sup>3</sup> > 0.02 | LOS E or worse                           | Cumulative          |
| Any LOS         | LOS E or worse and v/c <sup>3</sup> < 0.02 | Any LOS                                  | None                |

Notes:

\* See Table 1 regarding additional right-of-way for transit facility with roadway.

a. Volume from Imperial County Circulation and Scenic Highways Element Manual (Dec. 2003).

b. Volume from Caltrans, Imperial County, or Linscott Law & Greenspan, Engineers counts.

c. Volumes from Caltrans CalexGP+ Model and adjusted higher in some cases.

d. A 0.5%, 1.0%, or 2.0% annual growth rate was applied to the Year 2025 volumes to obtain Year 2050 volumes.

e. Capacity based on the Imperial County Classification Table (depending on the Year 2050 volume amount).

## PEAK HOUR VOLUME DATA

Peak hour volume data consists of hourly volume relationships and data location. The hourly volumes are expressed as a percentage of the Annual Average Daily Traffic (AADT). The percentages are shown for both the AM and the PM peak periods.

The principle data described here are the K factor, the D factor and their product (KD). The K factor is the percentage of AADT during the peak hour for both directions of travel. The D factor is the percentage of the peak hour travel in the peak direction. KD multiplied with the AADT gives the one way peak period directional flow rate or the design hourly volume (DHV). The design hourly volume is used for either Operational Analysis or Design Analysis. Refer to the 2000 Highway Capacity Manual for more details.

Following is a glossary of terms used in this listing of peak hour volume data:

|         |  |
|---------|--|
| Dir     | Indicates direction of travel for peak volume  |
| AADT    | Annual Average Daily Traffic in vehicles per day (vpd).  |
| AM Peak | Represents the morning peak period for traffic analysis  |
| CS      | Control Station Number, Caltrans identification number for monitoring site.  |
| CO      | County abbreviation used by Caltrans   |
| D       | D factor. The percentage of traffic in the peak direction during the peak hour. Values in this book are derived by dividing the measured PHV by the sum of both directions of travel during the peak hour. |
| DAY     | Day of week for the peak volume.   |
| DDHV    | The directional design hour volume, in vehicles per hour (vph)<br>DDHV=AADTxKxD. See equation (8-1) on page 8-11 of the 2000 Highway Capacity Manual.  |
| DI      | Caltrans has twelve transportation districts statewide. This abbreviation identifies the district in which the count station is located.   |
| HR      | The ending time for the peak hour volume listed. The volume observed from 1 to 2 would be recorded as 2.   |

|         |  |
|---------|--|
| K       | The percentage of the AADT in both directions during the peak hour. Values in this table are derived by dividing the measured 2-way PHV by the AADT.   |
| KD      | The product of K and D. The percentage of AADT in the peak direction during the peak hour. Values in this table are derived by dividing the measured 1-way PHV by the AADT.  |
| LEG     | For traffic counting purposes, a highway intersection or interchange is assigned two legs according to increasing postmiles (route direction) and with a postmile reference at the center of the intersection or interchange. The volume of traffic on each leg is denoted by an A, B or O. A = ahead leg, B = back leg, and O – traffic volume being same for both back and ahead legs. |
| MNTH    | The month that the peak volume occurred.   |
| PHV     | Peak Hour Volume in the peak direction. A one way volume in vehicles per hour (vph) as used here. The PHV is analogous to the DDHV as used for design purposes.  |
| PM      | The Post Mile is the mileage measured from the county line, or from the beginning of a route. Each postmile along a route in a county is a unique location on the state highway system.  |
| PM Peak | Represents the afternoon peak period for traffic analysis.   |
| PRE     | The postmile may have a prefix like R, T, L, M, etc. When a length of highway is changed due to construction or realignment, new postmile values are assigned. To distinguish the new values from the old, an alpha code is prefixed to the new postmile.  |
| RTE     | The state highway route number   |
| YR      | The year when the count was made. Traffic counting is on a 3-year cycle.   |

## **Appendix J**

### **Project Description Details**

# **CHAPTER 2.0**

---

# **PROJECT DESCRIPTION**

### **2.1 PROJECT DESCRIPTION**

The term Project refers to construction, operation, and decommissioning of the solar field and energy storage site parcels, Gen-Ties, improvements at the existing Drew Switchyard and other on-site and off-site ancillary features as described in the Project Description under either the Phased CUP Scenario or Full Build-out Scenario with up to approximately 855 gross and 762.8 net farmable acres of disturbance. The term CUPs refers to an individual CUP (i.e. CUP 17-0031), multiple CUPs (i.e. CUP 17-0031, CUP 17-0032 and CUP 17-0033) or all CUPs (CUP 17-0031 thru CUP 17-0035 and CUP 18-0001) as appropriate. The term Solar Energy Center refers to the area developed within each CUP with PV panels, collector lines, inverters and pad mounted transformers, substation(s) and switchyard(s), energy storage, O&M building, etc. The term Solar Field Site Parcels refers to the six parcels (052-170-039-000, 052-170-067-000, 052-170-031-000, 052-170-032-000, 052-170-056-000, and 052-170-037-000) which are currently flat crop farm fields where the PV panels and associated solar and energy storage equipment are proposed for development as CUP 17-0031 thru CUP 17-0035 and CUP 18-0001.

#### **2.1.1 INTRODUCTION**

This chapter of the Environmental Impact Report (EIR) describes the Drew Solar Project (“Project” or “Proposed Project”) proposed by Drew Solar, LLC. The Project is a proposal to build an approximately 100-mega-watt (MW) alternating current (AC) solar generation facility using photovoltaic (PV) technology. The entire Project is located on land owned by the Imperial Irrigation District (IID). The Project’s generation interconnection (gen-tie) transmission lines (“Gen-ties”) are proposed from the south end of the Project site running south across Drew Road and State Route 98 connecting into the existing Drew Switchyard located on APN 052-190-039. The term Project Site refers individually or collectively to the six parcels (052-170-039-000, 052-170-067-000, 052-170-031-000, 052-170-032-000, 052-170-056-000, and 052-170-037-000) on which the Project is proposed. The term Project Area refers to the area encompassed by all six CUPs as well as the Gen-Ties and other off-site ancillary facilities.

The Proposed Project consists of a photovoltaic (PV) solar facility capable of producing approximately 100 MWac on approximately 855 gross and 762.8 net farmable acres. The ultimate energy output is dependent on several variables, including off-take arrangements and the evolving efficiency of PV panels, so it is possible that the Project could generate more or less than 100 MW. The Project may be constructed at one time over approximately 18 months, or it may be built out over an approximately 10-year period. A conceptual phasing configuration is shown in Figure 2.0-3. A Site Plan is provided in Figure 2.0-4. The Project Proponent is requesting that a Conditional Use Permit (CUP) be issued for each of the five phases of the Project as well as an additional sixth CUP for Phase 5 for energy storage in the southwesterly portion of the Project Area. Project phasing allows utilities greater flexibility in obtaining renewable energy to meet ratepayer needs by allowing utilities to procure smaller energy quantities phased over time.

The Project Proponent has filed an application for a General Plan Amendment (GPA) for amendment of the Renewable Energy & Transmission Element to create an Island Overlay, an amendment of the requirements for said Island Overlay, a Zone Change to add the RE Overlay to the Project Site, a Variance and six CUPs. Each of the six CUPs may include an Operations and Maintenance (O&M) building or buildings. The Project may also include additional auxiliary facilities such as raw water/fire water storage, treated water storage, evaporation ponds, storm water retention basins, water filtration buildings and equipment, and equipment control buildings, septic system(s) and parking. The Project will

## **2.0 PROJECT DESCRIPTION**

---

also include electric and vehicular crossings of State facilities, IID facilities and County facilities. The Project crossings will not interfere with the purpose of these Agencies' facilities (e.g., where a drain flows, the Project crossing will still allow the drain to flow). Each phase of the Project may have its own energy storage component as well as energy storage being housed within the inverters.

### **2.1.2 PROJECT BACKGROUND**

For the last two decades, California has emerged as a leader in promoting policies designed to grow the State's portfolio of renewable energy generation and use. Most recently, California passed two bills further increasing the State's commitment to reductions in greenhouse gas emissions through reductions in fossil fuels and increases in renewable energy: Senate Bill (SB) 350 requiring retail sellers and publicly owned utilities to procure half of their electricity from renewable sources by 2030. This requirement is known as the Renewable Portfolio Standard or "RPS." In 2016, the Legislature passed SB 32, which codifies a 2030 greenhouse gas emissions reduction target of 40 percent below 1990 levels. According to Greentech Media, reaching such high amounts of variable renewable generation all but requires a wider build-out of storage capacity to give the grid more control over when that wind and solar power is consumed. The California legislature has passed several bills recently to help expand and expedite the amount of energy storage that is connected to California's electric grid. Newly signed AB 2861 authorizes the CPUC to create an independent dispute-resolution panel, staffed by electrical systems experts. Their job is to evaluate a disputed interconnection fee, gathering input from both sides and ruling on the case within 60 days. AB 2868 is aimed at increasing the overall size of the storage market by directing utilities to deploy up to 500 megawatts of additional storage capacity, of which no more than a quarter can be behind-the-meter. AB 33 declares the legislature's wish that the CPUC pay extra attention to long-duration storage for the grid. "The commission, in coordination with the Energy Commission, shall, as part of a new or existing proceeding, evaluate and analyze the potential for all types of long-duration bulk energy storage resources to help integrate renewable generation into the electrical grid," the law says. The CPUC's ruling comes after years of work jump-started by a 2010 state law, Assembly Bill 2514, which originally called for the statewide energy storage mandate of 1.3 GW to enable a "market transformation" for these new technologies. On June 10, 2013, CPUC Commissioner Peterman's Assigned Commissioner's Ruling stated "Energy storage has the potential to transform how the California electric system is conceived, designed, and operated. In so doing, energy storage has the potential to offer services needed as California seeks to maximize the value of its generation and transmission investments: optimizing the grid to avoid or defer investments in new fossil-power plants, integrating renewable power, and minimizing greenhouse emissions."

The Applicant is proposing to construct, operate and decommission a solar generation and energy storage facility on approximately 855 gross and 762.8 net farmable acres (inclusive of solar field, energy storage, project substation(s), roads, retention basins, etc.) located in southern Imperial County, California. A fundamental challenge posed by solar energy is that peak supply does not consistently coincide with peak demand times (e.g., 5:00 – 9:00 PM). Energy storage is a rapidly developing technology that can help balance supply and demand by capturing and storing renewable energy generated during daylight hours for peak evening demand. Energy storage, where available, reduces reliance on fossil fuels and furthers California's RPS policies by providing for better integration of locally-sourced solar and wind generation and RPS requirements.

On December 28, 2017, January 8, 2018, July 5, 2018 and [insert date that Derek submits the TPM], the Applicant submitted the following applications to ICPDS Department.

## **2.0 PROJECT DESCRIPTION**

---

- Amendment (GPA 17-0006) to Imperial County's General Plan for amendment of the Renewable Energy & Transmission Element to create an Island Overlay for the Project Site, and amendment of the requirements for said Island Overlay; Zone Change (ZC 17-0007) to add the RE Overlay Zone to the Project Site;
- Variance (V 17-0003) for power pole structures that are over 120 feet in height on all proposed project parcels, including the existing Drew Switchyard. With approval of the Variance, the proposed structures could be up to 180 feet in height;
- Parcel Map {[insert PM #]} to fix the existing inconsistency with the legal and physical boundary of the SW ¼ Section of the Project Site (APNs: 052-170-039 & 052-170-067), including APN 052-170-030 to the north of the Project Site as part of the Parcel Map; Five CUPs (CUP 17-0031; CUP 17-0032; CUP 17-0033; CUP 17-0034 and CUP 17-0035) to develop solar energy generating systems including potential energy storage on lands zoned A-2, A-2-R, and A-3 per Title 9, Division 5: Zoning Areas Established, Chapter 8, Sections 90508.02 and 90509.02; and
- One CUP (CUP 18-0001) to develop energy storage as a component of solar on lands zoned A-2 and A-3 per Title 9, Division 5: Zoning Areas Established, Chapter 8, Sections 90508.02 and 90509.02 (A-2 & A-3). Said energy storage would be removed at the time of removal of associated solar facility.

In addition to the foregoing, the applicant will request Similarity In Use designation from the Planning and Development Services Department in compliance with Section 90203.10 of the County's Land Use Ordinance for the energy storage facilities proposed to be developed under CUP 18-0001.

The Project will use PV technology to convert sunlight directly into direct current (DC) electricity. The process starts with photovoltaic cells that make up photovoltaic modules (environmentally sealed collections of photovoltaic cells). PV modules are generally non-reflective. Groups of photovoltaic modules are wired together to form a PV array. The DC produced by the array is collected at inverters (power conversion devices) where the DC is converted to AC. The voltage of the electricity is increased by a transformer at each power conversion station to a medium voltage level (typically 34.5 kilovolts (kV)). Medium voltage electric lines (underground and/or overhead) are used to collect the electricity from each medium voltage transformer and transmit it to the facility substation(s), where the voltage is further increased by a high voltage transformer to match the electric grid for export to the point of interconnection at the Drew Road Switchyard. Disconnect switches, fuses, circuit breakers, and other miscellaneous equipment will be installed throughout the system for electrical protection and operations and maintenance purposes.

This EIR is being prepared to analyze the potential environmental impacts of the Project and fulfill the requirements of the California Environmental Quality Act (CEQA).

A primary project objective is to develop a project that will produce public benefits for Imperial County, the Southern California Region, and the State of California. The following is a list of key public benefits that are fundamental to the project's objectives:

- To enable better energy balancing and greater grid reliability through the development of Energy Storage Facilities.
- To reduce the likelihood of energy blackouts through the development of Energy Storage Facilities.
- To help meet the mandate of 1.3GW of energy storage established by Assembly Bill 2514.

## **2.0 PROJECT DESCRIPTION**

---

- To help maximize the investment of Californians in transmission infrastructure through the development of Energy Storage Facilities.
- To levelize the cost of energy through the development of Energy Storage Facilities.
- To reinforce Imperial County's position as a leader in the Renewable Energy Marketplace through the development of Energy Storage Facilities.
- To create significant lease revenue for Imperial Irrigation District ("IID") as the property owner, a public agency, which will benefit the citizens of Imperial County.
- To enable IID to solar fallow and reduce water use on developed CUPs, which help assist IID in meeting its water conservation goals and requirements, and Salton Sea conservation obligations under various agreements, while also avoiding taking higher value farmland out of production as a means of water conservation.
- To utilize Imperial County's abundance of available solar energy (sunlight) to generate approximately 100 megawatts of solar power consistent with the Imperial County General Plan renewable energy objectives.
- To locate the Project in Imperial County in close proximity to the existing California Independent System Operator ("CAISO") electric transmission system at a location which has available capacity to deliver electricity to major load centers in California.
- To meet the terms and requirements of any Power Purchase Agreement (PPA) and Large Generator Interconnection Agreement ("LGIA") that the Applicant has or may enter into and that require it to be interconnected directly to the CAISO grid at the existing Drew Switchyard.
- To deploy a technology that is safe, readily available, efficient, and environmentally responsible.
- To generate power, and store energy in Energy Storage Facilities, in an efficient manner and at a cost that is competitive in the renewable market on sites controlled by the applicant.
- To provide a new source of renewable energy to assist the State of California in achieving and exceeding the RPS.
- To maximize local construction jobs for a variety of trades through the development of a solar generation facility and an energy storage facility, therefore helping maximize the reduction of unemployment in the construction sector.
- To locate the Project in an area that ranks among the highest in solar resource potential in the nation, as measured by the CEC.
- To minimize potential impacts to aesthetics, health and safety and other potential environmental impacts:
  - Locate the Project on disturbed land.
  - Consistent with County conditions on similar solar generation projects, group or collocate the Project's proposed electrical interconnection facilities with existing or proposed electrical interconnection facilities, to the extent that such grouping/colocation can be accommodated.
  - Utilize existing infrastructure (switchyards, transmission lines, roads, and water sources) where feasible to locate the project proximate to existing electric interconnection and

## **2.0 PROJECT DESCRIPTION**

---

transmission systems in Imperial County with capacity to deliver electricity to major load centers in California.

- To indirectly reduce the need to emit greenhouse gases caused by the generation of similar quantities of electricity from either existing or future non-renewable sources through the use of renewable energy sources during on-peak power periods.
- To create a sustainable form of electricity that requires little fuel to be consumed.
- Where existing agricultural operations are active, to promote continued agricultural operations until that CUP is developed for use.
- To encourage economic investment in renewable energy activities.
- To diversify Imperial County's economic base by developing environmentally responsible non-agricultural activities.
- To provide tax revenue through sales, use and property taxes generated by renewable energy development within Imperial County.
- To help maximize the expansion of the renewable energy sector in Imperial County's economy by developing solar generation facilities and Energy Storage Facilities.

### **2.1.3 SITE LOCATION**

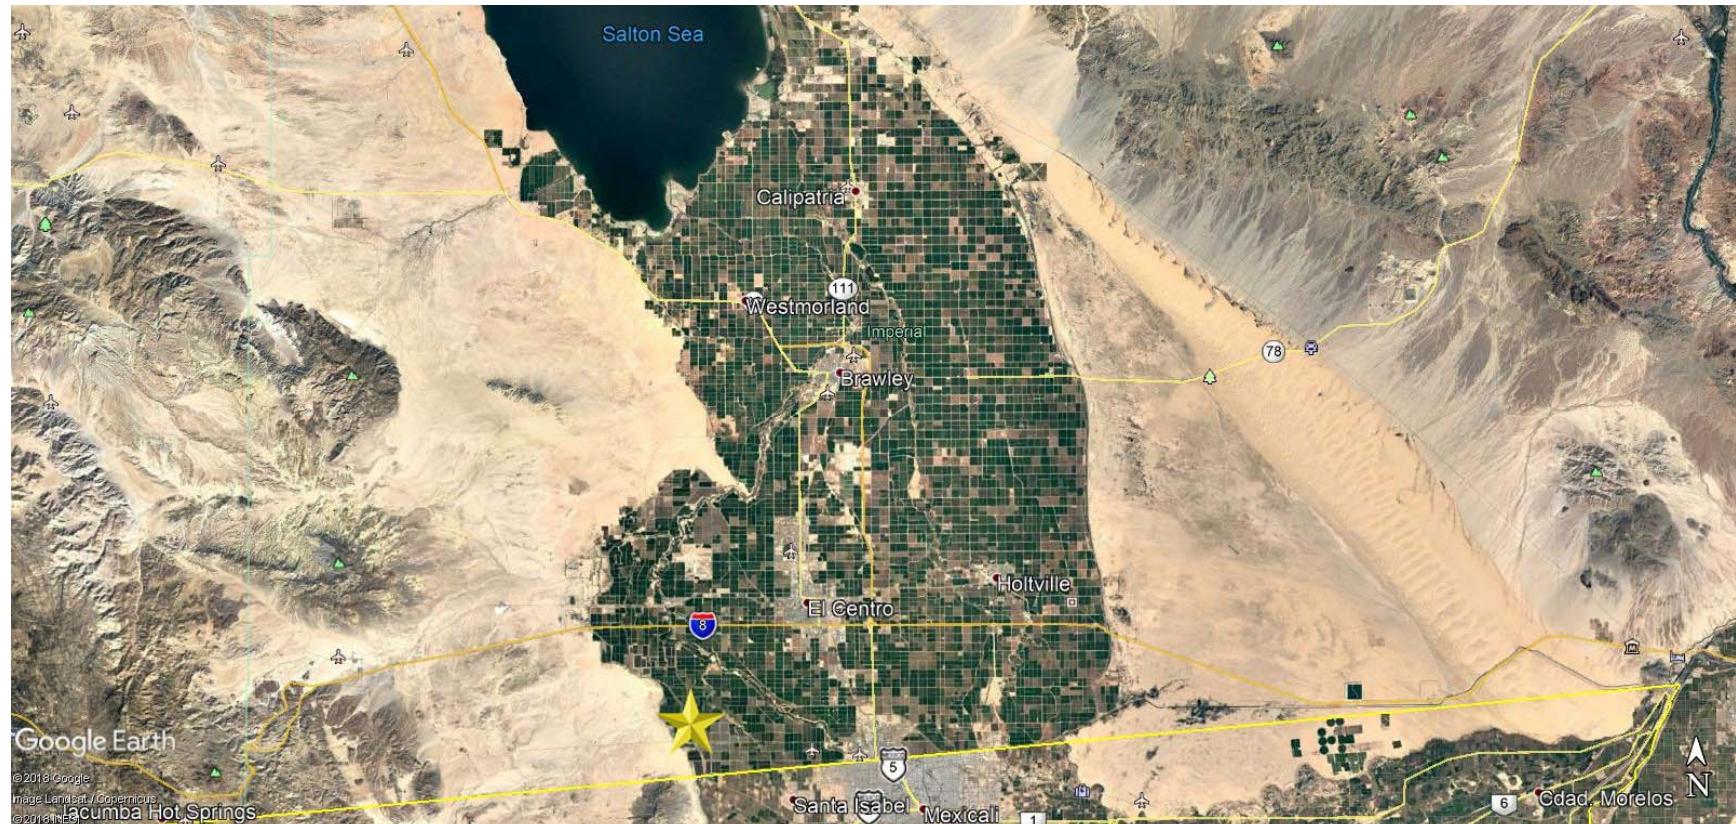

The proposed Project site is located on six parcels (052-170-039-000, 052-170-067-000, 052-170-031-000, 052-170-032-000, 052-170-056-000, and 052-170-037-000) approximately 6.5 miles southwest of the City of El Centro, California and 7.5 miles directly west of Calexico, California. The geographic center of the Project roughly corresponds with 32° 41' 13" North and 115° 40' 8" West, at an elevation of 19 feet below sea level. The Project site is generally located south of Kubler Road, east of the Westside Main Canal, north of State Route 98, and west of Pulliam Road.

**Figure 2.0-1** depicts the regional location of the Project. **Figure 2.0-2** shows the Project site and surrounding area. **Figure 2.0-3** is a conceptual phasing configuration of the Project. **Figure 2.0-4** is a site plan showing the layout of the Project and its various components.

### **2.1.4 OWNERSHIP**

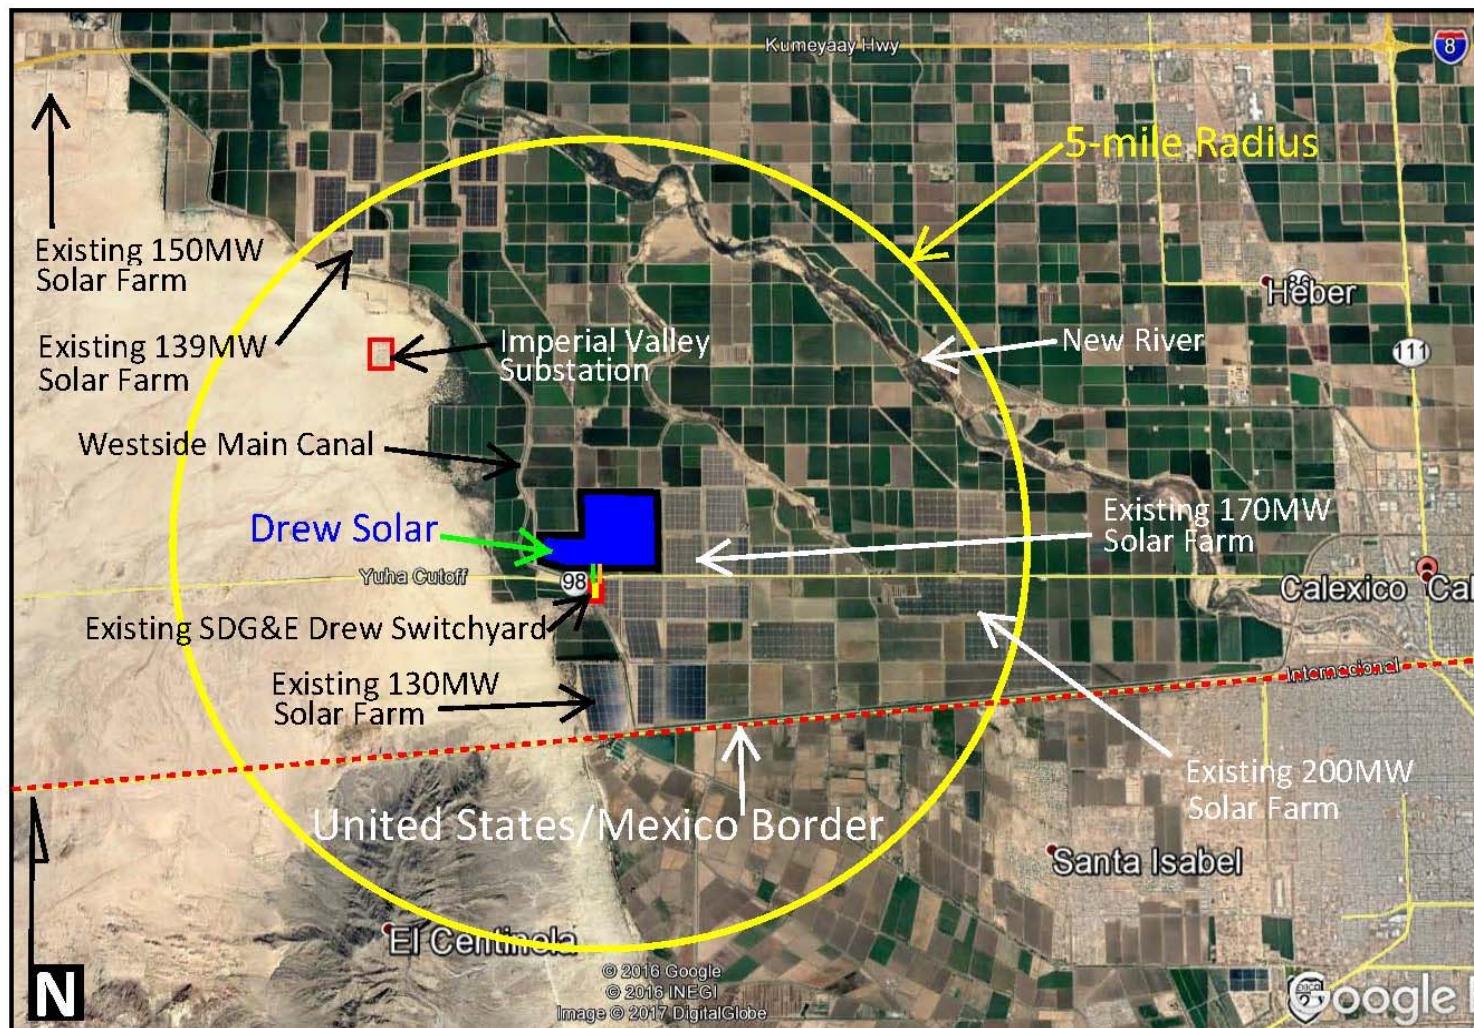

The property is owned by the IID. Drew Solar, LLC will lease the property for the construction, operation and decommissioning of the facility.

### 2.1.5 PROJECT CHARACTERISTICS

#### A. EXISTING ON-SITE USES AND SURROUNDING USES

**Figure 2.0-3** shows the boundary of the Project site and the six parcels which total approximately 855 gross and 762.8 net farmable acres of lands that have been used for agriculture. **Table 2.0-1** provides the Assessor's Parcel Numbers (APNs), approximate acreage, zoning and current use of each parcel that comprise the Project site.

The Project site is located in the southwestern portion of Imperial County. There are several other approved/built solar projects in the immediate vicinity surrounding the Project site. The other projects include Centinela Solar, the Mount Signal and Calexico Solar projects, Campo Verde Solar, Wistaria Ranch Solar and Imperial Solar Energy Center South. The Project is surrounded on 2 sides by the existing Centinela Solar project and is adjacent to the existing Drew Switchyard, which a majority of the projects in the area interconnect to. The rest of the area is predominantly agricultural with very few residences and agricultural buildings mixed in.

#### B. GENERAL PLAN AND ZONING DESIGNATIONS

The Imperial County General Plan Land Use Element designates the Project site as "Agriculture" (refer to Figure 4.2-1 in Section 4.2, Land Use). As shown in **Table 2.0-1**, lands on which the Drew Solar Project is proposed are currently zoned A-2 (General Agricultural Zone), A-2-R (General Agricultural Zone/Rural Zone), and A-3 (Heavy Agricultural) (refer to Figure 4.2-2 in Section 4.2, Land Use). Solar energy electrical generators, electrical power generating plants, substation(s), and facilities for the transmission of electrical energy are allowed as conditional uses in Agricultural zones (Land Use Ordinance, Title 9, Division 5, Sections 90508.02 and 90509.02).

**TABLE 2.0-1**  
**PROJECT SITE PARCELS**

| APN         | Net Acres | Gross Acres | Zoning      | Current Use           |
|-------------|-----------|-------------|-------------|-----------------------|
| 052-170-039 | 69.8      | 80.93       | A-2 & A-3   | Farmed for flat crops |
| 052-170-067 | 67.2      | 72.04       | A-2         | Farmed for flat crops |
| 052-170-031 | 157.1     | 168.61      | A-2 & A-2-R | Farmed for flat crops |
| 052-170-032 | 152.2     | 178.07      | A-2-R       | Farmed for flat crops |
| 052-170-056 | 157.9     | 168.31      | A-2         | Farmed for flat crops |
| 052-170-037 | 158.6     | 176.24      | A-2 & A-2-R | Farmed for flat crops |

Sources: Drew Solar 2017; Imperial County Planning & Development Services, 2017; IID Real Estate Department, 2017

Notes: A-2 = Agricultural; General A-2-R = General Agricultural Rural Zone; A-3 = Agricultural, Heavy

The Project is processing a Parcel Map to fix the existing inconsistency with the legal and physical boundary of the SW ¼ Section of the Project Site (APNs: 052-170-039 & 052-170-067), including APN 052-170-030 to the north of the Project Site as part of the Parcel Map. In doing so the net farmable acreage of the Project Site will remain the same (762.8 net acres), and the gross acreage will increase from 844.2 gross acres to approximately 855 gross acres once the Parcel Map is recorded.

Development of a solar facility would preclude the use of approximately 762.8 net farmable acres for agricultural production for life of the Project. The development agreement would enable the CUPs to be valid for a total of 40 years with commencement of construction starting any time within 10 years of CUP approval. At the end of the useful life of the Project, the solar facility would be decommissioned and reclaimed to its original condition.

### C. PROJECT COMPONENTS

Each of the components of the proposed Project is described in detail below. The components would be installed as part of construction, in use during operation, and removed and decommissioned as part of reclamation.

The net electrical output of the proposed Project is anticipated to be approximately 100 MWac. The actual net electrical output of the Project will depend upon the technology selected and final design and layout. The design and construction of the buildings, solar arrays (panels, etc.), energy storage facilities, and auxiliary facilities will be consistent with County building standards.

**Solar Energy Generation Component** - This component includes the construction, operation, and decommissioning of the five proposed solar energy generation parcels (Phases 1-5), inclusive of the shared Phase 5 Operation and Maintenance Complex, substation(s), and supporting transmission and Gen-Tie facilities. This component could be built out under either the Full Build-out Scenario or Phased Build-out Scenario.

**Energy Storage Component** – This includes the construction, operation, and decommissioning of the proposed energy storage facilities in conjunction with the storage of grid and solar energy generated by the Project. This component could be built out under either the Full Build-out Scenario or Phased Build-out Scenario.

**Drew Switchyard and Gen-Tie Component** - This component includes the construction, operation and decommissioning of required improvements at the existing Drew Switchyard facility and supporting transmission and Gen-Tie facilities in order to accommodate the Project's proposed utilization of the facility. This component is considered to be built out at one time under both the Full Build-out and Phased Build-out Scenario. Therefore, phased-buildout is not analyzed separately for this component.

#### **Solar Technology**

The Project may include only one PV technology or a combination of various PV technologies, including but not limited to crystalline silicon-based systems, thin-film systems, and perovskites.

When sunlight strikes a PV module, the energy absorbed is transferred to electrons in the atoms of the semiconductor causing them to escape from their normal positions and become part of the current in an electrical circuit. The PV modules convert the sunlight directly into low-voltage DC electricity that is subsequently transformed to AC electricity through an inverter. The system only operates when the sun is shining during daylight hours. The system operates at peak output when the sunlight is most intense, though it also produces power in low light conditions.

#### **Fixed-Tilt and Tracker Structures**

The Project may include only one PV technology or a combination of various PV technologies, including but not limited to crystalline silicon-based systems, bifacial modules, thin-film systems and perovskites. Depending on the selected manufacturer for the PV modules, the modules will be mounted on fixed-tilt or single-axis tracking structures. The modules will be grouped in nominal 1 to 4MW-AC arrays. Fixed tilt arrays will be oriented in east-west rows and will face in a generally southern orientation with a tilt angle between 10 and 35 degrees to maximize the amount of incidental solar radiation absorbed over the year. Single-axis trackers typically rotate  $\pm 60$  degrees (0 degrees is horizontal) along a nominally north-south axis to track the sun's movement throughout the day. Structural support elements will be

## **2.0 PROJECT DESCRIPTION**

---

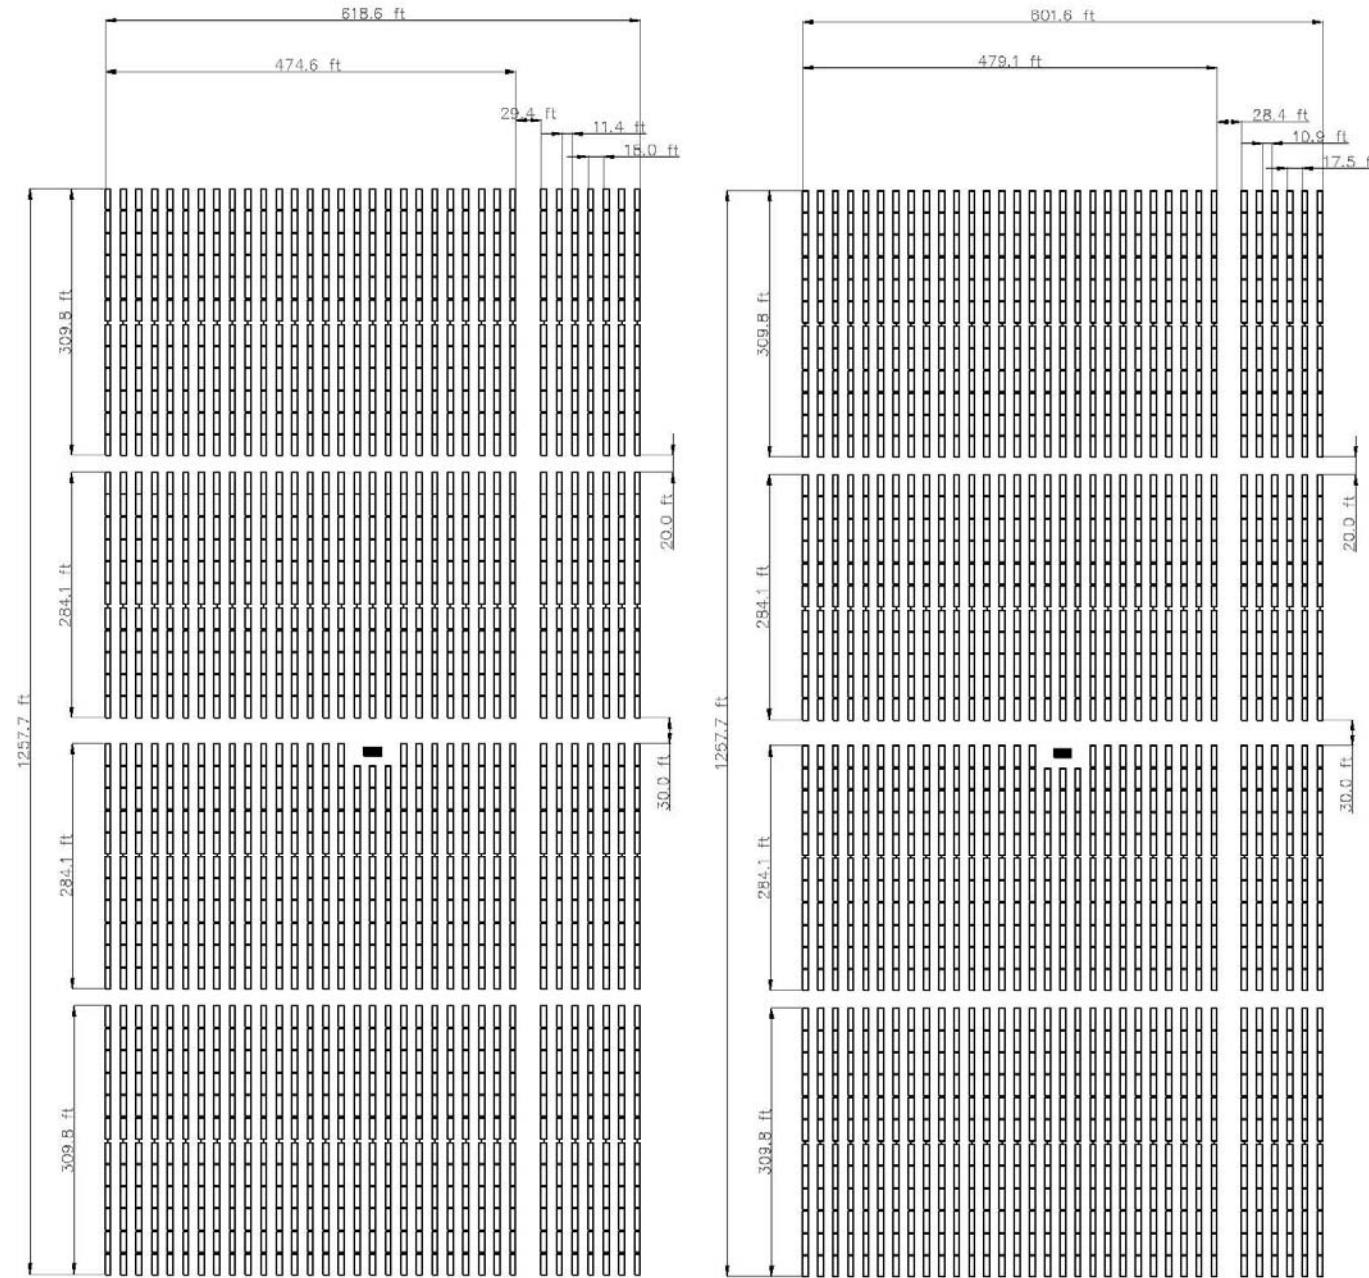

constructed of corrosion-resistant steel, aluminum, or equivalent members that are attached to circular piers or I-beam posts that will be driven into the prepared base grade of the Project site. The solar array field is arranged in groups called “blocks.”

**Figure 2.0-5** depicts a typical array layout. **Figure 2.0-6** is a graphic showing tracker details. The entire array block is connected to an inverter and transformer station to convert the current from DC to AC and step up the voltage to a higher voltage which is more efficient for transmitting power to the project substation(s).

### **Inverters and Pad-mounted Transformers**

At the center of each array is a power conversion station where inverters take the DC power output from the PV modules and convert it to AC power. **Figure 2.0-7** provides an elevation of a typical inverter station. The adjacent pad-mounted transformer steps the voltage up to a medium voltage level. The medium

## 2.0 PROJECT DESCRIPTION

**INVERTER STATION ELEVATION**

Source: Revolution Labs 2017.

## **2.0 PROJECT DESCRIPTION**

---

voltage outputs from each of the pad-mounted transformers are collected together in combining switchgear located at discrete locations on the Project site. The medium voltage output from the combining switchgear will be connected to the Project substation(s) where it will then be stepped up to 230-kV for export to the grid. The Project's Gen-ties will interconnect to the existing Drew Switchyard.

### **Substation and Switchyard**

An on-site substation will step-up the voltage from the collection level voltage to 230-kV. Breakers, buswork, protective relaying, Supervisory Control and Data Acquisition (SCADA), and associated substation equipment will be constructed on the Project site. The communication system may include above or below ground fiber optic cable or microwave tower. The Project will be interconnected to the regional transmission system from the onsite substation(s)/switchyard(s) via the Gen-ties facilities described in this project description. **Figure 2.0-8** depicts a typical substation configuration.

### **Transmission Interconnection Facilities**

The Project plans to connect to San Diego Gas & Electric's (SDG&E) Imperial Valley Substation by way of the existing Drew Switchyard.

Whether or not the Project is built in phases or at one time, the use of collector lines to collect electricity from the array fields to the Project substation(s) would remain similar. Skid mounted enclosed switchgear would be used within panel fields/phases to collect and transmit the electricity from the panel array fields to the Project substation(s).

In order to minimize impacts to the environment, the Project will utilize the existing Drew Switchyard as its point of interconnection. As illustrated in **Figures 2.0 -2, 2.0-3, 2.0-4 and 2.0-9**, the Project's Gen-ties are proposed to extend south from the south end of the Project site across Drew Road and State Route 98 into the existing Drew Switchyard located on APN 052-190-039-000. A new pole may be constructed on the existing Centinela Solar project on APN 052-190-041-000 and its line cutover into the new bay constructed by Drew Solar in the existing Drew Switchyard in order to minimize power line crossings. This will require vehicles and equipment to work at each tower location as well as to utilize pull sites along the Gen-ties. The structures for the 230-kV Gen-ties line are expected to be similar to those shown in **Figure 2.0-10**. If the Project is able to collocate with other facilities in the area, the Project may construct a new pole to the east of the existing pole that is on the northerly side of the existing Drew Switchyard in order to reduce Gen-tie crossings.

### **Operations and Maintenance (O&M) Building Complex**

The Operations and Maintenance (O&M) Building Complexes may contain administrative offices, parts storage, a maintenance shop, plant security systems, a site control center (**Figure 2.0-11**), and plant monitoring equipment. A specific design for the building(s) has not yet been selected as the technology utilized in utility scale solar energy production continues to improve dramatically at a rapid pace. The final layout will be based on the technology selected. The building(s) may have exterior lighting on motion sensors and will have fire and security alarms. The building(s) will be located on a graded area(s) with adjacent worker parking. The parking lot will be surfaced with concrete or asphalt per County standards and have a handicapped parking space. Additionally, the access road/driveway to the parking lot would be surfaced with either concrete asphalt per County standards. The Project will collect wastewater from sanitary facilities such as sinks and toilets in the O&M building(s). This waste stream will be sent to an on-site sanitary waste septic system and leach field to be installed in compliance with standards established by Imperial County Environmental Health Services. Alternatively, the Project may be designed to direct these waste streams to an underground tank for storage until it is pumped out, on a periodic or as-needed basis, and transported for disposal at a licensed waste treatment facility. During periodic major maintenance events, portable restroom facilities may be provided to accommodate

## 2.0 PROJECT DESCRIPTION

---

additional maintenance workers. An on-site water treatment facility may be constructed. Each phase may have its own O&M Building Complex, and Phase 5 may have two O&M Building Complexes.

### **Energy Storage**

The Project will likely incorporate an energy storage component and each phase may have its own energy storage component. The field of energy storage is rapidly advancing; thus, a single technology or provider has not been selected for the energy storage portion of the Project. The storage components of the Project will utilize storage technologies that operate based upon the principles of potential including but not limited to compressed air or pumped storage, lithium (ion, oxygen, polymer, phosphate, sulphur), Nickel Metal Hydride, Nickel Cadmium, Lead Acid, antiperovskites or other batteries, including but not limited to solid state batteries that may be approved for commercial use within the United States of America, and flywheels. The storage components may be centralized and located adjacent to the substation or switchgear, or alternatively, the energy storage components may be distributed throughout the plant adjacent to individual power conversion centers. The storage components would be housed in a warehouse type building (**Figure 2.0-12**) or alternatively in smaller modular structures such as cargo shipping containers (**Figure 2.0-13**). The Project may store energy generated onsite as well as energy from the CAISO grid.

The Renewable Energy and Transmission Element identifies public benefits associated with renewable energy. As demonstrated in Table 2.0-2, the Project with energy storage incorporated contributes to and enhances each of the eight public benefits associated with renewable energy generation:

**TABLE 2.0-2**  
**ENERGY STORAGE AND THE PUBLIC BENEFITS ASSOCIATED WITH RENEWABLE ENERGY AND TRANSMISSION**

| <b><u>Public Benefits of Renewable Energy and Transmission</u></b>   | <b><u>How Energy Storage Achieves the Benefit</u></b>  |
|--|--|
| Fiscal benefit of sales tax revenues from the purchase of equipment, goods and services.   | Equipment purchases related to the design, construction, and operations of energy storage facilities will generate additional sales tax revenues.  |
| Lease benefits to IID, a public agency.  | The Project will be built on land owned by the local public utility, IID.  |
| Social and fiscal benefits from increased economic activity and local employment opportunities that do not threaten the economic viability of other industries | The construction and operational phases of the Project will generate increased economic activity by bringing new jobs to the local community.  |
| Improvements in technology to reduce costs of electrical generation  | Energy storage enables better energy balancing and great grid reliability by solving the discrepancy between solar energy's peak demand and peak supply times, benefitting both the region and the state in achieving critically needed energy balancing.<br><br>Energy balancing, in turn, levels the cost of energy. By storing excess energy generated during daylight hours, energy storage would increase the supply of energy available during peak demand, thereby offsetting some of the |

## 2.0 PROJECT DESCRIPTION

|   |  |
|---|--|
|   | higher costs of energy consumption generally associated with peak nighttime demand.  |
| Reduction in potential greenhouse gases by displacing fossil-fuel-generated electricity with renewable energy power which does not add to the greenhouse effect | Energy storage will help the region and the State achieve greenhouse gas reduction targets by allowing the CAISO to procure electricity from renewable resources held in storage rather than from fossil-fuel sources.   |
| Contribution towards meeting the State of California's RPS  | Aid California in meeting its RPS requirements by contributing to the supply of renewable electricity for CAISO's procurement.   |
| Minimization of impacts to local communities, agriculture and sensitive environmental resources   | <p>Energy storage leverages existing renewable energy resources and reduces the need for fossil fuel-derived sources of electricity, thus reducing potential air quality and GHG emissions.</p> <p>The Project is sited on previously disturbed agricultural land to minimize impacts to sensitive environmental species.</p> <p>The Project Site will be restored to farmable conditions at the end of the life of the Project.</p> |

Additional benefits of energy storage include the following:

**Energy storage will likely reduce blackouts and contribute to grid reliability.** Customer demand on the grid is highest typically during the summer months, when energy regulators are most concerned about the possibility of brownouts and blackouts. Energy storage will increase the region's energy storage capacity by establishing energy reserves that can be used during this high demand period. Energy storage is a cost-effective and environmentally friendly technology to address ramp, regulation, capacity, ancillary services, system reliability and power quality because smoothing the power supply and providing a spinning reserve are functions usually performed by costly burning of fossil fuels. Further, energy storage can respond rapidly to increased demand / decreased supply (e.g., when clouds block the sun), whereas a conventional steam or gas-fired generator takes much longer and can result in supply deficits during the ramp-up period or when excess energy is kept on the grid and facilities are kept on standby to avoid excessive ramping times. This can make a significant difference when trying to correct frequency issues or meet reliability standards established by the North American Electric Reliability Corporation.

The large amount of intermittent renewable energy located at the Imperial Valley Substation has the potential to create challenges for CAISO and IID due to fluctuating weather conditions. For example, clear skies will generate significant solar resources (more than 1,000 MW) to the Imperial Valley Substation, but, cloud cover could significantly and suddenly reduce that generation to 100 MW. These variations have the potential to disrupt grid reliability. The Project's energy storage component would be capable of storing enough energy to discharge and maintain the 1,000MW output even during extended cloud cover.

The Applicant is proposing to install the energy storage facilities on with the Project Site given its close proximity to the existing Drew Switchyard. This location is ideal to help accommodate the high levels of

intermittent solar energy flowing through the existing Drew Switchyard and thus minimizing the risks of grid instability and outages.

**Energy storage promotes stable electricity prices.** Energy storage will enhance the Project's solar generation facility by providing for storage of energy generated during peak supply for use during peak demand periods, thus reducing the need to call up more expensive gas peaker plants to meet peak demand. Energy storage coupled with solar will allow the Project to supply stable electricity prices over the long term by eliminating potential fuel price volatility associated with use of fossil fuels, thus promoting stable electricity prices.

**Energy Storage maximizes regional investments in transmission infrastructure.** Energy storage will help manage transmission congestion, which in turn will help increase overall load carrying capacity. Further, by reducing the demand on transmission and distribution infrastructure during peak generation hours, energy storage will help extend the life of existing transmission infrastructure and defer repair and replacement costs that are often passed on to the public through increased rates.

### **Site Access / Traffic and Circulation**

There are County maintained roads providing access throughout the Project Site. Access to the Project Site will be from Kubler Road, Drew Road, Pulliam Road, and State Route 98. Access to components of the solar field will be controlled through security gates at several entrances. Multiple gate restricted access points will be used during construction, operation and decommissioning.

### **Roadway and IID Crossings**

The Project will include electric and vehicular crossings of State facilities, IID facilities and County facilities. Due to the nature of the Project and the rapidly changing technology, the exact locations of the crossings are not known at this time. However, it should be assumed for California Environmental Quality Act (CEQA) analysis purposes that wherever an Imperial Irrigation District (IID) facility (drain, irrigation canal, electric line, etc.) or County or State facility (road, etc.) intersect the Project, an electric or vehicular access crossing will occur. The Project crossings will not interfere with the purpose or continued use of these Agencies' facilities. For instance, where a drain flows, the Project crossing or access point will still allow the drain to flow.

**FIGURE 2.0-11  
OPERATIONS AND MAINTENANCE AREA**

## 2.0 PROJECT DESCRIPTION

*Source: Drew Solar 2018.*

**FIGURE 2.0-12**  
**BATTERY ENERGY STORAGE SYSTEM BUILDING**

### **Electric Service**

Permanent electric service may be obtained from IID for the O&M building(s) and auxiliary loads. Temporary electric service will be obtained for primary construction logistical areas. Generator power may be utilized for temporary portable construction trailer(s), construction and/or for decommissioning.

### **Fire Control**

The PV modules and ancillary equipment are constructed of fire-resistant material. Additionally, routine weed abatement and landscape maintenance will occur. As such, the Project represents a negligible increase in fire potential.

However, a Fire Management Plan will be prepared in accordance with Fire Department requirements for access and will not impact the ability to provide emergency access to the Project site. Access to nearby properties will not be hindered or restricted by the Project.

## D. PROJECT CONSTRUCTION

### **Construction Workers**

The Project would generate construction jobs. The number of workers on the Project site is expected to vary over the construction period. However, the number of construction workers onsite is expected to average up to 250 workers daily.

**FIGURE 2.0-13**

**BATTERY ENERGY STORAGE SYSTEM CONTAINERS**

*Source: Drew Solar 2018.*

## **2.0 PROJECT DESCRIPTION**

---

Typical construction work hours are expected to be from 7:00 am to 7:00 pm Monday through Friday, and 9:00 am to 5:00 pm on Saturdays. The schedule may change based on a need to comply with various biological mitigation measures, overall construction timing, or worker safety such as avoidance of excessive midday heat. Any deviation from construction work hours allowed in the General Plan Noise Element would require Planning Director approval.

### **Construction Duration**

The construction equipment, materials, and labor involved in building the Project remain similar whether the project is constructed in phases over time or built out over an 18-month period. The 18-month buildup of the entire Project at once results in greater intensity of labor and equipment during the construction period.

### **Phasing**

This EIR contemplates a Phased CUP Scenario and a Full Build-out Scenario. The Phased CUP Scenario refers to the development scenario where the Project is constructed in phases by individual CUP (i.e. CUP 17-0031) or a group of CUPs (i.e. CUP 17-0031, CUP 17-0035 and CUP 18-0001) as appropriate to accommodate market demand. This scenario also refers to the Gen-Ties, electrical collector lines and other on-site and off-site ancillary facilities proposed for development as part of the Project. Each CUP of the project may have its own off-taker and operate independently from the other CUPs. The phases shown on the phasing plan (**Figure 2.0-3**) are conceptual and will not be constructed in any particular order. The phases may be aggregated during construction and operations/maintenance so that multiple phases could be built at one time. All phases are anticipated to utilize proposed Gen-ties that run from the south end of the Project site across Drew Road and State Route 98 into the existing Drew Switchyard located on APN 052-190-039. The phases are anticipated to use main Project switchyard; however, each phase may independently construct its own up to 230-kv step up transformer and switchyard. **Table 2.0-3** provides a list of the conceptual phases along with the APNs and approximate acreage.

The Full Build-out Scenario refers to all six CUPs (including five CUPs for solar energy generating and storage systems and one CUP for energy storage as a component of solar), Gen-Ties, improvements to the existing Drew Switchyard and other on-site and off-site ancillary facilities proposed for development as part of the Project.

If the Project is constructed at once, construction would take place over approximately 18 months. If the phases are constructed over time (up to 10 years from issuance of the CUPs), each phase could take approximately 12 months and construction of some phases may overlap with one another.

**TABLE 2.0-3 PHASING - NET & GROSS ACRES**

| APN             | Net Acreage | Gross Acreage |
|-----------------|-------------|---------------|
| <b>Phase 1</b>  |             |               |
| 052-170-056-000 | 157.9 Acres | 168.31        |
| <b>Phase 2</b>  |             |               |
| 052-170-037-000 | 158.6 Acres | 176.24        |
| <b>Phase 3</b>  |             |               |
| 052-170-031-000 | 152.2 Acres | 168.61        |
| <b>Phase 4</b>  |             |               |
| 052-170-032-000 | 157.1 Acres | 178.07        |
| <b>Phase 5</b>  |             |               |
| 052-170-039-000 | 69.8 Acres  | 80.93         |

## 2.0 PROJECT DESCRIPTION

|                 |            |       |
|-----------------|------------|-------|
| 052-170-067-000 | 67.2 Acres | 72.04 |
|-----------------|------------|-------|

*Note: The Project is processing a Parcel Map to fix the existing inconsistency with the legal and physical boundary of the SW ¼ Section of the Project Site (APNs: 052-170-039 & 052-170-067), including APN 052-170-030 to the north of the Project Site as part of the Parcel Map. In doing so the net farmable acreage of the Project Site will remain the same (762.8 net acres), and the gross acreage will increase from 844.2 gross acres to approximately 855 gross acres once the Parcel Map is recorded.*

*Source: Drew Solar 2018.*

### **Temporary Construction Facilities**

During construction, temporary facilities will be developed on-site to facilitate the construction process. These facilities may include construction trailers, temporary septic systems or holding tanks, connections to adjacent IID raw water canals, parking areas, material receiving / storage areas, water storage ponds, construction power service, recycling / waste handling areas, and others. These facilities will be located at the construction areas designated on the final site plan(s).

### **Laydown Areas**

At full build-out, most of the Project site will be disturbed by construction of the Project. Temporary construction lay down, construction trailers, and parking areas will be provided within the Project Site. Due to the size of the Project site, the solar field lay down areas may be relocated periodically within the solar field acreage as the project is built out in phases.

### **Disturbance**

**TABLE 2.0-4  
CONSERVATIVELY CALCULATED PROJECT DISTURBED ACRES**

| Property/Project Component | Disturbed Acres (gross) |
|----------------------------|-------------------------|
| Project Site               | 855                     |
| Project Gen-Ties           | 0.8                     |
| Access Roads               | N/A                     |
| Total Project Disturbance  | 855.8                   |

### **Grading and Drainage**

Site preparation will be planned and designed to minimize the amount of earth movement required for the Project to the extent feasible. The hydrology design will be given first priority in order to protect the Project's facilities and adjacent facilities including any IID/County facilities from large storm events. It is the intent of the Project to support the panels on driven piles. Additional compaction of the soil in order to support the building and traffic loads as well as the PV module supports may be required and is dependent on final project engineering design.

The existing on-site drainage patterns will be maintained to the greatest extent feasible. It may be necessary to remove, relocate and/or fill in portions of the existing drainage ditches or delivery canals to accommodate the final panel layout for the Project. The final engineering design for these facilities will be reviewed by IID and the County to be sure that the purpose for the facilities (if still needed) will still be met.

### **Dust Control**

Dust generated during construction would be controlled by watering and, as necessary, the use of other dust suppression methods and materials accepted by ICAPCD or CARB. During grading, actively

## **2.0 PROJECT DESCRIPTION**

---

disturbed on-site areas and unpaved roads would be watered at least three times a day as necessary to reduce fugitive dust emissions. In addition, speeds would be limited to 15-mile per hour (mph) speed during construction.

### **Water Use**

During construction of the Project, water will be required for a variety of construction activities, including dust suppression, earth compaction, the creation of engineered fill, and concrete preparation. Construction-phase water demand will be greatest during site grading which will consist of disc and roll compaction over the site. An estimated total of 1,200 acre-feet of water will be used for the Project dust control and other construction activities during Project construction. An estimated 1,200 acre-feet of water will be used for decommissioning.

### **Construction Traffic**

Daily trip generation during the construction of the Project would be from delivery of equipment and supplies and the commuting of the construction workforce. Deliveries of equipment and supplies to the Project site would also vary over the construction period but have the potential to range from 5 to 40 daily trips, averaging approximately 10 daily trips. Parking for Project-related vehicles will be provided onsite during construction. **Table 2.0-5** summarizes project construction trip generation.

**TABLE 2.0-5**  
**DREW SOLAR PROJECT- CONSTRUCTION TRIP GENERATION**

| <b>Proposed Construction Related Traffic</b>                 | <b>ADT</b> | <b>6-7 AM</b> |            | <b>7-8 AM</b> |            | <b>4-5 PM</b> |            | <b>5-6 PM</b> |            |
|--|------------|---------------|------------|---------------|------------|---------------|------------|---------------|------------|
|  |            | <b>IN</b>     | <b>OUT</b> | <b>IN</b>     | <b>OUT</b> | <b>IN</b>     | <b>OUT</b> | <b>IN</b>     | <b>OUT</b> |
| Construction Workers on 4-10 Shift (75% of 250) <sup>1</sup> | 282        | 141           | 0          | 0             | 0          | 0             | 0          | 0             | 141        |
| Construction Workers on 5-8 Shift (25% of 250) <sup>2</sup>  | 94         | 0             | 0          | 47            | 0          | 0             | 47         | 0             | 0          |
| Equipment and Construction Trucks (with PCE) <sup>3</sup>    | 60         | 3             | 3          | 3             | 3          | 3             | 3          | 3             | 3          |
| Total Traffic During Peak Construction Period                | 436        | 144           | 3          | 50            | 3          | 3             | 50         | 3             | 144        |
| <b>Daily and Higher Peak Hour Used For Analysis</b>          | <b>436</b> | <b>144</b>    | <b>3</b>   |               |            |               |            | <b>3</b>      | <b>144</b> |

Notes: 1) Applicant estimates the 4 days at 10 hrs/day (4-10s) shift to include about 188 workers (75% of the total 250 peak work force) with about 25% carpooling (47) and riding with the 75% (141), thus the inbound is 141 trips and the ADT is 282. 2) Applicant estimates the 5 days at 8 hrs/day (5-8) shift to include about 62 workers (25% of the total 250 peak work force) with about 25% carpooling (15) and riding with the 75% (47), thus the inbound is 47 and the ADT is 94. 3) Approx. 10 daily trucks with a Passenger Car Equivalent (PCE) factor of 3 applied to each truck equals 60 ADT (10 trucks x 2 x 3 PCE = 60 ADT) that are anticipated to have a frequency of about 1 in and 1 out per hour for a peak period volume of 6 (with PCE).

Based on the expected trips generated, traffic on the local roads would increase during construction but impacts to current traffic patterns are anticipated to be minimal. With a phased Project, the total number of trips generated during construction would be about the same, but the number of daily trips would be reduced and the number of days to complete construction would be extended resulting in a decrease in intensity.

### **Storm Water**

The Proposed Project would retain to the greatest extent feasible the existing drainage characteristics of the Project site. Existing low-lying areas which receive runoff will continue to do so in the proposed conditions. Shallow on-site retention basins will be utilized. Where on-site soils have the potential to

## **2.0 PROJECT DESCRIPTION**

---

infiltrate runoff, runoff will be infiltrated. Where infiltration is not feasible, runoff may be detained and slowly released to the IID Drain system such that the peak flowrate of runoff from the 100-year storm event in the proposed condition is equal to or less than it is in the existing condition.

### **Staging Areas**

If the Project is constructed in phases, it is anticipated to be constructed in a counterclockwise manner starting with the parcel that is across the street from the existing Drew Switchyard. It is anticipated that any staging would take place within the parcel that is under construction.

### **Waste**

Small amounts of trash would be generated during construction from packaging materials delivered to the Project site. Construction related waste would be transported to a local landfill authorized to accept this waste for disposal or an appropriate recycling center authorized to accept recyclable materials.

### **Hazardous Materials**

Very little hazardous waste (waste oil and lubricants, spill clean-ups, etc.) is expected to be generated from the Project during construction and decommissioning. Fuel that may be used on site during construction and decommissioning would be stored in secondary containment. The Project will also be required to comply with State laws and County Ordinance restrictions which regulate and control hazardous materials.

Energy Storage systems comprised of compressed air or pumped storage, lithium (ion, oxygen, polymer, phosphate, sulphur), Nickel Metal Hydride, Nickel Cadmium, Lead Acid, antiperovskites or other batteries include materials that run the risk of overheating and catching fire if equipment is not operated properly. The project would operate in accordance with all applicable regulatory requirements, including but not limited to the following, which would mitigate the risk of fires and other hazardous events:

#### **Energy Storage Buildings**

- Fire suppression system
- Climate control
- Mechanical ventilation
- Non-corrosive flooring e.g., fiberglass grated flooring

#### **Energy Storage Maintenance**

- Operate energy storage systems per manufacturer's specifications.
- Monitor energy storage levels and temperatures while operating.
- Ensure temperature controls are set to specified temperatures.
- Observe run time with a full-charged battery.
- Ensure batteries self-discharge.
- Check batteries before placing in storage for irregularities in charge status.

#### **Handling Precautions**

## **2.0 PROJECT DESCRIPTION**

---

- Avoid exposing lithium batteries to excessive vibration.
- Do not keep batteries in high or low temperatures.
- Always handle batteries with caution.
- Place batteries in storage after the building reaches compliant temperature levels.
- Do not use damaged batteries.
- In case of contact with fluid do not rub eyes. Immediately flush eyes.
- Wash hands after handling batteries.
- In the event of contact on clothing, change clothing immediately.

### **Sanitation**

Portable toilets would be located on site during construction and sanitary waste would be removed by a local contractor.

### **Off-Site Construction Activities**

The portion of the Gen-ties crossing the Caltrans right of way over State Route 98 (SR-98) into the existing Drew Switchyard parcel would be approximately 400 feet in length and would be either overhead or underground. A new bay will be constructed inside the existing Drew Switchyard as part of the Project Gen-ties. If the Gen-ties are overhead, there would be one monopole on either side of the SR-98 crossing similar to the monopole that currently exists on the north side of the existing Drew Switchyard. Collector lines will cross Drew Road and IID drains and canals. Drive approaches will be constructed on Drew, Kubler, and Pulliam Roads as well as SR-98.

### **E. OPERATIONS AND MAINTENANCE**

Once construction is completed, the Drew Solar Project begin its operational phase.

#### **Employees**

Approximately two to six full-time workers will be employed to operate the generating facility. These personnel will perform maintenance and security functions.

#### **Traffic**

No impact to current traffic patterns would result during operation of the Project. Operation of the Project site would be expected to generate approximately 4 to 10 trips per day from maintenance and security personnel.

#### **Security**

To ensure the safety of the public and the facility, the property will be fenced, security lighting may be installed, and signs will be posted. Access to the Project site will be controlled, and gates will be installed at the roads entering the property. The fence will be monitored periodically to detect any intrusion into the property. The Project proposes an up to 7-foot chain link fence with 3-strand barb wire placed at the top, extending to a total of up to 8 feet. Landscaping and entry monumentation will be maintained at the entrance to the O&M building(s).

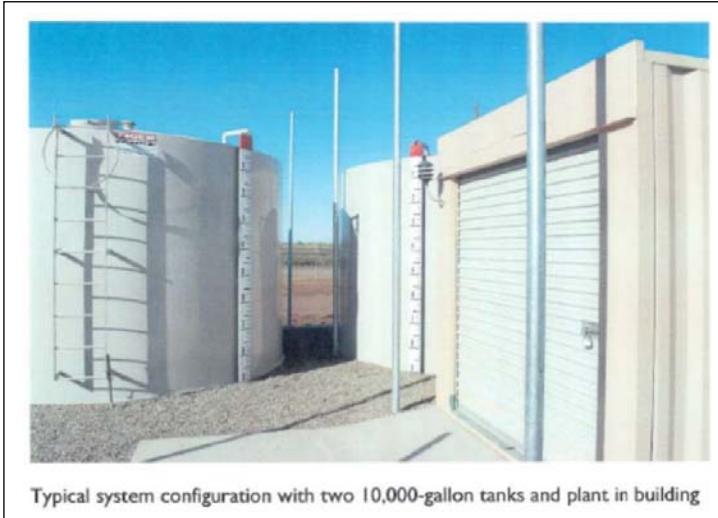

### Lighting System

The lighting system will provide operation and maintenance personnel with illumination in both normal and emergency conditions. Lighting will be designed to provide the minimum illumination needed to achieve safety and security objectives and will be shielded and oriented to focus illumination on the desired areas, minimizing light spillover.

### Water Use

The Project plans to secure water rights from the IID under the IID's Interim Water Supply Policy for Non-Agricultural Projects. In the event this isn't feasible, the Project will truck water to the Project site for operational purposes, or procure water from IID's applicable water policy/program at that time.

The water used during operations will be used for domestic use and fire protection. Water is typically procured from IID via a long-term Water Supply Agreement with a service pipe connection to an adjacent IID raw water canal. The Project may also use water to wash the solar modules should it be determined to be beneficial to the Project. The Project anticipates a requirement of approximately 60 acre-feet per year during plant operation. Water for fire protection will be stored in a 10,000-gallon tank onsite (similar to that shown in the image above). Project operational water use will be significantly less than the estimated total of 1,200 acre-feet of water to be used during construction, and also significantly less than the estimated total of 1,200 acre-feet of water to be used for decommissioning.

Typical system configuration with two 10,000-gallon tanks and plant in building

### Noise

The primary noise sources during operation of the Project are anticipated to be from inverter tracking motors and blowers (that are used to remove condensation from solar panels), which would be distributed throughout the facility.

Additional noise may be generated by equipment within the substation; typically this includes switches, protection and control equipment, transformers, and the incoming transmission lines. The noise generated by transmission lines and switches has previously been analyzed to be 25 dBA at 50 feet. Transformers within the substation would generate noise levels similar to those at the inverters. Substation switches do not generate an audible noise, and circuit breakers (70 dBA at 65 feet) would not be a common noise source, as they would only operate for short periods of time during an emergency event in order to protect the switches and transformers within the substation.

### Communications Systems

The Project will utilize telephone and internet services that will be provided via overhead or underground lines, microwave tower or via cellular service obtained from a local provider.

### Waste

Some waste material would be generated during normal operations, and would be hauled off-site. Sanitary waste generated during operations would go to project septic systems and/or periodically be pumped and hauled off-site and disposed of by a licensed contractor.

## **2.0 PROJECT DESCRIPTION**

---

The Applicant will provide appropriate training and supervision of on-site personnel throughout construction of all CUPs and regularly during operation of the project regarding management of materials and wastes, and responding to hazardous releases or spills or other Project site emergencies. This training will include the procedures to follow during any Project site emergency, and appropriate reporting of spills, releases, or other emergencies to Imperial County, and local emergency service providers. Either directly or through its contractors, the Applicant will hire several personnel to oversee all aspects of a hazardous materials management plan and follow Best Management Practices (BMPs).

### **Panel Washing & Project Water Use**

Solar panels may be washed on a periodic basis if it determined to be beneficial to the Project. Solar panels would be washed up to four times per year. Approximately 14 acre-feet of water per year of the 60 acre feet of water per year required for Project operations and maintenance will be used for panel washing. Fire protection is estimated to be 1 acre foot of water per year, sanitary water is estimated to be 5 acre feet of water per year, dust suppression is estimated to be 35 acre feet of water per year, and potable water is estimated to be 5 acre feet of water per year.

### **Weed and Vegetation Management**

Invasive / weedy species would be controlled and any non-invasive vegetation that re-establishes within the Project site would be controlled within the solar field. Vegetation growing within the boundaries of the Project Site would be periodically removed manually and/or treated with herbicides. The Applicant would be required to prepare a Pest Management Plan for submission to the Imperial County Agricultural Commission.

### **Miscellaneous**

Other maintenance activities that would be conducted include periodic testing of equipment, inspection and repair of project components, and maintenance of on-site roads and drainage systems (i.e. retention basin[s]).

### **Electricity Consumption**

The Proposed Project may consume an estimated 4.4 MW-hours (Station Service, Trackers, and backfeed) of electrical energy daily from the IID power system. This energy would be used to operate the solar panel trackers, the on-site security system and the solar facility monitoring and control system when the solar panels are not generating power.

### **Air Quality**

Normal operations of the Project would not result in any direct air emissions from the electricity production process as the PV solar panels convert sunlight directly into DC electricity. No fossil fuels are consumed in the process and no pollutants are emitted during normal operations. Daily air pollutant emission sources are anticipated to be limited to vehicular traffic and small engines associated with operations and maintenance activities.

### **Hazardous Material Handling and Storage**

The Project would not use or store large quantities of hazardous chemicals within the Project site during normal operations. Any hazardous materials brought to the Project site would be required to comply with all applicable local, state and federal regulations.

## **F. DECOMMISSIONING AND RECLAMATION PLANS**

The Project is processing a Development Agreement with Imperial County to enable and control a phased build-out of the Project that is capable of meeting changing market demands by authorizing initiation of the CUP or CUPs anytime within a 10 year period. Thereafter, the CUPs are valid for the

## 2.0 PROJECT DESCRIPTION

remaining period of 40 years from the date of the CUP approval. The requested Development Agreement would provide flexibility to allow the start of construction to commence for up to 10 years after the CUPs are approved. The proposed Project is expected to operate for 30 to 40 years. At the end of its useful life, the Applicant proposes to decommission the Project and reclaim the area associated with surface disturbance. Roads that benefit agricultural activities would be left in place.

The planned operational life of the facility is approximately 30 years. However, if the facility continues to be economically viable, it could be operated for a longer period. The Project will create a decommissioning plan that will be implemented at the end of the Project's life, and will adhere to Imperial County's decommissioning requirements, including, but not limited to:

- Description of the proposed decommissioning measures for the facility and for all appurtenances constructed as part of the facility.
- Description of the activities necessary to restore the Project site to its previous condition.
- Presentation of the costs associated with the proposed decommissioning measures. Discussion of conformance with applicable regulations and with local and regional plans.

In the phased buildout, the phases will be decommissioned independently of one another.

### I. DESIGN FEATURES AND BEST MANAGEMENT PRACTICES

**Table 2.0-6** identifies draft Applicant-proposed measures that would be incorporated into the proposed Project to reduce impacts to resources.

**TABLE 2.0-6**  
**APPLICANT PROPOSED MEASURES INCLUDED AS PART OF THE DREW SOLAR PROJECT**

| AESTHETICS   |
|--|
| <b>Visibility</b><br>The Project will provide landscaping at Project entrances and the operations and maintenance buildings.   |
| <b>AIR QUALITY</b><br>Comply with APCD Rule 800 during construction, including but not limited to the following:<br>Stabilize all disturbed areas with water, tarps, dust suppressants, or soil binders.<br>Most construction equipment will be equipped with EPA Tier 2 or better engine designation.<br>Bulk Materials shall be completely covered unless six inches of freeboard space from the top of the container is maintained with no spillage and loss of Bulk Material. In addition, the cargo compartment of all Haul Trucks is to be cleaned and/or washed at delivery site after removal of Bulk Material.<br>Clean all Track-Out or Carry-Out at the end of each workday or immediately when mud or dirt extends a cumulative distance of 50 linear feet or more onto a paved road within an Urban area.<br>Vehicle speed for all construction vehicles shall not exceed 15 mph on any unpaved surface at the construction site. |
| <b>BIOLOGICAL RESOURCES</b><br>The project will complete preconstruction clearance surveys for burrowing owl within 30 days prior to construction. If active burrows are present within the project footprint, the following design features will be implemented. The owls will be passively relocated. This includes covering or excavating all burrows and installing one-way doors into occupied burrows. This will allow any animals inside to leave the burrow, but will exclude any animals from re-entering the burrow. The   |

## 2.0 PROJECT DESCRIPTION

**TABLE 2.0-6**  
**APPLICANT PROPOSED MEASURES INCLUDED AS PART OF THE DREW SOLAR PROJECT**

burrows should then be excavated and filled to prevent reuse. The proposed project shall also comply with the following mitigation measures:

**MM-BIO-1 General Avoidance and Minimization Measures**

***Debris/Non-native Vegetation/Pollution***

- Fully covered trash receptacles that are animal-proof will be installed and used onsite to contain all food, food scraps, food wrappers, beverage containers, and other miscellaneous trash.
- No litter or debris will be discharged into state-jurisdictional waters.
- Work areas shall be kept clean of debris, such as trash, and construction materials.

***Vehicle and Equipment Restrictions and Maintenance***

- Night-time construction should be minimized to the extent possible. However, if night-time activity (e.g., equipment maintenance) is necessary, then the speed limit shall be 10 mph.
- Vehicle operation within jurisdictional resources when surface water is present will be prohibited except as necessary to perform work in IID facilities pursuant to ACOE, RWQCB, and/or CDFW permits and/or authorizations. Any equipment or vehicles driven and/or operated within or adjacent to a state-jurisdictional channel will be checked and maintained by the operator daily to prevent leaks of oil or other petroleum products that could be deleterious to aquatic life if introduced to the watercourse.
- Vehicles and equipment access will be limited to the identified impact areas and speed limit of 15 mph will be enforced. The work areas and sensitive areas will be flagged prior to construction in order to ensure construction activities remain within the approved work limits. During operations and maintenance, vehicles and equipment will be restricted from entering sensitive habitat, and limited to maintenance access roads, where feasible, and the minimal area necessary to perform the work.
- Staging and storage areas for spoils, equipment, materials, fuels, lubricants, and solvents will be located outside the state-jurisdictional channels and within the designated impact area. Stationary equipment, such as motors, pumps, generators, compressors, and welders, located adjacent to state-jurisdictional waters shall be positioned over drip-pans or other containment. Prior to refueling and lubrication, vehicles and other equipment shall be moved away from the jurisdictional waters.

**TABLE 2.0-6**  
**APPLICANT PROPOSED MEASURES INCLUDED AS PART OF THE DREW SOLAR PROJECT**

|   |  |
|---|--|
| <p><b><i>Other Restrictions on Activities and Personnel</i></b></p> <ul style="list-style-type: none"><li>• No pets, such as cats or dogs, permitted on the Project site during construction or operations and maintenance.</li><li>• Any contractor, employee, or agency personnel who kills, injures, or traps a wildlife species shall immediately report the incident to the Project biologist during construction and the operations manager during operations and maintenance.</li><li>• All pipes, culverts, or similar structures with a diameter of 4 inches or more that are stored at a construction site for one or more overnight periods shall be covered to prevent entry to nesting birds and other wildlife.</li></ul> |  |
| <b>MM-BIO-2</b>   | <p><b>Environmental Awareness Training, Biological Monitoring, and Compliance</b></p> <p><b><i>Worker Environmental Awareness Program and Ongoing Training</i></b></p> <p>Prior to the initiation of any on-site grading, all construction/contractor personnel working on site must complete training through a Worker Environmental Awareness Program (WEAP). New construction workers engaged in construction activities (e.g., grading, utility installation, etc.) shall complete WEAP training within the first week of deployment on the Project site. Additionally, operational staff shall complete WEAP training prior to deployment on the Project site.</p> <p><b><i>Biological Monitoring and Compliance Documentation</i></b></p> <p>The Project biologist shall perform the biological monitoring and compliance documentation for the Project during construction, including the following:</p> <ul style="list-style-type: none"><li>• Prior to the initiation of any on-site grading, the Project biologist will document that required pre-construction surveys and/or relocation efforts have been implemented.</li><li>• The Project biologist will periodically monitor activities during initial grading.</li><li>• The Project biologist will note any evidence of trash and, if present, communicate the presence and requirement to remove the trash to the construction manager.</li><li>• The Project Biologist shall have the following minimum qualifications: (1) Have a bachelor's degree in biological sciences, zoology, botany, ecology or a closely related field; (2) Have at least 2 years of experience in biological compliance for construction projects; and (3) Have at least 1 year of field experience with</li></ul> |

## 2.0 PROJECT DESCRIPTION

**TABLE 2.0-6**  
**APPLICANT PROPOSED MEASURES INCLUDED AS PART OF THE DREW SOLAR PROJECT**

biological resources found in the geographic region of the Project.

**MM-BIO-3 Burrowing Owl Surveys and Avoidance/Relocation.**

No more than 14 days prior to ground-disturbing activities (vegetation clearance, grading), a qualified wildlife biologist (i.e., a wildlife biologist with previous burrowing owl survey experience) shall conduct pre-construction take avoidance surveys on and within 200 meters (656 feet) of the construction zone (where safe and legally accessible) to identify occupied breeding or wintering burrowing owl burrows. The two-pass take avoidance burrowing owl surveys shall be conducted in accordance with the Staff Report on Burrowing Owl Mitigation (2012 Staff Report; CDFG 2012) and shall consist of walking parallel transects 7 to 20 meters apart, adjusting for vegetation height and density as needed, and noting any suitably sized burrows with fresh burrowing owl sign or presence of burrowing owls. As each burrow is investigated, biologists shall also look for signs of American badger and desert kit fox. Copies of the burrowing owl survey results will be submitted to the CDFW.

If burrowing owls are detected on site, no ground-disturbing activities will be permitted within 200 meters (656 feet) of an occupied burrow during the breeding season (February 1 to August 31), unless otherwise authorized by CDFW. During the nonbreeding season (September 1 to January 31), ground-disturbing work can proceed near active burrows as long as the work occurs no closer than 50 meters (165 feet) from the burrow. Depending on the level of disturbance, a smaller buffer may be established in consultation with CDFW.

If avoidance of active burrows is infeasible during the nonbreeding season, then, before breeding behavior is exhibited and after the burrow is confirmed empty by site surveillance and/or scoping, a qualified biologist shall implement a passive relocation program in accordance with Appendix E (i.e., Example Components for Burrowing Owl Artificial Burrow and Exclusion Plans) of the 2012 Staff Report. Passive relocation consists of excluding burrowing owls from occupied burrows by closing or collapsing the burrows and providing suitable artificial burrows nearby for the excluded burrowing owls.

Where required buffering will not be feasible, passive relocation is an option in consultation with CDFW, but it is preferred to install appropriate artificial burrows (in accordance with the negotiated Plan) and then let the owls decide whether they would like to abandon the existing burrow. Only burrows that are in danger by construction should be collapsed if at all possible.

A Burrowing Owl Relocation Plan will be prepared and approved by CDFW prior to commencement of burrowing owl exclusion activities if this method of mitigation is required. The plan will detail the procedures of the passive relocation effort, the location of constructed replacement burrows, design of replacement burrows, and post relocation monitoring requirements.

**MM-BIO-4 Nesting Bird Pre-construction Surveys and Avoidance Plan.**

The Project biologist shall conduct pre-construction surveys no earlier than 7 days prior

**TABLE 2.0-6**  
**APPLICANT PROPOSED MEASURES INCLUDED AS PART OF THE DREW SOLAR PROJECT**

|  |  |
|--|--|
| <p>to any on-site grading and construction activities that occurs during the nesting season defined as February 1 – September 15 or as determined by the Project biologist. Pre-construction surveys shall be conducted within the designated construction area and a 500-foot buffer (where safe and legally accessible). Burrowing owl measures are addressed in MM-BIO-3.</p> <p>The purpose of the pre-construction surveys will be to determine whether occupied nests are present in the construction zone or within 500 feet of the construction zone boundary on lands that are legally accessible.</p> <p>If occupied nests are found, then limits of construction to avoid occupied nests shall be established by the Project biologist in the field with flagging, fencing, or other appropriate barriers (e.g., 250 feet around active passerine nests to 500 feet around active raptor nests), and construction personnel shall be instructed on the sensitivity of nest areas. The Project biologist may adjust the 250-foot or 500-foot setback at his or her discretion depending on the species and the location of the nest (e.g., if the nest is well protected in an area buffered by dense vegetation the setback may be reduced). Once a Project biologist has determined that the birds have fledged and are no longer reliant upon the nest or parental care for survival, construction may proceed.</p> |  |
| <p><b>MM-BIO-5</b> All transmission towers and lines are designed to conform to Avian Power Line Interaction Committee (APLIC) standards. APLIC standards identify the necessary physical separation between energized and/or grounded structures, conductors, hardware, or equipment to avoid the potential for that to be bridged by birds, thus avoiding the potential for electrocution. The Proposed Project shall implement recommendations by the APLIC (2006, 2012) to protect raptors and other birds.</p>  |  |
| <p><b>CULTURAL RESOURCES</b></p> <p>Archaeological monitoring shall occur during drilling activities for the Gen-ties, and if only disturbed sediments or other sediments and formations are identified that do not have the potential to contain archaeological resources, then monitoring may be reduced or terminated.</p> <p>In the event that archaeological resources (sites, features, or artifacts) are exposed during construction activities for the Project, all construction work occurring within 100 feet of the find shall immediately stop until a qualified archaeologist meeting the Secretary of the Interior's Professional Qualification Standards can evaluate the significance of the find and determine whether or not additional study is warranted. If the discovery is clearly not significant (e.g., and isolate) the archaeologist may simply record the find and allow work to continue. If the discovery proves potentially significant under CEQA, additional work such as preparation of an</p>   |  |

## 2.0 PROJECT DESCRIPTION

**TABLE 2.0-6**  
**APPLICANT PROPOSED MEASURES INCLUDED AS PART OF THE DREW SOLAR PROJECT**

|   |
|---|
| archaeological treatment plan, testing, or data recovery may be warranted.  |
| In accordance with Section 7050.5 of the California Health and Safety Code, if human remains are found, the County Coroner shall be immediately notified of the discovery. No further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains shall occur until the County Coroner has determined, within 2 working days of notification of the discovery, the appropriate treatment and disposition of the human remains. If the County Coroner determines that the remains are, or are believed to be, Native American, he or she shall notify the NAHC in Sacramento within 24 hours. In accordance with California Public Resources Code Section 5097.98, the NAHC must immediately notify those persons it believes to be the MLD from the deceased Native American. The MLD shall complete inspection within 48 hours of being granted access to the site. The designated Native American representative would then determine, in consultation with the property owner, the disposition of the human remains. |
| <b>HAZARDS AND HAZARDOUS MATERIALS</b>  |
| Prior to commencement of construction of a CUP, all trash and debris will be removed from the CUP parcels of the Project and properly disposed.   |
| <b>HYDROLOGY AND WATER QUALITY</b>  |
| <b>Flood Hazard</b><br>The Project will make best efforts to avoid constructing facilities within a flood hazard zone; however, in the event some facilities are required to be constructed in flood hazard zone, the Project will design its facilities to meet Imperial County Building Standards. The project will be designed to comply with Imperial County and IID storm water retention standards.   |
| <b>Construction Activities</b><br>Prior to the issuance of the first grading permit, the developer shall prepare and submit a Storm Water Pollution Prevention Plan (SWPPP), and receive coverage under the General Construction National Pollutant Discharge Elimination System Permit from the California State Water Resources Control Board. The SWPPP shall include source control and treatment control BMPs. Possible source control BMPs include, but are not limited to: <ul style="list-style-type: none"><li>• trash storage;</li><li>• integrated pest management;</li><li>• efficient irrigation and landscape design; and,</li><li>• property owner educational materials regarding source control management.</li></ul> Treatment control BMPs will be comprised of detention basins to remove trash and pollutants such as sediment, nutrients, metals, bacteria, oil and grease, and organics.   |
| <b>GEOLOGY AND SOILS</b><br>Prior to approval of final engineering and grading plans for the Project, the County shall verify that all recommendations contained in the Geotechnical Investigation Report have been incorporated into all final engineering and grading plans. This report identifies specific measures for mitigating geotechnical conditions on the Project site, and addresses site preparation, foundations and settlements, slabs-on-grade, concrete mixes and corrosivity, seismic design, and pavement design. The County's Public Works Department shall review grading plans prior to finalization, to verify plan compliance with the recommendations of the Geotechnical Investigation Report. All development on the Project site shall be in accordance with Title 24, California Code of Regulations.   |

**TABLE 2.0-6**  
**APPLICANT PROPOSED MEASURES INCLUDED AS PART OF THE DREW SOLAR PROJECT**

| TRANSPORTATION AND CIRCULATION   |
|--|
| Construction traffic will minimize use of unpaved roads to the extent feasible. Roads will be photographed prior to construction and Project related impacts to County roads will be repaired. Before construction a Traffic Control Plan will be prepared for the Imperial County Department of Public Works, and a Traffic Management Plan will be prepared for Caltrans for State Route 98 encroachments. |
| PUBLIC HEALTH AND SAFETY   |
| <p><b><i>Fire Prevention</i></b><br/> A Fire Prevention and Response Plan (FPRP) will be developed and implemented during construction, operation, and maintenance of the Project.</p>   |
| <p><b><i>Security</i></b><br/> The Project will contract with a security company to protect the facility.<br/> A perimeter fence with 3 strands of barbed wire will be placed along the Project perimeter to keep people out of the facility.</p>  |
| NOISE  |
| The use of noise-generating and vibration-generating construction equipment will not begin before 7:00 a.m. during weekdays or 9:00 a.m. on Saturday per the County General Plan Noise Element.  |

## 2.2 ALTERNATIVES

### 2.2.1 ALTERNATIVE 1 - REDUCED PRIME FARMLAND ALTERNATIVE

This alternative would exclude the portion of the proposed Project west of Drew Road (CUPs 17-0035 & 18-0001), and would reduce potential impacts to Prime Farmland.

### 2.2.2 ALTERNATIVE 2 - NO PROJECT ALTERNATIVE

CEQA Guidelines Section 15126.6(e)(1) requires that a No Project Alternative be analyzed in order to allow the decision-makers to compare the impacts of approving a proposed Project with the impacts of not approving the proposed Project. Under the No Project Alternative, the proposed Drew Solar Project would not be developed. No GPA, Zone Change, Variance or CUP applications would be approved. The Project site could remain in its existing condition as agricultural land owned by the IID.

These are discussed in detail in Chapter 6.0, Alternatives.

## 2.3 INTENDED USES OF THE EIR/AUTHORIZING ACTIONS

The EIR is intended to provide documentation pursuant to CEQA to cover all local, regional, and state permits and approvals which may be needed or are desirable in order to implement the proposed project. Discretionary actions and approvals by the Imperial County Planning Commission and/or Board of Supervisors for the proposed Project or its alternatives may include, but are not limited to:

## **2.0 PROJECT DESCRIPTION**

---

### **2.3.1 DISCRETIONARY ACTIONS AND APPROVALS**

#### **A. COUNTY OF IMPERIAL**

In conformance with Sections 15050 and 15367 of the CEQA Guidelines, the County of Imperial has been designated the "lead agency," defined as, "the public agency which has the principal responsibility for carrying out or approving a project." Discretionary actions and approvals by the Imperial County Planning Commission and/or Board of Supervisors for the proposed Project or its alternatives may include, but are not limited to:

##### **Development Agreement**

The Project is processing a Development Agreement with Imperial County to enable and control a phased build-out of the Project that is capable of meeting changing market demands by authorizing initiation of the CUP or CUPs anytime within a 10 year period. Thereafter, the CUPs are valid for the remaining period of 40 years from the date of the CUP approval. The requested Development Agreement would provide flexibility to allow the start of construction to commence for up to 10 years after the CUPs are approved.

##### **Certification of the Final EIR**

After the required public review for the Draft EIR, Imperial County will respond to written comments, edit the document, and produce a Final EIR to be considered for certification by the Board of Supervisors prior to making a decision on the Project.

##### **Findings**

Following certification of the EIR, the Board of Supervisors must approve Findings pursuant to CEQA Guidelines Section 15091.

##### **Mitigation Monitoring and Reporting Program**

A Mitigation Monitoring and Reporting Program (MMRP) will be adopted as required by CEQA Guidelines Section 15097 to ensure that mitigation measures identified in the EIR are implemented as appropriate.

##### **General Plan Amendment**

The proposed Project will require approval of a General Plan Amendment (GPA) (17-0006) for amendment of the Renewable Energy & Transmission Element to create an Island Overlay for the Project Site, and amendment of the requirements for said Island Overlay. The Project shares a common boundary to an existing transmission source (i.e. the existing Drew Switchyard) and is adjacent to the existing Centinela Solar Farm.

##### **Zone Change**

Zone Change (ZC 17-0007) to add the RE Overlay Zone to the Project Site.

##### **Variance**

Variance (V 17-0003) for the entire proposed Project Area, including the existing Drew Switchyard, for power pole structures that are over 120 feet in height. With approval of the Variance, the proposed structures could be up to 180 feet in height.

##### **Conditional Use Permits**

The proposed Project will require a total of six CUPs (CUP 17-0031, CUP 17-0032, CUP 17-0033, CUP 17-0034, CUP 17-0035 and CUP 18-0001). Five CUPs will be required to develop solar energy generating

## **2.0 PROJECT DESCRIPTION**

---

systems including potential energy storage on lands zoned A-2, A-2-R, and A-3 per Title 9, Division 5: Zoning Areas Established, Chapter 8, Section 90508.02 and 90509.02; and one CUP (CUP 18-0001) to develop energy storage as a component of solar on lands currently zoned A-2 and A-3, per Title 9, Division 5: Zoning Areas Established, Chapter 8, Sections 90508.02 and 90509.02 (A-2 and A-3).

### **Development Agreement**

The Project is processing a Development Agreement with Imperial County to enable and control a phased build-out of the Project that is capable of meeting changing market demands by authorizing initiation of the CUP or CUPs anytime within a 10 year period. Thereafter, the CUPs are valid for the remaining period of 40 years from the date of the CUP approval. The requested Development Agreement would provide flexibility to allow the start of construction to commence for up to 10 years after the CUPs are approved.

### **Parcel Map**

The Project is processing a Parcel Map to fix the existing inconsistency with the legal and physical boundary of the SW ¼ Section of the Project Site (APNs: 052-170-039 & 052-170-067), including APN 052-170-030 to the north of the Project Site as part of the Parcel Map. In doing so the net farmable acreage of the Project Site will remain the same (762.8 net acres), and the gross acreage will increase from 844.2 gross acres to approximately 855 gross acres once the Parcel Map is recorded.

### **Lot Tie Agreements**

Lot Tie Agreement(s) to hold some or all of the parcels that are part of the Project together as a single parcel in order to reduce/eliminate the setbacks for interior property lines of parcels that are part of the Project and adjacent to one another.

## **B. DISCRETIONARY ACTIONS AND APPROVALS BY OTHER AGENCIES**

Responsible Agencies are those agencies that have discretionary approval over one or more actions involved with development of the proposed Project. Trustee Agencies are state agencies that have discretionary approval or jurisdiction by law over natural resources affected by a project. These agencies may include, but are not limited to the following:

- California Public Utility Commission (Authority to Enter into Power Purchase Agreement)
- California Department of Fish and Wildlife (Streambed Alteration Agreement)
- United States Fish and Wildlife Service (Section 7 Consultation)
- California Regional Water Quality Control Board (401 Water Quality Certification)
- United States Army Corps of Engineers (404 permit)
- Imperial County Air Pollution Control District
  - o Authority to Construct Permit for emergency backup generators

## **2.0 PROJECT DESCRIPTION**

---

### **2.3.2 SUBSEQUENT/CONCURRENT ENTITLEMENTS TO IMPLEMENT THE PROPOSED PROJECT**

A variety of ministerial actions and permits may be required by Imperial County to implement the components of the Proposed Project, including, but not limited to:

- Grading Plan for the solar field and energy storage site parcels: ICPDSD
- Construction Traffic Control Plan: ICDPW
- Building Permits: ICPDSD
- Dust Control Plan (Imperial County Air Pollution Control District)
- Rule 310 Exemption: ICAPCD
- Site Plan and Architectural Review: ICPDSD
- Construction Traffic Control Plan: ICDPW
- Encroachment Permits from for access to the project parcels from County roads, and for any proposed Country road crossings: ICDPW
- Occupancy Permits: ICPDSD
- On-site Water Treatment Permit: ICPDSD / ICEHS
- Private Sewage Disposal Permit to construct and operate a septic system and leach field for the O&M building(s), if proposed for the Proposed Project: ICEHS
- Ag Reclamation Plan/Decommissioning Plan: ICPDSD/ICDPW
- Minor-modifications to CUP to implement changes responsive to market conditions or changes imposed by other agencies with jurisdiction over the Proposed Project: ICPDSD
- Vacation of easements: ICDPW
- Abandonment of rights-of-way: ICDPW
- Pest Management Plan: Imperial County Agricultural Commissioner's Office
- Review of Plans/Access and Fire Water Requirements: Imperial County Fire Department

### **2.3.3 ACTIONS AND APPROVALS BY OTHER AGENCIES**

Responsible Agencies are those agencies that have approval over one or more actions involved with development of the Proposed Project. Trustee Agencies are state agencies that have approval or jurisdiction by law over natural resources affected by a project. These agencies may include, but are not limited to the following:

#### **IMPERIAL IRRIGATION DISTRICT (IID)**

Various approvals may be required from IID in conjunction with implementation of the proposed Project.

For the purposes of CEQA, wherever an IID facility (drain, irrigation canal, electric line, etc.) intersects the Project, an encroachment will occur as the Proposed Project would cross IID facilities with access points and electrical project electrical crossings. The Proposed Project may also drain into IID drain facilities. Due to the preliminary nature of the Project and the rapidly changing technology, the exact locations of proposed access and drainage encroachments, and project electrical crossings, are not known at this time; however approximate access points and crossing locations have been provided in **Figure 2.0-3**.

## **2.0 PROJECT DESCRIPTION**

---

The Project encroachments/crossings will not interfere with the purpose of IID's facilities. The following IID approvals, although not discretionary approvals, include, but are not limited to:

- Encroachment Permits/Agreements
- Electrical Crossings
- Water Supply Agreements
- Backfeed Service Agreement
- Electric Service Agreement

### **CALIFORNIA DEPARTMENT OF TRANSPORTATION**

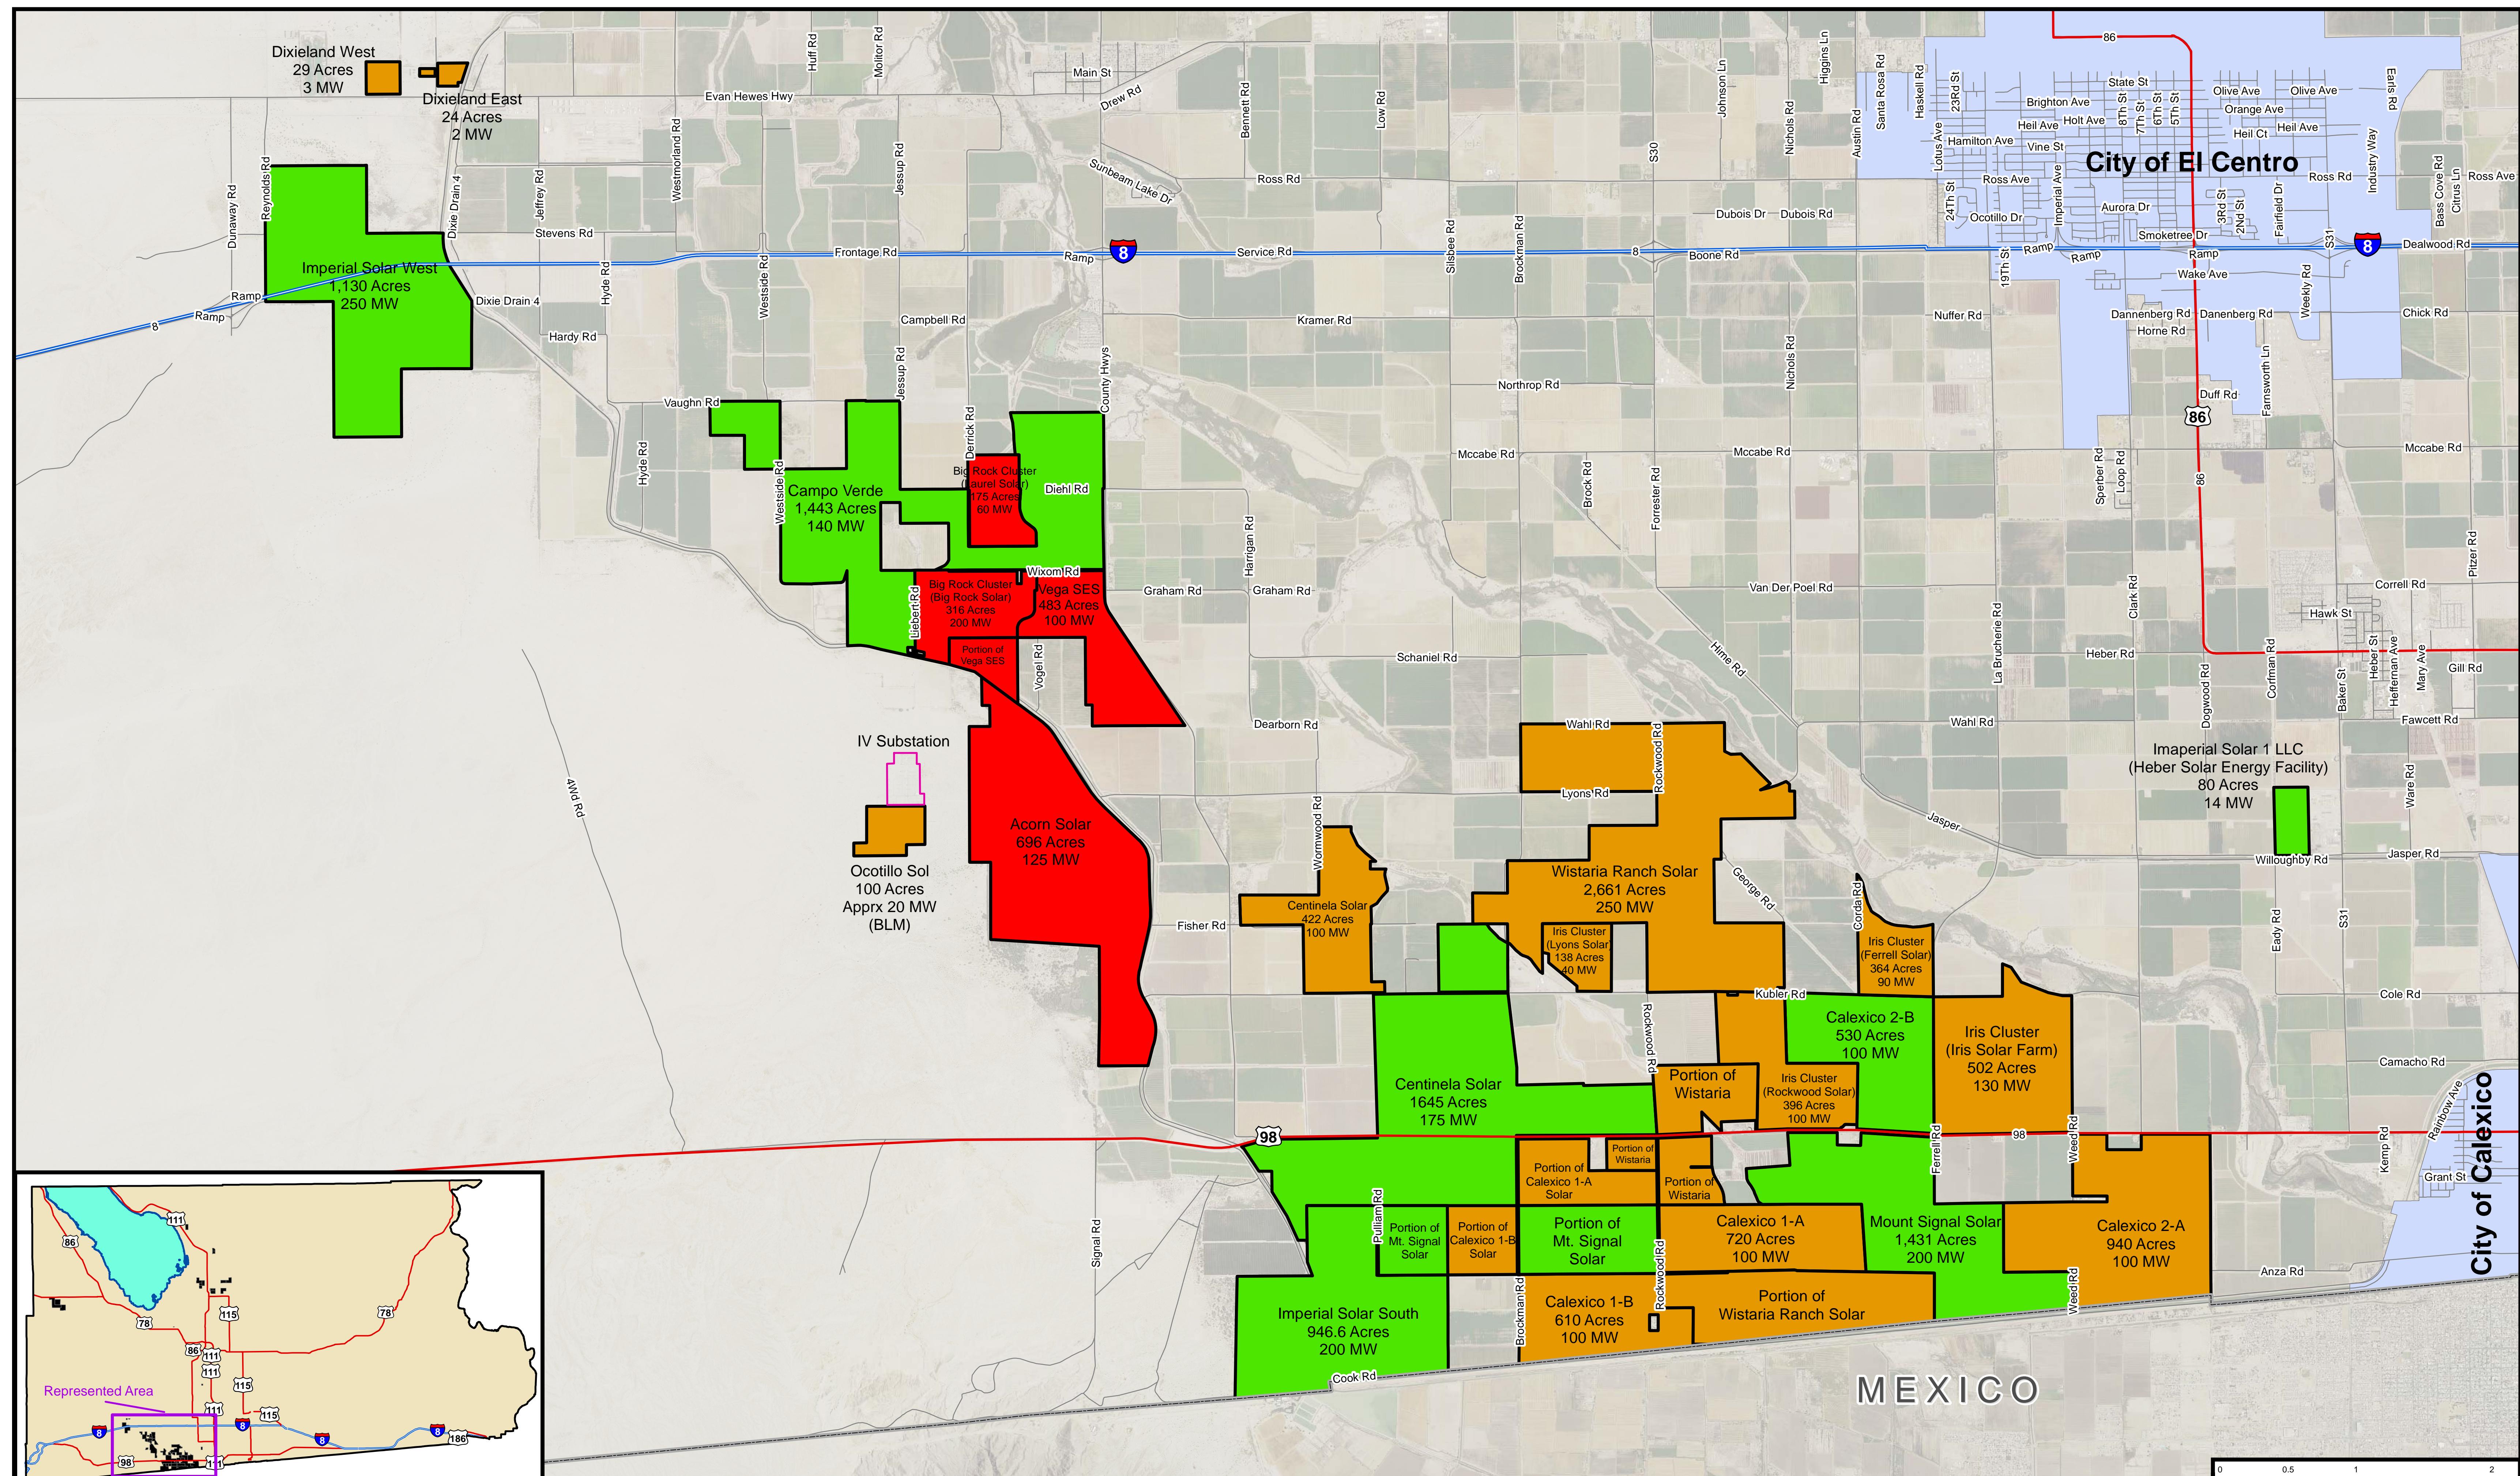

Project gen-tie lines will cross SR-98, and project access points are proposed along SR-98. Although not a discretionary approval, these crossings will require encroachment permits from the California Department of Transportation (Caltrans), as well as approval of a water pollution control program and transportation management plan by Caltrans.

### **California State Water Resources Control Board**

General Construction Storm Water Permit Notice of Intent/Storm Water Pollution Prevention Plan

## **Appendix L**

### **Cumulative Project (New Development) Information**

## Solar Farm Average Traffic Generation Rates

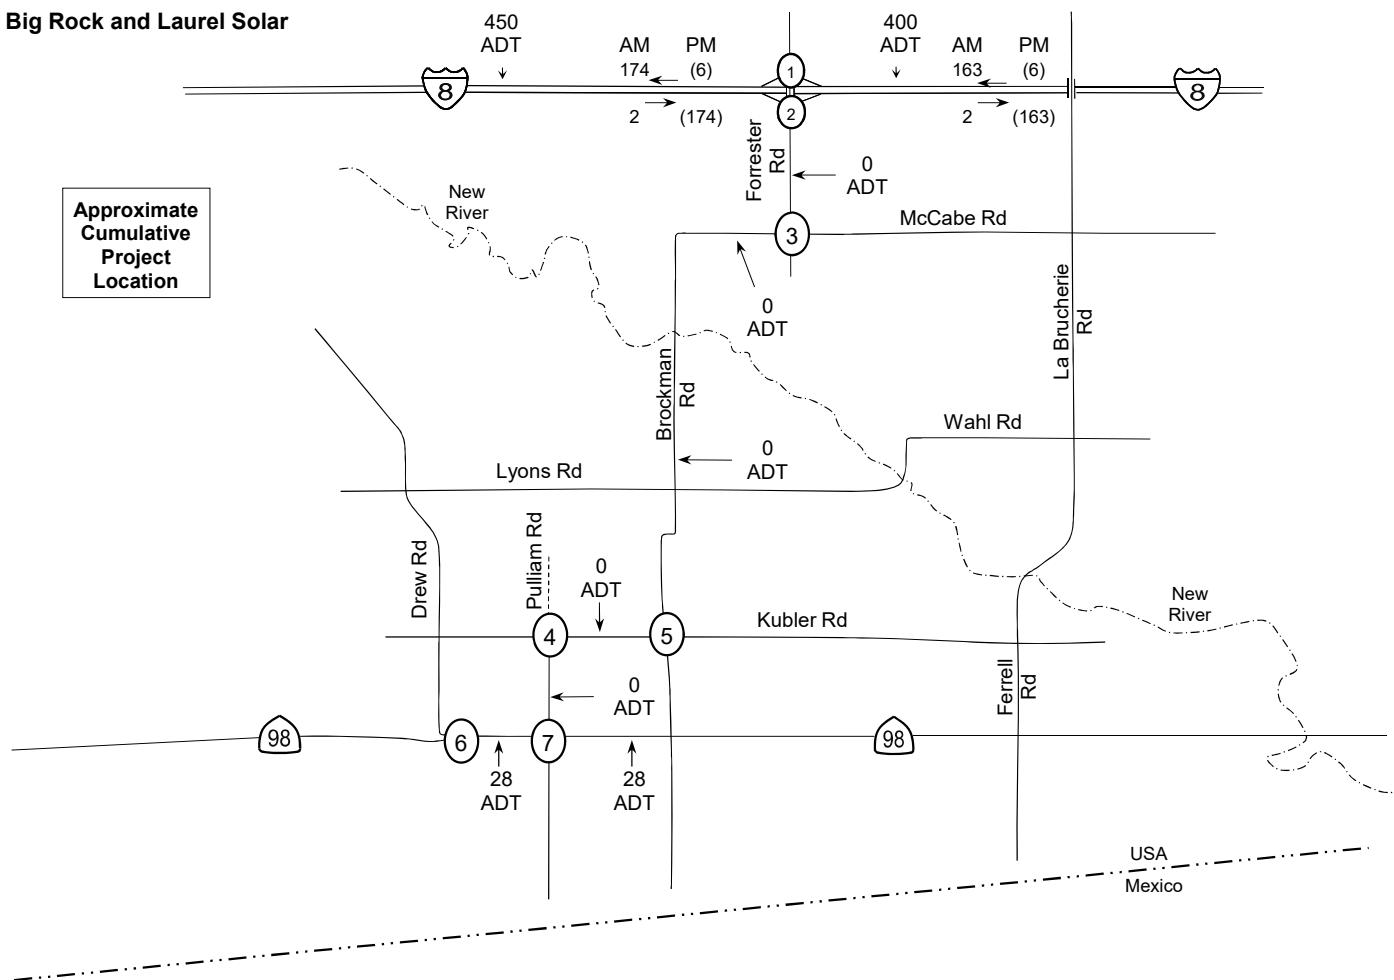

Several cumulative projects did not have technical studies and therefore did not have reported cumulative project traffic generation. Therefore, an average traffic generation rate from other existing solar farm projects was calculated based on the number of megawatts (MW). The following tables lists the traffic generation associated with each cumulative project and the associated MW.

| Project                   | Mega<br>Watts | ADT         | ADT /<br>MW | AM          |        |             | PM    |             |             |
|---------------------------|---------------|-------------|-------------|-------------|--------|-------------|-------|-------------|-------------|
|                           |               |             |             | IN          |        | OUT         | IN    |             | OUT         |

## 4.0 Project Description

The proposed Battery Energy Storage System will incorporate traditional lithium-ion batteries. The Project is proposed to be constructed in two phases, with Phase 1 designed to store up to 5 megawatt-hours of energy and Phase 2 up to 100 megawatt-hours of energy. Construction for Phase 1 is proposed to start in late 2016 and construction for Phase 2 is expected to begin in 2018.

### 4.1 Project Phase 1 Construction Trip Generation

Phase 1 construction (planned for late 2016) will occur over a period of approximately 66 days to install the foundations and connect the components to the existing controls system and project substation. Approximately 12 workers will be on site for 6 to 8 weeks generally from sunrise to 2:30 PM. In addition to the construction workers, three technicians will work an additional 3 to 6 weeks to commission and debug the system integration. Work hours for three technicians will be approximately from 8 PM to 5 AM to avoid interference with the facility when solar power is being generated. Phase 1 deliveries will occur throughout the construction period; however, peak deliveries are anticipated to occur in Week 3 with approximately 4 truck deliveries in the morning and 1 truck delivery in the afternoon. A water truck is anticipated to deliver water with an average of less than one truck per day; however, to be conservative one daily water truck is included in the trip generation. For trip generation purposes, truck trips are converted to a Passenger Car Equivalent (PCE) by multiplying each truck by a factor of 3 due to size and speed constraints. For Phase 1 the peak construction traffic is calculated at 66 ADT with 39 morning peak hour trips (27 inbound and 12 outbound) and 21 afternoon peak hour trips (3 inbound and 18 outbound) as shown in **Table 6**.

**TABLE 6: PHASE 1 PROJECT TRIP GENERATION (PASSENGER CAR EQUIVALENT)**

| Phase 1 Construction Related Traffic                                      | Daily Vehicles | ADT with PCE <sup>2</sup> | Morning Peak |     | Afternoon Peak |     |
|---|----------------|---------------------------|--------------|-----|----------------|-----|
|   |                |                           | IN           | OUT | IN             | OUT |
| Daytime Construction Workers (12 with no PCE) <sup>1</sup>                | 12             | 24                        | 12           | 0   | 0              | 12  |
| Nighttime Technicians 8 pm to 5 am (3 with no PCE) <sup>1</sup>           | 3              | 6                         | 0            | 0   | 0              | 0   |
| Equipment Deliveries and Construction Trucks (with PCE of 3) <sup>2</sup> | 5              | 30                        | 12           | 12  | 3              | 3   |
| Water Truck (with PCE of 3) <sup>2</sup>                                  | 1              | 6                         | 3            | 0   | 0              | 3   |
| Phase 1 Total Traffic During Peak Construction Period                     | 21             | 66                        | 27           | 12  | 3              | 18  |

ADT: Average Daily Trips. PCE: Passenger Car Equivalent factor of 3 applied to delivery and water trucks to provide an equivalent number of passenger cars. 1) Number of construction workers and construction trucks provided by applicant. 2) Passenger Car Equivalent (PCE) factor of 3 applied to each truck.

### 4.2 Project Phase 2 Construction Trip Generation

Phase 2 construction (expected in 2018) will occur over a period of approximately 160 days and will include site preparation; civil and foundation work (conduit, equipment pads, concrete foundations); building works (form and pour slab) framing, sheathing, roofing, mechanical, lighting and electrical, fire suppression); data support installation; batteries (install battery racks, install batteries in racks); electrical works (pull and test cable, set and test equipment, point of

interconnection work); certificate of occupancy; and commissioning. Approximately 30 workers will be on site generally from sunrise to 2:30 PM. In addition to the construction workers, three technicians will work an additional 3 to 6 weeks to commission and debug the system integration. Work hours for three technicians will be approximately from 8 PM to 5 AM to avoid interference with the facility when solar power is being generated. Phase 2 deliveries will occur throughout the construction period; however, peak deliveries are anticipated to occur in Month 3 with approximately 5 truck deliveries in the morning and 4 truck deliveries in the afternoon. A water truck is anticipated to deliver water with an average of less than one truck per day; therefore, to be conservative one daily water truck is included in the trip generation. For trip generation purposes, truck trips are converted to a Passenger Car Equivalent (PCE) by multiplying each truck by a factor of 3 due to size and speed constraints. For Phase 2 the peak construction traffic is calculated at 126 ADT with 63 morning peak hour trips (48 inbound and 15 outbound) and 57 afternoon peak hour trips (12 inbound and 45 outbound) as shown in **Table 7**.

**TABLE 7: PHASE 2 PROJECT TRIP GENERATION (PASSENGER CAR EQUIVALENT)**

| Phase 2 Construction Related Traffic                                      | Daily Vehicles | ADT with PCE <sup>2</sup> | Morning Peak |     | Afternoon Peak |     |
|---|----------------|---------------------------|--------------|-----|----------------|-----|
|   |                |                           | IN           | OUT | IN             | OUT |
| Daytime Construction Workers (12 with no PCE) <sup>1</sup>                | 30             | 60                        | 30           | 0   | 0              | 30  |
| Nighttime Technicians 8 pm to 5 am (3 with no PCE) <sup>1</sup>           | 3              | 6                         | 0            | 0   | 0              | 0   |
| Equipment Deliveries and Construction Trucks (with PCE of 3) <sup>2</sup> | 9              | 54                        | 15           | 15  | 12             | 12  |
| Water Truck (with PCE of 3) <sup>2</sup>                                  | 1              | 6                         | 3            | 0   | 0              | 3   |
| Phase 2 Total Traffic During Peak Construction Period                     | 43             | 126                       | 48           | 15  | 12             | 45  |

ADT: Average Daily Trips. PCE: Passenger Car Equivalent factor of 3 applied to delivery and water trucks to provide an equivalent number of passenger cars. 1) Number of construction workers and construction trucks provided by applicant. 2) Passenger Car Equivalent (PCE) factor of 3 applied to each truck.

The construction is anticipated to occur Monday through Friday; however, if extra work days are required, they would occur on Saturdays.

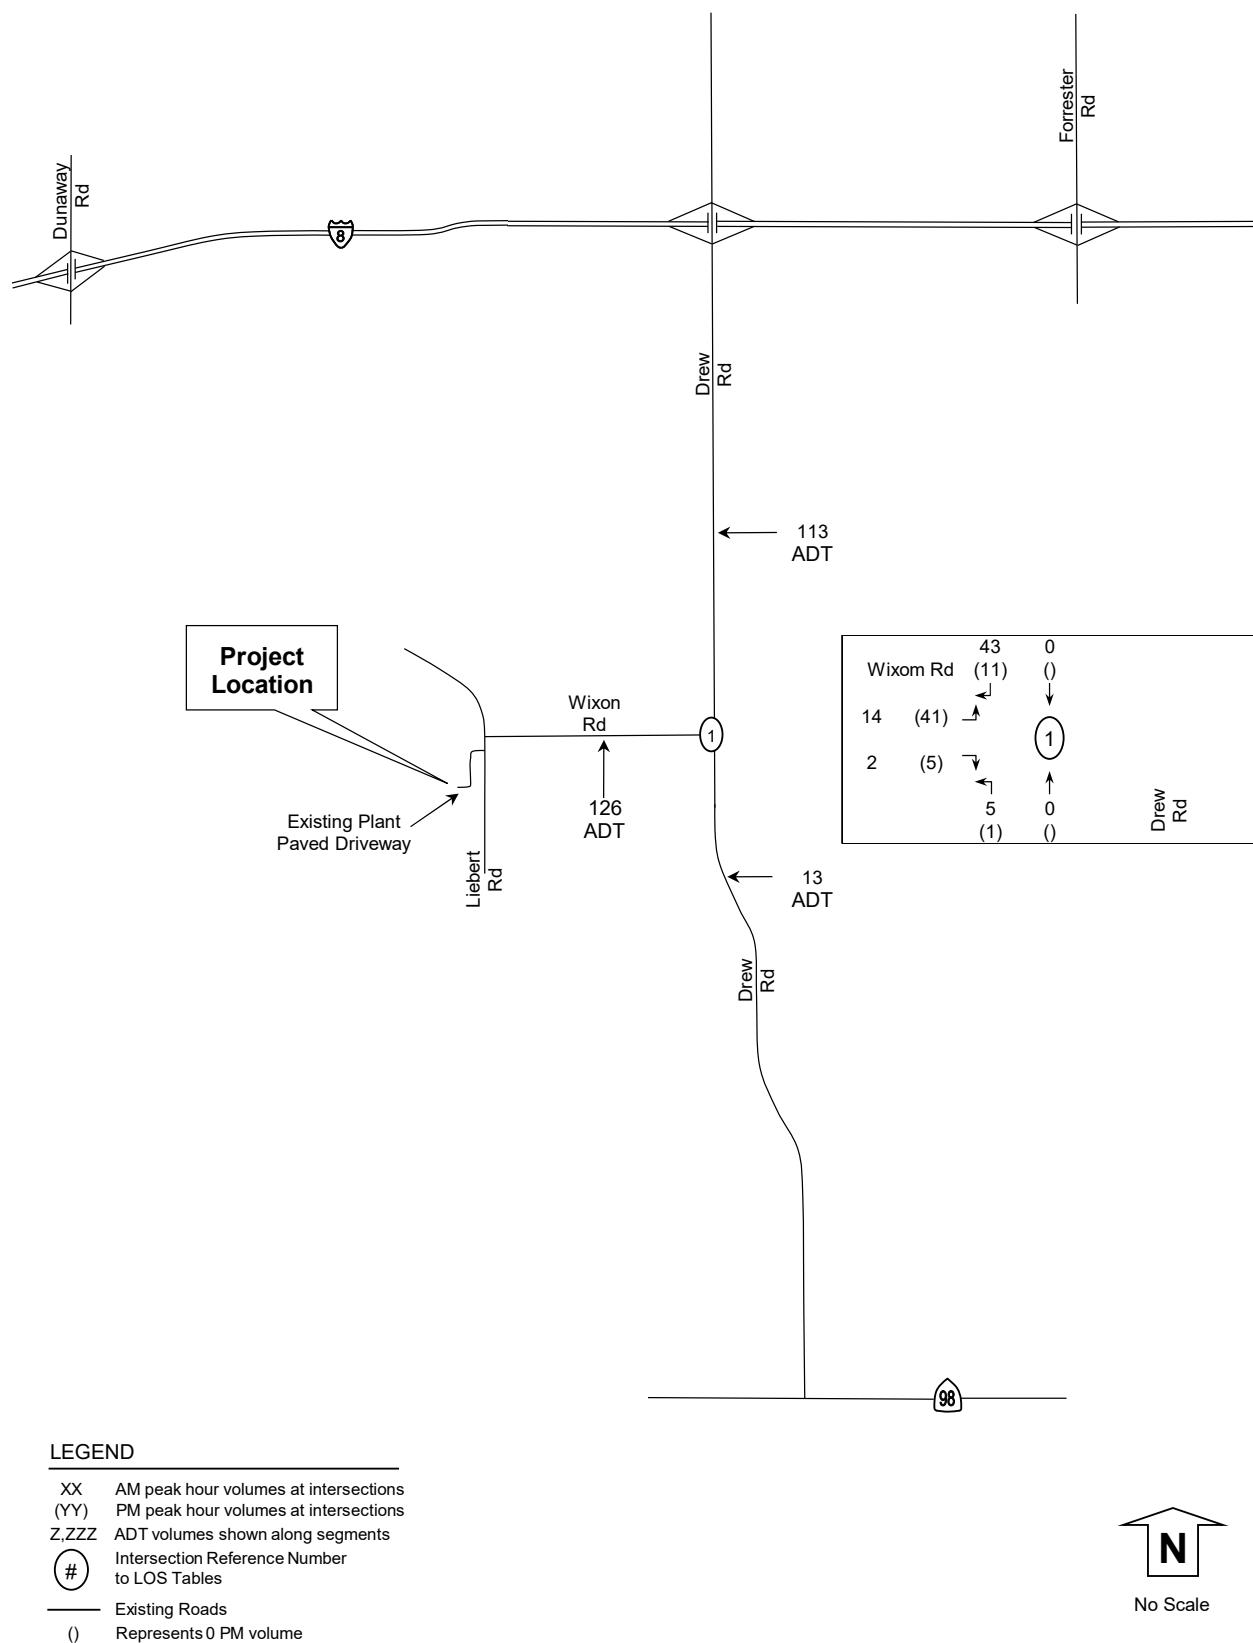

### 4.3 Project Operations and Maintenance Trip Generation

The post construction operations and maintenance of the Battery Energy Storage Facility will be monitored by existing six operators currently on-site as part of the existing Campo Verde Solar Facility operations. No additional full time staff is anticipated as part of the Battery Energy Storage Facility; however, technicians will be brought in if necessary, thus there is no anticipated new trip generation for the maintenance and project operations. Therefore, this traffic analysis is based on the higher and temporary construction traffic.

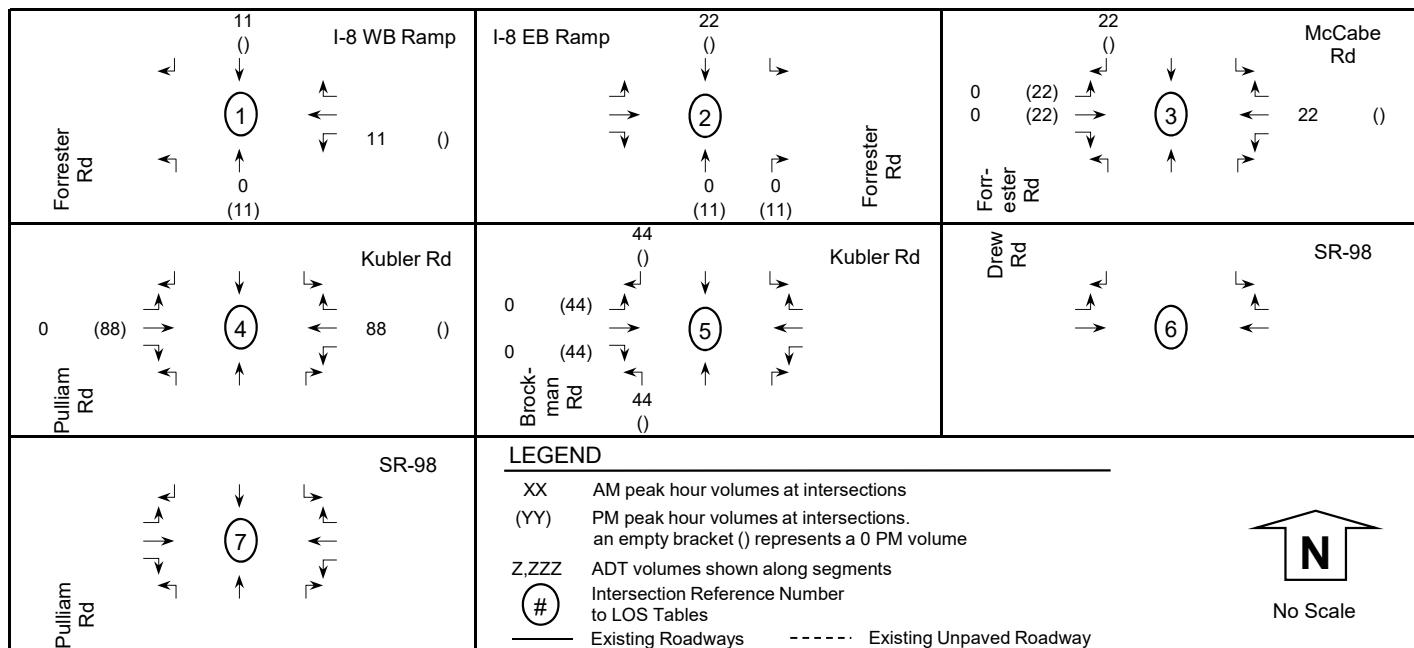

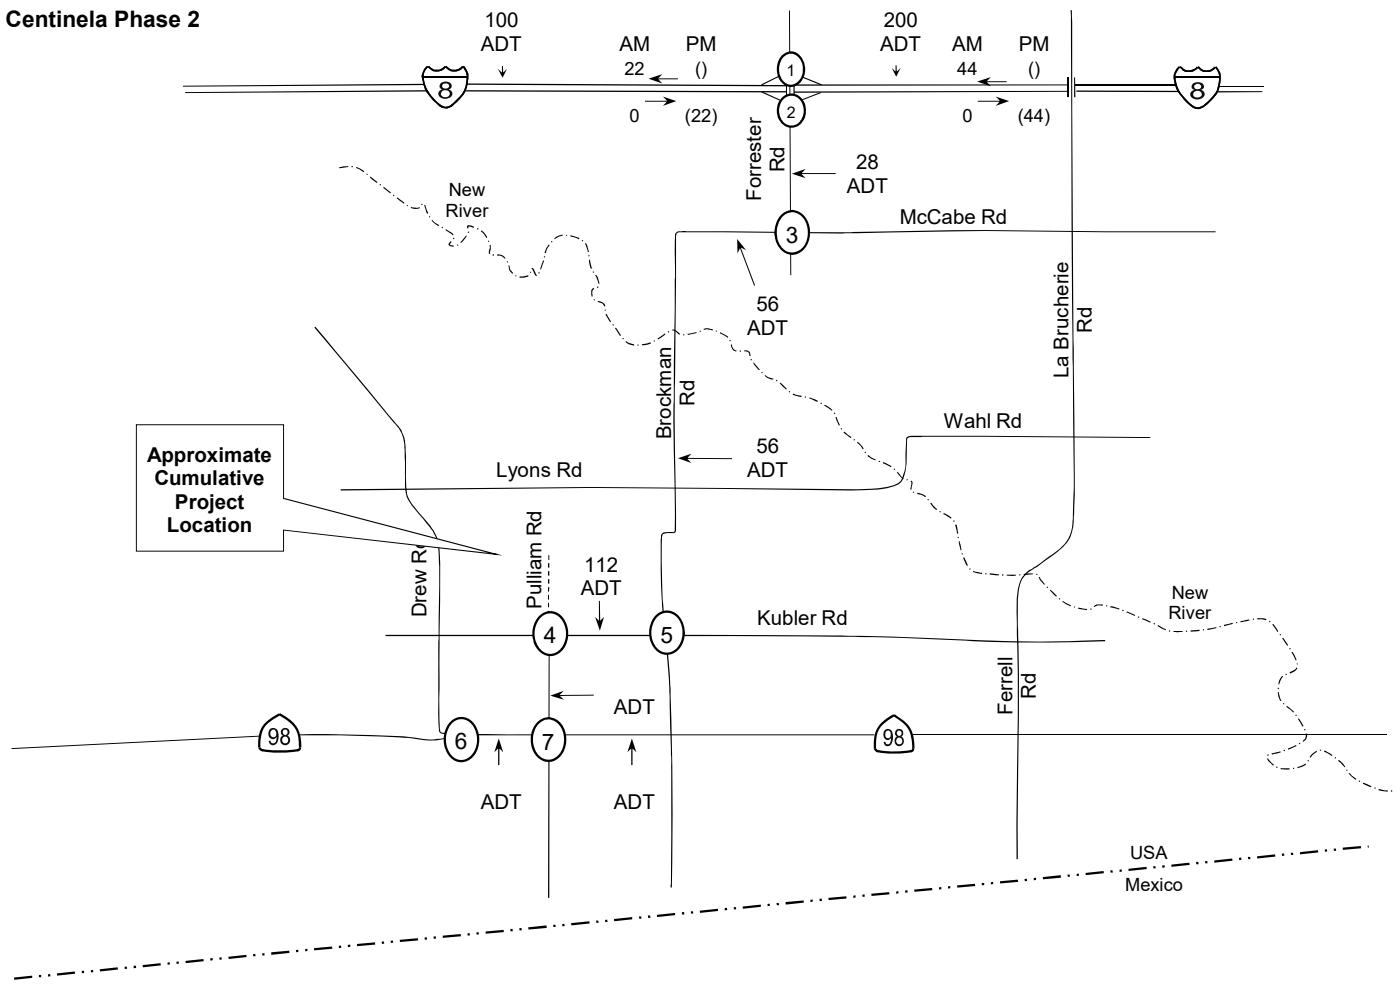

### 4.4 Construction Trip Distribution and Assignment

The trip distribution is based on the proximity to I-8 and SR-98, anticipated delivery of equipment, and construction workforce origination as shown in shown in **Figure 7**. The assignment of phase 1 construction traffic is shown in **Figure 8** while phase 2 construction traffic is shown in **Figure 9**.

Jim Minnick  
DIRECTOR

# Imperial County Planning & Development Services

## Planning / Building / Parks & Recreation

TO: Commissioner Charles Baker  
Commissioner Dennis Logue  
Commissioner Sandy Carver  
Commissioner Charles Lucas  
Commissioner Mike Goodsell

FROM: Jim Minnick, Secretary  
Airport Land Use Commission

SUBJECT: Public Hearing to consider the proposed Coyne Ranch Specific Plan, General Plan Amendment, Zone Change, Tract Map for consistency with the 1996 Airport Land Use Compatibility Plan (**ALUCP 13-17**)

DATE OF REPORT: September 26, 2017

A handwritten signature in black ink that reads "J. Minnick".

AGENDA ITEM NO: 1

HEARING DATE: October 18, 2017

HEARING TIME: 6:00 p.m.

HEARING LOCATION: County Administrative Center  
Board of Supervisors Chambers  
940 Main Street  
El Centro, CA 92243

### SECRETARY'S RECOMMENDATION

It is Staff's recommendation that the attached proposed project(s) for the proposed Coyne Ranch Specific Plan, General Plan Amendment, Zone Change & Tract Map (within the ALUCP's "C" Zone") could be deemed consistent with the 1996 Airport Land Use Compatibility Plan.

## **SECRETARY'S REPORT**

### **Project Location:**

The project is located on a 129 acre parcel within the Seeley Urban Area plan on the Northwest corner of Ross Road and Bennett Road; APN 051-450-009-000; legally described as that portion of the Par 1 PM 2285 of TR 189 Township 16 Range 12-13 129.45 acres.

The specific location of the proposed project location is found within the attached Imperial County Airport Compatibility Map, Zone C, of the 1996 Airport Land Use Compatibility Plan.

### **Project Description:**

The Planning & Development Services Department received the attached proposed Coyne Ranch Specific Plan 16-0001, General Plan Amendment, Zone Change 16-0002 and Tract Map 989 on September 2017. The proposed Specific Plan project is a multi-year build out residential development. The project will be built out in four (4) phases, and will include up to 546 residential units.

The proposed Specific Plan, General Plan Amendment, Zone Change & Major Subdivision have been submitted for the Airport Land Use Commission's review and determination of consistency with the 1996 Airport Land Use Compatibility Plan (ALUCP).

The proposed site is located within the attached "C Zone" of the Imperial County Airport's Compatibility Map, ALUCP Figure 3G.

The ALUCP's Compatibility Criteria for the C Zone, "Common Traffic Pattern zone, indicates a maximum density of six (6) dwelling units/per acre. The project is proposing a possible total of 546 residential units on the 129.45 acre parcel. This calculates to 4.21 units per acre. The development of 435 single family homes on 77 acres equals 5.65 units per acre, however, a portion of the proposed Specific Plan allows up to 111 multi-family units on 7.55 acres. This calculation of (14.70 per acre) which puts a small portion of the total project area over the 6 unit per acre limit per the Class C Airport Land Use restrictions.

Other uses (people/ac)<sup>2</sup> for a maximum of 200 per acre and a required open Land<sup>3</sup> of 15% of project site. (129 acres x 15%) = 19.35 acres of required open space appears to meet ALUC limits.

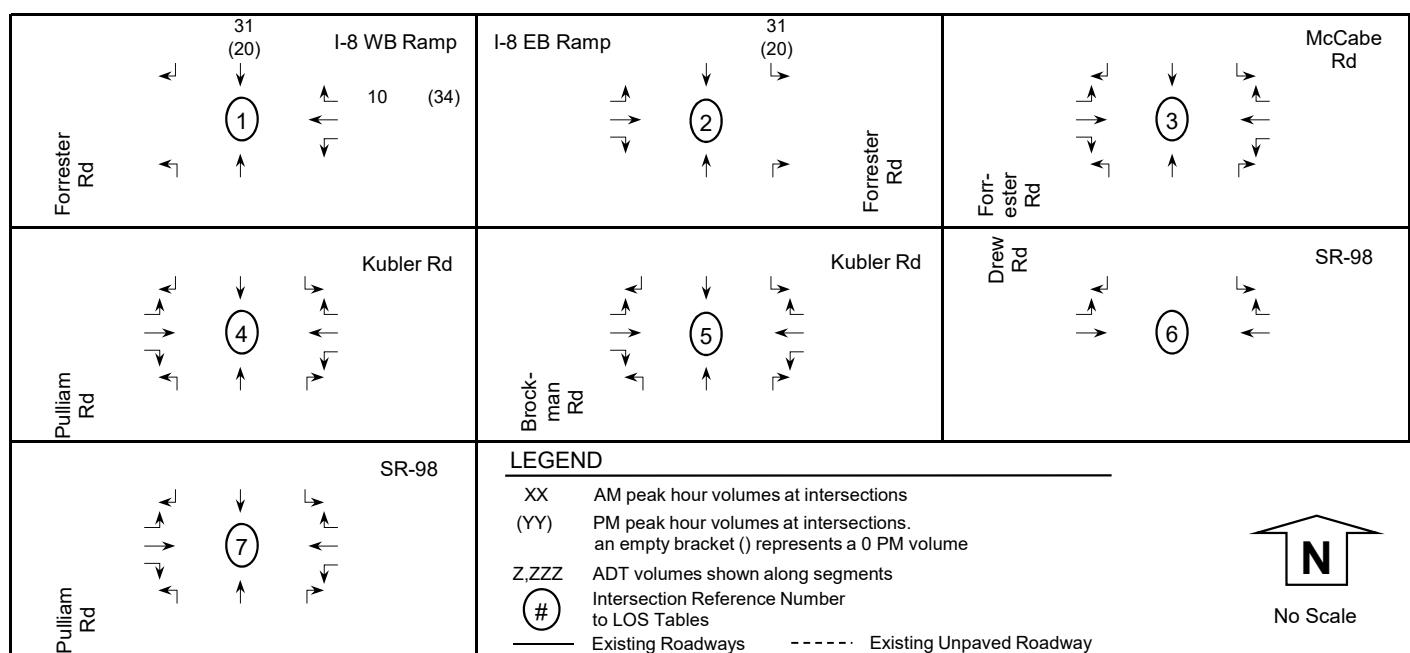

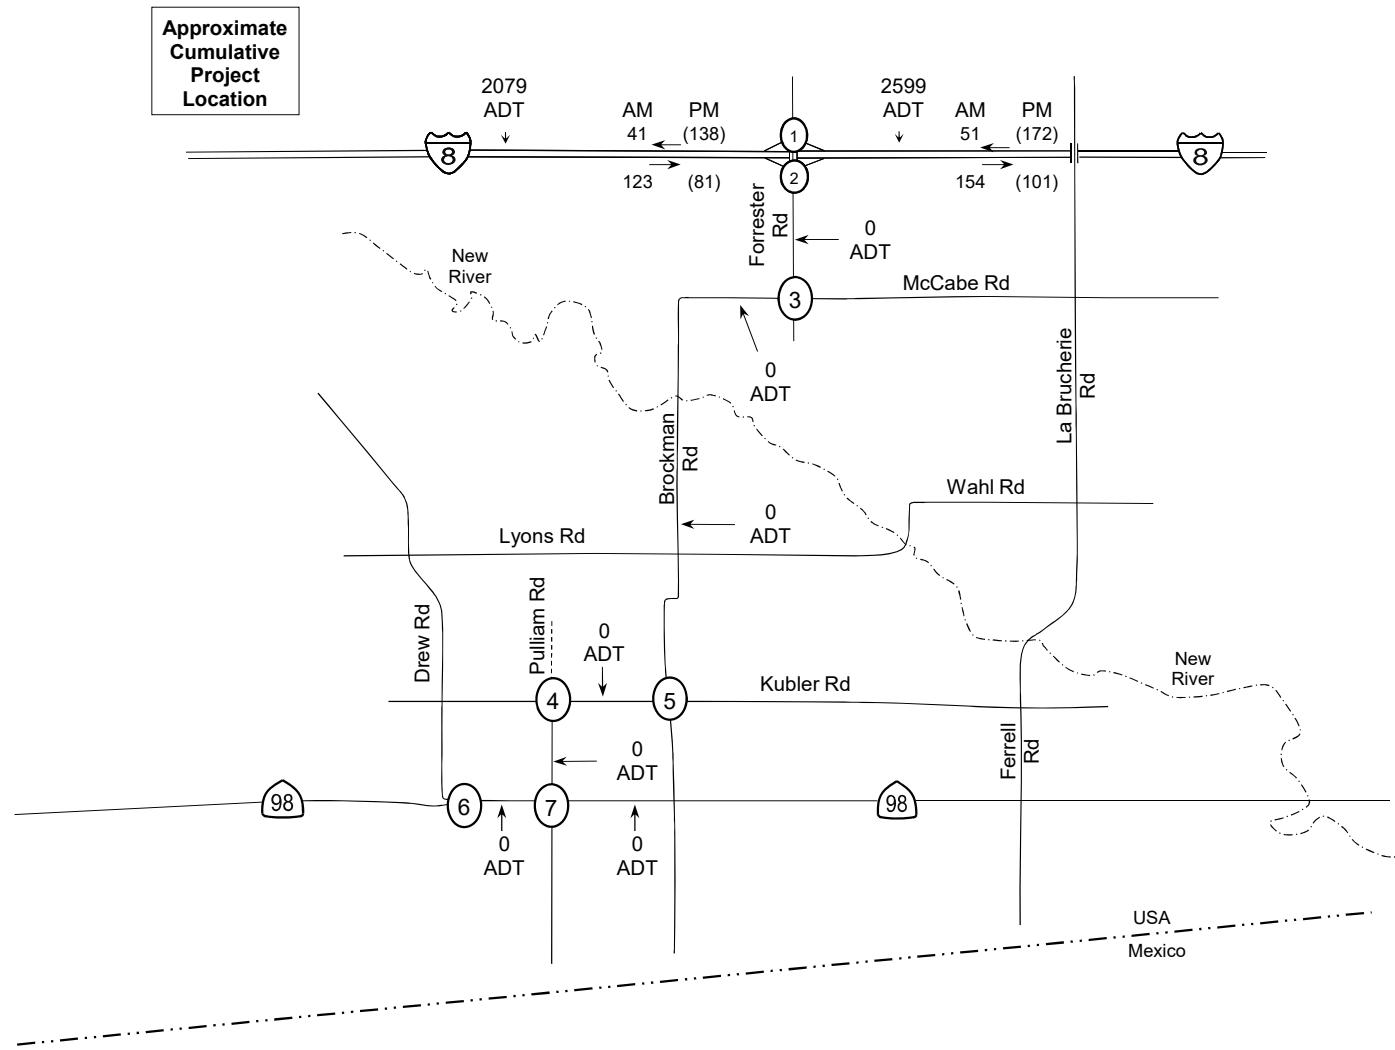

### **General Plan/ALUCP Analysis:**

The Airport Land Use Compatibility Plan (ALUCP), Chapter 2, Section 1.3. 2 (a) & (b), provides "Statutory Requirements" by the Commission, which include:

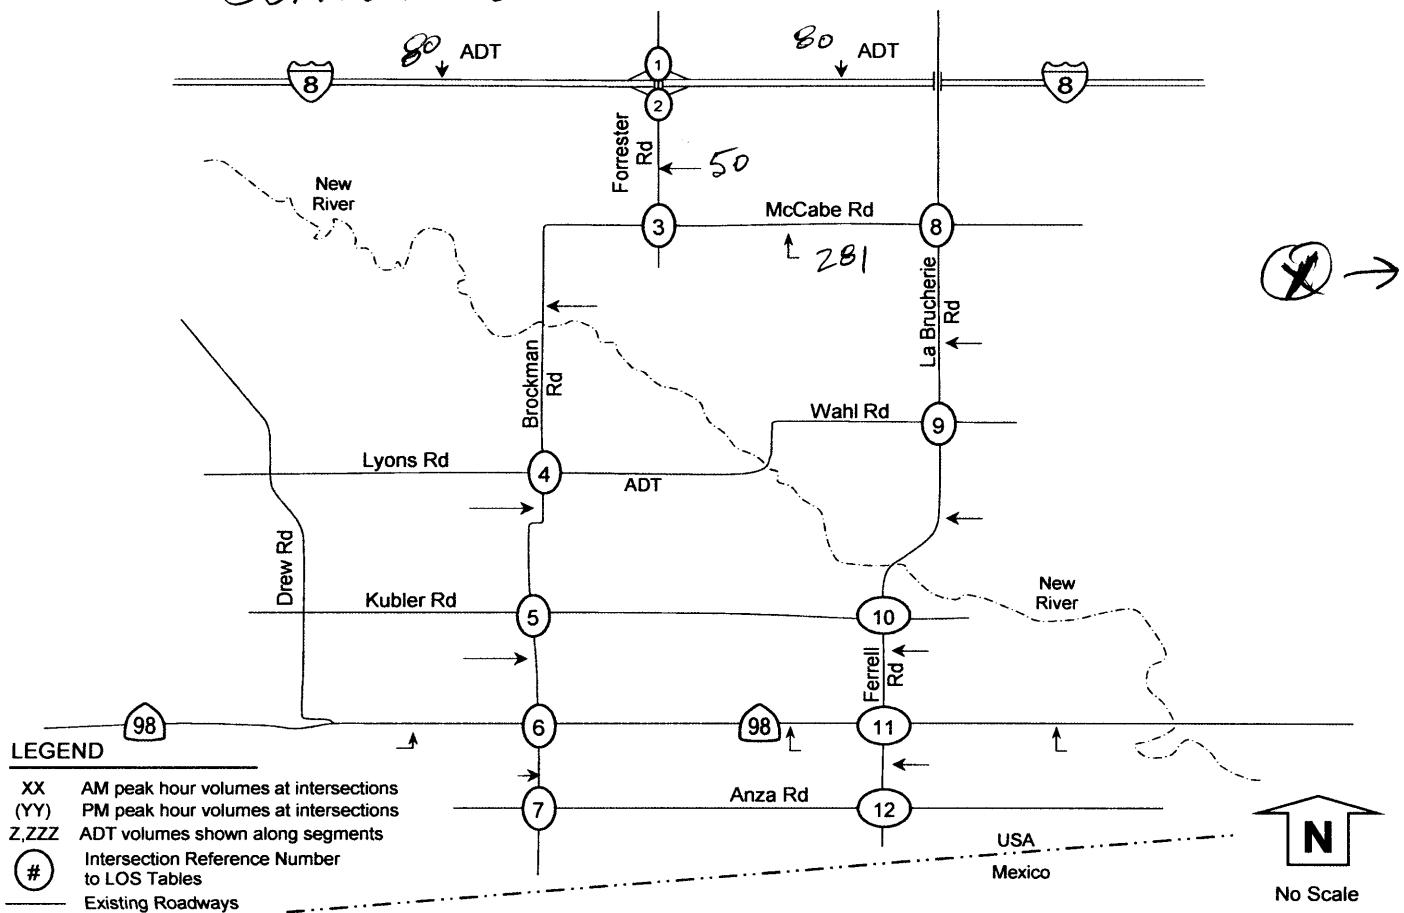

"As required by State law, (a) the adoption or approval of any amendment to a general or specific plan affecting the Commission's geographic area of concern as indicated in " (Section 1.3.2 (a), pg. 2-3), &

"Other Project Review- State law empowers the Commission to review additional types of land use "actions, regulations, and permits." as shown on page 2-3

**IRIS Cluster (Ferrell, Rockwood, Iris, Lyons)**

## 4.0 Project Description

The project is a solar photovoltaic energy-generating facility capable of producing approximately 250 megawatts of electricity on approximately 2,793 acres. The project is located approximately 8 miles west of the City of Calexico in the Mt. Signal area of Imperial Valley. The project is located on privately owned, agricultural land.

### 4.1 Project Trip Generation and Phases/Phasing

The project trip generation consists of a construction phase and operations phase. The construction phase will have the highest intensity followed by an operations phase with significantly fewer trips. This section describes the construction and operations trip generation. Project description details are included in **Appendix J**.

The project may be phased over time; therefore, four possible phases were analyzed. This included the entire project being constructed early in 2013 (existing conditions scenario), the entire project being constructed on a typical schedule that accounts for time needed to obtain permits and financing for the project in 2016 (near-term scenario), the entire project being construct in 2019 (2024 minus 5 years for a mid-point scenario of the CUP), and the entire project being delayed due to market forces until 2024 (long-term scenario).

#### 4.1.1 Project Construction Trip Generation

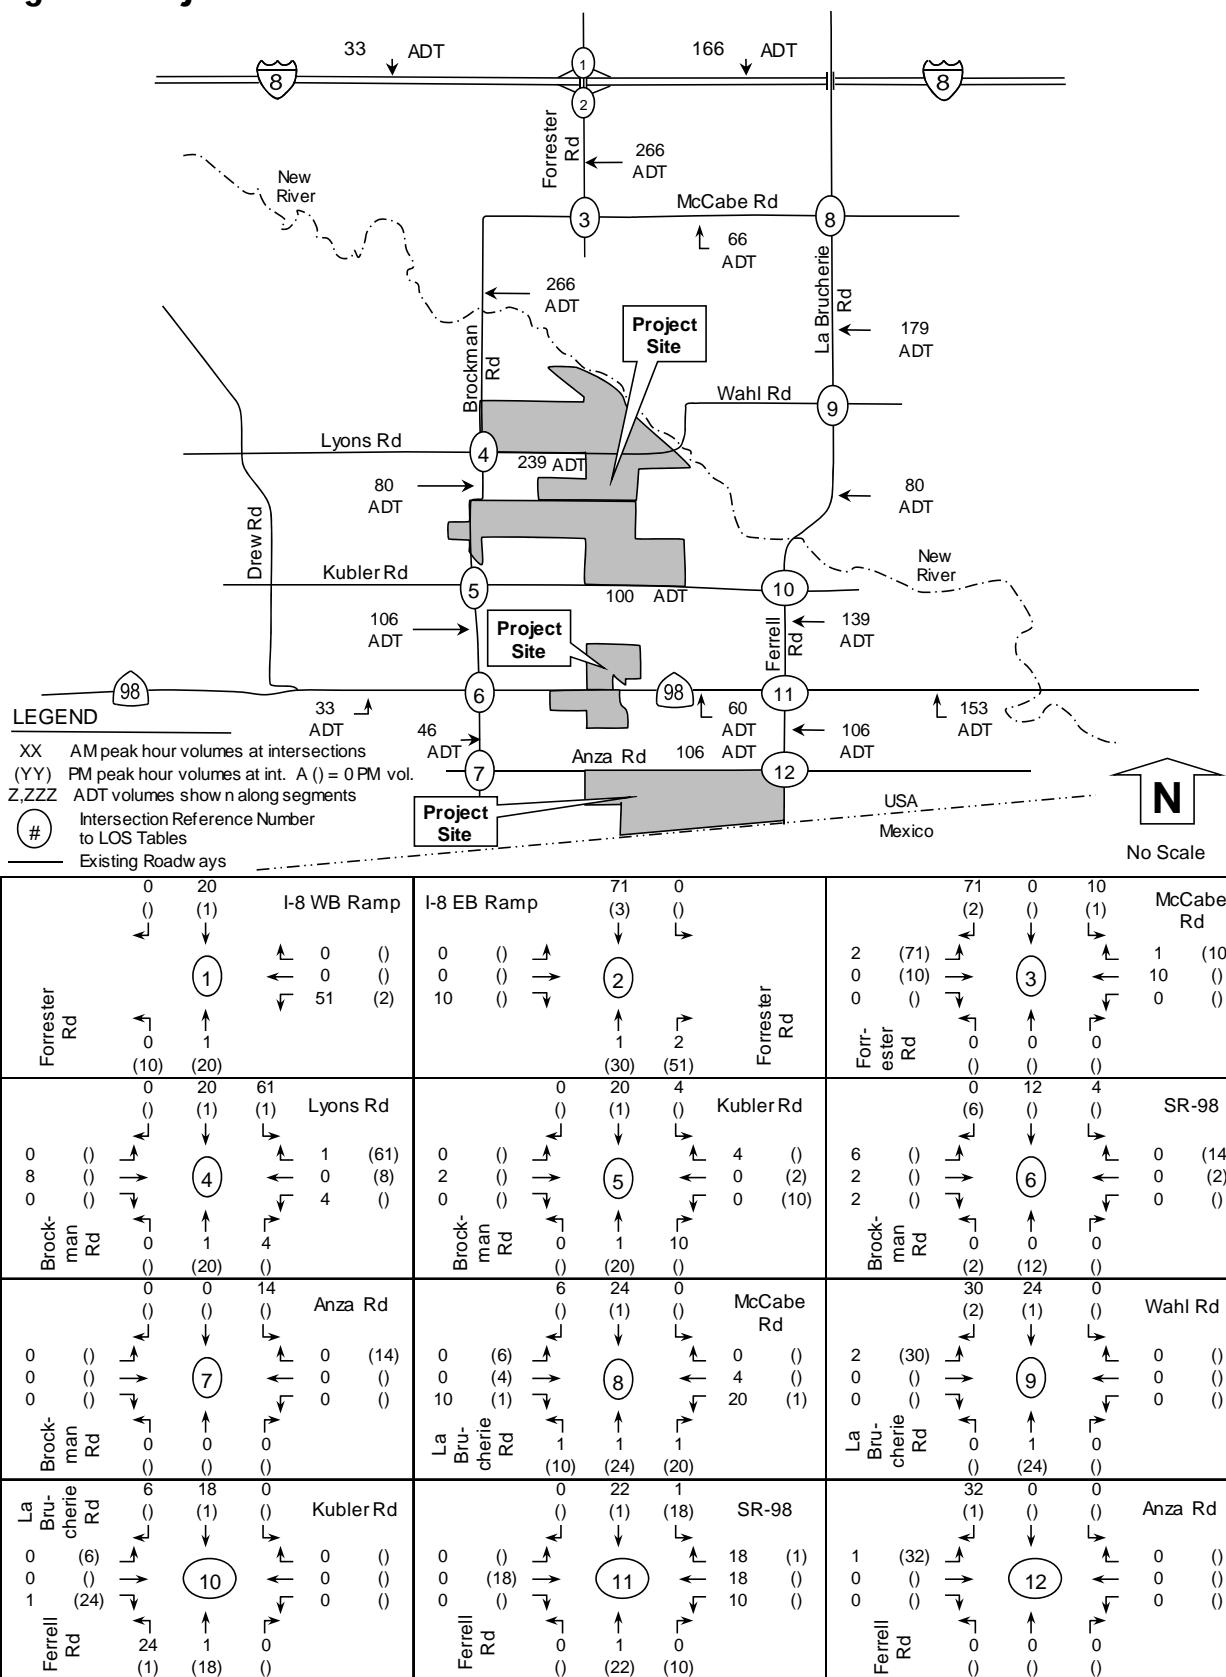

Construction of the project includes site preparation, foundation construction, delivery of equipment and supplies, erection of major equipment and structures, installation of control systems, and start-up/testing. These construction activities are expected to require approximately 18 months. According to the Applicant, the construction workforce is expected to start in 2015 and reach the highest concentration in spring of 2016 (for the near-term scenario) with an average of 250 workers and a possible peak of up to 350 daily workers. Based on the applicant's experience in the current construction of IV Solar South, about 75% of the workers follow a 4 day at 10 hours per day (4-10) schedule, about 25% follow a 5 day at 8 hours per day (5-8) schedule, and roughly 25% of the workers carpool. The workers also have different start and end times between the 4-10 and 5-8 schedule. The 4-10 workers typically arrive at 6am and depart at 5pm while the 8-5 workers typically arrive at 7am and depart at 4pm. This analysis is based on the higher concentration (75%) of 4-10 workers that arrive a 6am and depart at 5pm. The worker and construction truck traffic is calculated at 664 ADT with 209 AM peak hour trips (203 inbound and 6 outbound) and 209 PM peak hour trips (6 inbound and 203 outbound) as shown in **Table 8**.

**TABLE 8: PROJECT CONSTRUCTION TRIP GENERATION**

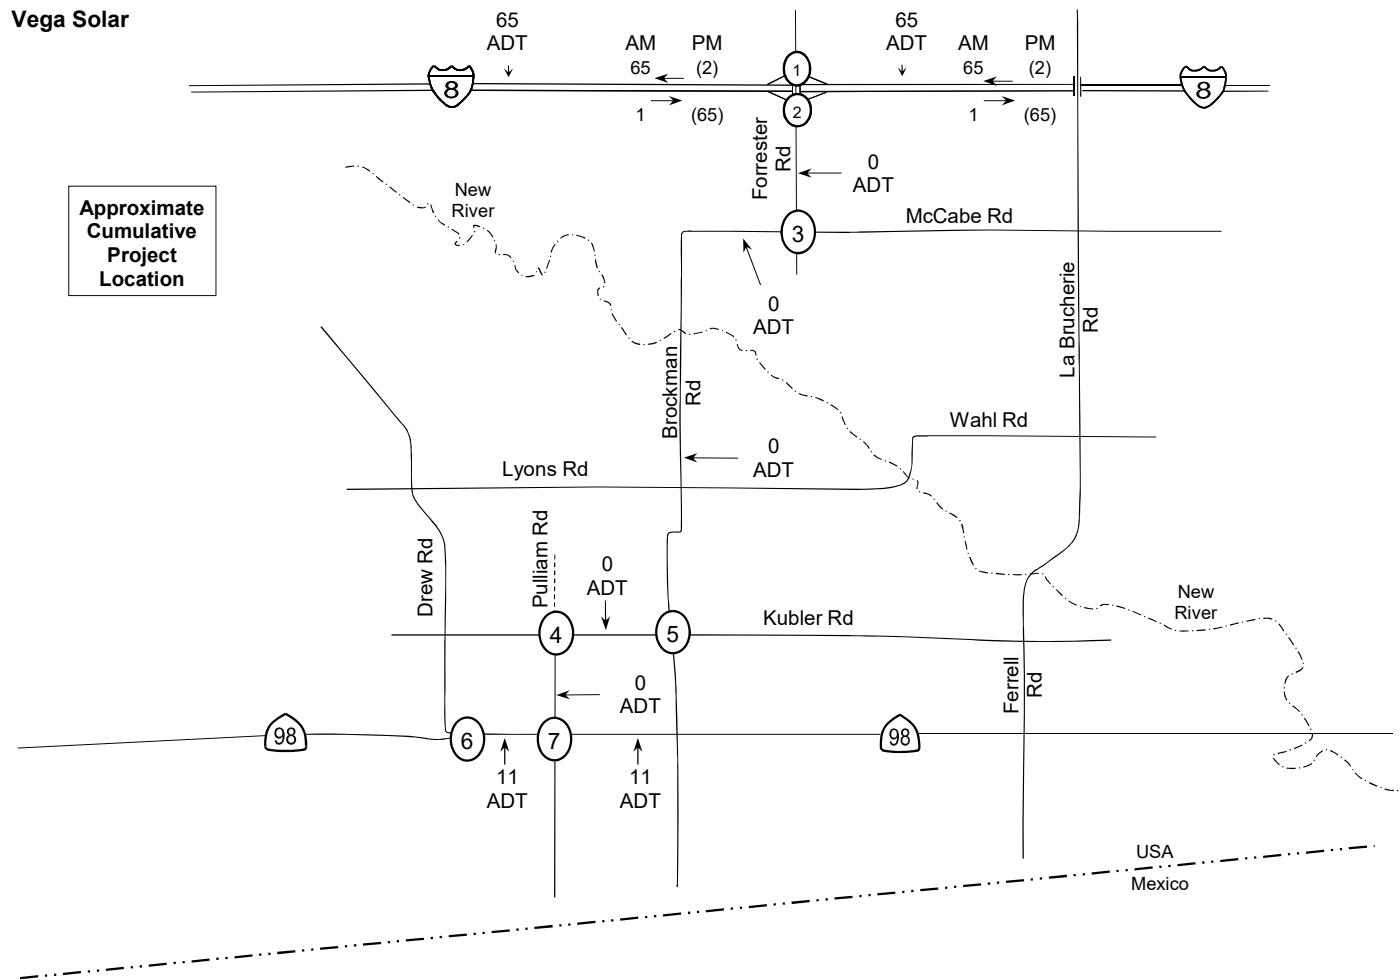

| Proposed Construction Related Traffic                        | ADT        | 6:00 AM    |          | 7:00 AM |     | 4:00 PM |     | 5:00 PM  |            |
|--|------------|------------|----------|---------|-----|---------|-----|----------|------------|
|  |            | IN         | OUT      | IN      | OUT | IN      | OUT | IN       | OUT        |
| Construction Workers on 4-10 Shift (75% of 350) <sup>1</sup> | 394        | 197        | 0        | 0       | 0   | 0       | 0   | 0        | 197        |
| Construction Workers on 5-8 Shift (25% of 350) <sup>2</sup>  | 132        | 0          | 0        | 66      | 0   | 0       | 66  | 0        | 0          |
| Equipment and Construction Trucks (with PCE) <sup>3</sup>    | 138        | 6          | 6        | 6       | 6   | 6       | 6   | 6        | 6          |
| Total Traffic During Peak Construction Period                | 664        | 203        | 6        | 72      | 6   | 6       | 72  | 6        | 203        |
| <b>Daily and Higher Peak Hour Used For Analysis</b>          | <b>664</b> | <b>203</b> | <b>6</b> |         |     |         |     | <b>6</b> | <b>203</b> |

Notes: 1) Applicant estimates the 4 days at 10 hrs/day (4-10) shift to include about 75% of the total 350 peak work force with about 25% carpooling. 2) Applicant estimates the 5 days at 8 hrs/day (5-8) shift to include about 25% of the total 350 peak work forces with about 25% carpooling. 3) About 23 daily trucks with a Passenger Car Equivalent (PCE) factor of 3 applied to each truck equals 138 ADT (23 trucks x 2 x 3 PCE = 138 ADT) that are anticipated to have a frequency of about 2 per hour for a peak period volume of 6 (with PCE).

Notes: (1) Capacity of 2,350 pcphpl from CALTRANS' Guide for the Preparation of Traffic Impact Studies, December 2002. (2) Latest K factor from Caltrans (based on 2017 report), which is the percentage of AADT in both directions. (3) Latest D factor from Caltrans (based on 2017 report), which when multiplied by K and ADT will provide peak hour volume. (4) Latest truck factor from Caltrans (based on 2015 report).

# IMPERIAL COUNTY ECONOMIC FORECAST

Imperial County is located at the extreme southeastern edge of California, adjacent to San Diego County. It is the home of the Salton Sea, the largest lake in the state. Imperial County has a population of 181,100 people and a total of 64,500 wage and salary jobs. The income per capita is \$32,219 and the average salary per worker is \$45,715, both of which represent the lowest levels among all Southern California counties.

Imperial County's economy is heavily agricultural. With approximately 10,700 farm workers, the county is responsible for more than \$2 billion of agricultural output per year. Its most prevalent commodities are cattle, alfalfa, broccoli, and lettuce. The public sector also plays a large role in the region's economy, and with 17,900 workers, it is the county's largest employment sector. A substantial number of the government jobs in Imperial County are related to the two state correctional facilities, which employ a combined total of 2,300 staff and house 6,700 inmates.

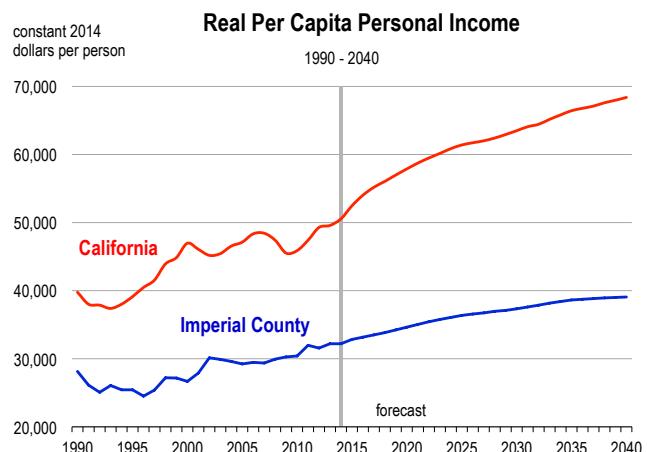

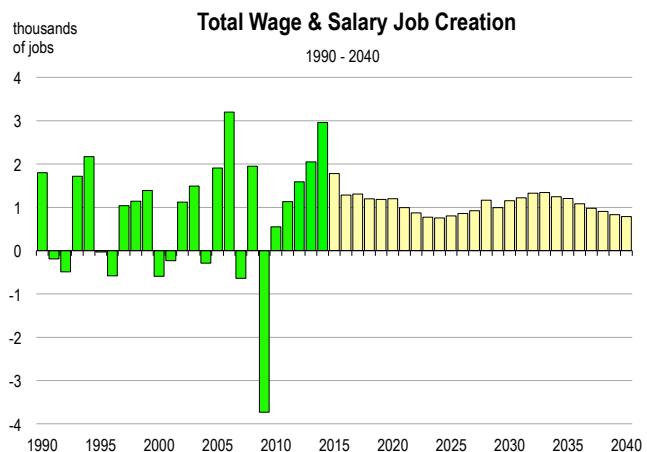

Across Southern California, employment increased by 2.6 percent in 2014. Imperial County gained 3,000 wage and salary jobs, representing a growth rate of 4.8 percent. Farm employment increased by 6.6 percent, while non-farm employment grew by 4.5 percent. Although the unemployment rate remains very high, it improved substantially, falling from 24.9 percent in 2013 to 23.6 percent in 2014.

In 2014, the largest employment gains were observed in wholesale and retail trade (+1,200 jobs), education and healthcare (+1,100 jobs), agriculture (+660 jobs), and construction (+340 jobs). The largest losses were observed in manufacturing (-800 jobs).

Between 2009 and 2014, the Imperial County population grew at an average rate of 0.9 percent per year. This growth was entirely due to the natural increase (new births), as overall net migration was negative.

## FORECAST HIGHLIGHTS

- Total employment is expected to increase by 2.8 percent in 2015. From 2015 to 2020, the growth rate will average 1.8 percent per year. Over the same period, agricultural employment will be relatively flat.
- Average salaries are currently well below the California state average, and will remain so over the forecast horizon. Adjusted for inflation, average salaries in Imperial County will rise by an average of 0.9 percent per year from 2015 to 2020.
- The sectors that will create the most jobs between 2015 and 2020 are education and healthcare, government, and wholesale and retail trade. Together, these industries will account for 85 percent of net job creation in the county.

- The population will continue to grow faster than the state average. Annual growth in the 2015 to 2020 period will average 1.5 percent.
- Net migration is expected to turn positive in 2016. Over the 2015-2020 period, an average of 530 net migrants will enter the county each year.
- Real income per capita, adjusted for inflation, is projected to increase by 1.9 percent in 2015. Between 2015 and 2020, growth will average 1.1 percent per year.
- Total taxable sales, adjusted for inflation, are expected to increase by an average of 1.7 percent per year between 2015 and 2020.
- Industrial production is expected to increase by 4.9 percent in 2015. From 2015 to 2020, the growth rate of industrial production is expected to average 4.0 percent per year.
- Farm production is forecasted to increase by 0.3 percent per year between 2015 and 2020. The principal farm products in the county are cattle and leaf lettuce.

| County                          | 2010 Census Population | 2016 Census Estimate Population |

| Average Percent Growth/Year:    |                        | 0.6%                            |

Source: Population data from U.S. Census Bureau (<http://www.census.gov>).

The screenshot shows the QuickFacts page for Imperial County, California. At the top, there's a navigation bar with links to 'Secure' (https://www.census.gov/quickfacts/fact/table/imperialcountycalifornia/PST045216), 'U.S. Department of Commerce | Blogs | Index A-Z | Global', and a search bar. Below the header, the 'United States Census Bureau' logo is visible. On the right side, there are links for 'What's New & FAQs' and 'Tell us what you think'. The main content area is titled 'QuickFacts' and 'Imperial County, California'. It states that QuickFacts provides statistics for all states and counties, and for cities and towns with a population of 5,000 or more. Below this, there's a search bar with placeholder text 'Enter state, county, city,' and a dropdown menu labeled '-- Select a fact --'. To the right of the search bar are buttons for 'CLEAR', 'TABLE', 'MAP', 'CHART', and 'MORE'. The main table area has a heading 'All Topics' with a dropdown arrow. The table itself has a blue header row with a person icon and the word 'PEOPLE'. The first column lists topics: 'Population', 'Population estimates, July 1, 2016, (V2016)', 'Population estimates base, April 1, 2010, (V2016)', 'Population, percent change - April 1, 2010 (estimates base) to July 1, 2016, (V2016)', and 'Population, Census, April 1, 2010'. The second column contains numerical values: 180,883, 174,528, 3.6%, and 174,528 respectively. The third column contains the text 'Imperial County, California' repeated three times. A magnifying glass icon is located at the bottom right of the table area.

| Topic  | Value   | Location                    |
|--|---------|-----------------------------|
| Population   | 180,883 | Imperial County, California |
| Population estimates, July 1, 2016, (V2016)  | 180,883 | Imperial County, California |
| Population estimates base, April 1, 2010, (V2016)                                    | 174,528 | Imperial County, California |
| Population, percent change - April 1, 2010 (estimates base) to July 1, 2016, (V2016) | 3.6%    | Imperial County, California |
| Population, Census, April 1, 2010  | 174,528 | Imperial County, California |

## **Appendix U**

### **Solar Farm Average Operations Traffic Generation Rates**

## Solar Farm Average Operations Phase Traffic Generation Rates

After construction completion, the solar projects will change to an operations phase with fewer employees and thus the project will generate less traffic. Some of the other solar projects did not have traffic identified for the operations phase; therefore, an average traffic generation operations rate was calculated based on the number of megawatts (MW). The following tables lists the traffic generation associated with each cumulative project and the associated MW.

| Project                           | Operations    |     |             | Operations AM |       |             |        | Operations PM |               |             |        |
|-----------------------------------|---------------|-----|-------------|---------------|-------|-------------|--------|---------------|---------------|-------------|--------|
|                                   | Mega<br>Watts | ADT | ADT /<br>MW | IN            |       | OUT         |        | IN<br>IN/MW   | OUT<br>OUT/MW | OUT         |        |
|                                   |               |     |             | IN            | IN/MW | OUT         | OUT/MW |               |               | IN          | OUT/MW |
| Centinela                         | 275           | 21  | 0.08        | 4             | 0.01  | 3           | 0.01   | 3             | 0.01          | 4           | 0.01   |
| Imperial Solar South              | 200           | 15  | 0.08        | 2             | 0.01  | 2           | 0.01   | 2             | 0.01          | 2           | 0.01   |
| Imperial Solar West               | 250           | 15  | 0.06        | 2             | 0.01  | 2           | 0.01   | 2             | 0.01          | 2           | 0.01   |
| Mt Signal                         | 200           | 20  | 0.10        | 7             | 0.04  | 1           | 0.01   | 7             | 0.04          | 1           | 0.01   |
| <b>Average Operation Rates/MW</b> |               |     | <b>0.08</b> | <b>0.02</b>   |       | <b>0.01</b> |        | <b>0.02</b>   |               | <b>0.01</b> |        |

The above operation rates were used to calculate the traffic associated with the following cumulative projects during their operations phase.

| <u>Proposed Cumulative Projects</u> | MW  | ADT | IN | OUT | IN | OUT |
|-------------------------------------|-----|-----|----|-----|----|-----|
